(DOE/EDP-0057) Avail: NTIS HC A05/MF A01

The planning and management requirements and schedules needed to evaluate and assess the environmental, health, and safety aspects of the Space Applications Program are identified. Environment is defined in its broadest sense to include environmental, health (occupational and public), safety, socioeconomic, legal, and institutional aspects. Topics considered include: (1) space nuclear power system nuclear fuel fabrication; (2) space nuclear power system heat source fabrication; (3) testing of subsystems and assembled systems; (4) research and development in support of space nuclear system development; (5) nuclear system responses to launch and reentry accidents; and (6) nuclear system environmental behavior and recovery. ENVIRONMENTAL ASSESSMENT METHODOLOGY: SOLAR POWER PLANT APPLICATIONS. VOLUME 1: ENVIRONMENTAL IMPACT ASSESSMENT METHODOLOGY Final Report

K. Nair and A. Sicherman May 1979 161 p refs
(EPRI Proj. 551)
(EPRI-ER-1070-Vol-1) Avail: NTIS HC A08/MF A01

A methodology for environmental impact assessment of solar power stations based on decision analysis is presented. A general overview of the methodology is given including a discussion of the issues warranting a formal analysis, the advantages of decision analysis from the decision maker's perspective, and some case study examples where the methodology was applied. The step-by-step implementation procedure for performing an environmental impact assessment using the methodology is described. The manner in which the methodology can incorporate cost into the analysis, both as a concern and as a yardstick of comparison, is discussed. Decision analysis and cost-benefit analysis are compared and contrasted. The appendix includes a bibliography concerning methods used by industry and/or government to make monetary estimates of environmental impacts. DOE

ADEQUACY ANALYSIS OF AIR QUALITY MONITORING ACTIVITIES RELEVANT TO CALIFORNIA THERMAL ENHANCED OIL RECOVERY FIELDS

Judy Matthews and J. Thomasian Nov. 1979 139 p refs
(Contract ET-78-C-01-3092)
(SAN-12093-1) Avail: NTIS HC A07/MF A01

A summary of enchanced oil recovery (EOR) activities in California is presented. Ambient air monitoring requirements are discussed in terms of state and Federal regulations. In addition, ambient air quality monitoring in California is considered with emphasis on specific monitoring requirements for new source regulation. An inventory of California EOR air quality monitoring activity is given and the adequacy of the air monitoring activity in the California EOR fields is discussed. DOE

COAL-CONVERSION TECHNOLOGIES: SOME HEALTH

AND ENVIRONMENTAL EFFECTS

S. C. Morris, P. D. Moskowitz, W. A. Sevian, S. Silberstein, and L. D. Hamilton Feb. 1979 27 p refs
(Contract EY-76-C-02-0016)
(BNL-5103; TID-4500) Avail: NTIS HC A03/MF A01

Selected health and environmental concerns of four coal conversion and four existing technologies are compared. Quantitative occupational health and safety estimates are presented covering extraction, transportation, distribution, processing, and conversion activities; also included are estimates of public health damage arising from fuel transportation and air pollution impacts. Qualitative estimates of health damage due to polycyclic organic matter and reduced sulfur are discussed. In general, energy inefficiencies, residuals, and implied environmental and health damages increase as follows: (1) direct combustion of natural gas and oil; (2) direct combustion of synthetic gas and oil; (3) central station electric power from synthetic gas; (4) central station electric power from coal; and (5) central station electric power from combustion of synthetic liquid fuels. Compliance and conflict of these technologies with Clean Air Act Amendments and other legislation are discussed. DOE

LIGHT-DUTY DIESEL GASEOUS EMISSIONS MEASUREMENT - COMPARISON OF DILUTION TUNNEL TEST RESULTS TO CERTIFICATION CELL TEST RESULTS

Jeff Alson Jan. 1979 13 p
(PB80-115991; SDSB-79/04) Avail: NTIS HC A02/MF A01 CSCL 13B

Gaseous emissions data are summarized for eleven light-duty diesel vehicles using both the standard certification test procedure and the dilution tunnel test procedure which incorporates particulate measurement. The greatest variability was found in the HC variability inherent in measuring HC and, in the extreme cases, also to equipment inconsistencies between the test cells. CO, NOx and CO2 data from the dilution tunnel test procedure were generally in good agreement with the certification data with the only trend being slightly lower NOx and CO2 values from the dilution tunnel. This is hypothesized as a possible dynamometer effect. It is concluded that there are no significant differences in the two test procedures with regards to the measurement of gaseous emissions. GRA

CONTROL TECHNOLOGIES FOR PARTICULATE AND TAR EMISSIONS FROM COAL CONVERTERS

C. Chen, C. Koralek, and L. Breitstein Jul. 1979 115 p refs
(Contract EPA-68-02-2601)
(PB80-108392; EPA-600/7-79-170) Avail: NTIS HC A06/MF A01 CSCL 13B

Solid and tar particulate emissions in raw product gases from several types of coal gasifiers are characterized in terms of their total quantities, chemical composition, and size distribution. Control technologies for particulate emissions were assessed with respect to the limitations of the control device and to existing and proposed regulations. Fabric filters were not suitable where tar particulates were found or at higher than 300 C. Electrostatic precipitators operated as high as 1100 C. Rotary cyclones showed the widest range of applicability, but conventional cyclones were most economical for particles larger than 50 microns. Solid and tar particulate emissions collected for 250,000 scfd of a medium-Btu gas contained up to 1.6 million kg of particulate. GRA

HOT GAS CLEANUP PROCESS Final Report, Jan. 1977 - Mar. 1979

A. Bekir Onursal Jul. 1979 155 p refs
(Contract EPA-68-02-2601)
(PB80-108467; EPA-600/7-79-169) Avail: NTIS HC A08/MF A01 CSCL 13B

The results of a study to identify and classify 22 hot gas cleanup (HGC) processes for desulfurizing reducing gases at above 430 C according to absorbent type into groups employing solid, molten salt, and molten metal absorbents are presented. Each process is described in terms of its status, chemistry, operating characteristics, problems, and uncertainties. The applicability of non HGC processes to a variety of coal gasification systems for several end uses for the product gases is assessed. Advantages and disadvantages of HGC relative to conventional low temperature cleanup systems with respect to thermal efficiency, the presence and/or emissions of tars, particulates, and NOx, and corrosion are described. GRA

CHARACTERIZATION AND ANALYSIS OF DEVONIAN SHALES AS RELATED TO RELEASE OF GASEOUS HYDROCARBONS Quarterly Progress Report, Jan. - Mar. 1979

R. S. Kalyoncu, J. P. Boyer, and M. J. Snyder 15 Apr. 1979 240 p
(Contract EY-76-C-05-5205)
(ORO-5205-10) Avail: NTIS HC A11/MF A01

This program has the objective of determining the relationships between the shale characteristics, hydrocarbon gas contents, and well location, and thereby provide a sound basis for (1) assessing the productive capacity of the Eastern Devonian Gas Shale deposits and (2) guiding research, development, and demonstration projects to enhance the recovery of natural gas from the shale deposits. The Y-1 well in Allegany County, New York was sampled in September 1978. 412 samples were collected from the Allegany County, New York well. Characterization data on Y-1 (EGSP New York No. 1), Allegany County, New York well is reported and discussed. Analysis of the hydrocarbon gases in Y-1 samples indicates that the longer chain hydrocarbon gases (ethane, propane, butane) in these shales are significantly higher than in previous wells. The carbon contents of the Y-1 (Allegany County, New York) well, on the other hand, are somewhat lower than predicted from the hydrocarbon gas contents. There is still a positive relationship between the carbon and hydrocarbon gas contents, however. A similar relationship is also apparent between the sulfur and hydrocarbon gas contents. No unusual trends are observed in the porosity values, and a reasonable agreement exists between the measured Hg-intrusion values and those calculated from the density data. Higher porosity values are associated with low bulk densities. From limited lithological observations New York shales exhibit variable clay, mineral, and quartz contents. Generally, low levels of pyrite and carbonate minerals are observed. The low pyrite and carbonate contents noted in the powder examination of the samples are supported by the EDAX results showing low Ca and S contents. DOE

NONIDEAL COMPENSATION IN MHD GENERATORS Ph.D. Thesis

David A. Carl 1979 274 p
Avail: Univ. Microfilms Order No. 8009457

Nonideal compensation, the distortion of the total magnetic flux density by the induced magnetic flux density despite the presence of compensating bus bars, was examined with one and two dimensional models. The conducting fluid was assumed to be an incompressible liquid at a constant velocity. The iterative solution technique used in both models consisted of iterating between an equivalent circuit model that solves for the air gap current distribution, given the total magnetic flux density distribution, and a magnetic field model that solves for the total magnetic flux density distribution, given the air gap current distribution. End loss was modeled by a shunt resistance. The one dimensional model was intended to indicate general trends. The two dimensional model was intended to provide a more detailed analysis. Dissert. Abstr.

MARKETING AND MARKET ACCEPTANCE DATA FROM THE RESIDENTIAL SOLAR DEMONSTRATION PROGRAM. VOLUME 1: DETAILED ANALYSIS, AUTUMN 1979
1979 218 p refs Sponsored in part by HUD
(PB80-115298; HUD-0050579) Avail: NTIS HC A10/MF A01 CSCL 05C

The marketing and market acceptance components of HUD's residential solar heating and cooling demonstration program, designed to promote the development of a self-sustaining solar energy industry, are analyzed. The actual experiences of actors and institutions involved in the market acceptance of solar houses are described. Emerging trends in the characteristics, opinions, and actions of participants in the demonstration program are identified and explored. All findings are based on marketing interviews with program participants, with a market acceptance model used to guide analysis. Practical information relevant to the construction industry and solar manufacturers is emphasized. GRA

GEOTHERMAL ENERGY MARKET PENETRATION: DEVELOPMENT OF A MODEL FOR THE RESIDENTIAL SECTION
Allen C. Goodman Sep. 1979 34 p refs
(Contracts EX-76-A-36-1008; DE-AI01-79ET-27025)
(PB80-118359; APL/JHU-QM-79-209; APL/JHU-GEMS-006; MCGER-79/003) Avail: NTIS HC A03/MF A01 CSCL 05C

A model was developed that examines the feasibility of using geothermal technology in heating residential structures. Specific account is taken of the small contribution of new housing to the total stock in any given year and of the durability of houses and their furnaces. Both aspects constrain the penetration of geothermal energy into the residential market. Other market penetration paradigms are discussed and a simple model of market penetration is presented that is based on the premise that homeowners will not abandon an existing furnace until its economic life is over. Behavioral parameters are considered and the model is extended from 20 to 40 years. Methods are discussed for collecting the needed data to determine market penetration, and ideas are proposed of ways to induce homeowners to give up economically viable furnaces to allow the firm providing the energy to reduce costs. FUEL ECONOMY SCREENING STUDY OF ADVANCED AUTOMOTIVE GAS TURBINE ENGINES
John L. Klann Mar. 1980 57 p
(Contract EC-77-A-31-1040)
(NASA-TM-81433; E-357; DOE/NASA/1040-80/11) Avail: NTIS HC A04/MF A01 CSCL 13F

Fuel economy potentials were calculated and compared among ten turbomachinery configurations. All gas turbine engines were evaluated with a continuously variable transmission in a 1978 compact car. A reference fuel economy was calculated for the car with its conventional spark ignition piston engine and three speed automatic transmission. Two promising engine/transmission combinations, using gasoline, had 55 to 60 percent gains over the reference fuel economy. Fuel economy sensitivities to engine design parameter changes were also calculated for these two combinations. Author

URBAN MASS TRANSPORTATION ENERGY CONSERVATION: SRGP OPERATING INSTRUCTIONS AND PROGRAM DOCUMENTATION, VOLUME 5 Final Report
J. F. MacMann and R. E. Nestle Oct. 1979 120 p refs
(Contract EM-76-C-01-8628)
(DOE/PE/8628-1-Vol-5) Avail: NTIS HC A06/MF A01

A computer program for Short Range Generalized transportation Policy (SRGP) analysis developed for use in analyzing the energy conservation potential of a broad spectrum of transit, carpooling, vanpooling, parking, pricing, and other transportation system management measures is described. It is intended for use in either an areawide or corridor context and in what is referred to as a sketch planning style of analysis. Output includes changes in fuel consumption, vehicle emissions, vehicle miles of travel, and modal shares for drive alone, shared ride, and transit. Changes in travel behavior are forecast relating to auto ownership, work trip mode choice, and the frequency, destination, and mode choice for both shopping and social/recreational nonwork travel. Using a random sample household forecasting procedure, SRGP is a modified version of the program UMODEL, distributed by the U.S. Urban Mass Transportation Administration as part of UTPS, the Urban Transportation Planning System. DOE

URBAN TRANSPORTATION ENERGY CONSERVATION: CASE CITY APPLICATIONS OF ANALYSIS METHODOLOGIES, VOLUME 3 Final Report, Jul. 1976 - Sep. 1978
T. J. Atherton and J. H. Suhrbier Oct. 1979 160 p refs
(Contract EM-76-C-01-8628)
(DOE/PE/8628-1-Vol-3) Avail: NTIS HC A08/MF A01

Disaggregate travel demand methodologies were applied to the analysis of potential energy conservation strategies in three urban areas: Denver, Colorado; Fort Worth, Texas; and San Francisco, California. The methodologies are sketch planning in nature and include the forecasting of changes in automobile ownership; work trip model shares by drive alone, shared ride, and transit; nonwork trip frequency, destination, and mode choice; fuel consumption and vehicle emissions. Policies analyzed include those related as employer based ride sharing, parking management, transit, pricing, and traffic operations. Considerable variations in the potential effectiveness was found, among the three urban areas, depending in large part on the availability of alternative travel modes such as transit. Descriptions are provided of the individual policy analyses performed, the methods by which example policies were analyzed, the necessary data preparation activities, and the procedures used to adapt the set of travel demand models to the unique conditions of each of the three metropolitan areas. DOE

N80-21207# Cambridge Systematics, Inc., Mass.
URBAN TRANSPORTATION ENERGY CONSERVATION: ANALYTIC PROCEDURES FOR ESTIMATING CHANGES IN TRAVEL DEMAND AND FUEL CONSUMPTION, VOLUME 2 Final Report, Jul. 1976 - Sep. 1978
T. J. Atherton and J. H. Suhrbier Oct. 1979 153 p refs
(Contract EM-76-C-01-8628)
(DOE/PE/8628-1-Vol-2) Avail: NTIS HC A08/MF A01

Analytical tools used to evaluate the effectiveness of alternative transportation policies in achieving reductions in overall fuel consumption are presented. To ensure a high measure of accuracy, the analysis goes beyond the first order effects, i.e., the shift from single occupant autos as the mode chosen for the work trip to more fuel efficient means of travel. Questions treated include what will happen with the autos left at home as a result of increased carpooling for work trips. The methodology developed links together several disaggregate travel demand models to predict auto ownership, work trip mode choice, and nonwork travel demands. The theoretical basis for the travel demand models used is introduced. These models and their linkages both with each other and with the various submodels are described. The assumptions made in developing the model system and using it to forecast responses to alternative transportation policies are included. Emphasis is placed on the conceptual framework of the model system and specification of the individual models and submodels. DOE

N80-21208# Cambridge Systematics, Inc., Mass.
ANALYTICAL PROCEDURES FOR URBAN TRANSPORTATION ENERGY CONSERVATION: SUMMARY OF FINDINGS AND METHODOLOGIES, VOLUME 1 Final Report, Jul. 1976 - Apr. 1979
J. H. Suhrbier and W. D. Byrne Oct. 1979 54 p refs 5 Vol.
(Contract EC-76-C-01-8628)
(DOE/PE/8628-1-Vol-1) Avail: NTIS HC A04/MF A01

Analytical methodologies are described and illustrated for use in analyzing the energy conservation potential of candidate urban transportation measurements. Quantitative methodologies oriented to carpooling, vanpooling, transit, pricing, traffic regulation and control, and auto ownership are provided based on the use of disaggregate behavioral travel demand models. Changes are indicated in trip frequency and distribution as well as in travel model, operating conditions, and vehicle miles of travel. Trip-based estimates of fuel consumption and vehicle emissions are included. The methodologies employ manual sketch planning procedures, a programmable calculator, or a fully-calibrated computer program utilizing a random sample household enumeration forecasting technique. The developed methodologies were applied in cooperation with metropolitan planning organizations representing the Dallas-Fort Worth, San Francisco, and Denver urban areas. DOE

TEST AND EVALUATION REPORT OF THE ERDC HYBRID-ELECTRIC VAN (HEVAN)
G. J. Klose May 1979 67 p
(Contract EX-76-A-31-1011)
(DOE/TIC-10232) Avail: NTIS HC A04/MF A01

The HEVAN or Hybrid-Electric Van is a battery powered electric vehicle with an on board gasoline fueled electric power generation unit. The HEVAN was developed from a Volkswagen transporter chassis. It is propelled by a series wound dc traction motor rated at 20 HP (14.9 kW) which is powered by sixteen 6-volt SGL lead acid batteries of nominally 96 volts. The motor power is controlled by an SCR chopper with a bypass contractor and drives the vehicle through a four-speed VW transaxle. The conventional VW hydraulic brake system is used; there is no provision for regenerative braking. The on board electric power generator consists of a 16-HP (11.9kW) gasoline engine driving a 7.5 kW alternator with a dc rectifier; this provides electrical power either directly to the drive motor or to the battery pack, depending on the battery charge state and the motor power requirements. Numerous tests were conducted with pure electric operation, but only limited results were obtained in the hybrid mode due to continual problems with the motor generator set. DOE

ENERGY STORAGE SYSTEMS FOR AUTOMOBILE PROPULSION
L. G. OConnell 26 Nov. 1979 35 p
(Contract W-7405-eng-48)
(UCID-18320) Avail: NTIS HC A03/MF A01

Energy storage power systems that are credible alternatives to the internal combustion engine system are evaluated. It is concluded that automotive electrical power systems can be developed for various performance levels. Most electricity using vehicles will weigh more and cost more than their internal combustion engine equivalents. If performance of these vehicles is reduced, they can be more cost competitive. Mechanical energy storage propulsion systems appear useful as power boosters for certain mission applications. DOE

GENERAL SENSITIVITY ANALYSIS OF SOLAR THERMAL-ELECTRIC PLANTS
F. L. Lansing, E. W. Hayes, and C. S. Yung *In its* The Deep Space Network 15 Apr. 1980 p 130-142

Avail: NTIS HC A08/MF A01 CSCL 10A

A unified and generalized treatment for predicting the technical performance of many present or future solar thermal electric power system designs and configurations is presented. In order to screen the major design parameters whose effect on performance is high and to assess the system improvement or deficiency resulting from their change, a sensitivity analysis is performed. The sensitivity, defined as the percentage change of output divided by the percentage change in input, is evaluated analytically for seven major system design parameters. These design parameters are: the solar radiation intensity, the ambient temperature, the optical-thermal characteristics of the collector subsystem (concentrator-receiver), the relative thermal efficiency for the energy conversion subsystem, the working fluid operating temperature, and the rate of fluid heat capacity. General performance sensitivity expressions are derived and numerically evaluated for the range of possible operating conditions. The effect of these major parameters on the system performance optimization is presented to identify future improvement areas and to pave the way for the second phase study in the economic sensitivity analysis on bus bar energy costs. A.W.H.

OUTGASSING BEHAVIOR OF CARBON-BONDED CARBON-FIBER THERMAL INSULATION
G. C. Wei, C. D. Reynolds, and G. W. Brassell 1979 7 p refs Presented at 14th Carbon Conf., University Park, Pa., 25 Jun. 1979
(Contract W-7405-eng-26)
(CONF-790625-8) Avail: NTIS HC A02/MF A01

A carbon-bonded carbon-fiber (CBCF3) thermal insulation was developed and has demonstrated acceptable strength, thermal conductivity, and outgassing properties for the selenide isotope generator. Primary outgassing at 1350 C and 0.1 mPa (10 to the minus 6th power torr) for 70 h seemed satisfactory because reabsorption during exposure to argon or air was minimal and the total weight loss during secondary outgassing was also very small. The total outgassing of CBCF3 insulation during generator startup and operation was equivalent to the weight loss during secondary outgassing, (i.e., 0.08 mg per gram of CBCF3 insulation). The dominating gaseous species of secondary outgassing are CO and CO2. Primary outgassing (1350 C at 0.1 mPa (10 to the minus 6th power torr) for 70 h) causes no increases in the thermal conductivity of CBCF3 insulation. Specimen size affected the first few hours of primary outgassing and thus the fraction of total amount of volatile species being driven off at the end of primary outgassing. DOE

EVALUATION OF HIGH CHROMIUM OVERLAYS TO PROTECT LESS ALLOYED SUBSTRATES FROM CORROSION IN A COAL GASIFICATION ATMOSPHERE Quarterly Report, 1 Sep. - 30 Nov. 1978
Edward P. Sadowski 1978 33 p refs
(Contract EF-77-C-01-2621)
(FE-2621-5) Avail: NTIS HC A03/MF A01

Inspection by Dy-chek and bend tests were completed. All AWS-ER 309 and INCONEL Filler Metal 72 weldments and fifteen of eighteen R139 weldments were bent 180 deg around a mandrel successfully. Mixed results were obtained on three of the R139 weldments. Stress-rupture testing at 1800 F shows no significant differences in the tensile strength of weldments due to filler metal, substrate or weld process and indicate that the substrates and welding process have an effect on the stress rupture strength. The weldments with the INCOLOY alloy 800H substrate with inert gas deposited overlays have the higher stress rupture strength. The submerged-arc weldments had the lowest stress rupture strength for each filler metal and substrate. DOE

ADVANCED COAL GASIFICATION SYSTEM FOR ELECTRIC POWER GENERATION, FY 1978 Quarterly Progress Report, 1 Jul. - 30 Sep. 1978
28 Dec. 1978 123 p refs
(Contract EX-76-C-01-1514)
(FE-1514-93; QPR-4) Avail: NTIS HC A07/MF A01

A gasifier was to evaluate performance with coke breeze and char derived from coal using oxygen and steam as the gasification media. Since suitable chars were not available, direct coal feed to the gasifier was used. Four tests were run, TP-018-1 through -4, and operating summaries and test results are described. The operating results for Test TP-018-1 are summarized. Test TP-018-2 was the first gasifier test to be run with oxygen. Total time for the test exceeded 180 hours, with 50 hours of operation using Pittsburgh seam coal as feedstock. Product gas higher heating values of a dry basis ranged from 120 Btu/scf for coke breeze to 260 Btu/scf for Pittsburgh coal. An experimental test grid designed to show the effect of increased oxygen flow on reactor temperatures and heating values with the high-caking Pittsburgh seam coal was established and added to with each test conducted. Successful operation of the single stage gasifier reactor with oxygen was demonstrated with this series of tests with some rather significant results. Summaries of these results are given. DOE

SOLVENT REFINED COAL PROCESS: DATA CORRELATION AND ANALYSIS Final Report
J. F. S. Frith, S. Viswanathan, and A. Gupta Aug. 1979 308 p Sponsored by the Elec. Power Res. Inst.
(EPRI-AF-1157) Copyright. Avail: Issuing Activity

Available pilot plant and other experimental data on coal liquifaction were evaluated and useful correlations for design and scale-up to commercial size plants were developed. The available operating data were obtained from three pilot plants. The reviewed data was organized into comparative tables to facilitate its use in subsequent studies. To reduce the data into forms useful for design calculations, a number of correlations were developed. Product yields were correlated with reaction severity expressed as hydrogen consumption. The liquefaction reactions were studied by calculating reaction rate constants for the processes of hydrogen consumption, coal conversion and organic sulfur removal. To aid the design of the vapor-liquid separation equipment, a means of characterzing coal liquids was proposed. This was used successfully with methods that are currently available to predict physical properties and vapor liquid equilibria for petroleum mixtures. DOE

COAL-TO-METHANOL VIA NEW PROCESSES UNDER DEVELOPMENT: AN ENGINEERING AND ECONOMIC EVALUATION Final Report

W. S. Chia, G. E. Good, and Y. S. Ng Oct. 1979 112 p
Sponsored by Elec. Power Res. Inst.
(EPRI-AF-1227) Avail: NTIS HC A06/MF A01

The results of a screening study are presented evaluating two coal to methanol routes via processes under development. A total of two coals investigated in two different plant configurations: (1) Illinois No. 6 bituminous coal in an all methanol scheme; and (2) Wyodak subbituminous coal in a methanol and distillate fuel oil coproduction scheme. In both schemes the Liquid Phase Methanol process was used for the synthesis of methanol from cleaned and conditioned synthesis gas. All other processes incorporated in the plant configurations were commercially proven in the petrochemical, chemical, or petroleum refinery industry. The conceptual designs for the two grass roots coal conversion complexes each designed to produce approximately 300 billion Btu per day of storable fuels are presented; included are overall block flow diagrams, steam and utility balances, and water management schemes. Cost estimates, economic assessments, and overall thermal efficiencies are provided for each of the two processing schemes considered. DOE

BENEFITS OF INCREASED USE OF CONTINUOUS CASTING BY THE UNITED STATES STEEL INDUSTRY

Oct. 1979 41 p refs
(PB80-104904; OTA/TM/ISC-2; LC-79-600177) Avail: NTIS HC A03/MF A01 CSCL 11F

The continuous casting process is described and the advantages of the process are examined. The rate of adoption of this technology in the U.S. steel industry is compared with that in the foreign steel industries. The factors that have constrained the greater adoption of continuous casting in the United States are briefly discussed and the economic costs and benefits of converting existing capacity to this new process are analyzed. PARAMETRIC TESTS OF A TRACTION DRIVE RETROFITTED TO AN AUTOMOTIVE GAS TURBINE

Douglas A. Rohn, Stuart H. Lowenthal, and Neil E. Anderson 1980 21 p refs Presented at the 5th Intern. Automotive Propulsion Systems Symp., Dearborn, Mich., 14-18 Apr. 1980 Prepared in cooperation with Army Aviation Research and Development Command, Cleveland, Ohio
(Contract EF-77-A-31-1011)
(NASA-TM-81457; AVRADCOM-TR-80-8; DOE/NASA/1011-80/4) Avail: NTIS HC A02/MF A01 CSCL 13I

The results of a test program to retrofit a high performance fixed ratio Nasvytis Multiroller Traction Drive in place of a helical gear set to a gas turbine engine are presented. Parametric tests up to a maximum engine power turbine speed of 45,500 rpm and to a power level of 11 kW were conducted. Comparisons were made to similar drives that were parametrically tested on a back-to-back test stand. The drive showed good compatibility with the gas turbine engine. Specific fuel consumption of the engine with the traction drive speed reducer installed was comparable to the original helical gearset equipped engine. Author

STORAGE PEAK GAS-TURBINE POWER UNIT

B. Tsinkotski Jan. 1980 25 p refs Transl. into ENGLISH from Period. Polytech. Mech. Eng. (USSR), v. 22, no. 2, 1978 p 95-113 Original language document announced as A79-24507 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-75757) Avail: NTIS HC A02/MF A01 CSCL 10B

A storage gas-turbine power plant using a two-cylinder compressor with intermediate cooling is studied. On the basis of measured characteristics of a .25 Mw compressor computer calculations of the parameters of the loading process of a constant capacity storage unit (05.3 million cu m) were carried out. The required compressor power as a function of time with and without final cooling was computed. Parameters of maximum loading and discharging of the storage unit were calculated, and it was found that for the complete loading of a fully unloaded storage unit, a capacity of 1 to 1.5 million cubic meters is required, depending on the final cooling. EXHAUST CHARACTERIZATION OF NEAT ALCOHOL FUELED IC ENGINES Final Report

B. Pullman, R. Pefley, Richard Bechtold (DOE, Bartlesville, Okla.), and Jerry Allsup (DOE, Bartlesville, Okla.) Oct. 1979 30 p refs Sponsored by DOE
(BETC/P-B-8-1943-1) Avail: NTIS HC A03/MF A01

A late-model vehicle was converted to operate using methanol, gasoline, or ethanol as fuel and experimental work was done to obtain energy economy and exhaust emissions data for each of the three fuels. Results are compared at equal equivalence ratios both with and without an oxidation catalyst in the exhaust system. Using a catalyst for emissions control, unburned (hydro) carbon emissions were lowest during lean operating conditions and were nearly the same for all three fuels under those conditions. Oxides of nitrogen emissions typically were reduced by over 50 percent in changing from gasoline to methanol or ethanol. Composition of the exhaust hydrocarbons was determined from analysis via gas chromatography. These data were used for calculating photochemical reactivities and comparisons were made among the fuels during cold start and FTP weighted tests. DOE

PROJECTIONS OF ENHANCED OIL RECOVERY, 1985 - 1995
Joan Heinkel Sep. 1979 43 p
(DOE/EIA-0183/11; TR/ES/79-30) Avail: NTIS HC A03/MF A01

The production potential from thermal recovery methods, miscible and immiscible gas flooding, and chemical flooding methods were estimated. It was assumed that existing EOR technology is conventionally applied requiring a 10 percent real after tax rate of return similar to that assumed for conventional recovery method. Five alternative price paths for world supplies of crude oil were investigated. Supply possibilities from these enhanced methods are estimated as 0.9 million bbl/d in 1985 and show no variation despite the $6 range in price among the scenarios. Although thermal recovery techniques provide the bulk of production in the 1985-1995, they should decline in importance over time, providing 52 to 57 percent of ultimate recovery. Gas flooding will increase production over time to account for 37 to 41 percent of ultimate recovery and chemical flooding accounts for 6 to 7 percent. DOE

WIND WHEEL ELECTRIC POWER GENERATOR Patent
John W. Kaufman, inventor (to NASA) Issued 4 Mar. 1980 8 p Filed 24 Feb. 1978 Supersedes N78-22469 (16 - 13, p 2137)
(NASA-Case-MFS-23515-1; US-Patent-4,191,505; US-Patent-Appl-SN-880726; US-Patent-Class-415-2; US-Patent-Class-415-101) Avail: U.S. Patent and Trademark Office CSCL 10B

Wind wheel electric power generator apparatus includes a housing rotatably mounted upon a vertical support column. Primary and auxiliary funnel-type, venturi ducts are fixed onto the housing for capturing wind currents and conducting to a bladed wheel adapted to be operatively connected with the generator apparatus. Additional air flows are also conducted onto the bladed wheel; all of the air flows positively effecting rotation of the wheel in a cumulative manner. The auxiliary ducts are disposed at an acute angle with respect to the longitudinal axis of the housing, and this feature, together with the rotatability of the housing and the ducts, permits capture of wind currents within a variable directional range.

AMPLIFIED WIND TURBINE APPARATUS Patent Application
William N. Myers, inventors (to NASA) and Leopold A. Hein Filed 12 Mar. 1980 16 p
(NASA-Case-MFS-23830-1; US-Patent-Appl-SN-129780) Avail: NTIS HC A02/MF A01 CSCL 10A

An amplified wind turbine apparatus is disclosed wherein ambient inlet air is prerotated in an air rotation chamber having a high pressure profile. A second rotation chamber adjacent and downstream of the turbine has a low pressure core profile whereby flow across the turbine is accelerated and thereafter exits the turbine apparatus through a draft anti-interference device. The draft device eliminates interference with ambient winds at the outlet of the turbine apparatus. Pivotable vanes controlled in response to prevailing wind direction admit air to the chambers and aid in imparting rotation. NASA

(NASA-CR-162628; DOE/JPL-954873-79/08) Avail: NTIS HC A08/MF A01 CSCL 10A

The process sequence for the fabrication of dendritic web silicon into solar panels was modified to include aluminum back surface field formation. Plasma etching was found to be a feasible technique for pre-diffusion cleaning of the web. Several contacting systems were studied. The total plated Pd-Ni system was not compatible with the process sequence; however, the evaporated TiPd-electroplated Cu system was shown stable under life testing. Ultrasonic bonding parameters were determined for various interconnect and contact metals but the yield of the process was not sufficiently high to use for module fabrication at this time. Over 400 solar cells were fabricated according to the modified sequence. No sub-process incompatibility was seen. These cells were used to fabricate four demonstration modules. A cost analysis of the modified process sequence resulted in a selling price of $0.75/peak watt. R.E.S.

FLAME TUBE PARAMETRIC STUDIES FOR CONTROL OF FUEL BOUND NITROGEN USING RICH-LEAN TWO-STAGE COMBUSTION
Donald F. Schultz and Gary Wolfbrandt 1980 25 p refs Presented at Western States Sect. of the Combust. Inst. of Spring

Meeting, Irvine, Calif., 21-22 Apr. 1980
(Contract EF-77-A-01-2593)
(NASA-TM-81472; DOE/NASA/2593-80/15; E-405) Avail: NTIS HC A02/MF A01 CSCL 21B

An experimental parametric study of rich-lean two-stage combustion in a flame tube is described and approaches for minimizing the conversion of fuel-bound nitrogen to nitrogen oxides in a premixed, homogeneous combustion system are evaluated. Air at 672 K and 0.48 MPa was premixed with fuel blends of propane, toluene, and pyridine at primary equivalence ratios ranging from 0.5 to 2.0 and secondary equivalence ratios of 0.5 to 0.7. Distillates of SRC-II, a coal syncrude, were also tested. The blended fuels were proportioned to vary fuel hydrogen composition from 9.0 to 18.3 weight percent and fuel nitrogen composition from zero to 1.5 weight percent. Rich-lean combustion proved effective in reducing fuel nitrogen to NO sub x conversion; conversion rates up to 10 times lower than those normally produced by single-stage combustion were achieved. The optimum primary equivalence ratio, where the least NO sub x was produced and combustion efficiency was acceptable, shifted between 1.4 and 1.7 with changes in fuel nitrogen content and fuel hydrogen content. Increasing levels of fuel nitrogen content lowered the conversion rate, but not enough to avoid higher NO sub x emissions as fuel nitrogen increased. M.G.

EFFECT OF A HEATED ATMOSPHERE ON THE TEMPERATURE DEPENDENCE OF THE TOTAL EMITTANCE OF BLACK CHROME SOLAR ABSORBER PIPES M.S. Thesis
Thomas Alexander Reitter Oct. 1979 79 p refs
(Contract W-7405-eng-48)
(UCRL-52851) Avail: NTIS HC A05/MF A01

An apparatus for measuring the total hemispherical emittance of pipes of length suitable for in a prototype solar collector is reported. The apparatus was used to measure the total hemispherical emittance as a function of temperature of black chrome, nickel, and bare steel surfaces, before and after exposure to heated humid or dry air atmospheres. Exposure to a heated atmosphere lowered the emittance of the black chrome surfaces on the order of 20%. Similar exposure increased the emittance of the bare steel surface significantly, but had no effect on the nickel surface. It was hypothesized that the lowering of the black chrome emittance is due to the oxidation and subsequent outgassing of carbon contaminants on and in the black chrome layer. The actual causes may be a combination of this and other effects. However, due to the complexity of the black chrome layer it was not possible to explain the changes in the black chrome emittance in terms of changes in the coating. DOE

ANALYSIS OF A HEAT EXCHANGER-THERMOELECTRIC GENERATOR SYSTEM
Jon Henderson 1979 7 p refs Presented at the 14th Intersoc. Energy Conversion Engineering Conference, Boston, 5-10 Aug. 1979
(Contract EG-77-C-01-4042)
(SERI/TP-35-253; CONF-790803-56) Avail: NTIS HC A02/MF A01

Analysis of a thermoelectric generator (TEG) in an ocean thermal energy conversion (OTEC) application is presented. An analytic model was developed for describing the heat exchanger-TEG interactions. This model was used to illustrate limitations of applying conventional fixed junction temperature assumptions to systems experiencing significant temperature drops across the heat exchanger surfaces. Design methods were developed for determining the thermoelectric element geometry that produces maximum output power. Results show that a heat exchanger-TEG system may deliver about 100 W/sq m of heat exchanger surface. This compares favorably with conventional OTEC schemes. DOE

N80-21849# Brookhaven National Lab., Upton, N. Y.
USE OF EARTH COUPLING IN SOLAR ASSISTED HEAT PUMPS
P. D. Metz, E. A. Kush, and J. N. Andrews 1979 11 p refs Presented at a Nordic Symp. on Earth Heat Pump Systems, Goteborg, Sweden, 15-16 Oct. 1979
(Contract EY-76-C-02-0016)
(BNL-26748; CONF-791119-1) Avail: NTIS HC A02/MF A01

The use of thermal coupling between the earth and the storage element of a solar source heat pump system was investigated. Four buried tanks and five configurations of serpentine plastic pipe with various control strategies were studied. System heating and cooling performance, detailed earth temperature profiles, and soil thermal properties were measured. Experimental results were used to validate heat flow models. The integration of ground coupling with solar heat pump systems is explained, the tank and pipe field configurations are described, and the heat flow model development is outlined. The experimental results, are reported and are compared to model predictions. DOE

ECONOMIC ANALYSIS OF SOLAR INDUSTRIAL PROCESS HEAT SYSTEMS. A METHODOLOGY TO DETERMINE ANNUAL REQUIRED REVENUE AND INTERNAL RATE OF RETURN
W. C. Dickinson and K. C. Brown 17 Aug. 1979 46 p refs
(Contract W-7405-eng-48)
(UCRL-52814) Avail: NTIS HC A03/MF A01

To permit an economic evaluation of solar industrial process heat systems, a methodology to determine the annual required revenue and the internal rate of return was developed. First, a format is provided to estimate the solar system's installed cost, annual operating and maintenance expenses, and net annual solar energy delivered to the industrial process. Then an expression is presented that gives the annual required revenue and the price of solar energy. The economic attractiveness of the potential solar investment can be determined by comparing the price of solar energy with the price of fossil fuel, both expressed in levelized terms. DOE

REVIEW OF SELECTED ON-SITE DOE SMALL SOLAR THERMAL POWER PLANT EXPERIMENTS
Robert L. Alvis 1979 12 p ref Presented at the Fourth Annual National Conf. on Technology for Energy, Albuquerque, N. Mex., 30 Oct. 1979
(Contract EY-76-C-04-0789)
(SAND-79-1040C; CONF-791052-1) Avail: NTIS HC A02/MF A01

Three solar power plants are reviewed that were developed in an effort to find an alternate energy source for powering irrigation pumps. Power generation by the conversion of solar energy is shown to be technically feasible in the construction and operation of these three solar thermal power systems. The thermal cycling inherent in solar energy is shown to be more stressful on the system components and requires special design attention to obtain satisfactory performance. The economic benefit of these one-of-a-kind systems are not competitive with the conventional power systems. However, predictions for similar systems in large production indicate that power could be generated for approximately 5 cents/kWh in the Southwest. Recent increases in conventional energy costs, and continuing component development, are combining to make solar power systems a potential near-term reality. DOE

ANALYTIC PROCEDURES FOR URBAN TRANSPORTATION ENERGY CONSERVATION. VOLUME 1: SUMMARY OF FINDINGS AND METHODOLOGIES Final Report
J. H. Suhrbier and W. D. Byrne Apr. 1979 40 p refs
(Contract EM-76-C-01-8628)
(Cons-8626-T1-Vol-1) Avail: NTIS HC A03/MF A01

Analytical methodologies are described and illustrated for use by metropolitan planning organizations and other state and local transportation agencies in analyzing the energy conservation potential of candidate urban transportation measures. Quantitative methodologies oriented to carpooling, vanpooling, transit, pricing, traffic regulation and control, and auto ownership are provided based on the use of disaggregate behavioral travel demand models. Changes are indicated in trip frequency and distribution as well as in travel model, operating conditions, and vehicle miles of travel. Trip-based estimates of fuel consumption and vehicle emissions are included. Application of the developed methodologies was performed in cooperation with metropolitan planning organizations representing the Dallas-Fort Worth, San Francisco, and Denver urban areas. DOE

ARE THE ALTERNATIVE ENERGY STATEGIES ACHIEVABLE?
Alvin M. Weinberg Sep. 1979 29 p refs
(Contract EY-76-C-05-0033)
(ORAU/IEA-79-15(0)) Avail: NTIS HC A03/MF A01

The constraints on penetration of energy technologies (time and information, net energy, and capital cost) are discussed. Related to the energy/time exchange is the economic cost of intermittency of energy supply. Renewable energy sources, particularly solar sources, are characteristically intermittent. To eliminate intermittency imposes a cost that must be considered in planning energy futures based on renewable sources. The article concludes that alternative energy strategies are achievable if they are subsidized by the government in the form of support for research, development and demonstration projects. R.E.S.

Data are presented for air depolarized cathode performance in caustic half cells and hydrogen depolarization of anodes for the electrowinning of zinc. Investigation with air depolarized Pt cathodes in caustic half cells include: progress of the one year old RA19 type air diffusion cathode; data involving incorporation of a Hg/HgO reference electrode into the standard hardware; studies investigating cathode loading vs. cell performance; continued evaluation of thin, porous, conducting substrates; and cathode performance as a function of electrolyte concentration. In the area of zinc electrowinning, short term tests (4 hours) with pure hydrogen feeds were carried out under various cell operating conditions. In addition, tests with CO-containing hydrogen were initiated utilizing different levels of carbon monoxide poison. A preliminary economic evaluation for electric energy savings versus hydrogen costs is presented. DOE

PERFORMANCE OF A SOLAR ENERGY-ASSISTED HEAT PUMP HEATING SYSTEM: ANALYSIS AND CORRELATION OF FIELD-COLLECTED DATA M.S. Thesis
Ronald Craig Williams Aug. 1979 219 p refs
(Contract EY-76-S-02-2704)
(COO-2704-T1) Avail: NTIS HC A10/MF A01

An analysis of building energy usage and thermal load for the Solar Building during the winter heating seasons of 1974-75 and 1975-76 is reported. The one-story office building is located in Albuquerque, New Mexico. Its mechanical heating and cooling equipment is categorized as a solar-assisted heat pump system consisting of solar collectors, water thermal storage, a water to water heat pump and five smaller water-to-air heat pump packaged units. Building energy usage examined with emphasis on the time of day energy was consumed and the source from which the energy was obtained. The rate of electrical energy consumption was found to be very dependent on building use. High rates of electrical energy usage during occupied periods required cooling during parts of even the coldest days. Mechanical equipment heating was found to vary as a function of building usage as well as a function of the indoor-outdoor temperature differential.

SOLAR POND FOR INDUSTRIAL PROCESS HEAT
K. C. Brown, M. Edesess, and T. S. Jayadev Oct. 1979 7 p refs Presented at the Solar Ind. Process Heat Conf., Oakland, Calif., 31 Oct. - 2 Nov. 1979
(Contract EG-77-C-01-4042)
(SERI/TD-351-460; CONF-791024-11) Avail: NTIS HC A02/MF A01

Solar ponds offer perhaps the simplest technique for conversion of solar energy to thermal energy, which can be used for industrial process heat. It is unique in its capability in acting both as collector and storage. Further, the cost of solar pond per unit area is less than any active collectors available today. Combination of these economic and technical factors make solar ponds attractive as a fuel saver in industrial process heat (IPH) applications. Detailed calculations are given for solar ponds in two specific applications: providing hot water for aluminum can washing in a manufacturing plant and hot water for washing in a large commercial laundry. With the help of computer codes, it is shown that solar ponds are far more cost effective than any other solar IPH technology for these applications. DOE

LOW COST PERFORMANCE EVALUATION OF PASSIVE SOLAR BUILDINGS
Larry S. Palmiter, L. Blair Hamilton, and Michael J. Holtz Oct. 1979 60 p refs
(Contract EG-77-C-01-4042)
(SERI/RR-63-223) Avail: NTIS HC A04/MF A01

An approach to low cost instrumentation and performance evaluation of passive solar heated buildings is presented. Beginning with a statement of the need for a low cost approach, a minimum list of measured quantities necessary to compute a set of recommended performance factors is developed. Conflicts and confusion surrounding the definition of various performance factors are discussed and suggestions are made for dealing with this situation. Available instrumentation and data processing equipment is presented. The recommended system would monitor approximately ten variables and compute numerous performance factors on site at a projected system cost of less than $3,000 per installation.

STUDY ON EUROPEAN ASPECTS OF SOLAR POWER SATELLITES, VOLUME 1 Final Report
J. Ruth and W. Westphal Jun. 1979 137 p refs
(Contract ESA-3705/78-F-DK(SC))
(ESA-CR(P)-1266) Avail: NTIS HC A07/MF A01

A study on implications of the potential electricity supply for Western Europe by Solar Power Satellites (SPS) and of their implementation problems around the turn of the century is presented. Three objectives in this scope have been pursued to provide a decision platform for on-going study and research activities: (1) to establish an information base including relevant data collection and basic SPS-systems understanding; (2) to identify and preliminary assess specific European problems of SPS utilization; and (3) to accomplish recommendations for early study activities of particular European concern. The last item is directly derived from the evaluations of the second study objective and must be seen in the context with SPS activities of the USA. It is concluded that the special European environment calls for special European utilization feasibility analyses, while the principal technical feasibility of a SPS-system should be taken over from U.S. studies. Moreover, if the USA stops its activities, an implementation of a SPS-system for Western Europe would be impractical in the considered time frame (2000-2030).

TORSIONAL OSCILLATIONS OF THE ROTOR DISC FOR HORIZONTAL AXIS WIND TURBINES WITH HINGED OR TEETERED BLADES, PART 12
Lennart S. Hultgren (MIT) 23 Aug. 1979 39 p refs
(Contract SWEDBESD-5061.012)
(FFA-TN-AU-1499-PT-12) Avail: NTIS HC A03/MF A01

The coupling of torsional oscillations of the rotor disc and the blade motions was analyzed for horizontal axis wind turbine hinged or teetered blades. The blades and the tower were assumed to be perfectly rigid. The vibrational analysis was linear and the antisymmetric blade flapping motion was found be decoupled. Expressions for the eigenfrequencies of the system were obtained. Analytical solutions were constructed for forced vibrations due to gravity, wind shear and tower shadow. Large resonant torsional responses were found to be possible. Numerical examples are presented.

HYDROPOWER, AN ENERGY SOURCE WHOSE TIME HAS COME AGAIN
11 Jan. 1980 96 p
(PB80-127715; EMD-80-30) Avail: NTIS HC A05/MF A01 CSCL 10B

Recent price increases in imported oil demonstrate the urgency for the U.S. to rapidly develop its renewable resources. One such renewable resource for which technology is available now is hydropower. Studies indicate that hydropower potential, particularly at existing dam sites, can save the county hundreds of thousands of barrels of oil per day. But problems and constraints-economic, environmental, institutional, and operational-limit is full potential. Federal programs have had little impact on helping to bring hydro projects on line. Specifically, the Department of Energy's Small Hydro Program could do more to overcome hydro constraints and problems through an effective outreach program and more emphasis on demonstration projects. FLYWHEEL ENERGY STORAGE SWITCHER. VOLUME 1: STUDY SUMMARY AND DETAILED DESCRIPTION OF ANALYSIS Final Report, Sep. 1977 - Jan. 1979
L. M. Cook, W. T. Curran, R. McConnell, and A. K. Smith Apr. 1979 442 p refs
(Contract DOT-FR-777-4247-1)
(PB80-121478; FRA/ORD-79/20.1-Vol-1; AiResearch-79-15651-1) Avail: NTIS HC A19/MF A01 CSCL 13F

The application of flywheel energy storage to the railroad switchyard locomotive was studied to determine the practicality and viability of such a system. The system, as originally conceived, required the use of separately excited traction motors and a major task of the study was to test separately excited version of the Electro-Motive Division's D77 traction motor. The attractiveness of the system is very dependent on the operational scenario of the switching locomotive. The operation of locomotives at three flatyards were studied, Dillard (Southern Railway System), Baldwin (Seaboard Coast Line), and Whitefish (Burlington Northern). Also, a large amount of data concerning the operation environment of switching locomotives was collected. It is concluded that a boxcar was required to carry the energy storage unit because no room existed on the locomotive. This, combined with the increased auxiliary load, results in the same energy consumption with or without the FESS system, for a typical flatyard operation in spite of the energy recuperated and reused. Brake maintenance savings, although significant, are not sufficient to give an attractive return on investment. GRA

POLLUTION CONTROL PRACTICES, FUEL CONVERSION AND ITS ENVIRONMENTAL EFFECTS
H. Gold (Water Purification Associates, Cambridge, Mass.), J. A. Nardella (DOE, Germantown, Md.), and C. A. Vogel Aug. 1979 9 p refs Repr. from Chem. Engineering Progr., v. 75, no. 8, Aug. 1979 p 58-64 Presented at AICHE, Miami Beach, Fla. Nov. 1978
(PB80-119704; EPA-600/J-79-032) Avail: NTIS HC A02/MF A01 CSCL 13B

Water-related effects that could be expected from siting specific conversion plants at given locations in the major coal and oil shale bearing regions of the U.S. were investigated. The synthetic fuel technologies examined include: coal gasification to convert coal to pipeline gas; coal liquefaction to convert coal to low-sulfur fuel oil; coal refining to produce a de-ashed, low-sulfur solvent-refined (clean) coal; and oil shale retorting to produce synthetic crude. The results presented include the range of water requirements, the conditions for narrowing the range and optimizing the use of water, the ranges of residual solid wastes, and the cost and energy requirements for wastewater treatment. OVERVIEW OF POLLUTION FROM COMBUSTION OF FOSSIL FUELS IN BOILERS OF THE UNITED STATES Final Report, Jan. - Jun. 1979
P. W. Spaite and T. W. Devitt Oct. 1979 69 p refs
(Contract EPA-68-02-2603)
(PB80-124969; EPA-600/7-79-233) Avail: NTIS HC A04/MF A01 CSCL 13B

The fossil-fuel-fired boiler population of the U.S. are described. Data is given on the number and capacity of boilers for categories most relevant to producing pollution. Information presented includes: type of fuel burned (coal, residual oil, distillate oil, natural gas); usage sector (utility, industrial, commercial); size category (less than 25 million Btu/hr, 25-250 million Btu/hr, greater than 250 million Btu/hr); and heat transfer configuration (water tube, fire tube, cast iron). Fuel consumption data are presented for each type of fuel burned in each usage sector. These data are used to estimate the amount of sulfur oxide, nitrogen oxide, and particular air emissions produced by boiler operation. Other air pollutants are discussed qualitatively. Solid waste and water pollution from boiler operation is discussed generally. GRA

ESTIMATION OF WIND CHARACTERISTICS AT POTENTIAL WIND ENERGY CONVERSION SITES

Oct. 1979 149 p refs Prepared for Battelle Pacific Northwest Lab., Sequim, Wash.
(Contract EY-76-C-06-1830)
(PNL-3074) Avail: NTIS HC A07/MF A01

The development and application of a method for determining wind characteristics at candidate wind energy conversion sites where no available historical data exists are described. The method uses a mass consistent wind flow model (COMPLEX) to interpolate between stations where wind data are available. The COMPLEX model incorporates the effects of terrain features and airflow. The procedure requires acquisition and merger of wind data from three to five stations, application of COMPLEX to each of the seven to eleven eigenvectors, reconstruction of the hourly interpolated winds at the site from the eigenvector solutions, and estimating the wind characteristics from the simulated hourly values. Possible improvements to the procedure are discussed.

POTENTIALITIES OF TEC TOPPING: A SIMPLIFIED VIEW OF PARAMETRIC EFFECTS

James F. Morris 1980 21 p refs Presented at Intern. Conf. on Plasma Sci., Madison, Wisc., 19-21 May 1980; sponsored by IEEE
(Contract EC-77-A-31-1062)
(NASA-TM-81468; DOE/NASA/1062-80/5; E-399) Avail: NTIS HC A02/MF A01 CSCL 10A

An examination of the benefits of thermionic-energy-conversion (TEC)-topped power plants and methods of increasing conversion efficiency are discussed. Reductions in the cost of TEC modules yield direct decreases in the cost of electricity (COE) from TEC-topped central station power plants. Simplified COE, overall-efficiency charts presented illustrate this trend. Additional capital-cost diminution results from designing more compact furnaces with considerably increased heat transfer rates allowable and desirable for high temperature TEC and heat pipes. Such improvements can evolve of the protection from hot corrosion and slag as well as the thermal expansion compatibilities offered by silicon-carbide clads on TEC-heating surfaces. Greater efficiencies and far fewer modules are possible with high-temperature, high-power-density TEC: This decreases capital and fuel costs much more and substantially increases electric power outputs for fixed fuel inputs. In addition to more electricity, less pollution, and lower costs, TEC topping used directly in coal-combustion products contributes balance-of-payment gains. M.G.

[NASA-TM-78250] 26 p0274 N80-17014
Overview of NASA battery technology program
26 p0302 N80-20821
AEROSOLS
Aerosols and solar energy
[SERI/TP-36-309] 26 p0278 N80-17573
AEROSPACE ENGINEERING
The 1979 Goddard Space Flight Center Battery Workshop
[NASA-CP-2117] 26 p0302 N80-20820
AEROSPACE INDUSTRY
New standards in research and development
26 p0208 A80-23317
AEROSPACE TECHNOLOGY TRANSFER
Space benefits: The secondary application of aerospace technology in other sectors of the economy
[NASA-CR-162697] 26 p0274 N80-16950
NASA authorization, 1981, program review, volume 1
[GPO-53-814] 26 p0281 N80-17913

Aerospace technology review for LBL window/passive solar program
[LBL-9608] 26 p0316 N80-21850

AGING (MATERIALS)
Stability studies of coal liquids
[PEIC/TR-79/5] 26 p0257 N80-16129

AGRICULTURE
Estimation of primary production of vegetation in agricultural and forested areas using Landsat data
26 p0191 A80-22456
Wind turbines for irrigation pumping
[AIAA 80-0639] 26 p0239 A80-28822
Technical and economic feasibility of wind-powered systems for dairy farms
[AIAA 80-0641] 26 p0239 A80-28823
Solar energy for agriculture: Review of research
[PB-298688/3] 26 p0271 N80-16568

AIR CONDITIONING
Solar heating and air conditioning
26 p0209 A80-23516
Energy efficient buildings program
[LBL-9576] 26 p0304 N80-20877

AIR COOLING
Addition of an air-cooled collector test capability to the solar collector test facility
[PB-300482/7] 26 p0270 N80-16562

AIR LAND INTERACTIONS
Wind characteristics over complex terrain relative to WECS siting --- Wind Energy Conversion System
[AIAA 80-0645] 26 p0239 A80-28825

AIR POLLUTION
Hydrogen fuel in air transportation and its effects around airports
26 p0204 A80-23179
Health benefits derived from a planned hydrogen community
26 p0205 A80-23193
Power plant impacts on visibility in the west - Siting and emissions control implications
26 p0216 A80-24735
Mercury partitioning in a power plant plume and its influence on atmospheric removal mechanisms
26 p0223 A80-25170
Combined flue gas desulfurization and water treatment in coal-fired power plants
26 p0225 A80-25690
Organic content of particulate matter in turbine engine exhaust
26 p0229 A80-27099
An economic analysis of air pollution from coal-fired power plants
26 p0230 A80-27649
Trends in the construction of Otto engines in the U.S
26 p0235 A80-28472
Proceedings: Symposium on coal cleaning to achieve energy and environmental goals held at Hollywood, Florida on September 1978, volume 2
[PB-299384/8] 26 p0259 N80-16193
Environmental development plan: Underground coal gasification
[DOE/EDP-0047] 26 p0260 N80-16411
Status of pollutant removal technology for coal fired plants in the northeastern U.S.
[BNL-51004] 26 p0272 N80-16580
Remote sensing of sulfur dioxide effects on vegetation - photometric analysis of aerial photographs
[PB-300460/3] 26 p0272 N80-16600
Environmental assessment of stationary source NOx control technologies
[PB-300469/4] 26 p0272 N80-16601
A review of standards of performance for new stationary sources: Petroleum refineries
[PB-300480/1] 26 p0272 N80-16602
Analysis of thermal decomposition products of flue gas conditioning agents
[PB80-111818] 26 p0297 N80-19672
How to burn coal efficiently and economically, and meet air pollution requirements: The fluidized-bed combustion process
[PB80-107501] 26 p0308 N80-20911
Control technologies for particulate and tar emissions from coal converters
[PB80-108392] 26 p0310 N80-20949
Overview of pollution from combustion of fossil fuels in boilers of the United States
[PB80-124969] 26 p0320 N80-21912

AIR QUALITY
Adequacy analysis of air quality monitoring activities relevant to California thermal enhanced oil recovery fields
[SAN-12093-1] 26 p0309 N80-20929

AIR TRANSPORTATION
Hydrogen fuel in air transportation and its effects around airports
26 p0204 A80-23179
Air transport and travel in 2000 - Future requirements
26 p0234 A80-28427
The energy problem - Its effect on aircraft design. II - The effects of fuel cost
26 p0254 A80-32201
Safety of liquid hydrogen in air transportation
[LA-UR-79-1416] 26 p0259 N80-16236
The role of technology as air transportation faces the fuel situation
[NASA-TM-81793] 26 p0297 N80-20260

AIR WATER INTERACTIONS
OCEANS '79; Proceedings of the Fifth Annual Combined Conference, San Diego, Calif., September 17-19, 1979
26 p0232 A80-28251

AIRCRAFT CONFIGURATIONS
The potential for development of high performance light aircraft
26 p0208 A80-23307
Future large cargo aircraft technology
26 p0229 A80-27269

AIRCRAFT DESIGN
Short haul transport for the 1990s
26 p0190 A80-22046
Airborne spacecraft - A remotely powered, high-altitude RPV for environmental applications
26 p0228 A80-26820
The energy problem: Its effect on aircraft design. I - Supply and demand
26 p0231 A80-27752
The energy problem - Its effect on aircraft design. II - The effects of fuel cost
26 p0254 A80-32201

AIRCRAFT ENGINES
Power units for mini RPV's
26 p0246 A80-29662

AIRCRAFT FUEL SYSTEMS
Durability of foam insulation for LH2 fuel tanks of future subsonic transports
26 p0191 A80-22687

AIRCRAFT FUELS
Hydrogen fuel in air transportation and its effects around airports
26 p0204 A80-23179
A plan for active development of LH2 for use in aircraft
26 p0206 A80-23204
The energy problem: Its effect on aircraft design. I - Supply and demand
26 p0231 A80-27752
The energy problem - Its effect on aircraft design. II - The effects of fuel cost
26 p0254 A80-32201
Initial characterization of an Experimental Referee Broadened-Specification (ERBS) aviation turbine fuel
[NASA-TM-81440] 26 p0283 N80-18205
The role of technology as air transportation faces the fuel situation
[NASA-TM-81793] 26 p0297 N80-20260

AIRCRAFT SPECIFICATIONS
The potential for development of high performance light aircraft
26 p0208 A80-23307

AIRFOIL PROFILES
Model wind rotors in wind tunnels - Performance and the effect of Reynolds number
[AIAA 80-0623] 26 p0238 A80-28815
Wind-turbine power improvement with modern airfoil sections and multiple-speed generators
[AIAA 80-0633] 26 p0239 A80-28819

AIRFOILS
New approaches to sailing
26 p0228 A80-26344
Experiments on an oscillating aerofoil and applications to wind energy converters
[AIAA 80-0624] 26 p0238 A80-28816

AIRFRAME MATERIALS
Short haul transport for the 1990s
26 p0190 A80-22046
AIRLINE OPERATIONS
Air transport and travel in 2000 - Future requirements
26 p0234 A80-28427
AIRPORTS
Hydrogen fuel in air transportation and its effects around airports
26 p0204 A80-23179
AIRSHIPS
New approaches to sailing
26 p0228 A80-26344
ALABAMA
Remote sensing of sulfur dioxide effects on vegetation - photometric analysis of aerial photographs
[PB-300460/3] 26 p0272 N80-16600
Solar heating and hot water system installed at the Senior Citizen Center, Huntsville, Alabama
[NASA-CR-161384] 26 p0315 N80-21835
ALCOHOLS
Alcohol fuels. Citations from the American petroleum institute data base --- a bibliography with abstracts
[NTIS/PS-79/0911/2] 26 p0259 N80-16195
Experimental alcohol fuel plants
[ATP-P-5000-2] 26 p0283 N80-18203
Alcohol fuels information directory
[ATP-P-5000-3] 26 p0283 N80-18204
Physical properties of gasoline/alcohol blends
[BERC/RI-79/4] 26 p0288 N80-19296
ALKALIES
Improvements in electrolysis technology in alkaline solution --- for hydrogen production
26 p0196 A80-23112
The use of porous metallic diaphragm for hydrogen mass-production with alkaline water electrolysis
26 p0196 A80-23113
Testing aqueous caustic electrolyzers at high temperatures --- for hydrogen production
26 p0205 A80-23196
ALKALINE BATTERIES
Prospects for an alkaline hydrogen air fuel cell system
26 p0204 A80-23182
The dual-mode bus and further bus developments in France
26 p0235 A80-28431
Flexible formulated plastic separators for alkaline batteries
[NASA-CASE-LEW-12363-4] 26 p0285 N80-18555
Flexible formulated plastic separators for alkaline batteries
[NASA-CASE-LEW-12363-3] 26 p0285 N80-18556
ALKANES
Alkanes obtained by thermal conversion of Green River oil-shale kerogen using CO and H_2O at elevated pressure
26 p0226 A80-25888
ALLOCATIONS
Urban activity allocation under criteria of transportation energy efficiency
26 p0192 A80-22788
ALPHA PARTICLES
Anomalous diffusion of alpha particles in a tokamak reactor due to the trapped-ion mode
26 p0224 A80-25482
ALPS MOUNTAINS (EUROPE)
Use of solar energy for the production of electricity in the Alps
[SAND-79-6000] 26 p0265 N80-16499
ALUMINUM
The influence of Al on the hydrogen sorption properties of intermetallic compounds
26 p0203 A80-23173
Condensation of aluminum when used as a fuel additive in MHD power generation
26 p0242 A80-28859
Resource and energy constraints of regional and global availability of aluminum copper, and iron 1975 - 2000: A computer study
26 p0301 N80-20720
ALUMINUM GALLIUM ARSENIDES
Grown junction GaAs solar cells with a thin graded band-gap Al/x/Ga/1-x/As surface layer
26 p0250 A80-30668
ALUMINUM OXIDES
Nickel pigmented anodic aluminum oxide for selective absorption of solar energy
26 p0209 A80-23499
Condensation of aluminum when used as a fuel additive in MHD power generation
26 p0242 A80-28859
AMMETERS
Life test results of the NASA standard 20 ampere hour cells
26 p0303 N80-20846
AMMONIA
Small scale ammonia production as a means for hydrogen storage
26 p0201 A80-23160
Nitrogen reducing solar cells
26 p0244 A80-29059
AMORPHOUS MATERIALS
Carrier generation, recombination, and transport in amorphous silicon solar cells
26 p0227 A80-26340
Thin film solar cells based on amorphous silicon
26 p0245 A80-29395
Electrochemistry of amorphous V_2S_5 in lithium cells
26 p0247 A80-29895
AMORPHOUS SEMICONDUCTORS
The temperature dependence of the characteristics of sputtered a-Si-H solar cells
26 p0187 A80-21920
The doping of amorphous silicon for solar cells
26 p0187 A80-21921
Photovoltaics. V - Amorphous silicon cells
26 p0214 A80-24535
Amorphous Si-F-H solar cells prepared by dc glow discharge
26 p0251 A80-30940
Field-dependent quantum efficiency in hydrogenated amorphous silicon --- for solar cells
26 p0251 A80-30942
The characteristics of high current amorphous silicon diodes
26 p0253 A80-31966
Black a-Si solar selective absorber surfaces
26 p0254 A80-32325
ANAEROBES
Energy from aquatic plant wastewater treatment systems
[NASA-TM-X-72733] 26 p0275 N80-17545
Production of methane using an anaerobic filter
[ANL-TRANS-1164] 26 p0300 N80-20428
ANALOG SIMULATION
Simulation studies of multiple large wind turbine generators on a utility network
26 p0263 N80-16480
ANEMOMETERS
Project windsheet - An interim report --- on wind measurement at sites in American Southwest
[AIAA 80-0647] 26 p0239 A80-28827
ANNUAL VARIATIONS
A performance and economic evaluation of annual cycle energy storage /ACES/
26 p0223 A80-25260
ANNULAR FLOW
Turbulent flows through annular spaces
26 p0250 A80-30614
ANODES
Thin film CdSe photoanodes for electrochemical photovoltaic cells
26 p0228 A80-26466
ANODIZING
Nickel pigmented anodic aluminum oxide for selective absorption of solar energy
26 p0209 A80-23499
ANTENNA DESIGN
Microwave power beaming for long range energy transfer
26 p0193 A80-22833
ANTIREFLECTION COATINGS
Antireflection coatings on solar cells
26 p0186 A80-21914
Alternative grading profile for sputtered solar selective surfaces
26 p0246 A80-29744
Preliminary study of a solar selective coating system using black cobalt oxide for high temperature solar collectors
[NASA-TM-81385] 26 p0282 N80-18156

AQUEOUS SOLUTIONS
Testing aqueous caustic electrolyzers at high temperatures --- for hydrogen production
26 p0205 A80-23196
Salinity gradient energy conversion
26 p0233 A80-28262
AQUIFERS
Physical, chemical and energy aspects of underground hydrogen storage
26 p0234 A80-28278
ARCHITECTURE
Systematic design assessment techniques for solar buildings
26 p0209 A80-23514
Thermography at the earth's surface and the energy efficiency of buildings
26 p0213 A80-24072
ARCHITECTURE (COMPUTERS)
Design considerations of a CAMAC system for large tokamak JT-60
26 p0231 A80-27672
ARCTIC REGIONS
Research on dynamics of tundra ecosystems and their potential response to energy resource development
[DOE/SF-01525/1] 26 p0294 N80-19642
ARID LANDS
Oils and rubber from arid land plants
26 p0253 A80-32055
ARSENIDES
Development of high efficiency, low cost ZnSiAs2 solar cells.
[DOE/ET-23001/T1] 26 p0278 N80-17572
ASHES
Coal combustion fly ash characterization - Adsorption of nitrogen and water
26 p0250 A80-30656
ASSESSMENTS
Report on the gas supply industry
[ERG-027] 26 p0286 N80-18579
ATMOSPHERIC CIRCULATION
Wind characteristics over complex terrain relative to WECS siting --- Wind Energy Conversion System
[AIAA 80-0645] 26 p0239 A80-28825
ATMOSPHERIC MODELS
Gust models for design and performance analyses of wind turbines
[AIAA 80-0644] 26 p0240 A80-28833
Aerosols and solar energy
[SERI/TP-36-309] 26 p0278 N80-17573
ATOMIC ENERGY LEVELS
Spin-aligned hydrogen --- atoms at lowest electronic energy magnetic sublevels as substance for molecular production
26 p0200 A80-23151
ATTITUDE (INCLINATION)
Lateral and tilt whirl modes of flexibly mounted flywheel systems
26 p0259 N80-16215
AUGMENTATION
Study of a vortex augmentor for a wind-powered turbine
26 p0227 A80-26002
AUTOMATED GUIDEWAY TRANSIT VEHICLES
AGT guideway and station technology. Volume 8: Weather protection concepts
[PB-299746/8] 26 p0274 N80-16974
AUTOMATIC CONTROL
Solar energy control system
[NASA-CASE-MFS-25287-1] 26 p0275 N80-17544
AUTOMOBILE ENGINES
Use of hydrogen as a fuel for automobile heat engines
26 p0185 A80-21880
Stirling engine design and feasibility for automotive use --- Book
26 p0234 A80-28425
A technical conception for highly developed spark-ignition engines
26 p0235 A80-28471
Trends in the construction of Otto engines in the U.S
26 p0235 A80-28472
The future of the Diesel engine - A critical analysis
26 p0235 A80-28473
Advanced engine concepts - The Ford Proco engine
26 p0235 A80-28474
Future prospects for use of the gas turbine for automobiles
26 p0236 A80-28485
A study on plasma plug --- high energy ignition plugs for exhaust pollution reduction and fuel consumption decrease in automotive gasoline engines
26 p0252 A80-31775
Gas turbines for automotive use --- Book
26 p0253 A80-31999
Engine combustion technology overview
[SAND-78-8801] 26 p0260 N80-16347
Performance sensitivity analysis of Department of Energy-Chrysler upgraded automotive gas turbine engine, S/N 5-4
[NASA-TM-79242] 26 p0274 N80-17467
Materials review for improved automotive gas turbine engine --- superalloys, refractory alloys, and ceramics
[NASA-CR-159673] 26 p0275 N80-17470
Laboratory investigation of the performance of a Holden engine operating on liquified petroleum gas
[AD-A076145] 26 p0284 N80-18411
Issues concerning the light-duty diesel
[DOE/EV-0050/1] 26 p0290 N80-19510
Effect of water injection and off scheduling of variable inlet guide vanes, gas generator speed and power turbine nozzle angle on the performance of an automotive gas turbine engine
[NASA-TM-81415] 26 p0298 N80-20272
Combustion and operating characteristics of spark-ignition engines
[NASA-CR-162896] 26 p0298 N80-20340
Supporting research and technology for automotive Stirling engine development
[NASA-TM-81495] 26 p0311 N80-21200
Fuel economy screening study of advanced automotive gas turbine engines
[NASA-TM-81433] 26 p0311 N80-21201
Parametric tests of a traction drive retrofitted to an automotive gas turbine
[NASA-TM-81457] 26 p0314 N80-21754
Exhaust characterization of neat alcohol fueled IC engines
[BETC/P-B-8-1943-1] 26 p0314 N80-21760
Advanced automotive propulsion systems: Incentive financing
[CONS-5181-1] 26 p0321 N80-22128
AUTOMOBILE FUELS
Development of high-temperature hydrides for vehicular applications
26 p0203 A80-23172
Technico-economic study of distributing hydrogen for automotive vehicles
26 p0207 A80-23206
Experience with alcohol fuels
26 p0236 A80-28476
Future prospects for use of the gas turbine for automobiles
26 p0236 A80-28485
Hydrogen as a fuel --- automobiles
[TT-7903] 26 p0283 N80-18212
Methanol as a transportation fuel: Assessment of environmental and health research
[UCRL-52697] 26 p0288 N80-19295
Physical properties of gasoline/alcohol blends
[BERC/RI-79/4] 26 p0288 N80-19296
AUTOMOBILES
Future trends in the automobile
26 p0234 A80-28426
International Symposium on Traffic and Transportation Technologies, Hamburg, West Germany, June 18-20, 1979, Proceedings. Volumes C1 & C2 - Motor vehicle and road traffic technologies
26 p0235 A80-28470
Marginal conditions in automobile construction and their implications on the design of upper-category vehicles
26 p0236 A80-28477
Possibilities and limits of the conception of an up-to-date compact vehicle for the nineties
26 p0236 A80-28481
The contribution of Volkswagenwerk AG to the automobile concept of the 90's
26 p0236 A80-28482

Implications of fuel-efficient vehicles on ride quality and passenger acceptance: Workshop proceedings
[NASA-CP-2096] 26 p0287 N80-18990
Hydrogen storage for automobiles
[BNL-26906] 26 p0305 N80-20886
Electric and hybrid vehicle program
[DOE/CS-0026/7] 26 p0311 N80-21204
Energy storage systems for automobile propulsion
[UCID-18320] 26 p0312 N80-21211

AXISYMMETRIC FLOW
Numerical solution of the flow near the rotor of a horizontal-axis wind turbine and comparisons with data
[AIAA 80-0608] 26 p0237 A80-28805

B

BACTERIA
Common properties of bacterial and visual rhodopsines - The conversion of optical energy into electric-potential difference
26 p0216 A80-25026

BARRIER LAYERS
The barrier height change and current transport phenomena with the presence of interfacial layer in MIS Schottky barrier solar cells
26 p0247 A80-29815

BEAM SWITCHING
Magnetooptical switch for synchronization of CO2 and red laser beams --- in laser fusion systems
26 p0236 A80-28735

BEAM WAVEGUIDES
Microwave power transmission beam safety system
[NASA-CASE-NPO-14224-1] 26 p0283 N80-18287

BEARINGLESS ROTORS
UTRC 8 kW wind turbine tests
[AIAA 80-0657] 26 p0240 A80-28831

BEDS (PROCESS ENGINEERING)
Thermal energy storage in a packed bed of iron spheres with liquid sodium coolant
26 p0183 A80-21109
Photochemical conversion of coal to gasoline in an entrained bed reactor
26 p0283 N80-18202
Photochemical conversion of coal to gasoline in an entrained bed reactor
[ORO-5020-T1] 26 p0299 N80-20415

Energy information data base
[DOE/TIC-4579-R10-SUPPL-6] 26 p0305 N80-20881
Wind energy information directory
[SERI/SP-69-290] 26 p0305 N80-20883
Solar water pumps. Citations from the Engineering Index data base
[PB80-802531] 26 p0308 N80-20910

BINARY ALLOYS
Use of binary titanium alloys for hydrogen storage
26 p0202 A80-23164
Cubic metal-alloys for hydrogen storage
26 p0202 A80-23165

BIOCHEMISTRY
Photolysis of water for H2 production with the use of biological and artificial catalysts
26 p0210 A80-23521

BIODEGRADATION
Energy from aquatic plant wastewater treatment systems
[NASA-TM-X-72733] 26 p0275 N80-17545
Production of methane using an anaerobic filter
[ANL-TRANS-1164] 26 p0300 N80-20428

BIOELECTRIC POTENTIAL
Common properties of bacterial and visual rhodopsines - The conversion of optical energy into electric-potential difference
26 p0216 A80-25026

BIOLOGICAL EFFECTS
Methanol as a transportation fuel: Assessment of environmental and health research
[UCRL-52697] 26 p0288 N80-19295

BIOMASS
Estimation of primary production of vegetation in agricultural and forested areas using Landsat data
26 p0191 A80-22456

BIOMASS ENERGY PRODUCTION

Studies in biogas technology. I - Performance of a convectional biogas plant
26 p0188 A80-21938

Studies in biogas technology. II - Optimization of plant dimensions
26 p0188 A80-21939

Studies in biogas technology. III - Thermal analysis of biogas plants
26 p0188 A80-21940

Studies in biogas technology. IV - A novel biogas plant incorporating a solar water-heater and solar still
26 p0188 A80-21941

Bio-solar hydrogen production
26 p0201 A80-23155

Energy from the biological conversion of solar energy
26 p0210 A80-23522

Microbial production of energy sources from biomass
26 p0210 A80-23523

Exotic energy R&D has potential --- ocean wave and windpower utilization
26 p0213 A80-24124

Soft-energy provision - A new Utopia --- present problems of solar and biomass energy conversion
26 p0227 A80-26169

Biogas - Fuel of the future
26 p0227 A80-26175

An integrated approach to energy supply for small communities
[AIAA 80-0651] 26 p0240 A80-28830

Petroleum plantations
26 p0243 A80-29052

The 'tandem photoelectrolysis plant' concept - A strategy for fuel production via biomass conversion wastes
26 p0243 A80-29054

Wood gasification in a fluidized bed
26 p0244 A80-29154

Photobiological production of hydrogen
26 p0247 A80-29920

Assessment of the technical and economic feasibility of converting wood residues to liquid and gaseous fuel products using state-of-the-art and advanced coal conversion technology
[COO-4862-3] 26 p0258 N80-16189

Decentralized energy: Technology assessment and systems description
[BNL-50987] 26 p0265 N80-16502

Soil fertility and soil loss constraints on crop residue removal for energy production
[SERI/RR-52-324] 26 p0266 N80-16511

Energy from aquatic plant wastewater treatment systems
[NASA-TM-X-72733] 26 p0275 N80-17545

Potential of biomass conversion in meeting the energy needs of the rural populations of developing countries: An overview
[BNL-26721] 26 p0288 N80-19294

Environmental and economic evaluations of energy recovery from agricultural and forestry residues
[ANL/EES/TM-58] 26 p0297 N80-19668

Survey of biomass gasification. Volume 1: Synopsis and executive summary
[SERI/TR-33-239-VOL-1] 26 p0300 N80-20427

Biomass energy systems: Environmental readiness document
[DOE/ERD-0021] 26 p0308 N80-20905

BIOSPHERE

A global biogeocenotical biosphere simulation
[NASA-TM-76042] 26 p0309 N80-20920

BIT SYNCHRONIZATION

Magnetooptical switch for synchronization of CO2 and red laser beams --- in laser fusion systems
26 p0236 A80-28735

BITUMENS

Surface-active materials from Athabasca oil sands
26 p0192 A80-22770

Thermal, mechanical, and physical properties of selected bituminous coals and cokes
[PB-300398/5] 26 p0273 N80-16932

BLACK BODY RADIATION

Nickel pigmented anodic aluminum oxide for selective absorption of solar energy
26 p0209 A80-23499

BLADE TIPS

Teetered, tip-controlled rotor - Preliminary test results from Mod-0 100-kW experimental wind turbine
[AIAA 80-0642] 26 p0241 A80-28836

BLANKETS (FUSION REACTORS)

Mirror hybrid reactors --- fusion-fission reactor design
26 p0215 A80-24670

BOILERS

Application of black-liquor boiler technology to MHD heat and seed recovery equipment design
26 p0217 A80-25070

First-principle component models for control system simulation of MHD-steam plants
26 p0220 A80-25095

Conceptual design of an MHD/steam power plant of pilot scale /ETF/ and preliminary analyses of early commercial MHD power plants
26 p0220 A80-25097

Coupled generator and combustor performance calculations for potential early commercial MHD power plants
26 p0220 A80-25099

The transition MHD power plant concept
26 p0221 A80-25104

Evaluation of a photochemical system for nitrogen oxides control --- coal fired boilers
26 p0287 N80-18583

BOUNDARY LAYER CONTROL

Future large cargo aircraft technology
26 p0229 A80-27269

BOUNDARY LAYER PLASMAS

Current transport mechanisms in the boundary regions of MHD generators
[AIAA PAPER 80-0249] 26 p0192 A80-22745

BOUNDARY VALUE PROBLEMS

Gradient bounds for plasma confinement
26 p0213 A80-24223

MHD electrical potentials - Uniqueness of solutions to an extended class of elliptic boundary value problems
26 p0254 A80-32318

BRINES

Energy by reverse electrodialysis
26 p0194 A80-22940

Pitting resistance of engineering materials in geothermal brines. I - Low salinity brine
26 p0249 A80-30474

BROMIDES

Br-Ca-Fe water-decomposition cycles for hydrogen production
26 p0199 A80-23135

BROMINE

The reaction of sulfur dioxide with water and a halogen - The cases of bromine and iodine
26 p0197 A80-23125

The oxidation of sulphur dioxide by bromine and water
26 p0245 A80-29407

BUILDINGS

Overview of developing programs in solar desiccant cooling for residential buildings
[SERI/TP-34-187] 26 p0278 N80-17569

BURNERS

Regenerative burner system for thermoelectric power sources --- military equipment
[AD-A075955] 26 p0276 N80-17553

BURNING RATE

Wall combustion in high-swirl combustors --- for coal-fired MHD generators
26 p0222 A80-25110

How to burn coal efficiently and economically, and meet air pollution requirements: The fluidized-bed combustion process
[PB80-107501] 26 p0308 N80-20911

C

CADMIUM SELENIDES

Thin film CdSe photoanodes for electrochemical photovoltaic cells
26 p0228 A80-26466

CADMIUM SULFIDES

Energy analysis of CdS:Cu2S sputtered solar cells
26 p0186 A80-21918

Thin solid solution films Zn/x/Cd/1-x/S
26 p0194 A80-23014

Preparation and photovoltaic properties of screen printed CdS/Cu/x/S solar cells
26 p0228 A80-27057

High photocurrent polycrystalline thin-film CdS/CuInSe2 solar cell
26 p0229 A80-27321

Cadmium sulfide solar cells, volume 1. Citations from the NTIS data base
[PB80-802218] 26 p0296 N80-19656

CADMIUM TELLURIDES

Comparison of Hg/0.6/Cd/0.4/Te LPE layer growth from Te-, Hg-, and HgTe-rich solutions
26 p0234 A80-28305

Properties of ion-implanted junctions in mercury-cadmium-telluride
26 p0234 A80-28307

CALCIUM

Br-Ca-Fe water-decomposition cycles for hydrogen production
26 p0199 A80-23135

CALIFORNIA

Petroleum production at maximum efficient rate, Naval Petroleum Reserve no. 1 (Elk Hills), Kern County, California
[DOE/EIS-0012] 26 p0272 N80-16581

Environmental system study on the development of fossil fuel resources in the Southwest
[PB-300526/1] 26 p0272 N80-16596

Regional systems development for geothermal energy resources. Pacific region: California and Hawaii. Task 1: Implementation plan development --- for the generation of electric power
[DOE/ET-28432/1] 26 p0290 N80-19604

Regional systems development for geothermal energy resources. Pacific region: California and Hawaii. Task 2: Regional program monitoring and progress evaluation --- for the generation of electric power
[DOE/ET-28432/2] 26 p0291 N80-19605

Regional systems development for geothermal energy resources. Pacific region: California and Hawaii. Task 3: Water resources evaluation --- for generation of electric power
[DOE/ET-28432/3-1] 26 p0291 N80-19606

Regional systems development for geothermal energy resources. Pacific region: (California and Hawaii). Task 3: Water resources evaluation, appendices --- for generation of electric power
[DOE/ET-28432/3-2] 26 p0291 N80-19607

Performance monitoring of a passive solar heated house, Stockton, California
[EPRI-ER-1177] 26 p0319 N80-21879

CANADA

Design characteristics of the 224 kW Magdalen Islands VAWT
26 p0261 N80-16463

CAPACITANCE

Analysis of losses in a high-frequency converter with low-cosine capacitance load
26 p0252 A80-31501

CAPACITORS

Energy storage --- Book
26 p0184 A80-21123

CARBIDES

Graded metal carbide solar selective surfaces coated onto glass tubes by a magnetron sputtering system
26 p0246 A80-29742

CARBON

Effect of coal particle size on the coal hydrogenation reaction - In relation to the plasticity of coal
26 p0192 A80-22768

Photogalvanovoltaic cells and photovoltaic cells using glassy carbon electrodes
26 p0243 A80-29057

Reaction kinetics between CO2 and oil-shale residual carbon. I - Effect of heating rate on reactivity
26 p0249 A80-30524

Reaction kinetics between CO2 and oil-shale residual carbon. II - Partial-pressure and catalytic-mineral effects
26 p0250 A80-30527

Reaction kinetics between steam and oil-shale residual carbon
26 p0250 A80-30528

CARBON DIOXIDE

Electrochemical gasification of coal - Simultaneous production of hydrogen and carbon dioxide by a single reaction involving coal, water, and electrons
26 p0244 A80-29152

The global carbon dioxide problem - Impacts of U.S. synthetic fuel- and coal-fired electricity generating plants
26 p0248 A80-29938

Reaction kinetics between CO2 and oil-shale residual carbon. I - Effect of heating rate on reactivity
26 p0249 A80-30524

Reaction kinetics between CO2 and oil-shale residual carbon. II - Partial-pressure and catalytic-mineral effects
26 p0250 A80-30527

CARBON DIOXIDE LASERS

Silicon ribbon growth using scanned lasers
26 p0229 A80-27337

Magnetooptical switch for synchronization of CO2 and red laser beams --- in laser fusion systems
26 p0236 A80-28735

Helios, a 20 TW CO2 laser fusion facility
26 p0245 A80-29370

CARBON FIBERS

Outgassing behavior of carbon-bonded carbon-fiber thermal insulation
[CONF-790625-8] 26 p0313 N80-21456

CARBON MONOXIDE

Alkanes obtained by thermal conversion of Green River oil-shale kerogen using CO and H2O at elevated pressure
26 p0226 A80-25888

Coal liquefaction with synthesis gas
[PETC/TR-79/1] 26 p0299 N80-20416

CARBON-CARBON COMPOSITES

Outgassing behavior of carbon-bonded carbon-fiber thermal insulation
[CONF-790625-8] 26 p0313 N80-21456

CARBONATES

Development of sulfur-tolerant components for the molten carbonate fuel cell
26 p0190 A80-22167

Mixed potential analysis of sulfation of molten carbonate fuel cells
26 p0255 A80-32501

Performance model for molten carbonate fuel cells
[TR-190] 26 p0305 N80-20884

Molten carbonate fuel cell program: EMF and temperature relaxation in LiKCO 3 tiles, transference cell measurements
[ORNL/TM-7003] 26 p0318 N80-21865

CARGO AIRCRAFT

Future large cargo aircraft technology
26 p0229 A80-27269

The changing horizons for technical progress. II
26 p0229 A80-27270

CASTING

Benefits of increased use of continuous casting by the United States steel industry
[PB80-104904] 26 p0314 N80-21612

CATALYSIS

Chemical studies on the general atomic sulfur-iodine thermochemical water-splitting cycle
26 p0197 A80-23122

Photoelectrochemical cells --- with photoactive semiconducting electrodes
26 p0210 A80-23520

Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[FE-2315-37] 26 p0298 N80-20407

CATALYSTS

Methanol and methyl fuel catalysts
[FE-3177-4] 26 p0288 N80-19302

Exploratory studies in catalytic coal liquefaction
[EPRI-AP-1184] 26 p0299 N80-20422

Catalyst characterization in coal liquefaction
[SAND-79-1969] 26 p0299 N80-20423

CATALYTIC ACTIVITY

Photolysis of water for H2 production with the use of biological and artificial catalysts
26 p0210 A80-23521

CATASTROPHE THEORY

Synergetics of the fission electric cells
26 p0193 A80-22789

CATHODES

Long duration channel development and testing --- for MHD generator electrode corrosion measurement 26 p0216 A80-25063

CELL CATHODES

Energy savings through use of an improved reduction cell cathode [SAN-1257-T2] 26 p0267 N80-16515

CENTRIFUGAL FORCE

Centrifugal fluidized combustion of coal [FE-2516-9] 26 p0288 N80-19293

CENTRIFUGING

Application of centrifugal separation to the production of hydrogen from coal 26 p0194 A80-22869

CERAMIC COATINGS

Alternative grading profile for sputtered solar selective surfaces 26 p0246 A80-29744

CERAMICS

Wettability and corrosion of MHD ceramics by Rosebud coal slag 26 p0217 A80-25074

Future prospects for use of the gas turbine for automobiles 26 p0236 A80-28485

Energy savings through use of an improved reduction cell cathode [SAN-1257-T2] 26 p0267 N80-16515

Materials review for improved automotive gas turbine engine --- superalloys, refractory alloys, and ceramics [NASA-CR-159673] 26 p0275 N80-17470

CERIUM

A study of the cerium-chlorine system for thermochemical production of hydrogen 26 p0198 A80-23134

CERIUM COMPOUNDS

Basic chemistry of a new cycle, based on reactions of Ce/III/ titanate, for splitting water 26 p0233 A80-28273

CESIUM VAPOR

Cesium vapor source with a gas-controlled heat pipe for thermionic energy converters 26 p0249 A80-30241

CHANNEL FLOW

Equivalent circuits for the channel of the magnetohydrodynamic generator 26 p0190 A80-22349

Current transport mechanisms in the boundary regions of MHD generators [AIAA PAPER 80-0249] 26 p0192 A80-22745

End effects with a slowly varying magnetic field in a MHD channel with segmented electrodes 26 p0193 A80-22793

The STD/MHD codes - Comparison of analyses with experiments --- MHD generator performance prediction and tests [AIAA PAPER 80-0024] 26 p0212 A80-23953

Design description and performance predictions for the first CDIF power train --- MHD generator combustor, power channel and diffusers 26 p0216 A80-25062

Long duration channel development and testing --- for MHD generator electrode corrosion measurement 26 p0216 A80-25063

Electrical characteristics of an arc-mode slagging electrode generator --- in Faraday MHD generators 26 p0216 A80-25064

Local analysis of electrical performance of the U-25B generator --- MHD generator 26 p0216 A80-25066

Control of liquid metal-gas two phase flow by application of axial magnetic field 26 p0218 A80-25083

Electrical nonuniformities in U-25 MHD channels 26 p0219 A80-25091

Fluctuations in MHD generators 26 p0221 A80-25106

End zone of a channel with segmented electrodes, carrying nonuniform flow --- current and potential fields in plasma 26 p0254 A80-32220

CHARGE CARRIERS

Carrier generation, recombination, and transport in amorphous silicon solar cells 26 p0227 A80-26340

CHARGE TRANSFER

Carrier generation, recombination, and transport in amorphous silicon solar cells 26 p0227 A80-26340

CHARGED PARTICLES

Electrical purifiers for dielectric fluids --- charged particle contaminants separation from fuels, oils and hydraulic fluids 26 p0254 A80-32287

CHECKOUT

Installation and checkout of the DOE/NASA Mod-1 2000-kW wind turbine generator [NASA-TM-81444] 26 p0292 N80-19614

CHEMICAL ANALYSIS

Trace and minor element analyses of coal liquefaction products [PETC/TR-79/3] 26 p0299 N80-20417

Assessment of low- to moderate-temperature geothermal resources of Nevada [NVO-01556-1] 26 p0301 N80-20792

CHEMICAL ATTACK

Pitting resistance of engineering materials in geothermal brines. I - Low salinity brine 26 p0249 A80-30474

CHEMICAL CLEANING

Proceedings: Symposium on coal cleaning to achieve energy and environmental goals held at Hollywood, Florida on September 1978, volume 2 [PB-299384/8] 26 p0259 N80-16193

CHEMICAL COMPOSITION

Initial characterization of an Experimental Referee Broadened-Specification (ERBS) aviation turbine fuel [NASA-TM-81440] 26 p0283 N80-18205

CHEMICAL EFFECTS

Mechanochemical effects on coal conversion. I - Coal hydrogenation in gaseous hydrogen aided by mechanical energy 26 p0249 A80-30521

CHEMICAL ENERGY

Storage of light energy by chemical systems - Comment on long-term efficiency of iterative cyclic reactions 26 p0184 A80-21116

Prospects of developing nuclear power plants with chemothermal accumulation of thermal energy 26 p0185 A80-21879

Non-electric fusion energy applications 26 p0215 A80-24676

Solar energy: Chemical conversion and storage --- Book 26 p0243 A80-29051

Possible direct conversion of chemical energy into electrical energy in a semiconductor 26 p0247 A80-29795

Electrolysis-based hydrogen storage systems overview and rationale of the Brookhaven National Laboratory managed program [BNL-26904] 26 p0296 N80-19654

CHEMICAL ENGINEERING

Studies in biogas technology. II - Optimization of plant dimensions 26 p0188 A80-21939

Studies in biogas technology. III - Thermal analysis of biogas plants 26 p0188 A80-21940

Mixing effects of different types of hydrides 26 p0202 A80-23166

Main requirements on the nuclear installations used for hydrogen production and in technological processes 26 p0205 A80-23195

Engineering impact on the validity of the Mark-16 thermochemical cycle --- hydrogen production restrictions and prospects 26 p0205 A80-23198

Open-loop thermochemical cycles for the production of hydrogen 26 p0233 A80-28274

Engineering impact on the validity of the Mark-16 thermochemical cycle 26 p0233 A80-28275

Proceedings: Symposium on coal cleaning to achieve energy and environmental goals held at Hollywood, Florida on September 1978, volume 1 [PB-299383/0] 26 p0259 N80-16192

Proceedings: Symposium on coal cleaning to achieve energy and environmental goals held at Hollywood, Florida on September 1978, volume 2
[PB-299384/8] 26 p0259 N80-16193

Mixing and gasification of coal in entraining flow systems
[FE-2666-T1] 26 p0289 N80-19303

CHEMICAL EQUILIBRIUM

A study of the cerium-chlorine system for thermochemical production of hydrogen
26 p0198 A80-23134

CHEMICAL REACTIONS

Development, design and operation of a continuous laboratory-scale plant for hydrogen production by the Mark-13 cycle
26 p0197 A80-23126

Energy balance calculations and assessment of two thermochemical sulfur cycles
26 p0198 A80-23131

Recent research on thermochemical hydrogen production at the Oak Ridge National Laboratory
26 p0198 A80-23132

Materials and performance characteristics of the HYCSOS chemical heat pump and energy conversion system
26 p0204 A80-23180

A method for the techno-economic evaluation of chemical processes - Improvements to the 'OPTIMO' code --- improved computer program for hydrogen production and nuclear reactor-chemical plant coupling processes
26 p0205 A80-23192

Alcohol fuels. Citations from the American petroleum institute data base --- a bibliography with abstracts
[NTIS/PS-79/0911/2] 26 p0259 N80-16195

The preparation of some novel electrolytes: Synthesis of partially fluorinated alkanesulfonic acids as potential fuel cell electrolytes
[AD-A078473] 26 p0286 N80-18570

Basic research in engineering: Fluid dynamics and thermal processes --- workshop
[FE-2468-54] 26 p0301 N80-20551

CHEMICAL REACTORS

Studies in biogas technology. I - Performance of a convectional biogas plant
26 p0188 A80-21938

Studies in biogas technology. II - Optimization of plant dimensions
26 p0188 A80-21939

Studies in biogas technology. III - Thermal analysis of biogas plants
26 p0188 A80-21940

Studies in biogas technology. IV - A novel biogas plant incorporating a solar water-heater and solar still
26 p0188 A80-21941

A speculation on a general photoelectrochemical reactor
26 p0193 A80-22794

Nuclear methane reforming for coal gasification
26 p0195 A80-23105

Flash hydropyrolysis of coal
[BNL-51010] 26 p0258 N80-16185

Environmental assessment of the HYGAS process. Volume 1: HYGAS environmental characterization, data synthesis, analysis, and interpretation, tests 37 - 64
[FE-2433-25-VOL-1] 26 p0289 N80-19305

Systems studies of coal conversion processes using a reference simulator
[FE-2275-11] 26 p0289 N80-19307

Synthesis gas demonstration plant program, phase 1
[FE-25770-6] 26 p0289 N80-19308

Liquid phase methanation/shift pilot plant operation and laboratory support work
[FE-2036-37] 26 p0298 N80-20413

Coal liquefaction test center
[FE-1517-78] 26 p0300 N80-20425

CHINA

Monitoring urban population and energy utilization patterns from satellite data
26 p0207 A80-23293

CHLORINE

Electrodes for generation of hydrogen and oxygen for seawater
26 p0196 A80-23115

A study of the cerium-chlorine system for thermochemical production of hydrogen
26 p0198 A80-23134

A high energy hybrid system: Hydrogen - chlorine - solar - water
26 p0206 A80-23199

Survey of potential chlorine production processes --- for energy efficiency
[ANL/OEPM-79-1] 26 p0257 N80-16131

CHLOROPLASTS

Attempts to produce hydrogen by coupling hydrogenase and chloroplast photosystems
26 p0201 A80-23156

CHROMATOGRAPHY

The application of chromatography and ancillary techniques to the characterization of shale oil/oil shale compound classes and of organometallics
26 p0282 N80-18125

CHROMIUM

Evaluation of high chromium overlays to protect less alloyed substrates from corrosion in a coal gasification atmosphere
[FE-2621-5] 26 p0313 N80-21520

Effect of a heated atmosphere on the temperature dependence of the total emittance of black chrome solar absorber pipes
[UCRL-52851] 26 p0316 N80-21842

Evaluation of selective absorbers
[TP-5461] 26 p0317 N80-21851

CHROMIUM COMPOUNDS

Catalyst surfaces for the chromous/chromic redox couple
[NASA-CASE-LEW-13148-2] 26 p0285 N80-18557

CHROMIUM OXIDES

Evaluation of selective absorbers
[TP-5461] 26 p0317 N80-21851

CIRCUIT BOARDS

Methods for manufacturing heat pipes for circuit cards
[AD-A080188] 26 p0314 N80-21707

CIRCUIT PROTECTION

Methods for manufacturing heat pipes for circuit cards
[AD-A080188] 26 p0314 N80-21707

CIRCULAR CYLINDERS

Submerged cylinder wave energy device - Theory and experiment
26 p0251 A80-30801

CIRCULAR TUBES

Turbulent flows through annular spaces
26 p0250 A80-30614

CLEAN ENERGY

Energy accounting of alternative energy sources
26 p0193 A80-22868

Geothermal energy and the environment - The global experience
26 p0223 A80-25259

Going with the wind
26 p0243 A80-29037

CLEAN FUELS

Fossil energy program
[ORNL-5487] 26 p0266 N80-16506

CLOCKS

The Exxon rechargeable cells --- solar rechargeable clocks
26 p0303 N80-20834

COAL

Proceedings: Symposium on coal cleaning to achieve energy and environmental goals held at Hollywood, Florida on September 1978, volume 1
[PB-299383/0] 26 p0259 N80-16192

Proceedings: Symposium on coal cleaning to achieve energy and environmental goals held at Hollywood, Florida on September 1978, volume 2
[PB-299384/8] 26 p0259 N80-16193

Thermal, mechanical, and physical properties of selected bituminous coals and cokes
[PB-300398/5] 26 p0273 N80-16932

Centrifugal fluidized combustion of coal
[FE-2516-9] 26 p0288 N80-19293

Cogeneration Technology Alternatives Study (CTAS). Volume 1: Summary
[NASA-TM-81400] 26 p0293 N80-19626

Analysis of thermal decomposition products of flue gas conditioning agents
[PB80-111818] 26 p0297 N80-19672

Experimental laboratory measurement of thermophysical properties of selected coal types
[NASA-CR-162913] 26 p0298 N80-20404
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[FE-2315-37] 26 p0298 N80-20407
Support studies in fluidized-bed combustion 1978 annual report
[PB80-112758] 26 p0300 N80-20430
Environmental development plan: Coal extraction and preparation
[DOE/EDP-0050] 26 p0309 N80-20921

COAL GASIFICATION
Application of centrifugal separation to the production of hydrogen from coal
26 p0194 A80-22869
Nuclear methane reforming for coal gasification
26 p0195 A80-23105
The economics of producing hydrogen from a small air-blown coal gasifier
26 p0199 A80-23140
Industrial scale production of hydrogen from natural gas, naphtha and coal
26 p0199 A80-23141
Main requirements on the nuclear installations used for hydrogen production and in technological processes
26 p0205 A80-23195
Material requirements for coal gasification
26 p0212 A80-23833
Control performance of an air-blown fixed bed coal gasification combined cycle plant in utility power systems application
26 p0213 A80-24256
Development of a slagging cyclone gasifier for MHD applications
26 p0222 A80-25113
Nuclear methane reforming for coal gasification
26 p0233 A80-28276
Electrochemical gasification of coal - Simultaneous production of hydrogen and carbon dioxide by a single reaction involving coal, water, and electrons
26 p0244 A80-29152
Mechanochemical effects on coal conversion. I - Coal hydrogenation in gaseous hydrogen aided by mechanical energy
26 p0249 A80-30521
Coal gasification in steam at very high temperatures
26 p0249 A80-30522
Electrochemical gasification of coal - Investigation of operating conditions and variables
26 p0249 A80-30526
Balancing the process of hydrating gasification of brown coal
26 p0250 A80-30597
An underground coal gasification experiment - Hoe Creek II
26 p0251 A80-31042
Coal processing and utilization
26 p0255 A80-32396
Heavy hydrocarbons from coal gasification vapor pressures and dew point
26 p0257 N80-16111
Coal gasification
[DOE/ET-0067/3] 26 p0258 N80-16184
Flash hydropyrolysis of coal
[BNL-51010] 26 p0258 N80-16185
Assessment of the technical and economic feasibility of converting wood residues to liquid and gaseous fuel products using state-of-the-art and advanced coal conversion technology
[COO-4862-3] 26 p0258 N80-16189
Development studies on selected conversion of synthesis gas from coal to high octane gasoline
[FE-2276-27] 26 p0259 N80-16190
Environmental development plan: Underground coal gasification
[DOE/EDP-0047] 26 p0260 N80-16411
Molecular thermodynamics of dew-point calculations in coal gasification processes
26 p0273 N80-16926
Combined cycle power generation. Citations from the NTIS data base --- bibliographies
[PB80-800915] 26 p0280 N80-17594
The chemistry of sulfur in char and the implications for hydrogasification/hydrodesulfurization
[FE-2449-9] 26 p0288 N80-19298
Coal processing fuel cell utilization. Task 8: H2S removal by calcium-based sorbents
[PSI-TR-167] 26 p0288 N80-19300
Mixing and gasification of coal in entraining flow systems
[FE-2666-T1] 26 p0289 N80-19303
Environmental assessment of the HYGAS process. Volume 1: HYGAS environmental characterization, data synthesis, analysis, and interpretation, tests 37 - 64
[FE-2433-25-VOL-1] 26 p0289 N80-19305
Development of a fast fluid bed gasifier, task 2 and 3
[FE-2361-40] 26 p0289 N80-19306
Systems studies of coal conversion processes using a reference simulator
[FE-2275-11] 26 p0289 N80-19307
Synthesis gas demonstration plant program, phase 1
[FE-25770-6] 26 p0289 N80-19308
Pollutants from synthetic fuels production: Sampling and analysis methods for coal gasification
[PB80-104656] 26 p0289 N80-19309
Application of coke plant control technologies to coal conversion
[PB80-108954] 26 p0290 N80-19310
Screening evaluation of electric power cycles integrated with coal gasification plants
[EPRI-AF-1160] 26 p0295 N80-19646
Liquid phase methanation/shift pilot plant operation and laboratory support work
[FE-2036-37] 26 p0298 N80-20413
Advanced development of a short-residence-time hydrogasifier
[FE-3125-5] 26 p0299 N80-20414
Chemical and physical stability of refractories for use in coal gasification
[COO-2904-14] 26 p0300 N80-20429
Coal-conversion technologies: Some health and environmental effects
[BNL-5103] 26 p0309 N80-20930
Control technologies for particulate and tar emissions from coal converters
[PB80-108392] 26 p0310 N80-20949
Hot gas cleanup process
[PB80-108467] 26 p0310 N80-20950
Evaluation of high chromium overlays to protect less alloyed substrates from corrosion in a coal gasification atmosphere
[FE-2621-5] 26 p0313 N80-21520
Advanced coal gasification system for electric power generation, FY 1978
[FE-1514-93] 26 p0313 N80-21554

COAL LIQUEFACTION
Solvolysis liquefaction of coal
26 p0187 A80-21926
Effect of coal particle size on the coal hydrogenation reaction - In relation to the plasticity of coal
26 p0192 A80-22768
Numerical modeling of heat flow in underground coal liquefaction
26 p0213 A80-24319
Combined ADI iteration and implicit central difference numerical method for solving nonlinear conjugated partial differential equations with moving boundary heat transfer in in-situ coal liquefaction
26 p0228 A80-26681
Application of liquefaction processes to low-rank coals
26 p0230 A80-27418
Performance of low rank coals in the Exxon Donor Solvent Process
26 p0230 A80-27419
Coal liquefaction processes --- Book
26 p0242 A80-28953
Mechanochemical effects on coal conversion. I - Coal hydrogenation in gaseous hydrogen aided by mechanical energy
26 p0249 A80-30521
Filtration in coal liquefaction - Influence of filtration conditions in non-hydrogenated systems
26 p0254 A80-32371

Filtration in coal liquefaction - Influence of digestion conditions in the filtration of non-hydrogenated coal digests
26 p0255 A80-32372
Coal processing and utilization
26 p0255 A80-32396
Stability studies of coal liquids
[PETC/TR-79/5] 26 p0257 N80-16129
Conceptual design of a coal-to-methanol-to-gasoline commercial plant: Executive summary
[FE-2416-43] 26 p0258 N80-16182
Coal liquefaction
[DOE/ET-0068/3] 26 p0258 N80-16183
Application of radiography to coal liquefaction
[SAND-79-1226C] 26 p0274 N80-17243
Effects of impurities in coal-derived liquids on accelerated hot corrosion of superalloys
[NASA-TM-81384] 26 p0283 N80-18157
Fluid coking of coal liquefaction residues: The fourth residue
[FE-2422-28] 26 p0289 N80-19304
Application of coke plant control technologies to coal conversion
[PB80-108954] 26 p0290 N80-19310
Engineering evaluation of control technology for H-Coal and Exxon donor solvent processes
[PB80-108566] 26 p0297 N80-19678
Coal liquefaction with synthesis gas
[PETC/TR-79/1] 26 p0299 N80-20416
Trace and minor element analyses of coal liquefaction products
[PETC/TR-79/3] 26 p0299 N80-20417
Exploratory studies in catalytic coal liquefaction
[EPRI-AF-1184] 26 p0299 N80-20422
Catalyst characterization in coal liquefaction
[SAND-79-1969] 26 p0299 N80-20423
Coal liquefaction test center
[FE-1517-78] 26 p0300 N80-20425
Zinc halide hydrocracking process for distillate fuels from coal
[FE-1743-68] 26 p0300 N80-20426
Coal-conversion technologies: Some health and environmental effects
[BNL-5103] 26 p0309 N80-20930
Solvent refined coal process: Data correlation and analysis
[EPRI-AF-1157] 26 p0313 N80-21557
Coal-to-methanol via new processes under development: An engineering and economic evaluation
[EPRI-AF-1227] 26 p0314 N80-21558

COAL UTILIZATION
Magnetohydrodynamic power generation - Program planning and status
26 p0184 A80-21449
Overview of coal energy utilization technology in Japan
26 p0187 A80-21924
A four-component model for the vaporization of seeded slags - The system KO/.5/-CaO-AlO/1.5/SiO2 --- in MHD generator coal combustor
26 p0217 A80-25073
Particulate size and rates of pressure drop increase in an MHD air preheater
26 p0217 A80-25076
A superconducting dipole magnet for the CFFF MHD facility at the University of Tennessee Space Institute --- Coal-Fired Flow Facility
26 p0218 A80-25079
Characterization of dynamic influences in a coal-fired MHD system
26 p0219 A80-25094
Oxygen-enriched air for MHD power plants
26 p0220 A80-25096
A 250 MWt MHD Engineering Test Facility /ETF/ system design
26 p0220 A80-25098
Preliminary assessment of the requirements and potential of open cycle MHD as an electric utility power plant
26 p0220 A80-25101
The retrofit approach to MHD demonstration and commercialization --- for coal-fired MHD plants
26 p0221 A80-25102
A modular approach to an engineering test facility and beyond --- for coal-fired MHD generators
26 p0221 A80-25103
Kinetics of char burnout and ash vaporization in coal-fired MHD combustors
26 p0221 A80-25108
Progress in coal combustion research at Avco Everett Research Laboratory, Inc.
26 p0221 A80-25109
Wall combustion in high-swirl combustors --- for coal-fired MHD generators
26 p0222 A80-25110
One-stage cyclone combustor for coal fired test stand of 4MW thermal power --- for MHD generators
26 p0222 A80-25111
High slag rejection, high carbon conversion rate, air cooled cyclone coal combustor for MHD regenerative heat exchangers
26 p0222 A80-25112
Scaling MHD cyclone coal combustors
26 p0222 A80-25114
Mercury partitioning in a power plant plume and its influence on atmospheric removal mechanisms
26 p0223 A80-25170
Fluidized bed combustion of high sulphur coals
26 p0225 A80-25494
The development of fluidized bed combustion
26 p0225 A80-25689
Combined flue gas desulfurization and water treatment in coal-fired power plants
26 p0225 A80-25690
Simplified correlations for prediction of NO/x/ emissions from MHD power plants
26 p0227 A80-26001
Lignite and coal in the U.S. energy future
26 p0230 A80-27420
An economic analysis of air pollution from coal-fired power plants
26 p0230 A80-27649
The global carbon dioxide problem - Impacts of U.S. synthetic fuel- and coal-fired electricity generating plants
26 p0248 A80-29938
Hydrogenation of brown coal. I - The effects of additional quantities of the inorganic constituents
26 p0249 A80-30523
Application of Fourier-transform infrared spectroscopy to the characterization of fractionated coal liquids
26 p0249 A80-30525
Coal combustion fly ash characterization - Adsorption of nitrogen and water
26 p0250 A80-30656
Coal processing and utilization
26 p0255 A80-32396
Study of a French national energy system based on coal and nuclear energy
26 p0255 A80-32500
Comparative assessment of residential energy supply systems that use fuel cells: Executive summary --- domestic energy supply systems analysis of coal fired power plants using fuel cells
[PB-299207/1] 26 p0271 N80-16564
Status of pollutant removal technology for coal fired plants in the northeastern U.S.
[BNL-51004] 26 p0272 N80-16580
Photochemical conversion of coal to gasoline in an entrained bed reactor
26 p0283 N80-18202
Evaluation of a photochemical system for nitrogen oxides control --- coal fired boilers
26 p0287 N80-18583
Photochemical conversion of coal to gasoline in an entrained bed reactor
[ORO-5020-T1] 26 p0299 N80-20415
Factors affecting cleanup of exhaust gases from a pressurized, fluidized-bed coal combustor
[NASA-TM-81439] 26 p0301 N80-20532
How to burn coal efficiently and economically, and meet air pollution requirements: The fluidized-bed combustion process
[PB80-107501] 26 p0308 N80-20911
Coal-conversion technologies: Some health and environmental effects
[BNL-5103] 26 p0309 N80-20930
Conceptual design of an AFBC electric power generating plant. Volume 3: Appendices
[FE-2455-27-VOL-3] 26 p0318 N80-21866

COASTAL PLAINS
The Yallahs fan delta, southeastern Jamaica: A depositional model for active tectonic coastlines
26 p0273 N80-16632
COATINGS
Metal foils for direct application of absorber coatings on solar collectors
[LBL-9324] 26 p0277 N80-17560
COBALT
Exploratory studies in catalytic coal liquefaction
[EPRI-AF-1184] 26 p0299 N80-20422
Catalyst characterization in coal liquefaction
[SAND-79-1969] 26 p0299 N80-20423
COBALT OXIDES
Preliminary study of a solar selective coating system using black cobalt oxide for high temperature solar collectors
[NASA-TM-81385] 26 p0282 N80-18156
COGENERATION
Cogeneration of electric energy and nitric oxide
26 p0255 A80-32412
Cogeneration Technology Alternatives Study (CTAS). Volume 1: Summary
[NASA-TM-81400] 26 p0293 N80-19626
Feasibility of cogeneration application of a 4.8 MW fuel cell power plant at a Santa Clara, California paper mill
[SAN-2189-T1] 26 p0304 N80-20876
COKE
Thermal, mechanical, and physical properties of selected bituminous coals and cokes
[PB-300398/5] 26 p0273 N80-16932
Fluid coking of coal liquefaction residues: The fourth residue
[FE-2422-28] 26 p0289 N80-19304
Application of coke plant control technologies to coal conversion
[PB80-108954] 26 p0290 N80-19310
COLLISIONLESS PLASMAS
Quiescent and turbulent plasmas under mirror-configurations of magnetic field
26 p0223 A80-25322
Theory of current generation by electrostatic traveling waves in collisionless magnetized plasmas
26 p0229 A80-27263
Toroidal effects on nonlocal collisionless drift instability
26 p0229 A80-27278
COLORADO
Energy source book --- Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming
[DOE/TIC-10190] 26 p0306 N80-20895
COLUMNS (PROCESS ENGINEERING)
Separation of hydrogen from the mixture of hydrogen iodide, hydrogen and iodine in thermogravitational column
26 p0200 A80-23145
COMBUSTION
Combustion and operating characteristics of spark-ignition engines
[NASA-CR-162896] 26 p0298 N80-20340
COMBUSTION CHAMBERS
Turbulation of plasma in combustion chamber of an MHD generator
26 p0190 A80-22348
Design description and performance predictions for the first CDIF power train --- MHD generator combustor, power channel and diffusers
26 p0216 A80-25062
A four-component model for the vaporization of seeded slags - The system KO/.5/-CaO-AlO/1.5/SiO2 --- in MHD generator coal combustor
26 p0217 A80-25073
Coupled generator and combustor performance calculations for potential early commercial MHD power plants
26 p0220 A80-25099
Fluctuations in combustion MHD generator systems
26 p0221 A80-25105
Experiments concerning inhomogeneities in combustion MHD generators
26 p0221 A80-25107
Kinetics of char burnout and ash vaporization in coal-fired MHD combustors
26 p0221 A80-25108
Wall combustion in high-swirl combustors --- for coal-fired MHD generators
26 p0222 A80-25110
One-stage cyclone combustor for coal fired test stand of 4MW thermal power --- for MHD generators
26 p0222 A80-25111
High slag rejection, high carbon conversion rate, air cooled cyclone coal combustor for MHD regenerative heat exchangers
26 p0222 A80-25112
Development of a slagging cyclone gasifier for MHD applications
26 p0222 A80-25113
Scaling MHD cyclone coal combustors
26 p0222 A80-25114
Factors affecting cleanup of exhaust gases from a pressurized, fluidized-bed coal combustor
[NASA-TM-81439] 26 p0301 N80-20532
COMBUSTION CONTROL
An underground coal gasification experiment - Hoe Creek II
26 p0251 A80-31042
Flame tube parametric studies for control of fuel bound nitrogen using rich-lean two-stage combustion
[NASA-TM-81472] 26 p0315 N80-21837
COMBUSTION EFFICIENCY
Use of hydrogen as a fuel for automobile heat engines
26 p0185 A80-21880
Advanced engine concepts - The Ford Proco engine
26 p0235 A80-28474
Combustion of multicomponent fuel droplets
[COO-4449-2] 26 p0257 N80-16126
Support studies in fluidized-bed combustion 1978 annual report
[PB80-112758] 26 p0300 N80-20430
COMBUSTION PHYSICS
Progress in coal combustion research at Avco Everett Research Laboratory, Inc.
26 p0221 A80-25109
Fluidized bed combustion of high sulphur coals
26 p0225 A80-25494
COMBUSTION PRODUCTS
Particulate size and rates of pressure drop increase in an MHD air preheater
26 p0217 A80-25076
Fluidized bed combustion of high sulphur coals
26 p0225 A80-25494
Simplified correlations for prediction of NO/x/ emissions from MHD power plants
26 p0227 A80-26001
Electrical conductivity of a seeded H2/O2 system
26 p0254 A80-32330
The chemistry of sulfur in char and the implications for hydrogasification/hydrodesulfurization
[FE-2449-9] 26 p0288 N80-19298
Analysis of thermal decomposition products of flue gas conditioning agents
[PB80-111818] 26 p0297 N80-19672
COMMERCIAL AIRCRAFT
A plan for active development of LH2 for use in aircraft
26 p0206 A80-23204
COMMERCIAL ENERGY
Conceptual design of an MHD/steam power plant of pilot scale /ETF/ and preliminary analyses of early commercial MHD power plants
26 p0220 A80-25097
Coupled generator and combustor performance calculations for potential early commercial MHD power plants
26 p0220 A80-25099
The retrofit approach to MHD demonstration and commercialization --- for coal-fired MHD plants
26 p0221 A80-25102
Economic incentives to wind systems commercialization
[AIAA 80-0617] 26 p0238 A80-28811
Technical and economic feasibility of wind-powered systems for dairy farms
[AIAA 80-0641] 26 p0239 A80-28823
Washington state energy use profile, 1960-1978
[WAOENG-79-1] 26 p0318 N80-21869
COMPOSITE MATERIALS
Low cost composite blades for large wind turbines
[AIAA 80-0634] 26 p0239 A80-28820
COMPOSITE STRUCTURES
Aluminium or copper substrate panel for selective absorption of solar energy
[NASA-CASE-MFS-23518-3] 26 p0260 N80-16452

Large, low cost composite wind turbine blades
26 p0263 N80-16475
Composite-laminate flywheel-rotor development program
[UCRL-83554] 26 p0317 N80-21855

COMPOSITE WRAPPING
Low cost composite blades for large wind turbines
26 p0253 A80-32074

COMPRESSED AIR
Economics of thermal energy storage for compressed air energy storage systems
[PNL-SA-7949] 26 p0307 N80-20903
Economics of compressed air energy storage employing thermal energy storage
[PNL-3191] 26 p0307 N80-20904
Storage peak gas-turbine power unit
[NASA-TM-75757] 26 p0314 N80-21755

COMPRESSIBLE FLOW
Numerical calculation of steady inviscid full potential compressible flow about wind turbine blades
[NASA-TM-81438] 26 p0284 N80-18497

COMPRESSION TESTS
Compressive fatigue tests on a unidirectional glass/polyester composite at cryogenic temperatures --- for superconducting energy storage magnet structural supports
26 p0191 A80-22690

COMPRESSIVE STRENGTH
Thermal, mechanical, and physical properties of selected bituminous coals and cokes
[PB-300398/5] 26 p0273 N80-16932

COMPRESSOR EFFICIENCY
Storage peak gas-turbine power unit
[NASA-TM-75757] 26 p0314 N80-21755

COMPUTATIONAL FLUID DYNAMICS
Scale-up of advanced MHD generators
[AIAA PAPER 80-0179] 26 p0212 A80-23938
Numerical modeling of heat flow in underground coal liquefaction
26 p0213 A80-24319
Numerical calculation of steady inviscid full potential compressible flow about wind turbine blades
[AIAA 80-0607] 26 p0237 A80-28804

COMPUTER NETWORKS
The evolution of a large laser control system - From Shiva to Nova
26 p0185 A80-21901

COMPUTER PROGRAMS
A method for the techno-economic evaluation of chemical processes - Improvements to the 'OPTIMO' code --- improved computer program for hydrogen production and nuclear reactor-chemical plant coupling processes
26 p0205 A80-23192
A microprocessor-based system for the monitoring and control of a solar installation
26 p0242 A80-29006
Continuing regional solar energy information mini-center activities and updating the SOLCOST program
[COO-4643-T2] 26 p0267 N80-16521
Permanent magnet and superconducting generators in airborne, high power systems --- computer program to predict weight of the generators and component systems
[AD-A078424] 26 p0284 N80-18311
Urban mass transportation energy conservation: SRGP operating instructions and program documentation, volume 5
[DOE/PE-8628/1-VOL-5] 26 p0312 N80-21205
Estimation of wind characteristics at potential wind energy conversion sites
[PNL-3074] 26 p0321 N80-21955

COMPUTER SYSTEMS PROGRAMS
Continuing regional solar energy information Mini-Center activities and updating the SOLCOST program
[COO-4643-T1] 26 p0278 N80-17571

COMPUTER TECHNIQUES
Application of computer models to the retorting of oil shale
26 p0228 A80-26708

COMPUTERIZED DESIGN
Computer modeling of a two-junction, monolithic cascade solar cell
26 p0234 A80-28330
Dynamic rotor loads of a wind turbine via hand-held calculations
[AIAA 80-0611] 26 p0237 A80-28808
Solar energy design improvement: A methodology for hydronic flatplate collector systems
[AD-A076836] 26 p0286 N80-18567

COMPUTERIZED SIMULATION
Performance effects of Trombe wall control strategies --- passive solar building heating
26 p0183 A80-21105
The STD/MHD codes - Comparison of analyses with experiments --- MHD generator performance prediction and tests
[AIAA PAPER 80-0024] 26 p0212 A80-23953
Kinetics of char burnout and ash vaporization in coal-fired MHD combustors
26 p0221 A80-25108
Wind energy conversion system simulation program
[AIAA 80-0609] 26 p0237 A80-28806
Advanced electric propulsion system concept for electric vehicles
[NASA-CR-159651] 26 p0282 N80-17916
Systems studies of coal conversion processes using a reference simulator
[FE-2275-11] 26 p0289 N80-19307
Computer simulation of a solar energy system which utilizes flat-plate collectors
[AD-A079906] 26 p0304 N80-20870
Wind Energy System Time-domain (WEST) analyzers using hybrid simulation techniques
[NASA-CR-159737] 26 p0308 N80-20909

CONCENTRATION (COMPOSITION)
Combustion of multicomponent fuel droplets
[COO-4449-2] 26 p0257 N80-16126

CONCENTRATORS
Industrial solar thermal concentrators
26 p0189 A80-21953
Theoretical concentrations of solar radiation by central receiver systems
26 p0208 A80-23327
Kinematic synthesis of drive mechanisms for solar concentrating collector using auxilliary mirrors
26 p0212 A80-23998
Photovoltaics. III - Concentrators
26 p0214 A80-24533
Technical evaluation of gaseous suspensions of graphite for the absorption of concentrated solar radiation --- Book
26 p0214 A80-24660
Development of a spherical reflector/tracking absorber solar energy collector
26 p0226 A80-25885
Technology and performance of a high concentration solar cell power supply
26 p0226 A80-25886
Arabs turn their eyes to the sun --- solar energy development in Middle East
26 p0244 A80-29280
Design of nonimaging concentrators as second stages in tandem with image-forming first-stage concentrators
26 p0253 A80-32021
Evaluation of concentrated space solar arrays using computer modeling --- for spacecraft propulsion and power supplies
[NASA-CR-162681] 26 p0264 N80-16487
Solar energy concentrator design and operations. Citations from the NTIS data base
[NTIS/PS-79/0926/0] 26 p0270 N80-16557
Solar energy concentrator design and operations. Citations from the Engineering Index data base
[NTIS/PS-79/0927/8] 26 p0270 N80-16558
Optical and thermal effects in linear solar concentrating collectors
26 p0275 N80-17541
Performance of linear solar concentrating collectors
[SAND-79-1378C] 26 p0277 N80-17565
Low cost point focus solar concentrator. Phase 1: Preliminary design
[JPL-9950-273] 26 p0292 N80-19622
Low cost point focus solar concentrator, phase 1
[NASA-CR-162848] 26 p0292 N80-19624
Low-cost point-focus solar concentrator, phase 1
[NASA-CR-162839] 26 p0293 N80-19625
Installation and startup of the fixed mirror solar concentrator collector field subsystem
[GA-A-15344] 26 p0306 N80-20888

Optical analysis and optimization of line focus collectors
[SERI/TR-34-092] 26 p0306 N80-20893
Application of glass technology to novel solar energy collectors
[CONF-7906118-1] 26 p0317 N80-21852

CONDENSERS (LIQUIFIERS)
Development of high temperature subtractive column and chromatographic analysis of hydrocarbons present in diesel exhaust
[BETC/RI-78/12] 26 p0257 N80-16130

CONDENSING
Condensation and deposition of seed in the MHD bottoming plant
26 p0217 A80-25071
Condensation of aluminum when used as a fuel additive in MHD power generation
26 p0242 A80-28859
Heavy hydrocarbons from coal gasification vapor pressures and dew point
26 p0257 N80-16111

CONDUCTING FLUIDS
End zone of a channel with segmented electrodes, carrying nonuniform flow --- current and potential fields in plasma
26 p0254 A80-32220

CONDUCTIVE HEAT TRANSFER
Combined ADI iteration and implicit central difference numerical method for solving nonlinear conjugated partial differential equations with moving boundary heat transfer in in-situ coal liquefaction
26 p0228 A80-26681

CONFERENCES
Hydrogen energy system; Proceedings of the Second World Hydrogen Energy Conference, Zurich, Switzerland, August 21-24, 1978. Volumes 1-5
26 p0194 A80-23101
Royal Society, Discussion on Solar Energy, London, England, November 15, 16, 1978, Proceedings
26 p0209 A80-23511
Driven magnetic fusion reactors; Proceedings of the Course, Erice, Italy, September 18-26, 1978
26 p0214 A80-24661
Symposium on the Engineering Aspects of Magnetohydrodynamics, 18th, Butte, Mont., June 18-20, 1979, Preprints
26 p0216 A80-25061
European Conference on Controlled Fusion and Plasma Physics, 9th, Oxford, England, September 17-21, 1979, Invited Papers
26 p0225 A80-25771
Nuclear Science Symposium, 26th and Symposium on Nuclear Power Systems, 11th, San Francisco, Calif., October 17-19, 1979, Proceedings
26 p0231 A80-27656
OCEANS '79; Proceedings of the Fifth Annual Combined Conference, San Diego, Calif., September 17-19, 1979
26 p0232 A80-28251
International Symposium on Traffic and Transportation Technologies, Hamburg, West Germany, June 18-20, 1979, Proceedings. Volumes C1 & C2 - Motor vehicle and road traffic technologies
26 p0235 A80-28470
Wind Energy Conference, Boulder, Colo., April 9-11, 1980, Technical Papers
26 p0237 A80-28801
PESC '79; Power Electronics Specialists Conference, San Diego, Calif., June 18-22, 1979, Record
26 p0242 A80-28892
Laser 79 opto-electronics; Proceedings of the Fourth Conference, Munich, West Germany, July 2-6, 1979
26 p0245 A80-29334
Polymer materials basic research needs for energy applications. Proceedings of a Workshop Recommending Future Directions in Energy-Related Polymer Research
[CONF-780643] 26 p0257 N80-16172
Proceedings: Symposium on coal cleaning to achieve energy and environmental goals held at Hollywood, Florida on September 1978, volume 1
[PB-299383/0] 26 p0259 N80-16192
Proceedings: Symposium on coal cleaning to achieve energy and environmental goals held at Hollywood, Florida on September 1978, volume 2
[PB-299384/8] 26 p0259 N80-16193
Proceedings: Photovoltaics user Review Panel
[SERI/TP-69-276] 26 p0266 N80-16514
Implications of fuel-efficient vehicles on ride quality and passenger acceptance: Workshop proceedings
[NASA-CP-2096] 26 p0287 N80-18990
Basic research in engineering: Fluid dynamics and thermal processes --- workshop
[PE-2468-54] 26 p0301 N80-20551
The 1979 Goddard Space Flight Center Battery Workshop
[NASA-CP-2117] 26 p0302 N80-20820
Symposium Proceedings: Environmental Aspects of Fuel conversion technology, IV
[PB80-134729] 26 p0320 N80-21913

CONGRESSIONAL REPORTS
Gasohol: A technical memorandum
[PB80-105885] 26 p0259 N80-16194
Federal demonstrations of solar heating and cooling on private residences: Only limited success
[PB-301123/6] 26 p0270 N80-16555
NASA authorization, 1981, program review, volume 1
[GPO-53-814] 26 p0281 N80-17913
Geothermal energy: Obstacles and uncertainties impede its widespread use
[PB80-134430] 26 p0315 N80-21827

CONSTRUCTION MATERIALS
Gas turbines for automotive use --- Book
26 p0253 A80-31999

CONTAMINANTS
Pollutants from synthetic fuels production: Sampling and analysis methods for coal gasification
[PB80-104656] 26 p0289 N80-19309

CONTINENTAL SHELVES
Outer continental shelf environment monitoring concerns
[PB-299861/5] 26 p0273 N80-16625

CONTROL EQUIPMENT
The evolution of a large laser control system - From Shiva to Nova
26 p0185 A80-21901
First-principle component models for control system simulation of MHD-steam plants
26 p0220 A80-25095

CONTROL SIMULATION
First-principle component models for control system simulation of MHD-steam plants
26 p0220 A80-25095

CONTROL SURFACES
Teetered, tip-controlled rotor - Preliminary test results from Mod-O 100-kW experimental wind turbine
[AIAA 80-0642] 26 p0241 A80-28836

CONTROL THEORY
Control performance of an air-blown fixed bed coal gasification combined cycle plant in utility power systems application
26 p0213 A80-24256

CONTROLLED FUSION
Non-electric fusion energy applications
26 p0215 A80-24676
European Conference on Controlled Fusion and Plasma Physics, 9th, Oxford, England, September 17-21, 1979, Invited Papers
26 p0225 A80-25771
Controlled fusion research in China
26 p0226 A80-25786
Possible solution of the controlled thermonuclear fusion problem based on magnetogasdynamic energy storage
26 p0230 A80-27567

CONTROLLERS
Optimal controllers of the second kind --- for flat plate solar collectors
26 p0184 A80-21112

CONVECTION
Interferometric study of the natural convection characteristics of flat plate, slat and vee-corrugated solar collectors
[COO-2971-6] 26 p0307 N80-20900

CONVECTIVE FLOW
Combustion of multicomponent fuel droplets
[COO-4449-2] 26 p0257 N80-16126

CONVECTIVE HEAT TRANSFER
Non-convecting solar ponds 26 p0210 A80-23517
Radiative and convective heat transfer in the MHD generator duct 26 p0217 A80-25068
Investigations of heat transfer from plasma flux to electrode and insulating walls of the MHD generator channel 26 p0217 A80-25069
Performance calculations of tubular cover collectors 26 p0248 A80-29924

CONVERTERS
A fluorescent radiation converter [NASA-CASE-GSC-12528-1] 26 p0283 N80-18261

COOLANTS
Theoretical study of thermal losses: The use of hybrid and combined dry coolants --- in electrical power plants [NT-44-1978] 26 p0284 N80-18345

COOLING
Thermal energy storage application areas --- for building heating and cooling [CONS/5113-T4] 26 p0306 N80-20894

COOLING SYSTEMS
Investigation of heat and mass transfer for a regenerator model of a solar cooling system 26 p0232 A80-28200
Prototype solar heating and combined heating cooling systems [NASA-CR-161340] 26 p0264 N80-16485
Solar-MEC development program, project 9103 [COO-4495-7] 26 p0267 N80-16522
Heat-pump-centered integrated community energy systems: System development [ANL/CNSV/TM-8] 26 p0305 N80-20880
Methods for manufacturing heat pipes for circuit cards [AD-A080188] 26 p0314 N80-21707

COPPER
Emerging materials systems for solar cell applications-Cu/sub 2-x/Se [DOE/ET-23005/T2] 26 p0296 N80-19653
Resource and energy constraints of regional and global availability of aluminum copper, and iron 1975 - 2000: A computer study 26 p0301 N80-20720

COPPER SELENIDES
High photocurrent polycrystalline thin-film CdS/CuInSe2 solar cell 26 p0229 A80-27321

COPPER SULFIDES
Energy analysis of CdS:Cu2S sputtered solar cells 26 p0186 A80-21918
Preparation and photovoltaic properties of screen printed CdS/Cu/x/S solar cells 26 p0228 A80-27057

CORIOLIS EFFECT
Coriolis Program - A review of the status of the ocean turbine energy system 26 p0233 A80-28261

CORROSION RESISTANCE
Material corrosion investigations for the General Atomic sulfur-iodine thermochemical water-splitting cycle 26 p0204 A80-23189
Material requirements for coal gasification 26 p0212 A80-23833
Energy conversion and corrosion processes in electrochemical solar cells with semiconductor electrodes --- German thesis 26 p0225 A80-25679
Pitting resistance of engineering materials in geothermal brines. I - Low salinity brine 26 p0249 A80-30474
Chemical and physical stability of refractories for use in coal gasification [COO-2904-14] 26 p0300 N80-20429
Evaluation of high chromium overlays to protect less alloyed substrates from corrosion in a coal gasification atmosphere [FE-2621-5] 26 p0313 N80-21520

CORROSION TESTS
Wettability and corrosion of MHD ceramics by Rosebud coal slag 26 p0217 A80-25074

COST ANALYSIS
Energy analysis of CdS:Cu2S sputtered solar cells 26 p0186 A80-21918
OTEC for hydrogen production 26 p0195 A80-23109
Unipolar water electrolysers - A competitive technology 26 p0196 A80-23116
Development of low cost nickel-rare earth hydrides for hydrogen storage 26 p0202 A80-23170
The energy problem - Its effect on aircraft design. II - The effects of fuel cost 26 p0254 A80-32201
Continuing regional solar energy information mini-center activities and updating the SOLCOST program [COO-4643-T2] 26 p0267 N80-16521
Peak-load problem with storage technology --- cost analysis of electric energy storage based on energy requirements [ANL/SPG-8] 26 p0269 N80-16549
Factors affecting potential market penetration of laser fusion power plants [PNL-2803] 26 p0269 N80-16552
Today's geothermal power economics and risks [CONF-790803-44] 26 p0277 N80-17558
Economic analysis of the design and fabrication of a space qualified power system [NASA-TM-81418] 26 p0282 N80-18098
Low cost point focus solar concentrator, phase 1 [NASA-CR-162848] 26 p0292 N80-19624

COST EFFECTIVENESS
Space manufacturing, satellite power and human exploration 26 p0186 A80-21908
The economics of producing hydrogen from a small air-blown coal gasifier 26 p0199 A80-23140
Gas turbines for automotive use --- Book 26 p0253 A80-31999

COST ESTIMATES
The price of oil in the year 2000 [AAS 79-172] 26 p0215 A80-24717
Oil and gas replacement cost: Development and production. Volume 1: Discussion of methodology, exhibits, and projections [DOE/TIC-10078] 26 p0258 N80-16187
Cost of energy evaluation 26 p0263 N80-16482

COST INCENTIVES
SWECS qualifications criteria for state tax incentive programs --- Small Wind Energy Conversion System [AIAA 80-0650] 26 p0240 A80-28829

COST REDUCTION
Photovoltaic cost blitz spawns new silicon processes 26 p0186 A80-21913
Studies in biogas technology. II - Optimization of plant dimensions 26 p0188 A80-21939
Assessment of low-cost manufacturing process sequences --- photovoltaic solar arrays [NASA-CR-162745] 26 p0278 N80-17575

COSTS
An investigation of preferences for various types of energy cost feedback --- information feedback system to determine energy consumption costs [PB-300314/2] 26 p0270 N80-16560

COUPLED MODES
Ideal magnetohydrodynamic stability of tokamak plasmas 26 p0250 A80-30554

CREEP RUPTURE STRENGTH
Evaluation of high chromium overlays to protect less alloyed substrates from corrosion in a coal gasification atmosphere [FE-2621-5] 26 p0313 N80-21520

CRITICAL POINT
Heavy hydrocarbons from coal gasification vapor pressures and dew point 26 p0257 N80-16111

CROP INVENTORIES
Estimation of primary production of vegetation in agricultural and forested areas using Landsat data 26 p0191 A80-22456

CROP VIGOR
Remote sensing of sulfur dioxide effects on vegetation - photometric analysis of aerial photographs [PB-300460/3] 26 p0272 N80-16600

CRUDE OIL
Some application of Landsat imagery interpretation for petroleum targetting in India
26 p0191 A80-22433
The use of different-scale multispectral space photographs of the earth for the geological study of lands with oil and natural gas
26 p0254 A80-32276
Aggregated vectorial model of petroleum flow in the United States
[LBL-8874] 26 p0258 N80-16178
Oil and gas replacement cost: Development and production. Volume 1: Discussion of methodology, exhibits, and projections
[DOE/TIC-10078] 26 p0258 N80-16187
Petroleum production at maximum efficient rate, Naval Petroleum Reserve no. 1 (Elk Hills), Kern County, California
[DOE/EIS-0012] 26 p0272 N80-16581
A review of standards of performance for new stationary sources: Petroleum refineries
[PB-300480/1] 26 p0272 N80-16602
Energy material transport, now through 2000, system characteristics and potential problems. Task 3: Petroleum transportation
[PNL-2421] 26 p0278 N80-17574
Alaskan environmental research. Section 12.0 of part 2: Ecological sciences
[PNL-2850-PT-2-SUPPL] 26 p0297 N80-19666
Analysis of current trends in U.S. petroleum and natural gas production
[PB80-116056] 26 p0301 N80-20800
Analysis of water resources requirement for the enhanced (tertiary) oil recovery in the southern plains region of the United States
[PB80-110869] 26 p0301 N80-20801

CRYOGENIC EQUIPMENT
The state-of-the-art of cryogenic heat pipes
[AIAA PAPER 80-0211] 26 p0212 A80-23956

CRYOGENIC FLUID STORAGE
Durability of foam insulation for LH2 fuel tanks of future subsonic transports
26 p0191 A80-22687
The cryogenic storage of hydrogen
26 p0202 A80-23162
A storage tank for vehicular storage of liquid hydrogen
26 p0231 A80-27729

CRYOGENIC MAGNETS
Compressive fatigue tests on a unidirectional glass/polyester composite at cryogenic temperatures --- for superconducting energy storage magnet structural supports
26 p0191 A80-22690
Experiments on H2-O2MHD power generation
[NASA-TM-81424] 26 p0273 N80-16886

CRYOGENIC STORAGE
A study on hydrogen storage by use of cryoadsorbents
26 p0201 A80-23161

CRYOGENICS
Oxygen-enriched air for MHD power plants
26 p0220 A80-25096

CRYSTAL GROWTH
Silicon ribbon growth using scanned lasers
26 p0229 A80-27337
Silicon ribbon for photovoltaic cells
26 p0245 A80-29394
Silicon solar cells, volume 3. Citations from the Engineering Index data base --- bibliographies
[PB80-800717] 26 p0280 N80-17588
Silicon solar cells, volume 3. Citations from the NTIS data base --- bibliographies
[PB80-800691] 26 p0280 N80-17589
Silicon solar cells, volume 2. Citations from the Engineering Index data base --- bibliographies
[PB80-800709] 26 p0280 N80-17590

CUBIC LATTICES
Cubic metal-alloys for hydrogen storage
26 p0202 A80-23165

CURRENT CONVERTERS (AC TO DC)
An ac/dc power converter for batteries and fuel cells
[EPRI-EM-662] 26 p0259 N80-16284

CURRENT DENSITY
Development and operation of a high current density high pressure advanced electrolysis cell
26 p0197 A80-23119
Recombination in the space-charge region of Schottky barrier solar cells
26 p0207 A80-23272
Studies of silicon p-n junction solar cells
[NASA-CR-162832] 26 p0291 N80-19609

CURRENT DISTRIBUTION
Electrical nonuniformities in U-25 MHD channels
26 p0219 A80-25091
The barrier height change and current transport phenomena with the presence of interfacial layer in MIS Schottky barrier solar cells
26 p0247 A80-29815

CYLINDRICAL WAVES
Submerged cylinder wave energy device - Theory and experiment
26 p0251 A80-30801

D

DAMS
Cataract hydroelectric development expansion study
[DOE/ID-01796-1] 26 p0295 N80-19650
Potential hydroelectric power, vertical turbine, spillway combine Broadwater Dam
[DOE/ID-01822-1] 26 p0295 N80-19651

DATA ACQUISITION
Master Control and Data Acquisition System for a Solar Central Receiver Electric Power Plant
26 p0186 A80-21903
Performance monitoring of a passive solar heated house, Stockton, California
[EPRI-ER-1177] 26 p0319 N80-21879

DATA BASES
Potential for solar/conservation technologies in the state of Washington
[WAOENG-79-3] 26 p0317 N80-21859

DATA CORRELATION
Solvent refined coal process: Data correlation and analysis
[EPRI-AP-1157] 26 p0313 N80-21557

DATA REDUCTION
Describing wind data --- using characteristic wind speed and shape factor parameters
26 p0211 A80-23534
Solar availability for winter space heating: An analysis of the calendar period 1953-1975
[ANL/SPG-14] 26 p0268 N80-16532

DATA SYSTEMS
Design considerations of a CAMAC system for large tokamak JT-60
26 p0231 A80-27672

DECOMPOSITION
The oxidation of sulphur dioxide by bromine and water
26 p0245 A80-29407

DEGASSING
Study of hydrocarbon-shale interaction
[ORO-5197-14] 26 p0260 N80-16409

DEGRADATION
The effects of titanium impurities in N/+//P silicon solar cells
26 p0256 A80-32503
LSA field test
[NASA-CR-162798] 26 p0291 N80-19611

DEHYDROGENATION
On the study of hydrogen production from water using solar thermal energy
26 p0200 A80-23147

DELTAS
The Yallahs fan delta, southeastern Jamaica: A depositional model for active tectonic coastlines
26 p0273 N80-16632

DEMAND (ECONOMICS)
Resource and energy constraints of regional and global availability of aluminum copper, and iron 1975 - 2000: A computer study
26 p0301 N80-20720
Urban transportation energy conservation: Analytic procedures for estimating changes in travel demand and fuel consumption, volume 2
[DOE/PE-8628/1-VOL-2] 26 p0312 N80-21207

DEMOGRAPHY
Monitoring urban population and energy utilization patterns from satellite data
26 p0207 A80-23293

DENITROGENATION
Kinetics and mechanism of desulfurization and denitrogenation of coal-derived liquids --- quioline, indole, dibenzothiophene, and naphthalene
[FE-2028-15] 26 p0287 N80-19292

DENSE PLASMAS
Transverse confinement of a high-pressure plasma in a corrugated magnetic field
26 p0224 A80-25474
Space- and time-resolved study of impurities by visible spectroscopy in the high-density regime of JIPP T-II tokamak plasma
26 p0224 A80-25481

DENSITY DISTRIBUTION
Non-convecting solar ponds
26 p0210 A80-23517

DEOXIDIZING
Iron oxide reduction kinetics by hydrogen
26 p0203 A80-23174

DEPOSITION
Condensation and deposition of seed in the MHD bottoming plant
26 p0217 A80-25071
Preparation of thin films for solar energy utilization
[SAND-79-1754C] 26 p0267 N80-16517

DESALINIZATION
Arabs turn their eyes to the sun --- solar energy development in Middle East
26 p0244 A80-29280

DESICCANTS
Overview of developing programs in solar desiccant cooling for residential buildings
[SERI/TP-34-187] 26 p0278 N80-17569

DESIGN ANALYSIS
A modular design for a superconducting magnet for the ETF and larger MHD generators
26 p0218 A80-25078
Design evolution of large wind turbine generators
26 p0261 N80-16455
Design characteristics of the 224 kW Magdalen Islands VAWT
26 p0261 N80-16463
Overview of Vertical Axis Wind Turbine (VAWT)
26 p0262 N80-16466
Application analysis and photovoltaic system conceptual design for service/commercial/institutional and industrial sectors, task 1 report
[SAND-78-7032] 26 p0269 N80-16550
Receiver assembly design studies for 2-m 90 deg parabolic-cylindrical solar collectors
[SAND-79-1026] 26 p0277 N80-17564
Design study of a fusion-driven Tokamak hybrid reactor for fissile fuel production, volume 1
[EPRI-ER-1083-VOL-1] 26 p0281 N80-17863
Design study of a fusion-driven Tokamak hybrid reactor for fissile fuel production, volume 2
[EPRI-ER-1083-VOL-2] 26 p0281 N80-17864
Parametric study of potential early commercial MHD power plants
[NASA-CR-159633] 26 p0286 N80-18559
General sensitivity analysis of solar thermal-electric plants
26 p0313 N80-21379

DESORPTION
Kinetics of hydrogen absorption and desorption by ternary LaNi5-type intermetallic compounds
26 p0234 A80-28277

DESULFURIZING
Combined flue gas desulfurization and water treatment in coal-fired power plants
26 p0225 A80-25690
Status of pollutant removal technology for coal fired plants in the northeastern U.S.
[BNL-51004] 26 p0272 N80-16580
Kinetics and mechanism of desulfurization and denitrogenation of coal-derived liquids --- quioline, indole, dibenzothiophene, and naphthalene
[FE-2028-15] 26 p0287 N80-19292
The chemistry of sulfur in char and the implications for hydrogasification/hydrodesulfurization
[FE-2449-9] 26 p0288 N80-19298
Hot gas cleanup process
[PB80-108467] 26 p0310 N80-20950

DETONABLE GAS MIXTURES
Chemical kinetics in LNG detonations
[UCRL-82293-REV-1] 26 p0258 N80-16180

DETONATION
Chemical kinetics in LNG detonations
[UCRL-82293-REV-1] 26 p0258 N80-16180

DEUTERIUM PLASMA
Plasma parametric studies and potential applications of driven fusion reactors
26 p0215 A80-24674

DEVELOPING NATIONS
Potential of biomass conversion in meeting the energy needs of the rural populations of developing countries: An overview
[BNL-26721] 26 p0288 N80-19294

DEW
Molecular thermodynamics of dew-point calculations in coal gasification processes
26 p0273 N80-16926

DIAPHRAGMS (MECHANICS)
The use of porous metallic diaphragm for hydrogen mass-production with alkaline water electrolysis
26 p0196 A80-23113

DIELECTRICS
Electrical purifiers for dielectric fluids --- charged particle contaminants separation from fuels, oils and hydraulic fluids
26 p0254 A80-32287
Development of improved wraparound contacts for silicon
[NASA-CR-159748] 26 p0285 N80-18554

DIESEL ENGINES
A technical conception for highly developed spark-ignition engines
26 p0235 A80-28471
The future of the Diesel engine - A critical analysis
26 p0235 A80-28473
Engine combustion technology overview
[SAND-78-8801] 26 p0260 N80-16347
Comparison of fuel economy and emissions for diesel and gasoline powered taxicabs
[PB-298609/9] 26 p0275 N80-17484
Issues concerning the light-duty diesel
[DOE/EV-0050/1] 26 p0290 N80-19510

DIESEL FUELS
Development of high temperature subtractive column and chromatographic analysis of hydrocarbons present in diesel exhaust
[BETC/RI-78/12] 26 p0257 N80-16130
Diesel engine endurance test with water-containing fire-resistant fuel
[AD-A078665] 26 p0287 N80-19287
Stability survey of hydrocarbon fuels
[BETC-1778-4] 26 p0300 N80-20424
Light-duty diesel gaseous emissions measurement - comparison of dilution tunnel test results to certification cell test results
[PB80-115991] 26 p0310 N80-20945

DIFFERENTIAL THERMAL ANALYSIS
Safety studies on Li/SO2 cells. II - Kinetics of lithium-organic solvent exothermic reactions
26 p0247 A80-29894

DIFFUSERS
Technical development of the Diffuser Augmented Wind Turbine /DAWT/ concept
26 p0211 A80-23533

DIODES
Measurement techniques for high power semiconductor materials and devices
[DOE/RA-0041] 26 p0301 N80-20506

DIRECT CURRENT
A battery-run pulsed motor with inherent dynamic electronic switch control
26 p0242 A80-29008

DIRECT POWER GENERATORS
Development program for MHD direct coal-fired power generation test facility
[FE-1760-34] 26 p0318 N80-21864

DIURNAL VARIATIONS
The 1-GWh diurnal load-leveling superconducting magnetic energy storage system reference design. Appendix C: Dewar and structural support
[LA-7885-MS-VOL-6] 26 p0307 N80-20897

DOMESTIC ENERGY
Warm water storage in district heating systems incorporating combined heat and power plant
26 p0185 A80-21825

Overview of coal energy utilization technology in Japan
26 p0187 A80-21924
Geological and geochemical characteristics of geothermal resources in Japan
26 p0187 A80-21928
Results of solar heating experiments --- for full scale domestic system performance
26 p0209 A80-23513
Aerial thermography - A tool for making people aware of energy conservation
26 p0212 A80-24070
Problems concerning the interpretation of thermographic data for the detection of energy losses from buildings
26 p0212 A80-24071
Thermography at the earth's surface and the energy efficiency of buildings
26 p0213 A80-24072
A central solar domestic hot water system - Performance and economic analysis
26 p0223 A80-25261
Lignite and coal in the U.S. energy future
26 p0230 A80-27420
Study of a French national energy system based on coal and nuclear energy
26 p0255 A80-32500
Comparative assessment of residential energy supply systems that use fuel cells: Executive summary --- domestic energy supply systems analysis of coal fired power plants using fuel cells
[PB-299207/1] 26 p0271 N80-16564
Comparative assessment of residential energy supply systems that use fuel cells
[PB-299208/9] 26 p0271 N80-16565
Washington state energy use profile, 1960-1978
[WAOENG-79-1] 26 p0318 N80-21869

DOPED CRYSTALS
The doping of amorphous silicon for solar cells
26 p0187 A80-21921
Characterization of deliberately nickel-doped silicon wafers and solar cells --- microstructure, electrical properties, and energy conversion efficiency
[NASA-CR-162790] 26 p0276 N80-17551

DRAG REDUCTION
The potential for development of high performance light aircraft
26 p0208 A80-23307

DROPS (LIQUIDS)
Combustion of multicomponent fuel droplets
[COO-4449-2] 26 p0257 N80-16126
The effect of superheating on the performance of floating droplet direct contact heat exchangers
26 p0260 N80-16293

DRYING
Solar energy storage using chemical potential changes associated with drying of zeolites
26 p0183 A80-21106

DUST
Control technologies for particulate and tar emissions from coal converters
[PB80-108392] 26 p0310 N80-20949

DYES
Enhancement of the efficiency of neodymium lasers by conversion of the pump radiation in a luminescent liquid
26 p0209 A80-23404

DYNAMIC CHARACTERISTICS
Characterization of dynamic influences in a coal-fired MHD system
26 p0219 A80-25094

DYNAMIC STRUCTURAL ANALYSIS
Aeroelastic equations of motion of a Darrieus vertical-axis wind-turbine blade
[NASA-TM-79295] 26 p0284 N80-18446

DYNAMIC TESTS
Hydrogen embrittlement, stress state and design considerations
26 p0204 A80-23186

E

EARTH (PLANET)
Use of earth coupling in solar assisted heat pumps
[BNL-26748] 26 p0316 N80-21849

EARTH RESOURCES
Regional environment-energy data book: Northeast region
[DOE/TIC-10114/3] 26 p0279 N80-17578
Regional environment-energy data book: Western region
[DOE/TIC-10114/2] 26 p0280 N80-17597
Regional environment-energy data book: Southern region
[DOE/TIC-10114/4] 26 p0281 N80-17598
Regional environment-energy data book: Northwest region
[DOE/TIC-10114/5] 26 p0281 N80-17599
Energy from the west: Impact analysis report. Volume 2. Site-specific and regional impact analyses
[PB80-113574] 26 p0296 N80-19655
Energy from the west: Impact analysis report. Volume 1: Introduction and summary
[PB80-113566] 26 p0319 N80-21884

EARTH SURFACE
Experimental results from the solar ground coupling research facility at Brookhaven National Laboratory --- heat transfer and storage devices for a solar source heat pump system
[BNL-26219] 26 p0266 N80-16509

ECOLOGY
Research on dynamics of tundra ecosystems and their potential response to energy resource development
[DOE/SP-01525/1] 26 p0294 N80-19642
Alaskan environmental research. Section 12.0 of part 2: Ecological sciences
[PNL-2850-PT-2-SUPPL] 26 p0297 N80-19666

ECONOMETRICS
Resource and energy constraints of regional and global availability of aluminum copper, and iron 1975 - 2000: A computer study
26 p0301 N80-20720
Projections of enhanced oil recovery, 1985 - 1995
[DOE/EIA-0183/11] 26 p0314 N80-21824

ECONOMIC ANALYSIS
Use of nuclear reactors for simultaneous radiation and power generation as a cost effective means of hydrogen production
26 p0185 A80-21877
An overview of photovoltaic market research
26 p0186 A80-21917
Short haul transport for the 1990s
26 p0190 A80-22046
Open-cycle MHD powerplants - Performance, cost and technology demonstration strategies
[AIAA PAPER 80-0180] 26 p0192 A80-22739
A study on hydrogen storage by use of cryoadsorbents
26 p0201 A80-23161
A method for the techno-economic evaluation of chemical processes - Improvements to the 'OPTIMO' code --- improved computer program for hydrogen production and nuclear reactor-chemical plant coupling processes
26 p0205 A80-23192
Technico-economic study of distributing hydrogen for automotive vehicles
26 p0207 A80-23206
Onsite solar energy systems - Economics and system design
26 p0207 A80-23221
The economic significance of Q for mirror reactors - Combinations of Q and M which look promising --- parameters affecting energy conversion efficiency in fusion reactor
26 p0215 A80-24666
A performance and economic evaluation of annual cycle energy storage /ACES/
26 p0223 A80-25260
A central solar domestic hot water system - Performance and economic analysis
26 p0223 A80-25261
Optimization of a solar water heating system for a Negev kibbutz
26 p0226 A80-25887
An economic analysis of air pollution from coal-fired power plants
26 p0230 A80-27649
Ocean wave energy conversion concepts
26 p0232 A80-28260
Wind energy conversion system simulation program
[AIAA 80-0609] 26 p0237 A80-28806

Markets for wind energy systems - When, where and at what price
[AIAA 80-0613] 26 p0238 A80-28810
Economic incentives to wind systems commercialization
[AIAA 80-0617] 26 p0238 A80-28811
Economics of selected WECS dispersed applications
[AIAA 80-0618] 26 p0238 A80-28812
Economic assessment of the Darrieus wind turbine
[AIAA 80-0614] 26 p0241 A80-28837
Solar water heating in the Midwest - An economic assessment based on measured performance
26 p0241 A80-28858
A heat penalty and economic analysis of the hybrid sulfuric acid process
26 p0245 A80-29406
Energy politics --- economic and technological overview
26 p0246 A80-29475
Geothermal heating in Creil
26 p0255 A80-32499
Study of a French national energy system based on coal and nuclear energy
26 p0255 A80-32500
Economics of geothermal power
[COO-4051-43] 26 p0265 N80-16497
Economic analysis of Darrieus vertical axis wind turbine systems for the generation of utility grid electrical power. Volume 1: Executive summary
[SAND-78-0962-VOL-1] 26 p0268 N80-16539
Economic analysis of Darrieus vertical axis wind turbine systems for the generation of utility grid electrical power. Volume 2: Economic optimization model
[SAND-78-0962-VOL-2] 26 p0268 N80-16540
Economic analysis of Darrieus vertical axis wind turbine systems for the generation of utility grid electrical power. Volume 3: Point designs
[SAND-78-0962-VOL-3] 26 p0269 N80-16541
Economic analysis of Darrieus axis wind turbine systems for the generation of utility grid electrical power. Volume 4: Summary and analysis of the A. T. Kearney and Alcoa Laboratories point design economic studies
[SAND-78-0962-VOL-4] 26 p0269 N80-16542
Today's geothermal power economics and risks
[CONF-790803-44] 26 p0277 N80-17558
Economics of thermal energy storage for compressed air energy storage systems
[PNL-SA-7949] 26 p0307 N80-20903
Economics of compressed air energy storage employing thermal energy storage
[PNL-3191] 26 p0307 N80-20904
Economic analysis of solar industrial process heat systems. A methodology to determine annual required revenue and internal rate of return
[UCRL-52814] 26 p0317 N80-21853

ECONOMIC DEVELOPMENT
Space benefits: The secondary application of aerospace technology in other sectors of the economy
[NASA-CR-162697] 26 p0274 N80-16950

ECONOMIC FACTORS
United States energy policy - The continuing failure
26 p0185 A80-21766
Advances in energy systems and technology. Volume 2 --- Book
26 p0207 A80-23218
Economically working big scale solar power stations pneumatic light-weight construction
26 p0208 A80-23326

ECONOMIC IMPACT
The energy problem: Its effect on aircraft design. I - Supply and demand
26 p0231 A80-27752
The energy impacts of solar heating
26 p0248 A80-29946

ECONOMICS
Survey of the research into energy-economic interactions. Volume 2: Annotated bibliography
[DOE/TIC-10134-VOL-2] 26 p0281 N80-17909
A Newton method for the PIES energy model
[AD-A077102] 26 p0287 N80-18825
Are the alternative energy stategies achievable?
[ORAU/IEA-79-15(0)] 26 p0318 N80-21863

EJECTORS
Performance analysis of a type of electrohydrodynamic power generator
[AD-A076115] 26 p0283 N80-18307

ELECTRIC ARCS
Current transport mechanisms in the boundary regions of MHD generators
[AIAA PAPER 80-0249] 26 p0192 A80-22745
The effect of electrochemical and arcing phenomena on electrode performance --- in coal-fired MHD generators
26 p0218 A80-25080

ELECTRIC AUTOMOBILES
Electric vehicle in Japan
26 p0236 A80-28484
Electric automobiles. Citations from the NTIS data base --- and their propulsion systems
[NTIS/PS-79/0990/6] 26 p0274 N80-16976
Study of advanced electric propulsion system concept using a flywheel for electric vehicles
[NASA-CR-159650] 26 p0287 N80-18991
Research, development and demonstration of lead-acid batteries for electric vehicle propulsion
[ANL/OEPM-78-7] 26 p0317 N80-21860

ELECTRIC BATTERIES
Storage of solar energy
26 p0188 A80-21937
Electric transport - The future prospects
26 p0189 A80-21956
Solar energy electrochemical storage
26 p0208 A80-23331
A battery-run pulsed motor with inherent dynamic electronic switch control
26 p0242 A80-29008
Mixed electrolyte solutions of propylene carbonate and dimethoxyethane for high energy density batteries
26 p0247 A80-29898
An ac/dc power converter for batteries and fuel cells
[EPRI-EM-662] 26 p0259 N80-16284
Electric automobiles. Citations from the NTIS data base --- and their propulsion systems
[NTIS/PS-79/0990/6] 26 p0274 N80-16976
Simulation of an urban battery bus vehicle
[PB-300306/8] 26 p0282 N80-17923
The 1979 Goddard Space Flight Center Battery Workshop
[NASA-CP-2117] 26 p0302 N80-20820
Overview of NASA battery technology program
26 p0302 N80-20821
Life test results of the NASA standard 20 ampere hour cells
26 p0303 N80-20846

ELECTRIC CHARGE
MOS and oxide-charge-induced /OCI/ BSF solar cells
26 p0234 A80-28337

ELECTRIC CURRENT
Fluctuations in combustion MHD generator systems
26 p0221 A80-25105
Life test results of the NASA standard 20 ampere hour cells
26 p0303 N80-20846

ELECTRIC DISCHARGES
Lithium thionyl chloride high rate discharge
26 p0303 N80-20830
Lithium battery discharge tests
26 p0303 N80-20831

ELECTRIC ENERGY STORAGE
Pumped water storage
26 p0225 A80-25495
Peak-load problem with storage technology --- cost analysis of electric energy storage based on energy requirements
[ANL/SPG-8] 26 p0269 N80-16549

ELECTRIC EQUIPMENT
Electrical purifiers for dielectric fluids --- charged particle contaminants separation from fuels, oils and hydraulic fluids
26 p0254 A80-32287

ELECTRIC FIELD STRENGTH
Study of the U-25B MHD generator system in strong electric and magnetic fields
26 p0216 A80-25065

ELECTRIC FIELDS
Field-dependent quantum efficiency in hydrogenated amorphous silicon --- for solar cells
26 p0251 A80-30942

ELECTRIC GENERATORS
Tension-field wind machine - A new concept in large-scale energy production
[AIAA 80-0622] 26 p0238 A80-28814
Multi-speed electrical generator application to wind turbines
[AIAA 80-0635] 26 p0239 A80-28821
An assessment of utility-related test data from large wind turbine generator tests
[AIAA 80-0631] 26 p0240 A80-28834
Analysis of losses in a high-frequency converter with low-cosine capacitance load
26 p0252 A80-31501
Solar cells for photovoltaic generation of electricity: Materials, devices and applications --- Book
26 p0253 A80-31900
Large Wind Turbine Design Characteristics and R and D Requirements
[NASA-CP-2106] 26 p0260 N80-16453
The General Electric MOD-1 wind turbine generator program
26 p0261 N80-16456
The Boeing MOD-2 wind tunnel system rated at 2.5 MW
26 p0261 N80-16457
WTG Energy Systems' MP1-200 200 kilowatt wind turbine generator --- a fixed pitch rotor configuration driving a synchronous generator
26 p0261 N80-16458
Specification, siting and selection of large WECS prototypes
26 p0261 N80-16459
The Danish large wind turbine program --- feasibility of wind power in a utility grid
26 p0261 N80-16460
Large wind energy converter: Growian 3 MW
26 p0261 N80-16461
Characteristics of future Vertical Axis Wind Turbines (VAWTs) --- to generate utility grid electric power
26 p0261 N80-16462
Status of the Southern California Edison Company 3 MW Wind Turbine Generator (WTG) demonstration project
26 p0263 N80-16478
Results of a utility survey of the status of large wind turbine development
26 p0263 N80-16479
Simulation studies of multiple large wind turbine generators on a utility network
26 p0263 N80-16480
Fixed mirror solar concentrator for application to a 100 MW(e) electric generating plant
[GA-A-15340] 26 p0266 N80-16508
Economic analysis of Darrieus vertical axis wind turbine systems for the generation of utility grid electrical power. Volume 1: Executive summary
[SAND-78-0962-VOL-1] 26 p0268 N80-16539
Economic analysis of Darrieus vertical axis wind turbine systems for the generation of utility grid electrical power. Volume 2: Economic optimization model
[SAND-78-0962-VOL-2] 26 p0268 N80-16540
Economic analysis of Darrieus vertical axis wind turbine systems for the generation of utility grid electrical power. Volume 3: Point designs
[SAND-78-0962-VOL-3] 26 p0269 N80-16541
Economic analysis of Darrieus axis wind turbine systems for the generation of utility grid electrical power. Volume 4: Summary and analysis of the A. T. Kearney and Alcoa Laboratories point design economic studies
[SAND-78-0962-VOL-4] 26 p0269 N80-16542
Performance analysis of a type of electrohydrodynamic power generator
[AD-A076115] 26 p0283 N80-18307
Permanent magnet and superconducting generators in airborne, high power systems --- computer program to predict weight of the generators and component systems
[AD-A078424] 26 p0284 N80-18311
A linear magnetic motor/generator --- to generate electric energy using magnetic flux for spacecraft's power supply
[NASA-CASE-GSC-12518-1] 26 p0290 N80-19424
Test and evaluation report of the ERDC Hybrid-Electric Van (HEVAN)
[DOE/TIC-10232] 26 p0312 N80-21210
Advanced coal gasification system for electric power generation, FY 1978
[FE-1514-93] 26 p0313 N80-21554
Wind wheel electric power generator
[NASA-CASE-MFS-23515-1] 26 p0315 N80-21828
Conceptual design of an AFBC electric power generating plant. Volume 3: Appendices
[FE-2455-27-VOL-3] 26 p0318 N80-21866

ELECTRIC HYBRID VEHICLES
Electric transport - The future prospects
26 p0189 A80-21956
The dual-mode bus and further bus developments in France
26 p0235 A80-28431
Hybrid drive-systems for municipal buses
26 p0235 A80-28475
Analysis of life-cycle costs and market applications of flywheel energy-storage transit vehicles
[PB-300289/6] 26 p0282 N80-17922
Electric and hybrid vehicle program
[DOE/CS-0026/7] 26 p0311 N80-21204
Mechanical energy storage technology for transportation applications project plan
[UCRL-15138] 26 p0312 N80-21209
Test and evaluation report of the ERDC Hybrid-Electric Van (HEVAN)
[DOE/TIC-10232] 26 p0312 N80-21210

ELECTRIC MOTOR VEHICLES
Electric transport - The future prospects
26 p0189 A80-21956
Combined magnetic levitation and propulsion - The Mag-Transit concept
26 p0231 A80-27677
Metal/air batteries: Their status and potential - A review
26 p0231 A80-28012
The dual-mode bus and further bus developments in France
26 p0235 A80-28431
Electric automobiles. Citations from the NTIS data base --- and their propulsion systems
[NTIS/PS-79/0990/6] 26 p0274 N80-16976
Advanced electric propulsion system concept for electric vehicles
[NASA-CR-159651] 26 p0282 N80-17916
Simulation of an urban battery bus vehicle
[PB-300306/8] 26 p0282 N80-17923
Electric and hybrid vehicle program
[DOE/CS-0026/7] 26 p0311 N80-21204
Mechanical energy storage technology for transportation applications project plan
[UCRL-15138] 26 p0312 N80-21209

ELECTRIC MOTORS
Airborne spacecraft - A remotely powered, high-altitude RPV for environmental applications
26 p0228 A80-26820
A battery-run pulsed motor with inherent dynamic electronic switch control
26 p0242 A80-29008
Control strategy for a variable-speed wind energy conversion system
[NASA-TM-75512] 26 p0285 N80-18558
Study of advanced electric propulsion system concept using a flywheel for electric vehicles
[NASA-CR-159650] 26 p0287 N80-18991
A linear magnetic motor/generator --- to generate electric energy using magnetic flux for spacecraft's power supply
[NASA-CASE-GSC-12518-1] 26 p0290 N80-19424

ELECTRIC NETWORKS
The open-circuit voltage of back-surface-field /BSF/ p-n junction solar cells in concentrated sunlight
26 p0247 A80-29812
Simulation studies of multiple large wind turbine generators on a utility network
26 p0263 N80-16480

ELECTRIC POTENTIAL
The open-circuit voltage of back-surface-field /BSF/ p-n junction solar cells in concentrated sunlight
26 p0247 A80-29812
MHD electrical potentials - Uniqueness of solutions to an extended class of elliptic boundary value problems
26 p0254 A80-32318
Studies of silicon p-n junction solar cells
[NASA-CR-162832] 26 p0291 N80-19609

ELECTRIC POWER

Power consumption in the high-tension field between the government's responsibility to provide energy and politics
26 p0185 A80-21846

Wind power excites utility interest
26 p0190 A80-22281

Water turbine technology for small power stations
26 p0213 A80-24125

Possible direct conversion of chemical energy into electrical energy in a semiconductor
26 p0247 A80-29795

Analysis of losses in a high-frequency converter with low-cosine capacitance load
26 p0252 A80-31501

ELECTRIC POWER PLANTS

Magnetohydrodynamic power generation - Program planning and status
26 p0184 A80-21449

Master Control and Data Acquisition System for a Solar Central Receiver Electric Power Plant
26 p0186 A80-21903

Study of flywheel energy storage system for electric utilities
26 p0187 A80-21925

Electricity generation choices for the near term
26 p0190 A80-22280

Open-cycle MHD powerplants - Performance, cost and technology demonstration strategies
[AIAA PAPER 80-0180] 26 p0192 A80-22739

Small scale ammonia production as a means for hydrogen storage
26 p0201 A80-23160

Economically working big scale solar power stations pneumatic light-weight construction
26 p0208 A80-23326

Control performance of an air-blown fixed bed coal gasification combined cycle plant in utility power systems application
26 p0213 A80-24256

Cheap electricity from French tides
26 p0214 A80-24537

Power plant impacts on visibility in the west - Siting and emissions control implications
26 p0216 A80-24735

Oxygen-enriched air for MHD power plants
26 p0220 A80-25096

Conceptual design of an MHD/steam power plant of pilot scale /ETF/ and preliminary analyses of early commercial MHD power plants
26 p0220 A80-25097

A 250 MWt MHD Engineering Test Facility /ETF/ system design
26 p0220 A80-25098

Coupled generator and combustor performance calculations for potential early commercial MHD power plants
26 p0220 A80-25099

Preliminary assessment of the requirements and potential of open cycle MHD as an electric utility power plant
26 p0220 A80-25101

The retrofit approach to MHD demonstration and commercialization --- for coal-fired MHD plants
26 p0221 A80-25102

A modular approach to an engineering test facility and beyond --- for coal-fired MHD generators
26 p0221 A80-25103

The transition MHD power plant concept
26 p0221 A80-25104

Mercury partitioning in a power plant plume and its influence on atmospheric removal mechanisms
26 p0223 A80-25170

Combined flue gas desulfurization and water treatment in coal-fired power plants
26 p0225 A80-25690

Simplified correlations for prediction of NO/x/ emissions from MHD power plants
26 p0227 A80-26001

Free space microwave power transmission systems for microwave powered atmospheric platforms
26 p0228 A80-26813

Economics of selected WECS dispersed applications
[AIAA 80-0618] 26 p0238 A80-28812

The global carbon dioxide problem - Impacts of U.S. synthetic fuel- and coal-fired electricity generating plants
26 p0248 A80-29938

Satellite solar power plants
26 p0252 A80-31200

Promising fuels for MHD power stations
26 p0252 A80-31750

Design and testing of a cavity-type, steam-generating, central receiver for a solar thermal power plant
26 p0253 A80-31856

The Danish large wind turbine program --- feasibility of wind power in a utility grid
26 p0261 N80-16460

Characteristics of future Vertical Axis Wind Turbines (VAWTs) --- to generate utility grid electric power
26 p0261 N80-16462

Economics of geothermal power
[COO-4051-43] 26 p0265 N80-16497

Use of solar energy for the production of electricity in the Alps
[SAND-79-6000] 26 p0265 N80-16499

Status of pollutant removal technology for coal fired plants in the northeastern U.S.
[BNL-51004] 26 p0272 N80-16580

Criteria for an ideal solar photovoltaic powered industry
[HCP/T5433-01] 26 p0279 N80-17577

Combined cycle power generation. Citations from the NTIS data base --- bibliographies
[PB80-800915] 26 p0280 N80-17594

Combined cycle power generation. Citations from the Engineering Index data base --- bibliographies
[P80-800923] 26 p0280 N80-17595

Theoretical study of thermal losses: The use of hybrid and combined dry coolants --- in electrical power plants
[NT-44-1978] 26 p0284 N80-18345

Parametric study of potential early commercial MHD power plants
[NASA-CR-159633] 26 p0286 N80-18559

Regional systems development for geothermal energy resources. Pacific region: California and Hawaii. Task 1: Implementation plan development --- for the generation of electric power
[DOE/ET-28432/1] 26 p0290 N80-19604

Regional systems development for geothermal energy resources. Pacific region: California and Hawaii. Task 2: Regional program monitoring and progress evaluation --- for the generation of electric power
[DOE/ET-28432/2] 26 p0291 N80-19605

Regional systems development for geothermal energy resources. Pacific region: California and Hawaii. Task 3: Water resources evaluation --- for generation of electric power
[DOE/ET-28432/3-1] 26 p0291 N80-19606

Regional systems development for geothermal energy resources. Pacific region: (California and Hawaii). Task 3: Water resources evaluation, appendices --- for generation of electric power
[DOE/ET-28432/3-2] 26 p0291 N80-19607

Cogeneration Technology Alternatives Study (CTAS). Volume 1: Summary
[NASA-TM-81400] 26 p0293 N80-19626

The effects of regional insolation differences upon advanced solar thermal electric power plant performance and energy costs
[NASA-CR-162886] 26 p0294 N80-19634

Solar sea power plants. Citations from the NTIS data base
[PB80-802580] 26 p0297 N80-19661

Solar seapower plants. Citations from the Engineering Index data base
[PB80-802598] 26 p0297 N80-19662

Economics of compressed air energy storage employing thermal energy storage
[PNL-3191] 26 p0307 N80-20904

Environmental assessment methodology: Solar power plant applications. Volume 1. Environmental impact assessment methodology
[EPRI-ER-1070-VOL-1] 26 p0309 N80-20926

General sensitivity analysis of solar thermal-electric plants
26 p0313 N80-21379

Storage peak gas-turbine power unit
[NASA-TM-75757] 26 p0314 N80-21755

Solar thermal repowering systems integration
[SERI/TR-8037-1] 26 p0316 N80-21847

Conceptual design of an AFBC electric power generating plant. Volume 3: Appendices
[FE-2455-27-VOL-3] 26 p0318 N80-21866
Hydro for the eighties: Bringing hydroelectric power to low income people, the work book. A slide presentation: Audio cassette and workbook
[PB80-103948] 26 p0319 N80-21883

ELECTRIC POWER SUPPLIES
PESC '79; Power Electronics Specialists Conference, San Diego, Calif., June 18-22, 1979, Record
26 p0242 A80-28892

ELECTRIC POWER TRANSMISSION
Free space microwave power transmission systems for microwave powered atmospheric platforms
26 p0228 A80-26813

ELECTRIC PROPULSION
Electric automobiles. Citations from the NTIS data base --- and their propulsion systems
[NTIS/PS-79/0990/6] 26 p0274 N80-16976

ELECTRICAL MEASUREMENT
End effects with a slowly varying magnetic field in a MHD channel with segmented electrodes
26 p0193 A80-22793
The influence of a voltage ramp on the measurement of I-V characteristics of a solar cell
26 p0247 A80-29817
Characterization of prototype secondary lithium battery
26 p0303 N80-20832

ELECTRICAL PROPERTIES
Equivalent circuits for the channel of the magnetohydrodynamic generator
26 p0190 A80-22349
Electrical characteristics of an arc-mode slagging electrode generator --- in Faraday MHD generators
26 p0216 A80-25064
Study of the U-25B MHD generator system in strong electric and magnetic fields
26 p0216 A80-25065
Local analysis of electrical performance of the U-25B generator --- MHD generator
26 p0216 A80-25066
A study on plasma plug --- high energy ignition plugs for exhaust pollution reduction and fuel consumption decrease in automotive gasoline engines
26 p0252 A80-31775
Characterization of deliberately nickel-doped silicon wafers and solar cells --- microstructure, electrical properties, and energy conversion efficiency
[NASA-CR-162790] 26 p0276 N80-17551

ELECTRICAL RESISTANCE
Effective thermal and electrical resistances of stabilized layered superconductors with nonideal phase contact
26 p0252 A80-31507

ELECTRO-OPTICS
Laser 79 opto-electronics; Proceedings of the Fourth Conference, Munich, West Germany, July 2-6, 1979
26 p0245 A80-29334

ELECTROCATALYSTS
Optimization of Pt-doped Kocite (trade name) electrodes in H3Po4 fuel cells
[AD-A075372] 26 p0294 N80-19639

ELECTROCHEMICAL CELLS
Energy storage --- Book
26 p0184 A80-21123
Possible use of honeycomb-type structures for high power batteries and fuel cells
26 p0190 A80-22169
Energy by reverse electrodialysis
26 p0194 A80-22940
Solar energy electrochemical storage
26 p0208 A80-23331
Energy conversion and corrosion processes in electrochemical solar cells with semiconductor electrodes --- German thesis
26 p0225 A80-25679
Thin film CdSe photoanodes for electrochemical photovoltaic cells
26 p0228 A80-26466
Simultaneous determination of quantum efficiency and energy efficiency of semiconductor photoelectrochemical cells by photothermal spectroscopy
26 p0247 A80-29897
The storage of electrochemical energy
26 p0286 N80-18578

ELECTROCHEMICAL CORROSION
Long duration channel development and testing --- for MHD generator electrode corrosion measurement
26 p0216 A80-25063
The effect of electrochemical and arcing phenomena on electrode performance --- in coal-fired MHD generators
26 p0218 A80-25080

ELECTROCHEMICAL OXIDATION
Electrochemical gasification of coal - Simultaneous production of hydrogen and carbon dioxide by a single reaction involving coal, water, and electrons
26 p0244 A80-29152

ELECTROCHEMISTRY
Irreversibility analysis of hydrogen separation schemes in thermochemical cycles
26 p0197 A80-23120
Electrochemical aspects of the H2SO4-SO2 thermoelectrochemical cycle for hydrogen production
26 p0198 A80-23128
Plastic bonded electrodes for nickel-cadmium accumulators. III - Influence of active layer composition on galvanostatic and potentiostatic discharge curves
26 p0232 A80-28016
Electrochemistry of amorphous V2S5 in lithium cells
26 p0247 A80-29895
Electrochemical gasification of coal - Investigation of operating conditions and variables
26 p0249 A80-30526
Improved thermal battery --- military applications
[AD-A075835] 26 p0276 N80-17554
Catalyst surfaces for the chromous/chromic redox couple
[NASA-CASE-LEW-13148-2] 26 p0285 N80-18557
The 1979 Goddard Space Flight Center Battery Workshop
[NASA-CP-2117] 26 p0302 N80-20820
Status of the DOE battery and electrochemical technology program
[MTR-8026] 26 p0307 N80-20902
Molten carbonate fuel cell program: EMF and temperature relaxation in LiKCO 3 tiles, transference cell measurements
[ORNL/TM-7003] 26 p0318 N80-21865
Energy savings by means of fuel cell electrodes in electro-chemical industries
[COO-4881-6] 26 p0318 N80-21870

ELECTROCONDUCTIVITY
Experiments concerning inhomogeneities in combustion MHD generators
26 p0221 A80-25107
Electrical conductivity of a seeded H2/O2 system
26 p0254 A80-32330

ELECTRODES
Current transport mechanisms in the boundary regions of MHD generators
[AIAA PAPER 80-0249] 26 p0192 A80-22745
A speculation on a general photoelectrochemical reactor
26 p0193 A80-22794
The significance of studies with palladium to basic problems of electrolytic hydrogen evolution
26 p0196 A80-23114
Electrodes for generation of hydrogen and oxygen for seawater
26 p0196 A80-23115
Electrolysis of hydrobromic acid --- hybrid cycle for hydrogen production
26 p0198 A80-23129
Photoelectrochemical generation of hydrogen with hybrid electrodes
26 p0200 A80-23153
Energy conversion and corrosion processes in electrochemical solar cells with semiconductor electrodes --- German thesis
26 p0225 A80-25679
Plastic bonded electrodes for nickel-cadmium accumulators. III - Influence of active layer composition on galvanostatic and potentiostatic discharge curves
26 p0232 A80-28016

Low-temperature thermionic converter with an expanded-area collector 26 p0249 A80-30242
A study on plasma plug --- high energy ignition plugs for exhaust pollution reduction and fuel consumption decrease in automotive gasoline engines 26 p0252 A80-31775
Optimization of Pt-doped Kocite (trade name) electrodes in H3PO4 fuel cells [AD-A075372] 26 p0294 N80-19639
ELECTRODIALYSIS
Energy by reverse electrodialysis 26 p0194 A80-22940
ELECTRODYNAMICS
Electrical processes in the interaction of a magnetic field wave with an ionized-gas stream 26 p0252 A80-31509
ELECTROHYDRODYNAMICS
Performance analysis of a type of electrohydrodynamic power generator [AD-A076115] 26 p0283 N80-18307
ELECTROLYSIS
Present state and outlook of the electrolytic H2-production route 26 p0195 A80-23104
On the potential of solar energy conversion into hydrogen and/or other fuels 26 p0195 A80-23107
OTEC for hydrogen production 26 p0195 A80-23109
The utilization of ocean hydropower systems for advanced electrolytic hydrogen energy production technology 26 p0196 A80-23110
The kinetics of oxygen evolution on non-traditional electrodic materials --- for hydrogen production by electrolysis of KOH aqueous solutions 26 p0196 A80-23111
Improvements in electrolysis technology in alkaline solution --- for hydrogen production 26 p0196 A80-23112
The use of porous metallic diaphragm for hydrogen mass-production with alkaline water electrolysis 26 p0196 A80-23113
The significance of studies with palladium to basic problems of electrolytic hydrogen evolution 26 p0196 A80-23114
Electrodes for generation of hydrogen and oxygen for seawater 26 p0196 A80-23115
Hydrogen production by high temperature electrolysis of water vapour 26 p0197 A80-23118
Development and operation of a high current density high pressure advanced electrolysis cell 26 p0197 A80-23119
Electrolysis of hydrobromic acid --- hybrid cycle for hydrogen production 26 p0198 A80-23129
Solar beam-assisted electrolyser applied to Yokohama Mark 5 and 6 --- hydrogen production 26 p0200 A80-23144
Hydrogen production from fusion reactors coupled with high temperature electrolysis 26 p0200 A80-23148
Plasmochemical cycle of hydrogen production from the water 26 p0200 A80-23149
Hydrogen generation via photoelectrolysis of water - Recent advances 26 p0200 A80-23152
Photoelectrochemical generation of hydrogen with hybrid electrodes 26 p0200 A80-23153
Thermoelectrochemical cycles for power and hydrogen production 26 p0201 A80-23157
Thermochemical or hybrid cycles of hydrogen production techno-economical comparison with water electrolysis 26 p0205 A80-23191
Testing aqueous caustic electrolyzers at high temperatures --- for hydrogen production 26 p0205 A80-23196
Theoretical efficiency limit of water electrolysis and practical means to approach it 26 p0205 A80-23197
Status and development of production of cheap hydrogen 26 p0208 A80-23330
Photoelectrochemical cells --- with photoactive semiconducting electrodes 26 p0210 A80-23520
The 'tandem photoelectrolysis plant' concept - A strategy for fuel production via biomass conversion wastes 26 p0243 A80-29054
Electrolysis-based hydrogen storage systems overview and rationale of the Brookhaven National Laboratory managed program [BNL-26904] 26 p0296 N80-19654
ELECTROLYTES
Development of sulfur-tolerant components for the molten carbonate fuel cell 26 p0190 A80-22167
Improvements in electrolysis technology in alkaline solution --- for hydrogen production 26 p0196 A80-23112
The use of porous metallic diaphragm for hydrogen mass-production with alkaline water electrolysis 26 p0196 A80-23113
Mixed electrolyte solutions of propylene carbonate and dimethoxyethane for high energy density batteries 26 p0247 A80-29898
The current-voltage characteristics of semiconductor-electrolyte junction photovoltaic cells 26 p0251 A80-30939
The preparation of some novel electrolytes: Synthesis of partially fluorinated alkanesulfonic acids as potential fuel cell electrolytes [AD-A078473] 26 p0286 N80-18570
ELECTROLYTIC CELLS
Present state and outlook of the electrolytic H2-production route 26 p0195 A80-23104
Improvements in electrolysis technology in alkaline solution --- for hydrogen production 26 p0196 A80-23112
Unipolar water electrolysers - A competitive technology 26 p0196 A80-23116
Development of Billings SPE electrolyzer --- for hydrogen production 26 p0196 A80-23117
Development and operation of a high current density high pressure advanced electrolysis cell 26 p0197 A80-23119
Testing aqueous caustic electrolyzers at high temperatures --- for hydrogen production 26 p0205 A80-23196
Solar energy electrochemical storage 26 p0208 A80-23331
The 'tandem photoelectrolysis plant' concept - A strategy for fuel production via biomass conversion wastes 26 p0243 A80-29054
Photochemical determinants of the efficiency of photogalvanic conversion of solar energy 26 p0243 A80-29056
Photogalvanovoltaic cells and photovoltaic cells using glassy carbon electrodes 26 p0243 A80-29057
Safety studies on Li/SO2 cells. II - Kinetics of lithium-organic solvent exothermic reactions 26 p0247 A80-29894
Electrochemistry of amorphous V2S5 in lithium cells 26 p0247 A80-29895
Cogeneration of electric energy and nitric oxide 26 p0255 A80-32412
Lightweight fuel cell powerplant components program [NASA-CR-161412] 26 p0298 N80-20306
Status of the DOE battery and electrochemical technology program [MTR-8026] 26 p0307 N80-20902
ELECTROMOTIVE FORCES
Flexible formulated plastic separators for alkaline batteries [NASA-CASE-LEW-12363-4] 26 p0285 N80-18555
Flexible formulated plastic separators for alkaline batteries [NASA-CASE-LEW-12363-3] 26 p0285 N80-18556

ELECTRON ACCELERATORS
- Progress in the production and energy flux concentration of the REB accelerator for ICF 26 p0226 A80-25785

ELECTRON DENSITY (CONCENTRATION)
- Effect of the interstitial hole size and electron concentration on complex metal hydride formation 26 p0202 A80-23168

ELECTRON RADIATION
- Shallow-homojunction GaAs cells with high resistance to 1-MeV electron radiation 26 p0183 A80-21089

ELECTRON RECOMBINATION
- Recombination in the space-charge region of Schottky barrier solar cells 26 p0207 A80-23272
- The current-voltage characteristics of semiconductor-electrolyte junction photovoltaic cells 26 p0251 A80-30939
- The spectral response of a front surface field solar cell 26 p0254 A80-32331

ELECTRON STATES
- Spin-aligned hydrogen --- atoms at lowest electronic energy magnetic sublevels as substance for molecular production 26 p0200 A80-23151

ELECTRON TRANSFER
- Light-induced electron transfer reactions in solution, organized assemblies and at interfaces - Scope and potential applications 26 p0243 A80-29055

ELECTRONIC CONTROL
- The evolution of a large laser control system - From Shiva to Nova 26 p0185 A80-21901
- Electronic fuel injection techniques for hydrogen powered I.C. engines 26 p0206 A80-23205
- Design considerations of a CAMAC system for large tokamak JT-60 26 p0231 A80-27672
- Peak power tracking technique for photovoltaic arrays 26 p0242 A80-28908

ELECTROSTATIC WAVES
- Theory of current generation by electrostatic traveling waves in collisionless magnetized plasmas 26 p0229 A80-27263
- Toroidal effects on nonlocal collisionless drift instability 26 p0229 A80-27278

ELECTROSTATICS
- Toroidal Trivelpiece-Gould modes --- quasi-electrostatic approximation for electron plasma waves in fusion reactor 26 p0189 A80-22042

ELLIPTIC DIFFERENTIAL EQUATIONS
- MHD electrical potentials - Uniqueness of solutions to an extended class of elliptic boundary value problems 26 p0254 A80-32318

EMISSIVITY
- Spectral selectivity of high-temperature solar absorbers 26 p0225 A80-25657

EMITTANCE
- Effect of a heated atmosphere on the temperature dependence of the total emittance of black chrome solar absorber pipes [UCRL-52851] 26 p0316 N80-21842

ENCAPSULATING
- Develop silicone encapsulation systems for terrestrial silicon solar arrays [NASA-CR-162840] 26 p0292 N80-19617

ENERGY
- The storage of electrochemical energy 26 p0286 N80-18578

ENERGY ABSORPTION
- Submerged cylinder wave energy device - Theory and experiment 26 p0251 A80-30801
- Absorption of wave energy by elongated bodies --- in ocean water 26 p0251 A80-30805

ENERGY ABSORPTION FILMS
- High photocurrent polycrystalline thin-film CdS/CuInSe2 solar cell 26 p0229 A80-27321
- Graded metal carbide solar selective surfaces coated onto glass tubes by a magnetron sputtering system 26 p0246 A80-29742
- Cylindrical magnetron sputtering system for coating solar selective surfaces onto batches of tubes 26 p0246 A80-29743
- Alternative grading profile for sputtered solar selective surfaces 26 p0246 A80-29744
- Preparation of thin films for solar energy utilization [SAND-79-1754C] 26 p0267 N80-16517
- Photovoltaic Materials and Device Measurements Workshop: Focus on polycrystalline thin film cells [SERI/TP-49-185] 26 p0268 N80-16538

ENERGY CONSERVATION
- Energy accounting of alternative energy sources 26 p0193 A80-22868
- Aerial thermography - A tool for making people aware of energy conservation 26 p0212 A80-24070
- Problems concerning the interpretation of thermographic data for the detection of energy losses from buildings 26 p0212 A80-24071
- Co-generation at a practical plant level - Single stage steam turbine generator set replaces pressure reducing station to reduce plant energy consumption 26 p0222 A80-25116
- Possible energy savings through tribological measures - Especially in automobiles 26 p0227 A80-26184
- Radiant heat for energy conservation 26 p0253 A80-32056
- Energy savings through use of an improved reduction cell cathode [SAN-1257-T2] 26 p0267 N80-16515
- Energy conservation in industry: The present approach, the future opportunities [PB-301244/0] 26 p0270 N80-16556
- Survey on metallurgical recycling processes [ANL/OEPM-79-2] 26 p0282 N80-17918
- Energy conservation in the U.S. economy from increased recycle of obsolete steel scrap 26 p0290 N80-19492
- Energy conservation in the US: Some interdisciplinary approaches with an emphasis on industrial cogeneration 26 p0302 N80-20811
- Energy efficient buildings program [LBL-9576] 26 p0304 N80-20877
- Urban mass transportation energy conservation: SRGP operating instructions and program documentation, volume 5 [DOE/PE-8628/1-VOL-5] 26 p0312 N80-21205
- Urban transportation energy conservation: Case city applications of analysis methodologies, volume 3 [DOE/PE-8628/1-VOL-3] 26 p0312 N80-21206
- Urban transportation energy conservation: Analytic procedures for estimating changes in travel demand and fuel consumption, volume 2 [DOE/PE-8628/1-VOL-2] 26 p0312 N80-21207
- Analytical procedures for urban transportation energy conservation: Summary of findings and methodologies, volume 1 [DOE/PE-8628/1-VOL-1] 26 p0312 N80-21208
- Analytic procedures for urban transportation energy conservation. Volume 1: Summary of findings and methodologies [CONS-8626-T1-VOL-1] 26 p0317 N80-21857
- Potential for solar/conservation technologies in the state of Washington [WAOENG-79-3] 26 p0317 N80-21859

Unconventional gas recovery program
[METC/SP-79/8] 26 p0258 N80-16181

Coal liquefaction
[DOE/ET-0068/3] 26 p0258 N80-16183

Assessment of the technical and economic feasibility of converting wood residues to liquid and gaseous fuel products using state-of-the-art and advanced coal conversion technology
[COO-4862-3] 26 p0258 N80-16189

Development studies on selected conversion of synthesis gas from coal to high octane gasoline
[FE-2276-27] 26 p0259 N80-16190

Proceedings: Symposium on coal cleaning to achieve energy and environmental goals held at Hollywood, Florida on September 1978, volume 1
[PB-299383/0] 26 p0259 N80-16192

Proceedings: Symposium on coal cleaning to achieve energy and environmental goals held at Hollywood, Florida on September 1978, volume 2
[PB-299384/8] 26 p0259 N80-16193

Gasohol: A technical memorandum
[PB80-105885] 26 p0259 N80-16194

Engine combustion technology overview
[SAND-78-8801] 26 p0260 N80-16347

Study of hydrocarbon-shale interaction
[ORO-5197-14] 26 p0260 N80-16409

Large Wind Turbine Design Characteristics and R and D Requirements
[NASA-CP-2106] 26 p0260 N80-16453

Operational experience with VAWT blades --- structural performance
26 p0262 N80-16468

Structural analysis considerations for wind turbine blades
26 p0262 N80-16469

Blade design and operating experience on the MOD-OA 200 kW wind turbine at Clayton, New Mexico
26 p0262 N80-16470

Evaluation of an operating MOD-OA 200 kW wind turbine blade
26 p0262 N80-16471

Design, fabrication, and test of a steel spar wind turbine blade
26 p0262 N80-16472

Preliminary analysis of performance and loads data from the 2-megawatt mod-1 wind turbine generator
[NASA-TM-81408] 26 p0264 N80-16494

Solar collector manufacturing activity
[DOE/EIA-0174/78] 26 p0265 N80-16500

Environmental development plan: Solar thermal power systems
[DOE/EDP-0035] 26 p0265 N80-16503

Workshop on Power Conditioning for Alternative Energy Technologies, executive summary
[SERI-TP-35-217-PT-25] 26 p0265 N80-16505

Computer simulation of ground coupled storage in a series solar assisted heat pump system
[BNL-26216] 26 p0266 N80-16507

Solar-MEC development program, project 9103
[COO-4495-7] 26 p0267 N80-16522

Contributions to the foundations of supply for energy and transportation: Concepts, economics, and technologies
[PB-300541/0] 26 p0269 N80-16554

Flat plate solar collector design and performance. Citations from the Engineering Index data base
[NTIS/PS-79/0929/4] 26 p0271 N80-16567

Solar energy for agriculture: Review of research
[PB-298688/3] 26 p0271 N80-16568

Vertical movement along the Cerro Prieto transform fault, Baja California, Mexico - a mechanism for geothermal energy renewal
[LBL-8905] 26 p0273 N80-16652

Experiments on H2-O2MHD power generation
[NASA-TM-81424] 26 p0273 N80-16886

Fiscal year 1979 scientific and technical reports, articles, papers and presentations
[NASA-TM-78250] 26 p0274 N80-17014

Information theory applied to solar radiation concentrators
26 p0275 N80-17539

Proceedings of the 13th Project integration meeting
[NASA-CR-162787] 26 p0276 N80-17549

Regenerative burner system for thermoelectric power sources --- military equipment
[AD-A075955] 26 p0276 N80-17553

Improved thermal battery --- military applications
[AD-A075835] 26 p0276 N80-17554

State-of-the-art of solar control systems in industrial process heat applications
[SERI/TP-39-240] 26 p0277 N80-17562

Suntech Solar Linear Array Thermal System (SLATS) test results
[SAND-79-0658] 26 p0277 N80-17563

Performance of solar passive buildings
[SAND-79-1574C] 26 p0277 N80-17566

Magma energy research, 79-1
[SAND-79-1344] 26 p0277 N80-17568

Some potential material supply constraints in solar systems for heating and cooling of buildings and process heat. A preliminary screening to identify critical materials
[PNL-2972] 26 p0278 N80-17570

Continuing regional solar energy information Mini-Center activities and updating the SOLCOST program
[COO-4643-T1] 26 p0278 N80-17571

Combined cycle power generation. Citations from the NTIS data base --- bibliographies
[PB80-800915] 26 p0280 N80-17594

Combined cycle power generation. Citations from the Engineering Index data base --- bibliographies
[P80-800923] 26 p0280 N80-17595

Geothermal energy development in the eastern United States. Evaluation of potential geothermal resource areas
[PB-299925/8] 26 p0285 N80-18547

Parametric study of potential early commercial MHD power plants
[NASA-CR-159633] 26 p0286 N80-18559

Appendix: MOD-1 wind turbine generator analysis and design report, volume 2
[NASA-CR-159496] 26 p0286 N80-18565

Mixing and gasification of coal in entraining flow systems
[FE-2666-T1] 26 p0289 N80-19303

Advanced technology light weight fuel cell program --- orbiting space vehicle long-life hydrogen oxygen fuel cell
[NASA-CR-159807] 26 p0292 N80-19615

Develop silicone encapsulation systems for terrestrial silicon solar arrays
[NASA-CR-162840] 26 p0292 N80-19617

High temperature solar thermal receiver
[NASA-CR-162831] 26 p0292 N80-19621

Cogeneration Technology Alternatives Study (CTAS). Volume 1: Summary
[NASA-TM-81400] 26 p0293 N80-19626

Wave power extraction by floating bodies
[AD-A078058] 26 p0294 N80-19637

Solar powered liquid piston Stirling cycle irrigation pump
[SAN-1894-1] 26 p0294 N80-19641

Research on dynamics of tundra ecosystems and their potential response to energy resource development
[DOE/SP-01525/1] 26 p0294 N80-19642

Energy accounting for solar and alternative energy sources
[ORAU/IEA-79-11(R)] 26 p0295 N80-19647

Characterization and assessment of selected solar thermal energy systems for residential and process heat applications
[LA-7995-TASE] 26 p0295 N80-19648

Cataract hydroelectric development expansion study
[DOE/ID-01796-1] 26 p0295 N80-19650

Potential hydroelectric power, vertical turbine, spillway combine Broadwater Dam
[DOE/ID-01822-1] 26 p0295 N80-19651

Emerging materials systems for solar cell applications-Cu/sub 2-x/Se
[DOE/ET-23005/T2] 26 p0296 N80-19653

Energy from the west: Impact analysis report. Volume 2. Site-specific and regional impact analyses
[PB80-113574] 26 p0296 N80-19655

Cadmium sulfide solar cells, volume 1. Citations from the NTIS data base
[PB80-802218] 26 p0296 N80-19656

Solar electric power generation, volume 3. Citations from the Engineering Index data base
[PB80-803034] 26 p0296 N80-19657

Solar electric power generation, volume 2. Citations from the NTIS data base
[PB80-803000] 26 p0296 N80-19658
Solar electric power generation, volume 3. Citations from the NTIS data base
[PB80-803018] 26 p0296 N80-19659
Solar electric power generation, volume 2. Citations from the Engineering Index data base
[PB80-803026] 26 p0296 N80-19660
Solar sea power plants. Citations from the NTIS data base
[PB80-802580] 26 p0297 N80-19661
Solar seapower plants. Citations from the Engineering Index data base
[PB80-802598] 26 p0297 N80-19662
Exploratory studies in catalytic coal liquefaction
[EPRI-AF-1184] 26 p0299 N80-20422
Survey of biomass gasification. Volume 1: Synopsis and executive summary
[SERI/TR-33-239-VOL-1] 26 p0300 N80-20427
Measurement techniques for high power semiconductor materials and devices
[DOE/RA-0041] 26 p0301 N80-20506
Basic research in engineering: Fluid dynamics and thermal processes --- workshop
[FE-2468-54] 26 p0301 N80-20551
A comparative study of the energy alternatives for the State of New York
26 p0302 N80-20807
Lithium thionyl chloride high rate discharge
26 p0303 N80-20830
Lithium battery discharge tests
26 p0303 N80-20831
Characterization of prototype secondary lithium battery
26 p0303 N80-20832
Militarized thermoelectric power sources
[AD-A075609] 26 p0304 N80-20869
DOE/JPL advanced thermionic technology program
[COO-3056-37] 26 p0304 N80-20873
Thermal fluid selection for long-distance heat transmission
[CONF-790803-47] 26 p0305 N80-20879
Energy information data base
[DOE/TIC-4579-R10-SUPPL-6] 26 p0305 N80-20881
Conversion system overview assessment. Volume 1: Solar thermoelectrics
[SERI/TR-35-078-VOL-1] 26 p0305 N80-20882
Residential solar heating and cooling using evacuated tube solar collectors: CSU Solar House 3
[COO-2858-24-SUMM] 26 p0305 N80-20887
Installation and startup of the fixed mirror solar concentrator collector field subsystem
[GA-A-15344] 26 p0306 N80-20888
The 1-GWh diurnal load-leveling superconducting magnetic energy storage system reference design. Appendix C: Dewar and structural support
[LA-7885-MS-VOL-6] 26 p0307 N80-20897
Status of the DOE battery and electrochemical technology program
[MTR-8026] 26 p0307 N80-20902
Determining the feasibility of incorporating water resource constraints into energy models
[EPRI-EA-1147] 26 p0308 N80-20908
National solar heating and cooling programs
[PB80-104987] 26 p0309 N80-20915
Environmental development plan: Coal extraction and preparation
[DOE/EDP-0050] 26 p0309 N80-20921
Fusion technology development
[DOE/ET-0116/1] 26 p0311 N80-21165
Projections of enhanced oil recovery, 1985 - 1995
[DOE/EIA-0183/11] 26 p0314 N80-21824
Effect of a heated atmosphere on the temperature dependence of the total emittance of black chrome solar absorber pipes
[UCRL-52851] 26 p0316 N80-21842
Aerospace technology review for LBL window/passive solar program
[LBL-9608] 26 p0316 N80-21850
Multi-objective energy analysis
[BNL-26882] 26 p0317 N80-21856
Are the alternative energy stategies achievable?
[ORAU/IEA-79-15(O)] 26 p0318 N80-21863
Solar energy research at LASL
[LA-7741-PR] 26 p0318 N80-21872
Study on European aspects of solar power satellites, volume 1
[ESA-CR(P)-1266] 26 p0319 N80-21880
Energy programs at the Johns Hopkins University Applied Physics Laboratory
[PB80-125651] 26 p0320 N80-21889

ENERGY TRANSFER
Explosive-driven magnetic generator with a plasma load
26 p0252 A80-31357
Wave power extraction by floating bodies
[AD-A078058] 26 p0294 N80-19637

ENGINE DESIGN
Hydrogen energy in United States Post Office delivery systems
26 p0203 A80-23178
Stirling engine design and feasibility for automotive use --- Book
26 p0234 A80-28425
Future trends in the automobile
26 p0234 A80-28426
A technical conception for highly developed spark-ignition engines
26 p0235 A80-28471
The future of the Diesel engine - A critical analysis
26 p0235 A80-28473
Advanced engine concepts - The Ford Proco engine
26 p0235 A80-28474
Power units for mini RPV's
26 p0246 A80-29662
Gas turbines for automotive use --- Book
26 p0253 A80-31999
A 15 kWe (nominal) solar thermal-electric power conversion concept definition study: Steam Rankin reciprocator system
[NASA-CR-159591] 26 p0291 N80-19612
Supporting research and technology for automotive Stirling engine development
[NASA-TM-81495] 26 p0311 N80-21200
Fuel economy screening study of advanced automotive gas turbine engines
[NASA-TM-81433] 26 p0311 N80-21201

ENGINE TESTS
Performance sensitivity analysis of Department of Energy-Chrysler upgraded automotive gas turbine engine, S/N 5-4
[NASA-TM-79242] 26 p0274 N80-17467
Laboratory investigation of the performance of a Holden engine operating on liquified petroleum gas
[AD-A076145] 26 p0284 N80-18411
Diesel engine endurance test with water-containing fire-resistant fuel
[AD-A078665] 26 p0287 N80-19287

ENGINEERING MANAGEMENT
New standards in research and development
26 p0208 A80-23317

ENGINEERING TEST REACTORS
International tokamak reactor - Executive summary of the IAEA Workshop, 1979
26 p0252 A80-31626

ENTRAINMENT
Mixing and gasification of coal in entraining flow systems
[FE-2666-T1] 26 p0289 N80-19303

ENVIRONMENT EFFECTS
Wind energy research and development at Lincoln
26 p0211 A80-23535
Geothermal energy and the environment - The global experience
26 p0223 A80-25259
Environmental development plan: Solar thermal power systems
[DOE/EDP-0035] 26 p0265 N80-16503
Federal photovoltaics utilization program
[DOE/EA-0087] 26 p0267 N80-16525
Petroleum production at maximum efficient rate, Naval Petroleum Reserve no. 1 (Elk Hills), Kern County, California
[DOE/EIS-0012] 26 p0272 N80-16581
Environmental assessment of stationary source NOx control technologies
[PB-300469/4] 26 p0272 N80-16601
Methanol as a transportation fuel: Assessment of environmental and health research
[UCRL-52697] 26 p0288 N80-19295

Environmental assessment of the HYGAS process. Volume 1: HYGAS environmental characterization, data synthesis, analysis, and interpretation, tests 37 - 64
[FE-2433-25-VOL-1] 26 p0289 N80-19305
Research on dynamics of tundra ecosystems and their potential response to energy resource development
[DOE/SF-01525/1] 26 p0294 N80-19642
Energy from the west: Impact analysis report. Volume 2. Site-specific and regional impact analyses
[PB80-113574] 26 p0296 N80-19655
Alaskan environmental research. Section 12.0 of part 2: Ecological sciences
[PNL-2850-PT-2-SUPPL] 26 p0297 N80-19666
Environmental assessment methodology: Solar power plant applications. Volume 3. Environmental impact assessment application
[EPRI-ER-1070-VOL-3] 26 p0306 N80-20889
Biomass energy systems: Environmental readiness document
[DOE/ERD-0021] 26 p0308 N80-20905
Environmental assessment methodology: Solar power plant applications. Volume 1. Environmental impact assessment methodology
[EPRI-ER-1070-VOL-1] 26 p0309 N80-20926
Coal-conversion technologies: Some health and environmental effects
[BNL-5103] 26 p0309 N80-20930
Energy from the west: Impact analysis report. Volume 1: Introduction and summary
[PB80-113566] 26 p0319 N80-21884
Pollution control practices, fuel conversion and its environmental effects
[PB80-119704] 26 p0320 N80-21896
Symposium Proceedings: Environmental Aspects of Fuel conversion technology, IV
[PB80-134729] 26 p0320 N80-21913

ENVIRONMENT MANAGEMENT
Regional environment-energy data book: Northeast region
[DOE/TIC-10114/3] 26 p0279 N80-17578
Regional environment-energy data book: Western region
[DOE/TIC-10114/2] 26 p0280 N80-17597
Regional environment-energy data book: Southern region
[DOE/TIC-10114/4] 26 p0281 N80-17598
Regional environment-energy data book: Northwest region
[DOE/TIC-10114/5] 26 p0281 N80-17599

ENVIRONMENT MODELS
A model for the Sulphur Springs geothermal field St. Lucia
26 p0231 A80-27924

ENVIRONMENT POLLUTION
Coal combustion fly ash characterization - Adsorption of nitrogen and water
26 p0250 A80-30656
Application of coke plant control technologies to coal conversion
[PB80-108954] 26 p0290 N80-19310

ENVIRONMENT PROTECTION
Environmental development plan: Underground coal gasification
[DOE/EDP-0047] 26 p0260 N80-16411
Environmental system study on the development of fossil fuel resources in the Southwest
[PB-300526/1] 26 p0272 N80-16596
Environmental development plan: Coal extraction and preparation
[DOE/EDP-0050] 26 p0309 N80-20921

ENVIRONMENT SIMULATION
Further studies on wind turbine generator wakes
[AIAA 80-0626] 26 p0238 A80-28817

ENVIRONMENTAL MONITORING
Environmental assessment methodology: Solar power plant applications. Volume 1. Environmental impact assessment methodology
[EPRI-ER-1070-VOL-1] 26 p0309 N80-20926

ENVIRONMENTAL SURVEYS
Petroleum production at maximum efficient rate, Naval Petroleum Reserve no. 1 (Elk Hills), Kern County, California
[DOE/EIS-0012] 26 p0272 N80-16581

EPITAXY
Comparison of Hg/0.6/Cd/0.4/Te LPE layer growth from Te-, Hg-, and HgTe-rich solutions
26 p0234 A80-28305
Grown junction GaAs solar cells with a thin graded band-gap Al/x/Ga/1-x/As surface layer
26 p0250 A80-30668
High efficiency solar panel, phase 2, gallium arsenide
[AD-A079635] 26 p0316 N80-21838

EQUATIONS OF MOTION
Aeroelastic equations of motion of a Darrieus vertical-axis wind-turbine blade
[NASA-TM-79295] 26 p0284 N80-18446

EQUIVALENT CIRCUITS
Equivalent circuits for the channel of the magnetohydrodynamic generator
26 p0190 A80-22349

ETHANE
Flash hydropyrolysis of coal
[BNL-51010] 26 p0258 N80-16185
Liquid phase methanation/shift pilot plant operation and laboratory support work
[FE-2036-37] 26 p0298 N80-20413

ETHYL ALCOHOL
Experience with alcohol fuels
26 p0236 A80-28476

EXHAUST EMISSION
Power plant impacts on visibility in the west - Siting and emissions control implications
26 p0216 A80-24735
Organic content of particulate matter in turbine engine exhaust
26 p0229 A80-27099
An economic analysis of air pollution from coal-fired power plants
26 p0230 A80-27649
Development of high temperature subtractive column and chromatographic analysis of hydrocarbons present in diesel exhaust
[BETC/RI-78/12] 26 p0257 N80-16130
Comparison of fuel economy and emissions for diesel and gasoline powered taxicabs
[PB-298609/9] 26 p0275 N80-17484
Issues concerning the light-duty diesel
[DOE/EV-0050/1] 26 p0290 N80-19510
Light-duty diesel gaseous emissions measurement - comparison of dilution tunnel test results to certification cell test results
[PB80-115991] 26 p0310 N80-20945
Exhaust characterization of neat alcohol fueled IC engines
[BETC/P-B-8-1943-1] 26 p0314 N80-21760
Overview of pollution from combustion of fossil fuels in boilers of the United States
[PB80-124969] 26 p0320 N80-21912

EXHAUST GASES
Gas turbines for automotive use --- Book
26 p0253 A80-31999
Factors affecting cleanup of exhaust gases from a pressurized, fluidized-bed coal combustor
[NASA-TM-81439] 26 p0301 N80-20532

EXPLORATION
Geothermal energy development in the eastern United States. Evaluation of potential geothermal resource areas
[PB-299925/8] 26 p0285 N80-18547

EXTREMUM VALUES
Gradient bounds for plasma confinement
26 p0213 A80-24223

EXTRUDING
Experimental laboratory measurement of thermophysical properties of selected coal types
[NASA-CR-162913] 26 p0298 N80-20404

F

FAILURE MODES
Mod 1 wind turbine generator failure modes and effects analysis
[NASA-CR-159494] 26 p0303 N80-20864

FANS (LANDFORMS)
The Yallahs fan delta, southeastern Jamaica: A depositional model for active tectonic coastlines
26 p0273 N80-16632

FARMLANDS
Soil fertility and soil loss constraints on crop residue removal for energy production
[SERI/RR-52-324] 26 p0266 N80-16511

FATIGUE TESTS
Compressive fatigue tests on a unidirectional glass/polyester composite at cryogenic temperatures --- for superconducting energy storage magnet structural supports
26 p0191 A80-22690
FEASIBILITY ANALYSIS
Hydrogen-fueled railroad motive power systems - A North American view
26 p0203 A80-23175
Technical and economic feasibility of wind-powered systems for dairy farms
[AIAA 80-0641] 26 p0239 A80-28823
Promising fuels for MHD power stations
26 p0252 A80-31750
Feasibility study of geothermal energy for heating greenhouses
[PB-299517/3] 26 p0271 N80-16569
Feasibility of cogeneration application of a 4.8 MW fuel cell power plant at a Santa Clara, California paper mill
[SAN-2189-T1] 26 p0304 N80-20876
FEDERAL BUDGETS
NASA authorization, 1981, program review, volume 1
[GPO-53-814] 26 p0281 N80-17913
FERRIMAGNETS
A battery-run pulsed motor with inherent dynamic electronic switch control
26 p0242 A80-29008
FIBER COMPOSITES
Low cost composite blades for large wind turbines
26 p0253 A80-32074
Composite-laminate flywheel-rotor development program
[UCRL-83554] 26 p0317 N80-21855
FIBER ORIENTATION
Compressive fatigue tests on a unidirectional glass/polyester composite at cryogenic temperatures --- for superconducting energy storage magnet structural supports
26 p0191 A80-22690
FILAMENT WINDING
Low cost composite blades for large wind turbines
26 p0253 A80-32074
FILTRATION
Filtration in coal liquefaction - Influence of filtration conditions in non-hydrogenated systems
26 p0254 A80-32371
Filtration in coal liquefaction - Influence of digestion conditions in the filtration of non-hydrogenated coal digests
26 p0255 A80-32372
FINITE DIFFERENCE THEORY
Combined ADI iteration and implicit central difference numerical method for solving nonlinear conjugated partial differential equations with moving boundary heat transfer in in-situ coal liquefaction
26 p0228 A80-26681
FISSILE FUELS
Design study of a fusion-driven Tokamak hybrid reactor for fissile fuel production, volume 1
[EPRI-ER-1083-VOL-1] 26 p0281 N80-17863
Design study of a fusion-driven Tokamak hybrid reactor for fissile fuel production, volume 2
[EPRI-NP-1083-VOL-2] 26 p0281 N80-17864
FISSION ELECTRIC CELLS
Synergetics of the fission electric cells
26 p0193 A80-22789
FISSION PRODUCTS
Hydrogen production from nuclear fission product waste heat and use in gas turbines
26 p0195 A80-23106
FLAME PROPAGATION
Combustion and operating characteristics of spark-ignition engines
[NASA-CR-162896] 26 p0298 N80-20340
FLAME RETARDANTS
Diesel engine endurance test with water-containing fire-resistant fuel
[AD-A078665] 26 p0287 N80-19287
FLAMMABILITY
Diesel engine endurance test with water-containing fire-resistant fuel
[AD-A078665] 26 p0287 N80-19287
FLAT PLATES
Fundamental characteristics of the reverse flat plate collector
26 p0187 A80-21927
Flat plate solar collector design and performance. Citations from the NTIS data base
[NTIS/PS-79/0928/6] 26 p0271 N80-16566
Flat plate solar collector design and performance. Citations from the Engineering Index data base
[NTIS/PS-79/0929/4] 26 p0271 N80-16567
Solar energy design improvement: A methodology for hydronic flatplate collector systems
[AD-A076836] 26 p0286 N80-18567
Computer simulation of a solar energy system which utilizes flat-plate collectors
[AD-A079906] 26 p0304 N80-20870
FLEXIBILITY
Lateral and tilt whirl modes of flexibly mounted flywheel systems
26 p0259 N80-16215
FLORIDA
Solar energy system performance evaluation: Seasonal report for SEMCO, Loxahatchee, Florida
[NASA-CR-161379] 26 p0293 N80-19627
FLOW CHARACTERISTICS
A refined windmill rotor model
[AIAA 80-0628] 26 p0241 A80-28841
FLOW DISTRIBUTION
Scale-up of advanced MHD generators
[AIAA PAPER 80-0179] 26 p0212 A80-23938
FLUES
Analysis of thermal decomposition products of flue gas conditioning agents
[PB80-111818] 26 p0297 N80-19672
FLUID DYNAMICS
Basic research in engineering: Fluid dynamics and thermal processes --- workshop
[FE-2468-54] 26 p0301 N80-20551
FLUID FLOW
Calculation of performance of N collectors in series from test data on a single collector
26 p0184 A80-21113
FLUIDIZED BED PROCESSORS
Fluidized bed combustion of high sulphur coals
26 p0225 A80-25494
The development of fluidized bed combustion
26 p0225 A80-25689
Wood gasification in a fluidized bed
26 p0244 A80-29154
Advanced electric generation. Commercialization in phase 3 planning
[DOE/ERD-0014] 26 p0269 N80-16547
Centrifugal fluidized combustion of coal
[FE-2516-9] 26 p0288 N80-19293
Coal processing fuel cell utilization. Task 8: H2S removal by calcium-based sorbents
[PSI-TR-167] 26 p0288 N80-19300
Fluid coking of coal liquefaction residues: The fourth residue
[FE-2422-28] 26 p0289 N80-19304
Development of a fast fluid bed gasifier, task 2 and 3
[FE-2361-40] 26 p0289 N80-19306
Support studies in fluidized-bed combustion 1978 annual report
[PB80-112758] 26 p0300 N80-20430
Factors affecting cleanup of exhaust gases from a pressurized, fluidized-bed coal combustor
[NASA-TM-81439] 26 p0301 N80-20532
Conceptual design of an AFBC electric power generating plant. Volume 3: Appendices
[FE-2455-27-VOL-3] 26 p0318 N80-21866
FLUORESCENCE
A fluorescent radiation converter
[NASA-CASE-GSC-12528-1] 26 p0283 N80-18261
FLUTTER ANALYSIS
Flutter analysis of small windturbine, designed for manufacture and use in developing countries
[UTH-LR-272] 26 p0284 N80-18415
FLUX DENSITY
Progress in the production and energy flux concentration of the REB accelerator for ICF
26 p0226 A80-25785
Nonideal compensation in MHD generators --- models of the distortion of the total magnetic flux density by the induced magnetic flux density
26 p0310 N80-21149
FLYWHEELS
Study of flywheel energy storage system for electric utilities
26 p0187 A80-21925

Lateral and tilt whirl modes of flexibly mounted flywheel systems
26 p0259 N80-16215
Flywheel energy storage and conversion system for photovoltaic applications
[COO-4094-57] 26 p0265 N80-16501
Design and applications of flywheels, volume 1. Citations from the NTIS data base --- bibliographies
[PB80-800303] 26 p0280 N80-17591
Design and applications of flywheels, volume 2. Citations from the NTIS data base --- bibliographies
[PB80-800311] 26 p0280 N80-17592
Design and applications of flywheels. Citations from the Engineering Index data base --- bibliographies
[PB0-800329] 26 p0280 N80-17593
Analysis of life-cycle costs and market applications of flywheel energy-storage transit vehicles
[PB-300289/6] 26 p0282 N80-17922
Study of advanced electric propulsion system concept using a flywheel for electric vehicles
[NASA-CR-159650] 26 p0287 N80-18991
Mechnical energy storage technology development
[SAND-79-1151] 26 p0304 N80-20874
Mechanical energy storage technology for transportation applications project plan
[UCRL-15138] 26 p0312 N80-21209
Composite-laminate flywheel-rotor development program
[UCRL-83554] 26 p0317 N80-21855
Flywheel energy storage switcher. Volume 1: Study summary and detailed description of analysis
[PB80-121478] 26 p0320 N80-21888

FOAMS
Durability of foam insulation for LH2 fuel tanks of future subsonic transports
26 p0191 A80-22687

FOCI
Low cost point focus solar concentrator, phase 1
[NASA-CR-162848] 26 p0292 N80-19624

FOLIAGE
Remote sensing of sulfur dioxide effects on vegetation - photometric analysis of aerial photographs
[PB-300460/3] 26 p0272 N80-16600

FOOD
A global biogeocenotical biosphere simulation
[NASA-TM-76042] 26 p0309 N80-20920

FORESTS
Estimation of primary production of vegetation in agricultural and forested areas using Landsat data
26 p0191 A80-22456

FOSSIL FUELS
Processing of solid fossil-fuel deposits by electrical induction heating
26 p0242 A80-29007
Fossil energy program
[ORNL-5487] 26 p0266 N80-16506
Environmental system study on the development of fossil fuel resources in the Southwest
[PB-300526/1] 26 p0272 N80-16596
Combined cycle for solar-fossil hybrid power generation
[CONF-790803-43] 26 p0276 N80-17557
Industrial fuel choice analysis model. Volume 2: Appendices to model documentation
[DOE/EIA-2832/1-VOL-2-APP] 26 p0299 N80-20419
Overview of pollution from combustion of fossil fuels in boilers of the United States
[PB80-124969] 26 p0320 N80-21912

FOURIER TRANSFORMATION
Application of Fourier-transform infrared spectroscopy to the characterization of fractionated coal liquids
26 p0249 A80-30525

FRACTIONATION
Application of Fourier-transform infrared spectroscopy to the characterization of fractionated coal liquids
26 p0249 A80-30525
Experimental laboratory measurement of thermophysical properties of selected coal types
[NASA-CR-162913] 26 p0298 N80-20404

FRANCE
Cheap electricity from French tides
26 p0214 A80-24537
The dual-mode bus and further bus developments in France
26 p0235 A80-28431
Study of a French national energy system based on coal and nuclear energy
26 p0255 A80-32500

FREQUENCY RESPONSE
The spectral response of a front surface field solar cell
26 p0254 A80-32331

FRESNEL LENSES
Industrial solar thermal concentrators
26 p0189 A80-21953

FRESNEL REFLECTORS
Some geometrical design aspects of a linear Fresnel reflector concentrator
26 p0193 A80-22791

FUEL CELLS
Development of sulfur-tolerant components for the molten carbonate fuel cell
26 p0190 A80-22167
Possible use of honeycomb-type structures for high power batteries and fuel cells
26 p0190 A80-22169
Prospects for an alkaline hydrogen air fuel cell system
26 p0204 A80-23182
A high energy hybrid system: Hydrogen - chlorine - solar - water
26 p0206 A80-23199
Cogeneration of electric energy and nitric oxide
26 p0255 A80-32412
Mixed potential analysis of sulfation of molten carbonate fuel cells
26 p0255 A80-32501
An ac/dc power converter for batteries and fuel cells
[EPRI-EM-662] 26 p0259 N80-16284
Advanced electric generation. Commercialization in phase 3 planning
[DOE/ERD-0014] 26 p0269 N80-16547
Comparative assessment of residential energy supply systems that use fuel cells: Executive summary --- domestic energy supply systems analysis of coal fired power plants using fuel cells
[PB-299207/1] 26 p0271 N80-16564
Comparative assessment of residential energy supply systems that use fuel cells
[PB-299208/9] 26 p0271 N80-16565
Catalyst surfaces for the chromous/chromic redox couple
[NASA-CASE-LEW-13148-2] 26 p0285 N80-18557
The preparation of some novel electrolytes: Synthesis of partially fluorinated alkanesulfonic acids as potential fuel cell electrolytes
[AD-A078473] 26 p0286 N80-18570
Coal processing fuel cell utilization. Task 8: H2S removal by calcium-based sorbents
[PSI-TR-167] 26 p0288 N80-19300
Orbiter fuel cell performance constraints. STS/OPS Pratt Whitney fuel cells. Operating limits for mission planning
[NASA-TM-80958] 26 p0291 N80-19610
Optimization of Pt-doped Kocite (trade name) electrodes in H3Po4 fuel cells
[AD-A075372] 26 p0294 N80-19639
Performance model for molten carbonate fuel cells
[TR-190] 26 p0305 N80-20884
Hydrogen storage for automobiles
[BNL-26906] 26 p0305 N80-20886
Molten carbonate fuel cell program: EMF and temperature relaxation in LiKCO 3 tiles, transference cell measurements
[ORNL/TM-7003] 26 p0318 N80-21865
Energy savings by means of fuel cell electrodes in electro-chemical industries
[COO-4881-6] 26 p0318 N80-21870

FUEL COMBUSTION
Use of hydrogen as a fuel for automobile heat engines
26 p0185 A80-21880
Progress in coal combustion research at Avco Everett Research Laboratory, Inc.
26 p0221 A80-25109
Organic content of particulate matter in turbine engine exhaust
26 p0229 A80-27099

Coal combustion fly ash characterization - Adsorption of nitrogen and water 26 p0250 A80-30656

Engine combustion technology overview [SAND-78-8801] 26 p0260 N80-16347

Centrifugal fluidized combustion of coal [FE-2516-9] 26 p0288 N80-19293

FUEL CONSUMPTION

Short haul transport for the 1990s 26 p0190 A80-22046

The potential for development of high performance light aircraft 26 p0208 A80-23307

Co-generation at a practical plant level - Single stage steam turbine generator set replaces pressure reducing station to reduce plant energy consumption 26 p0222 A80-25116

The energy problem: Its effect on aircraft design. I - Supply and demand 26 p0231 A80-27752

The future of the Diesel engine - A critical analysis 26 p0235 A80-28473

Advanced engine concepts - The Ford Proco engine 26 p0235 A80-28474

Promising fuels for MHD power stations 26 p0252 A80-31750

Gas turbines for automotive use --- Book 26 p0253 A80-31999

Worldwide transportation/energy demand forecast, 1975 - 2000 [ORNL/SUB-78/13536/1] 26 p0269 N80-16546

Contributions to the foundations of supply for energy and transportation: Concepts, economics, and technologies [PB-300541/0] 26 p0269 N80-16554

Comparison of fuel economy and emissions for diesel and gasoline powered taxicabs [PB-298609/9] 26 p0275 N80-17484

Implications of fuel-efficient vehicles on ride quality and passenger acceptance: Workshop proceedings [NASA-CP-2096] 26 p0287 N80-18990

Issues concerning the light-duty diesel [DOE/EV-0050/1] 26 p0290 N80-19510

The role of technology as air transportation faces the fuel situation [NASA-TM-81793] 26 p0297 N80-20260

Fuel economy screening study of advanced automotive gas turbine engines [NASA-TM-81433] 26 p0311 N80-21201

FUEL CONTAMINATION

Electrical purifiers for dielectric fluids --- charged particle contaminants separation from fuels, oils and hydraulic fluids 26 p0254 A80-32287

Effects of impurities in coal-derived liquids on accelerated hot corrosion of superalloys [NASA-TM-81384] 26 p0283 N80-18157

FUEL CORROSION

Effects of impurities in coal-derived liquids on accelerated hot corrosion of superalloys [NASA-TM-81384] 26 p0283 N80-18157

FUEL FLOW

Analysis of the potential transmission of hydrogen by pipeline in Switzerland 26 p0201 A80-23158

FUEL INJECTION

Hydrogen injection two-stroke spark ignition engine 26 p0203 A80-23177

Electronic fuel injection techniques for hydrogen powered I.C. engines 26 p0206 A80-23205

FUEL PRODUCTION

Application of liquefaction processes to low-rank coals 26 p0230 A80-27418

Processing of solid fossil-fuel deposits by electrical induction heating 26 p0242 A80-29007

The 'tandem photoelectrolysis plant' concept - A strategy for fuel production via biomass conversion wastes 26 p0243 A80-29054

Experimental alcohol fuel plants [ATF-P-5000-2] 26 p0283 N80-18203

Alcohol fuels information directory [ATF-P-5000-3] 26 p0283 N80-18204

Pollutants from synthetic fuels production: Sampling and analysis methods for coal gasification [PB80-104656] 26 p0289 N80-19309

Liquid phase methanation/shift pilot plant operation and laboratory support work [FE-2036-37] 26 p0298 N80-20413

Symposium Proceedings: Environmental Aspects of Fuel conversion technology, IV [PB80-134729] 26 p0320 N80-21913

FUEL SPRAYS

Combustion of multicomponent fuel droplets [COO-4449-2] 26 p0257 N80-16126

FUEL TESTS

An underground coal gasification experiment - Hoe Creek II 26 p0251 A80-31042

FUEL-AIR RATIO

Flame tube parametric studies for control of fuel bound nitrogen using rich-lean two-stage combustion [NASA-TM-81472] 26 p0315 N80-21837

FUELS

Preliminary assessment of the prospects for use of refuse-derived fuel in Maryland [BNL-51065] 26 p0258 N80-16179

Alcohol fuels. Citations from the American petroleum institute data base --- a bibliography with abstracts [NTIS/PS-79/0911/2] 26 p0259 N80-16195

FULL SCALE TESTS

Results of solar heating experiments --- for full scale domestic system performance 26 p0209 A80-23513

UTRC 8 kW wind turbine tests [AIAA 80-0657] 26 p0240 A80-28831

FUSION REACTORS

Toroidal Trivelpiece-Gould modes --- quasi-electrostatic approximation for electron plasma waves in fusion reactor 26 p0189 A80-22042

Hydrogen production from fusion reactors coupled with high temperature electrolysis 26 p0200 A80-23148

Driven magnetic fusion reactors; Proceedings of the Course, Erice, Italy, September 18-26, 1978 26 p0214 A80-24661

The mirror fusion test facility 26 p0214 A80-24665

The economic significance of Q for mirror reactors - Combinations of Q and M which look promising --- parameters affecting energy conversion efficiency in fusion reactor 26 p0215 A80-24666

Tandem mirror reactors 26 p0215 A80-24667

Field-reversed mirror reactor 26 p0215 A80-24668

Plasma parametric studies and potential applications of driven fusion reactors 26 p0215 A80-24674

Non-electric fusion energy applications 26 p0215 A80-24676

Characteristics of lower-hybrid-wave-driven steady-state tokamak power reactors 26 p0224 A80-25475

International tokamak reactor - Executive summary of the IAEA Workshop, 1979 26 p0252 A80-31626

Design study of a fusion-driven Tokamak hybrid reactor for fissile fuel production, volume 1 [EPRI-ER-1083-VOL-1] 26 p0281 N80-17863

Design study of a fusion-driven Tokamak hybrid reactor for fissile fuel production, volume 2 [EPRI-NP-1083-VOL-2] 26 p0281 N80-17864

FUSION-FISSION HYBRID REACTORS

Tandem mirror reactors 26 p0215 A80-24667

Mirror hybrid reactors --- fusion-fission reactor design 26 p0215 A80-24670

Plasma parametric studies and potential applications of driven fusion reactors 26 p0215 A80-24674

Design study of a fusion-driven Tokamak hybrid reactor for fissile fuel production, volume 1 [EPRI-ER-1083-VOL-1] 26 p0281 N80-17863

Design study of a fusion-driven Tokamak hybrid reactor for fissile fuel production, volume 2 [EPRI-NP-1083-VOL-2] 26 p0281 N80-17864

G

GALLIUM ARSENIDES
Shallow-homojunction GaAs cells with high resistance to 1-MeV electron radiation 26 p0183 A80-21089
Grain size and its influence on efficiency in polycrystalline GaAs solar cells 26 p0186 A80-21919
Native oxide and external dielectric polycrystalline GaAs MIS solar cells 26 p0223 A80-25444
Growth and characterization of thin film III-V compound semiconductor material for solar cell applications 26 p0244 A80-29058
Grown junction GaAs solar cells with a thin graded band-gap Al/x/Ga/1-x/As surface layer 26 p0250 A80-30668
High efficiency solar panel, phase 2, gallium arsenide [AD-A079635] 26 p0316 N80-21838

GALLIUM PHOSPHIDES
High temperature electronics for geothermal energy 26 p0185 A80-21902

GAMMA RAYS
Use of nuclear reactors for simultaneous radiation and power generation as a cost effective means of hydrogen production 26 p0185 A80-21877

GAS ANALYSIS
Pollutants from synthetic fuels production: Sampling and analysis methods for coal gasification [PB80-104656] 26 p0289 N80-19309

GAS CHROMATOGRAPHY
Development of high temperature subtractive column and chromatographic analysis of hydrocarbons present in diesel exhaust [BETC/RI-78/12] 26 p0257 N80-16130
Study of hydrocarbon-shale interaction [ORO-5197-14] 26 p0260 N80-16409

GAS DISCHARGES
Plasmochemical cycle of hydrogen production from the water 26 p0200 A80-23149
Model for description of transient behavior of a tokamak discharge 26 p0213 A80-24498

GAS EVOLUTION
The kinetics of oxygen evolution on non-traditional electrodic materials --- for hydrogen production by electrolysis of KOH aqueous solutions 26 p0196 A80-23111
The significance of studies with palladium to basic problems of electrolytic hydrogen evolution 26 p0196 A80-23114
Electrodes for generation of hydrogen and oxygen for seawater 26 p0196 A80-23115

GAS EXPLOSIONS
Explosive-driven magnetic generator with a plasma load 26 p0252 A80-31357

GAS HEATING
Solar space heating with air and liquid systems 26 p0209 A80-23512
Operability and materials testing for MHD air heaters 26 p0217 A80-25075

GAS IONIZATION
Experimental studies of an inert gas disk MHD generator with a small seed fraction 26 p0219 A80-25088
Discharge start-up in a tokamak with a poloidal divertor 26 p0223 A80-25472

GAS MIXTURES
Irreversibility analysis of hydrogen separation schemes in thermochemical cycles 26 p0197 A80-23120
Separation of hydrogen from the mixture of hydrogen iodide, hydrogen and iodine in thermogravitational column 26 p0200 A80-23145
Mixture properties for hydrogen supplementation of natural gas 26 p0201 A80-23159

GAS RECOVERY
Unconventional gas recovery program [METC/SP-79/8] 26 p0258 N80-16181

GAS TURBINE ENGINES
Organic content of particulate matter in turbine engine exhaust 26 p0229 A80-27099
Advanced engine concepts - The Ford Proco engine 26 p0235 A80-28474
Gas turbines for automotive use --- Book 26 p0253 A80-31999
Performance sensitivity analysis of Department of Energy-Chrysler upgraded automotive gas turbine engine, S/N 5-4 [NASA-TM-79242] 26 p0274 N80-17467
Materials review for improved automotive gas turbine engine --- superalloys, refractory alloys, and ceramics [NASA-CR-159673] 26 p0275 N80-17470
Effect of water injection and off scheduling of variable inlet guide vanes, gas generator speed and power turbine nozzle angle on the performance of an automotive gas turbine engine [NASA-TM-81415] 26 p0298 N80-20272
Fuel economy screening study of advanced automotive gas turbine engines [NASA-TM-81433] 26 p0311 N80-21201
Parametric tests of a traction drive retrofitted to an automotive gas turbine [NASA-TM-81457] 26 p0314 N80-21754

GAS TURBINES
Hydrogen production from nuclear fission product waste heat and use in gas turbines 26 p0195 A80-23106
Gas turbines 26 p0255 A80-32399
Waste heat recovery unit design for gas turbine propulsion systems [AD-A078154] 26 p0290 N80-19503
Storage peak gas-turbine power unit [NASA-TM-75757] 26 p0314 N80-21755

GAS-METAL INTERACTIONS
The influence of Al on the hydrogen sorption properties of intermetallic compounds 26 p0203 A80-23173
Hydrogen in iron-titanium - Experimental investigations of structure, heat of solution, diffusion, and hydriding kinetics 26 p0204 A80-23184
Hydrogen embrittlement, stress state and design considerations 26 p0204 A80-23186
Kinetics of hydrogen absorption and desorption by ternary LaNi5 type intermetallic compounds 26 p0206 A80-23203
Evaluation of high chromium overlays to protect less alloyed substrates from corrosion in a coal gasification atmosphere [FE-2621-5] 26 p0313 N80-21520

GAS-SOLID INTERACTIONS
Development of a fast fluid bed gasifier, task 2 and 3 [FE-2361-40] 26 p0289 N80-19306

GASEOUS FUELS
Biogas - Fuel of the future 26 p0227 A80-26175

GASIFICATION
Gasification of oil shale 26 p0226 A80-25889
Wood gasification in a fluidized bed 26 p0244 A80-29154
Combined cycle power generation. Citations from the Engineering Index data base --- bibliographies [PB80-800923] 26 p0280 N80-17595
Synthetic fuels from peat gasification [CONF-790803-55] 26 p0298 N80-20412
Survey of biomass gasification. Volume 1: Synopsis and executive summary [SERI/TR-33-239-VOL-1] 26 p0300 N80-20427

GASOHOL (FUEL)
Gasohol: A technical memorandum [PB80-105885] 26 p0259 N80-16194

Physical properties of gasoline/alcohol blends [BERC/RI-79/4] 26 p0288 N80-19296
Exhaust characterization of neat alcohol fueled IC engines [BETC/P-B-8-1943-1] 26 p0314 N80-21760

GASOLINE
Conceptual design of a coal-to-methanol-to-gasoline commercial plant: Executive summary [FE-2416-43] 26 p0258 N80-16182
Development studies on selected conversion of synthesis gas from coal to high octane gasoline [FE-2276-27] 26 p0259 N80-16190
Comparison of fuel economy and emissions for diesel and gasoline powered taxicabs [PB-298609/9] 26 p0275 N80-17484
Photochemical conversion of coal to gasoline in an entrained bed reactor 26 p0283 N80-18202
Laboratory investigation of the performance of a Holden engine operating on liquified petroleum gas [AD-A076145] 26 p0284 N80-18411
Physical properties of gasoline/alcohol blends [BERC/RI-79/4] 26 p0288 N80-19296
Photochemical conversion of coal to gasoline in an entrained bed reactor [ORO-5020-T1] 26 p0299 N80-20415
Stability survey of hydrocarbon fuels [BETC-1778-4] 26 p0300 N80-20424
Test and evaluation report of the ERDC Hybrid-Electric Van (HEVAN) [DOE/TIC-10232] 26 p0312 N80-21210
Exhaust characterization of neat alcohol fueled IC engines [BETC/P-B-8-1943-1] 26 p0314 N80-21760

GEARS
Effect of geometry and operating conditions on spur gear system power loss [NASA-TM-81426] 26 p0284 N80-18406

GENERATION
Energy conservation in the US: Some interdisciplinary approaches with an emphasis on industrial cogeneration 26 p0302 N80-20811

GEOCHEMISTRY
Geological and geochemical characteristics of geothermal resources in Japan 26 p0187 A80-21928

GEOLOGICAL FAULTS
Oil and gas exploration by pattern recognition of lineament assemblages associated with bends in wrench faults 26 p0191 A80-22441
Vertical movement along the Cerro Prieto transform fault, Baja California, Mexico - a mechanism for geothermal energy renewal [LBL-8905] 26 p0273 N80-16652

GEOLOGICAL SURVEYS
Geological and geochemical characteristics of geothermal resources in Japan 26 p0187 A80-21928
Some application of Landsat imagery interpretation for petroleum targetting in India 26 p0191 A80-22433

GEOMETRICAL OPTICS
Some geometrical design aspects of a linear Fresnel reflector concentrator 26 p0193 A80-22791

GEORGIA
Solar energy system performance evaluation: A seasonal report for SEMCO, Macon, Georgia [NASA-CR-161380] 26 p0293 N80-19629

GEOTHERMAL ENERGY CONVERSION
Net energy production history of the Geysers Geothermal Project 26 p0184 A80-21745
High temperature electronics for geothermal energy 26 p0185 A80-21902
Solar and geothermal energy 26 p0208 A80-23328
Geothermal energy and the environment - The global experience 26 p0223 A80-25259
DOE moves ahead with geothermal 26 p0243 A80-29038
Geothermal heating in Creil 26 p0255 A80-32499
Economics of geothermal power [COO-4051-43] 26 p0265 N80-16497
Decentralized energy: Technology assessment and systems description [BNL-50987] 26 p0265 N80-16502
Hydrothermal electric and direct heat. Commercialization phase 3 planning [DOE/ERD-0005] 26 p0269 N80-16545
Feasibility study of geothermal energy for heating greenhouses [PB-299517/3] 26 p0271 N80-16569
Today's geothermal power economics and risks [CONF-790803-44] 26 p0277 N80-17558
Analysis of the geothermal binary cycle using paraffin hydrocarbons as working fluids 26 p0285 N80-18553
Geothermal energy market penetration: Development of a model for the residential section [PB80-118359] 26 p0311 N80-21198
Geothermal energy: Obstacles and uncertainties impede its widespread use [PB80-134430] 26 p0315 N80-21827
Energy programs at the Johns Hopkins University Applied Physics Laboratory [PB80-125651] 26 p0320 N80-21889

GEOTHERMAL RESOURCES
Geological and geochemical characteristics of geothermal resources in Japan 26 p0187 A80-21928
Geothermal energy and the environment - The global experience 26 p0223 A80-25259
A model for the Sulphur Springs geothermal field St. Lucia 26 p0231 A80-27924
Pitting resistance of engineering materials in geothermal brines. I - Low salinity brine 26 p0249 A80-30474
Hydrothermal electric and direct heat. Commercialization phase 3 planning [DOE/ERD-0005] 26 p0269 N80-16545
Vertical movement along the Cerro Prieto transform fault, Baja California, Mexico - a mechanism for geothermal energy renewal [LBL-8905] 26 p0273 N80-16652
Geothermal energy development in the eastern United States. Evaluation of potential geothermal resource areas [PB-299925/8] 26 p0285 N80-18547
Regional systems development for geothermal energy resources. Pacific region: California and Hawaii. Task 1: Implementation plan development --- for the generation of electric power [DOE/ET-28432/1] 26 p0290 N80-19604
Regional systems development for geothermal energy resources. Pacific region: California and Hawaii. Task 2: Regional program monitoring and progress evaluation --- for the generation of electric power [DOE/ET-28432/2] 26 p0291 N80-19605
Regional systems development for geothermal energy resources. Pacific region: California and Hawaii. Task 3: Water resources evaluation --- for generation of electric power [DOE/ET-28432/3-1] 26 p0291 N80-19606
Regional systems development for geothermal energy resources. Pacific region: (California and Hawaii). Task 3: Water resources evaluation, appendices --- for generation of electric power [DOE/ET-28432/3-2] 26 p0291 N80-19607
Assessment of low- to moderate-temperature geothermal resources of Nevada [NVO-01556-1] 26 p0301 N80-20792

GERMANY
Wind force analysis for the Federal Republic of Germany to determine the usefulness of wind power [ISBN-3-88148-164-8] 26 p0281 N80-17635

GLASS
Application of glass technology to novel solar energy collectors [CONF-7906118-1] 26 p0317 N80-21852

GLASS ELECTRODES
Photogalvanovoltaic cells and photovoltaic cells using glassy carbon electrodes 26 p0243 A80-29057

GLASS FIBER REINFORCED PLASTICS
Compressive fatigue tests on a unidirectional glass/polyester composite at cryogenic temperatures --- for superconducting energy storage magnet structural supports 26 p0191 A80-22690

GLOBAL AIR POLLUTION
The global carbon dioxide problem - Impacts of U.S. synthetic fuel- and coal-fired electricity generating plants
26 p0248 A80-29938

GLOBAL POSITIONING SYSTEM
GPS application to seismic oil exploration
26 p0222 A80-25159

GLOW DISCHARGES
Amorphous Si-F-H solar cells prepared by dc glow discharge
26 p0251 A80-30940

GOLD
The doping of amorphous silicon for solar cells
26 p0187 A80-21921

GOVERNMENT/INDUSTRY RELATIONS
Canadian renewable energy prospects
26 p0183 A80-21104
Power consumption in the high-tension field between the government's responsibility to provide energy and politics
26 p0185 A80-21846
SWECS qualifications criteria for state tax incentive programs --- Small Wind Energy Conversion System
[AIAA 80-0650] 26 p0240 A80-28829
Advanced automotive propulsion systems: Incentive financing
[CONS-5181-1] 26 p0321 N80-22128

GRADIENTS
Gradient bounds for plasma confinement
26 p0213 A80-24223

GRAIN BOUNDARIES
Grain size and its influence on efficiency in polycrystalline GaAs solar cells
26 p0186 A80-21919

GRAPHITE
Electrolysis of hydrobromic acid --- hybrid cycle for hydrogen production
26 p0198 A80-23129
Technical evaluation of gaseous suspensions of graphite for the absorption of concentrated solar radiation --- Book
26 p0214 A80-24660

GRINDING (COMMINUTION)
Mechanochemical effects on coal conversion. I - Coal hydrogenation in gaseous hydrogen aided by mechanical energy
26 p0249 A80-30521

GROUND STATIONS
Input data for solar systems
[DOE/TIC-10193-REV-1] 26 p0265 N80-16504

GROUND WATER
Groundwater quality monitoring of western oil shale development. Identification and priority ranking of potential pollution sources --- in eastern Utah
[PB-300536/0] 26 p0272 N80-16623

GROUND WIND
Wind characteristics over complex terrain relative to WECS siting --- Wind Energy Conversion System
[AIAA 80-0645] 26 p0239 A80-28825

GULF STREAM
The utilization of ocean hydropower systems for advanced electrolytic hydrogen energy production technology
26 p0196 A80-23110
Coriolis Program - A review of the status of the ocean turbine energy system
26 p0233 A80-28261

GUSTS
Gust models for design and performance analyses of wind turbines
[AIAA 80-0644] 26 p0240 A80-28833
Gust-rise exceedance statistics for wind turbine design
[PNL-2530] 26 p0277 N80-17567

H

HABITABILITY
Space manufacturing, satellite power and human exploration
26 p0186 A80-21908

HALIDES
Zinc halide hydrocracking process for distillate fuels from coal
[FE-1743-68] 26 p0300 N80-20426

HARMONIC OSCILLATION
The wingmill - An oscillating-wing windmill
[AIAA 80-0621] 26 p0238 A80-28813

HAWAII
Regional systems development for geothermal energy resources. Pacific region: California and Hawaii. Task 1: Implementation plan development --- for the generation of electric power
[DOE/ET-28432/1] 26 p0290 N80-19604
Regional systems development for geothermal energy resources. Pacific region: California and Hawaii. Task 2: Regional program monitoring and progress evaluation --- for the generation of electric power
[DOE/ET-28432/2] 26 p0291 N80-19605
Regional systems development for geothermal energy resources. Pacific region: California and Hawaii. Task 3: Water resources evaluation --- for generation of electric power
[DOE/ET-28432/3-1] 26 p0291 N80-19606
Regional systems development for geothermal energy resources. Pacific region: (California and Hawaii). Task 3: Water resources evaluation, appendices --- for generation of electric power
[DOE/ET-28432/3-2] 26 p0291 N80-19607

HAZARDS
Mod 1 wind turbine generator failure modes and effects analysis
[NASA-CR-159494] 26 p0303 N80-20864

HEALTH PHYSICS
Federal photovoltaics utilization program
[DOE/EA-0087] 26 p0267 N80-16525

HEAT EXCHANGERS
Particulate size and rates of pressure drop increase in an MHD air preheater
26 p0217 A80-25076
Impurity effects on non-equilibrium MHD gas heated by a fossil fuel-fired heat exchanger
26 p0219 A80-25089
High slag rejection, high carbon conversion rate, air cooled cyclone coal combustor for MHD regenerative heat exchangers
26 p0222 A80-25112
The effect of superheating on the performance of floating droplet direct contact heat exchangers
26 p0260 N80-16293
Suntech Solar Linear Array Thermal System (SLATS) test results
[SAND-79-0658] 26 p0277 N80-17563
Analysis of a heat exchanger-thermoelectric generator system
[SERI/TP-35-253] 26 p0316 N80-21848

HEAT GENERATION
Oil shale processing technology
26 p0247 A80-29800
Energy storage
26 p0255 A80-32398
Gas turbines
26 p0255 A80-32399

HEAT OF COMBUSTION
An underground coal gasification experiment - Hoe Creek II
26 p0251 A80-31042

HEAT OF SOLUTION
Hydrogen in iron-titanium - Experimental investigations of structure, heat of solution, diffusion, and hydriding kinetics
26 p0204 A80-23184

HEAT PIPES
The state-of-the-art of cryogenic heat pipes
[AIAA PAPER 80-0211] 26 p0212 A80-23956
Cesium vapor source with a gas-controlled heat pipe for thermionic energy converters
26 p0249 A80-30241
Methods for manufacturing heat pipes for circuit cards
[AD-A080188] 26 p0314 N80-21707

HEAT PUMPS
Materials and performance characteristics of the HYCSOS chemical heat pump and energy conversion system
26 p0204 A80-23180
A metal hydrogen heat pump as topping process for power generation
26 p0204 A80-23181
Heat pumps --- Book
26 p0207 A80-23224

- Research at the Building Research Establishment into the applications of solar collectors for space and water heating in buildings 26 p0209 A80-23515
- Computer simulation of ground coupled storage in a series solar assisted heat pump system [BNL-26216] 26 p0266 N80-16507
- Experimental results from the solar ground coupling research facility at Brookhaven National Laboratory --- heat transfer and storage devices for a solar source heat pump system [BNL-26219] 26 p0266 N80-16509
- Heat-pump-centered integrated community energy systems: System development [ANL/CNSV/TM-8] 26 p0305 N80-20880
- Performance of heat pumps at elevated evaporating temperatures with application to solar input [BNL-26772] 26 p0307 N80-20896
- Use of earth coupling in solar assisted heat pumps [BNL-26748] 26 p0316 N80-21849
- Performance of a solar energy-assisted heat pump heating system: Analysis and correlation of field-collected data [COO-2704-T1] 26 p0318 N80-21875

HEAT RESISTANT ALLOYS
- Material requirements for coal gasification 26 p0212 A80-23833
- Effects of impurities in coal-derived liquids on accelerated hot corrosion of superalloys [NASA-TM-81384] 26 p0283 N80-18157

HEAT STORAGE
- Thermal energy storage in a packed bed of iron spheres with liquid sodium coolant 26 p0183 A80-21109
- Systematic design assessment techniques for solar buildings 26 p0209 A80-23514
- Solar heating and air conditioning 26 p0209 A80-23516
- The state-of-the-art of cryogenic heat pipes [AIAA PAPER 80-0211] 26 p0212 A80-23956
- Thermal storage in density-stratified fluids and phase-change materials 26 p0225 A80-25496
- Large energy storage systems for utilities 26 p0231 A80-27731
- SEAS - A system for undersea storage of thermal energy 26 p0232 A80-28257
- Energy storage 26 p0255 A80-32398
- Computer simulation of ground coupled storage in a series solar assisted heat pump system [BNL-26216] 26 p0266 N80-16507
- High-temperature molten salt thermal energy storage systems [NASA-CR-159663] 26 p0275 N80-17547
- Suntech Solar Linear Array Thermal System (SLATS) test results [SAND-79-0658] 26 p0277 N80-17563
- Thermal energy storage, volume 2. Citations from the NTIS data base [NTIS/PS-79/0952/6] 26 p0279 N80-17584
- Thermal energy storage, volume 1. Citations from the NTIS data base [NTIS/PS-79/0951/8] 26 p0279 N80-17585
- Thermal energy storage, volume 1. Citations from the Engineering Index data base [NTIS/PS-79/0953/4] 26 p0279 N80-17586
- Thermal energy storage, volume 2. Citations from the Engineering Index data base [NTIS/PS-79/0954/2] 26 p0279 N80-17587
- Evaluation of a sulfur oxide chemical heat storage process for a steam solar electric plant [LBL-7868-REV] 26 p0306 N80-20890
- Economics of thermal energy storage for compressed air energy storage systems [PNL-SA-7949] 26 p0307 N80-20903
- Economics of compressed air energy storage employing thermal energy storage [PNL-3191] 26 p0307 N80-20904
- Review of recent research on energy storage in residential solar total energy systems [BNL-51012] 26 p0315 N80-21830
- Review of selected on-site DOE small solar thermal power plant experiments [SAND-79-1040C] 26 p0317 N80-21854

HEAT TRANSFER
- Studies in biogas technology. III - Thermal analysis of biogas plants 26 p0188 A80-21940
- Investigation of heat and mass transfer for a regenerator model of a solar cooling system 26 p0232 A80-28200
- Characterization of crushed glass as a transpired air heating solar collector material [LA-UR-79-1336] 26 p0265 N80-16498
- Experimental results from the solar ground coupling research facility at Brookhaven National Laboratory --- heat transfer and storage devices for a solar source heat pump system [BNL-26219] 26 p0266 N80-16509
- Thermal energy storage, volume 2. Citations from the NTIS data base [NTIS/PS-79/0952/6] 26 p0279 N80-17584
- Thermal energy storage, volume 1. Citations from the Engineering Index data base [NTIS/PS-79/0953/4] 26 p0279 N80-17586
- Thermal energy storage, volume 2. Citations from the Engineering Index data base [NTIS/PS-79/0954/2] 26 p0279 N80-17587
- Thermal fluid selection for long-distance heat transmission [CONF-790803-47] 26 p0305 N80-20879
- Interferometric study of the natural convection characteristics of flat plate, slat and vee-corrugated solar collectors [COO-2971-6] 26 p0307 N80-20900
- Solar pond for industrial process heat [SERI/TD-351-460] 26 p0319 N80-21876

HEAT TRANSMISSION
- Problems concerning the interpretation of thermographic data for the detection of energy losses from buildings 26 p0212 A80-24071

HEAT TREATMENT
- Solvolysis liquefaction of coal 26 p0187 A80-21926

HEATING EQUIPMENT
- Analyses of single and double exposure solar air heaters 26 p0193 A80-22792
- Heat pumps --- Book 26 p0207 A80-23224
- Operability and materials testing for MHD air heaters 26 p0217 A80-25075
- A central solar domestic hot water system - Performance and economic analysis 26 p0223 A80-25261
- Thermodynamics of heating. II 26 p0227 A80-26309

HELIOSTATS
- Unique high concentration solar test facility 26 p0186 A80-21916
- Theoretical concentrations of solar radiation by central receiver systems 26 p0208 A80-23327
- Development of a spherical reflector/tracking absorber solar energy collector 26 p0226 A80-25885
- Technology and performance of a high concentration solar cell power supply 26 p0226 A80-25886
- Measurement of heliostat performance characteristics 26 p0250 A80-30773
- Heliostat system design and operation. Citations from the Engineering Index data base [NTIS/PS-79/0930/2] 26 p0271 N80-16571
- Solar Central Receiver prototype heliostat, volume 1 [SAN-1604-1] 26 p0316 N80-21846

HELIUM-NEON LASERS
- Magnetooptical switch for synchronization of CO2 and red laser beams --- in laser fusion systems 26 p0236 A80-28735

HETEROJUNCTION DEVICES
- The open-circuit voltage of n/+/-n-p high-low-emitter /HLE/ junction solar cells in concentrated sunlight 26 p0209 A80-23496
- Heterojunction solar cells 26 p0210 A80-23519
- High photocurrent polycrystalline thin-film CdS/CuInSe2 solar cell 26 p0229 A80-27321

Heterojunction for thin-film solar cells
26 p0245 A80-29393
Grown junction GaAs solar cells with a thin graded band-gap Al/x/Ga/1-x/As surface layer
26 p0250 A80-30668

HIGH CURRENT
Development and operation of a high current density high pressure advanced electrolysis cell
26 p0197 A80-23119
The characteristics of high current amorphous silicon diodes
26 p0253 A80-31966

HIGH FIELD MAGNETS
Mirror hybrid reactors --- fusion-fission reactor design
26 p0215 A80-24670

HIGH POWER LASERS
Laser treatment of phosphorus-diffused silicon solar cells
26 p0186 A80-21915
Helios, a 20 TW CO2 laser fusion facility
26 p0245 A80-29370

HIGH PRESSURE
Development and operation of a high current density high pressure advanced electrolysis cell
26 p0197 A80-23119
Transverse confinement of a high-pressure plasma in a corrugated magnetic field
26 p0224 A80-25474
Chemical and physical stability of refractories for use in coal gasification
[COO-2904-14] 26 p0300 N80-20429

HIGH TEMPERATURE
Hydrogen production by high temperature electrolysis of water vapour
26 p0197 A80-23118
Hydrogen production from fusion reactors coupled with high temperature electrolysis
26 p0200 A80-23148
Spectral selectivity of high-temperature solar absorbers
26 p0225 A80-25657
High-temperature molten salt thermal energy storage systems
[NASA-CR-159663] 26 p0275 N80-17547
High temperature solar thermal receiver
[NASA-CR-162831] 26 p0292 N80-19621
Chemical and physical stability of refractories for use in coal gasification
[COO-2904-14] 26 p0300 N80-20429

HIGH TEMPERATURE GAS COOLED REACTORS
Prospects of developing nuclear power plants with chemothermal accumulation of thermal energy
26 p0185 A80-21879
Main requirements on the nuclear installations used for hydrogen production and in technological processes
26 p0205 A80-23195
Nuclear methane reforming for coal gasification
26 p0233 A80-28276

HIGH TEMPERATURE GASES
Coal gasification in steam at very high temperatures
26 p0249 A80-30522
Hot gas cleanup process
[PB80-108467] 26 p0310 N80-20950

HIGH TEMPERATURE NUCLEAR REACTORS
Use of nuclear reactors for simultaneous radiation and power generation as a cost effective means of hydrogen production
26 p0185 A80-21877
Nuclear energy as a primary energy source for hydrogen production
26 p0194 A80-23102

HIGH TEMPERATURE PLASMAS
Transverse confinement of a high-pressure plasma in a corrugated magnetic field
26 p0224 A80-25474

HIGH TEMPERATURE RESEARCH
The industrial applications of high-temperature heat - Solar thermal and electric plants
26 p0189 A80-21954

HIGH TEMPERATURE TESTS
High temperature electronics for geothermal energy
26 p0185 A80-21902
Testing aqueous caustic electrolyzers at high temperatures --- for hydrogen production
26 p0205 A80-23196

HIMALAYAS
Some application of Landsat imagery interpretation for petroleum targetting in India
26 p0191 A80-22433

HOLE DISTRIBUTION (MECHANICS)
Effect of the interstitial hole size and electron concentration on complex metal hydride formation
26 p0202 A80-23168

HONEYCOMB STRUCTURES
Possible use of honeycomb-type structures for high power batteries and fuel cells
26 p0190 A80-22169
Theoretical study of the heating of air in a plane honeycomb solar collector
26 p0208 A80-23333

HUMAN FACTORS ENGINEERING
Space manufacturing, satellite power and human exploration
26 p0186 A80-21908

HYDRATION
Balancing the process of hydrating gasification of brown coal
26 p0250 A80-30597

HYDRIDES
Kinetics of hydrogen absorption and desorption by ternary LaNi5 type intermetallic compounds
26 p0206 A80-23203

HYDROBROMIC ACID
Electrolysis of hydrobromic acid --- hybrid cycle for hydrogen production
26 p0198 A80-23129
The decomposition of hydrogen bromide using iron bromide and magnetite
26 p0198 A80-23130

HYDROCARBON COMBUSTION
Flame tube parametric studies for control of fuel bound nitrogen using rich-lean two-stage combustion
[NASA-TM-81472] 26 p0315 N80-21837

HYDROCARBON FUEL PRODUCTION
Studies in biogas technology. IV - A novel biogas plant incorporating a solar water-heater and solar still
26 p0188 A80-21941
Effect of coal particle size on the coal hydrogenation reaction - In relation to the plasticity of coal
26 p0192 A80-22768
Energy from the biological conversion of solar energy
26 p0210 A80-23522
Microbial production of energy sources from biomass
26 p0210 A80-23523
Biogas - Fuel of the future
26 p0227 A80-26175
Methanol derivation from North Dakota lignite and use as a fuel
26 p0230 A80-27417
Coal liquefaction processes --- Book
26 p0242 A80-28953
Petroleum plantations
26 p0243 A80-29052
Environmental assessment of the HYGAS process. Volume 1: HYGAS environmental characterization, data synthesis, analysis, and interpretation, tests 37 - 64
[FE-2433-25-VOL-1] 26 p0289 N80-19305

HYDROCARBON FUELS
Experience with alcohol fuels
26 p0236 A80-28476
Study of hydrocarbon-shale interaction
[ORO-5197-14] 26 p0260 N80-16409

HYDROCARBONS
Development of high temperature subtractive column and chromatographic analysis of hydrocarbons present in diesel exhaust
[BETC/RI-78/12] 26 p0257 N80-16130
Characterization and analysis of devonian shales as related to release of gaseous hydrocarbons
[ORO-5205-10] 26 p0310 N80-20973

HYDROCRACKING
Flash hydropyrolysis of coal
[BNL-51010] 26 p0258 N80-16185
Zinc halide hydrocracking process for distillate fuels from coal
[FE-1743-68] 26 p0300 N80-20426

HYDRODYNAMICS
- Wave power extraction by a train of rafts - Hydrodynamic theory and optimum design 26 p0251 A80-30804

HYDROELECTRIC POWER STATIONS
- The utilization of ocean hydropower systems for advanced electrolytic hydrogen energy production technology 26 p0196 A80-23110
- Water turbine technology for small power stations 26 p0213 A80-24125
- An integrated approach to energy supply for small communities [AIAA 80-0651] 26 p0240 A80-28830
- Decentralized energy: Technology assessment and systems description [BNL-50987] 26 p0265 N80-16502
- Cataract hydroelectric development expansion study [DOE/ID-01796-1] 26 p0295 N80-19650
- Potential hydroelectric power, vertical turbine, spillway combine Broadwater Dam [DOE/ID-01822-1] 26 p0295 N80-19651
- Hydro for the eighties: Bringing hydroelectric power to low income people, the work book. A slide presentation: Audio cassette and workbook [PB80-103948] 26 p0319 N80-21883
- Hydropower, an energy source whose time has come again [PB80-127715] 26 p0320 N80-21886
- Energy programs at the Johns Hopkins University Applied Physics Laboratory [PB80-125651] 26 p0320 N80-21889

HYDROFOIL CRAFT
- New approaches to sailing 26 p0228 A80-26344

HYDROGEN

HYDROGEN PRODUCTION CONTD

Hydrogen production from nuclear fission product waste heat and use in gas turbines
26 p0195 A80-23106
On the potential of solar energy conversion into hydrogen and/or other fuels
26 p0195 A80-23107
The theoretical design of a solar engine for the production of hydrogen
26 p0195 A80-23108
OTEC for hydrogen production
26 p0195 A80-23109
The utilization of ocean hydropower systems for advanced electrolytic hydrogen energy production technology
26 p0196 A80-23110
The kinetics of oxygen evolution on non-traditional electrodic materials --- for hydrogen production by electrolysis of KOH aqueous solutions
26 p0196 A80-23111
Improvements in electrolysis technology in alkaline solution --- for hydrogen production
26 p0196 A80-23112
The use of porous metallic diaphragm for hydrogen mass-production with alkaline water electrolysis
26 p0196 A80-23113
The significance of studies with palladium to basic problems of electrolytic hydrogen evolution
26 p0196 A80-23114
Electrodes for generation of hydrogen and oxygen for seawater
26 p0196 A80-23115
Unipolar water electrolysers - A competitive technology
26 p0196 A80-23116
Development of Billings SPE electrolyzer --- for hydrogen production
26 p0196 A80-23117
Hydrogen production by high temperature electrolysis of water vapour
26 p0197 A80-23118
Development and operation of a high current density high pressure advanced electrolysis cell
26 p0197 A80-23119
Irreversibility analysis of hydrogen separation schemes in thermochemical cycles
26 p0197 A80-23120
A feasibility study on thermochemical water-splitting cycles using sulfur compounds
26 p0197 A80-23121
Chemical studies on the general atomic sulfur-iodine thermochemical water-splitting cycle
26 p0197 A80-23122
The reaction of sulfur dioxide with water and a halogen - The cases of bromine and iodine
26 p0197 A80-23125
Development, design and operation of a continuous laboratory-scale plant for hydrogen production by the Mark-13 cycle
26 p0197 A80-23126
Equilibrium effects in high-pressure hydrogen production from thermochemical water-splitting cycles
26 p0198 A80-23127
Electrochemical aspects of the H2SO4-SO2 thermoelectrochemical cycle for hydrogen production
26 p0198 A80-23128
Electrolysis of hydrobromic acid --- hybrid cycle for hydrogen production
26 p0198 A80-23129
The decomposition of hydrogen bromide using iron bromide and magnetite
26 p0198 A80-23130
Energy balance calculations and assessment of two thermochemical sulfur cycles
26 p0198 A80-23131
Recent research on thermochemical hydrogen production at the Oak Ridge National Laboratory
26 p0198 A80-23132
The ZnSe thermochemical cycle for hydrogen production - Chemical and process design studies
26 p0198 A80-23133
A study of the cerium-chlorine system for thermochemical production of hydrogen
26 p0198 A80-23134
Br-Ca-Fe water-decomposition cycles for hydrogen production
26 p0199 A80-23135
Experimental verification of the mercury-iodine thermochemical cycle for the production of hydrogen from water - ANL-4
26 p0199 A80-23136
The magnesium-iodine cycle for the thermochemical decomposition of water
26 p0199 A80-23137
Thermochemical water splitting cycles - Impact of thermal burdens and kinetics
26 p0199 A80-23138
A kinetic investigation of the reforming of natural gas for the production of hydrogen
26 p0199 A80-23139
The economics of producing hydrogen from a small air-blown coal gasifier
26 p0199 A80-23140
Industrial scale production of hydrogen from natural gas, naphtha and coal
26 p0199 A80-23141
Optimization of a thermochemical water splitting cycle - Thermodynamic analysis - Experimental work with a solar furnace
26 p0199 A80-23142
Solar-thermochemical production of hydrogen from water
26 p0200 A80-23143
Solar beam-assisted electrolyser applied to Yokohama Mark 5 and 6 --- hydrogen production
26 p0200 A80-23144
Separation of hydrogen from the mixture of hydrogen iodide, hydrogen and iodine in thermogravitational column
26 p0200 A80-23145
On the study of hydrogen production from water using solar thermal energy
26 p0200 A80-23147
Hydrogen production from fusion reactors coupled with high temperature electrolysis
26 p0200 A80-23148
Plasmochemical cycle of hydrogen production from the water
26 p0200 A80-23149
Spin-aligned hydrogen --- atoms at lowest electronic energy magnetic sublevels as substance for molecular production
26 p0200 A80-23151
Hydrogen generation via photoelectrolysis of water - Recent advances
26 p0200 A80-23152
Photoelectrochemical generation of hydrogen with hybrid electrodes
26 p0200 A80-23153
Photochemical production of hydrogen from water
26 p0201 A80-23154
Bio-solar hydrogen production
26 p0201 A80-23155
Attempts to produce hydrogen by coupling hydrogenase and chloroplast photosystems
26 p0201 A80-23156
Thermoelectrochemical cycles for power and hydrogen production
26 p0201 A80-23157
Iron oxide reduction kinetics by hydrogen
26 p0203 A80-23174
Material corrosion investigations for the General Atomic sulfur-iodine thermochemical water-splitting cycle
26 p0204 A80-23189
Thermochemical or hybrid cycles of hydrogen production techno-economical comparison with water electrolysis
26 p0205 A80-23191
A method for the techno-economic evaluation of chemical processes - Improvements to the 'OPTIMO' code --- improved computer program for hydrogen production and nuclear reactor-chemical plant coupling processes
26 p0205 A80-23192
Present state and future prospects of thermochemical hydrogen production
26 p0205 A80-23194
Main requirements on the nuclear installations used for hydrogen production and in technological processes
26 p0205 A80-23195
Testing aqueous caustic electrolyzers at high temperatures --- for hydrogen production
26 p0205 A80-23196

Theoretical efficiency limit of water electrolysis and practical means to approach it
26 p0205 A80-23197

Engineering impact on the validity of the Mark-16 thermochemical cycle --- hydrogen production restrictions and prospects
26 p0205 A80-23198

Hydrogen production from water using fission-pumped laser
26 p0206 A80-23200

Laser-fusion production of hydrogen by radiolytic-thermochemical cycles
26 p0206 A80-23201

Model for hydrogen production on illuminated transition metal surfaces
26 p0206 A80-23202

Kinetics of hydrogen absorption and desorption by ternary LaNi5 type intermetallic compounds
26 p0206 A80-23203

A plan for active development of LH2 for use in aircraft
26 p0206 A80-23204

Status and development of production of cheap hydrogen
26 p0208 A80-23330

Photolysis of water for H2 production with the use of biological and artificial catalysts
26 p0210 A80-23521

Hydrogen energy research programs in Japan
26 p0233 A80-28271

Present state and future prospects of thermochemical hydrogen production
26 p0233 A80-28272

Basic chemistry of a new cycle, based on reactions of Ce/III/ titanate, for splitting water
26 p0233 A80-28273

Open-loop thermochemical cycles for the production of hydrogen
26 p0233 A80-28274

Engineering impact on the validity of the Mark-16 thermochemical cycle
26 p0233 A80-28275

Nuclear methane reforming for coal gasification
26 p0233 A80-28276

The 'tandem photoelectrolysis plant' concept - A strategy for fuel production via biomass conversion wastes
26 p0243 A80-29054

Electrochemical gasification of coal - Simultaneous production of hydrogen and carbon dioxide by a single reaction involving coal, water, and electrons
26 p0244 A80-29152

A heat penalty and economic analysis of the hybrid sulfuric acid process
26 p0245 A80-29406

The oxidation of sulphur dioxide by bromine and water
26 p0245 A80-29407

Photobiological production of hydrogen
26 p0247 A80-29920

Plant power fuels hydrogen production
26 p0249 A80-30465

Hydrogen as a fuel
26 p0257 N80-16177

Coal liquefaction test center
[PE-1517-78] 26 p0300 N80-20425

HYDROGEN SULFIDE

Mixed potential analysis of sulfation of molten carbonate fuel cells
26 p0255 A80-32501

The chemistry of sulfur in char and the implications for hydrogasification/hydrodesulfurization
[PE-2449-9] 26 p0288 N80-19298

HYDROGEN-BASED ENERGY

Hydrogen energy system; Proceedings of the Second World Hydrogen Energy Conference, Zurich, Switzerland, August 21-24, 1978. Volumes 1-5
26 p0194 A80-23101

Storage, transmission and distribution of hydrogen
26 p0194 A80-23103

Solar-thermochemical production of hydrogen from water
26 p0200 A80-23143

Solar beam-assisted electrolyser applied to Yokohama Mark 5 and 6 --- hydrogen production
26 p0200 A80-23144

Separation of hydrogen from the mixture of hydrogen iodide, hydrogen and iodine in thermogravitational column
26 p0200 A80-23145

Photochemical production of hydrogen from water
26 p0201 A80-23154

Bio-solar hydrogen production
26 p0201 A80-23155

Thermoelectrochemical cycles for power and hydrogen production
26 p0201 A80-23157

Analysis of the potential transmission of hydrogen by pipeline in Switzerland
26 p0201 A80-23158

Mixture properties for hydrogen supplementation of natural gas
26 p0201 A80-23159

Small scale ammonia production as a means for hydrogen storage
26 p0201 A80-23160

A study on hydrogen storage by use of cryoadsorbents
26 p0201 A80-23161

The role of metal hydrides in hydrogen storage and utilization
26 p0202 A80-23163

Use of binary titanium alloys for hydrogen storage
26 p0202 A80-23164

Mixing effects of different types of hydrides
26 p0202 A80-23166

Effect of the interstitial hole size and electron concentration on complex metal hydride formation
26 p0202 A80-23168

Effect of Ni, Ce and Co on hydrogen absorption by La-Ni alloys
26 p0202 A80-23169

Technological aspects and characteristics of industrial hydrides reservoirs
26 p0203 A80-23171

The influence of Al on the hydrogen sorption properties of intermetallic compounds
26 p0203 A80-23173

Hydrogen-fueled railroad motive power systems - A North American view
26 p0203 A80-23175

Hydrogen energy in United States Post Office delivery systems
26 p0203 A80-23178

Hydrogen in iron-titanium - Experimental investigations of structure, heat of solution, diffusion, and hydriding kinetics
26 p0204 A80-23184

Optimal development strategies for a whole energy system based on hydrogen
26 p0205 A80-23190

Technico-economic study of distributing hydrogen for automotive vehicles
26 p0207 A80-23206

Hydrogen energy research programs in Japan
26 p0233 A80-28271

Physical, chemical and energy aspects of underground hydrogen storage

Hysteresis in metal/hydrogen systems
26 p0246 A80-29725

Hydrogen as a fuel
26 p0257 N80-16177

Storing hydrogen in the form of light alloy hydrides
[IPP-26-209] 26 p0274 N80-17246

HYDROGENATION

Effect of coal particle size on the coal hydrogenation reaction - In relation to the plasticity of coal
26 p0192 A80-22768

Mechanochemical effects on coal conversion. I - Coal hydrogenation in gaseous hydrogen aided by mechanical energy
26 p0249 A80-30521

Hydrogenation of brown coal. I - The effects of additional quantities of the inorganic constituents
26 p0249 A80-30523

Coal liquefaction test center
[PE-1517-78] 26 p0300 N80-20425

HYDROLOGY

Bibliography of geology and hydrology, eastern New Mexico
[PB-300832/3] 26 p0273 N80-16663

HYDROLYSIS
The ZnSe thermochemical cycle for hydrogen production - Chemical and process design studies
26 p0198 A80-23133
The magnesium-iodine cycle for the thermochemical decomposition of water
26 p0199 A80-23137
Optimization of a thermochemical water splitting cycle - Thermodynamic analysis - Experimental work with a solar furnace
26 p0199 A80-23142
Solar-thermochemical production of hydrogen from water
26 p0200 A80-23143
Hydrogen generation via photoelectrolysis of water - Recent advances
26 p0200 A80-23152
Photochemical production of hydrogen from water
26 p0201 A80-23154
HYPERBOLIC DIFFERENTIAL EQUATIONS
Numerical modeling of heat flow in underground coal liquefaction
26 p0213 A80-24319
HYSTERESIS
Hysteresis in metal/hydrogen systems
26 p0246 A80-29725

I

ICE FORMATION
Snow and ice accumulation at solar collector installations in the Chicago metropolitan area
[PB80-113749] 26 p0308 N80-20912
IGNITION TEMPERATURE
In-situ combustion retorting of oil shale
26 p0192 A80-22764
Active burn control of nearly ignited plasmas
26 p0224 A80-25480
IMPLOSIONS
Application of plasma focus device to compression of toroidal plasma
26 p0229 A80-27058
IMPURITIES
Impurity effects on non-equilibrium MHD gas heated by a fossil fuel-fired heat exchanger
26 p0219 A80-25089
Spatial profiles of light impurity ions in the Alcator A tokamak plasma
26 p0224 A80-25478
Space- and time-resolved study of impurities by visible spectroscopy in the high-density regime of JIPP T-II tokamak plasma
26 p0224 A80-25481
The effects of titanium impurities in N/+//P silicon solar cells
26 p0256 A80-32503
INCENTIVES
Advanced automotive propulsion systems: Incentive financing
[CONS-5181-1] 26 p0321 N80-22128
INCIDENT RADIATION
Calculation of the monthly-average transmittance-absorptance product --- for solar collectors
26 p0184 A80-21117
Incidence-angle modifier and average optical efficiency of parabolic trough collectors
26 p0250 A80-30772
Normal incident solar radiation measurements at Upton, New York
[BNL-50939] 26 p0273 N80-16653
INCINERATORS
Incineration of industrial waste
26 p0192 A80-22766
INDIA
Some application of Landsat imagery interpretation for petroleum targetting in India
26 p0191 A80-22433
INDIUM COMPOUNDS
High photocurrent polycrystalline thin-film CdS/CuInSe2 solar cell
26 p0229 A80-27321
INDIUM PHOSPHIDES
Growth and characterization of thin film III-V compound semiconductor material for solar cell applications
26 p0244 A80-29058

INDOLES
Kinetics and mechanism of desulfurization and denitrogenation of coal-derived liquids --- quioline, indole, dibenzothiophene, and naphthalene
[FE-2028-15] 26 p0287 N80-19292
INDUCTION HEATING
Processing of solid fossil-fuel deposits by electrical induction heating
26 p0242 A80-29007
INDUCTION MOTORS
The theory of a free-field inductive MHD-propulsor
26 p0216 A80-25021
Combined magnetic levitation and propulsion - The Mag-Transit concept
26 p0231 A80-27677
INDUSTRIAL ENERGY
Introduction to the study of solar technology
26 p0188 A80-21949
Industrial solar thermal collectors
26 p0189 A80-21951
The utilization of industrially produced moderate-temperature solar heat
26 p0189 A80-21952
Industrial solar thermal concentrators
26 p0189 A80-21953
The industrial applications of high-temperature heat - Solar thermal and electric plants
26 p0189 A80-21954
Co-generation at a practical plant level - Single stage steam turbine generator set replaces pressure reducing station to reduce plant energy consumption
26 p0222 A80-25116
The prospects for solar energy use in industry within the United Kingdom
26 p0248 A80-29921
Energy conservation in industry: The present approach, the future opportunities
[PB-301244/0] 26 p0270 N80-16556
Criteria for an ideal solar photovoltaic powered industry
[HCP/T5433-01] 26 p0279 N80-17577
Characterization and assessment of selected solar thermal energy systems for residential and process heat applications
[LA-7995-TASE] 26 p0295 N80-19648
Industrial fuel choice analysis model. Volume 2: Appendices to model documentation
[DOE/EIA-2832/1-VOL-2-APP] 26 p0299 N80-20419
Energy conservation in the US: Some interdisciplinary approaches with an emphasis on industrial cogeneration
26 p0302 N80-20811
Feasibility of cogeneration application of a 4.8 MW fuel cell power plant at a Santa Clara, California paper mill
[SAN-2189-T1] 26 p0304 N80-20876
Industrial Sector Technology Use Model (ISTUM): Industrial energy use in the United States, 1974 - 2000. Volume 2: Results
[DOE/FE-2344/2] 26 p0305 N80-20885
Economic analysis of solar industrial process heat systems. A methodology to determine annual required revenue and internal rate of return
[UCRL-52814] 26 p0317 N80-21853
Solar pond for industrial process heat
[SERI/TD-351-460] 26 p0319 N80-21876
INDUSTRIAL MANAGEMENT
Space disposal of nuclear wastes
26 p0246 A80-29448
Report on the gas supply industry
[ERG-027] 26 p0286 N80-18579
INDUSTRIAL PLANTS
Studies in biogas technology. II - Optimization of plant dimensions

INFRARED IMAGERY
- Remote sensing of sulfur dioxide effects on vegetation - photometric analysis of aerial photographs [PB-300460/3] 26 p0272 N80-16600

INFRARED SPECTROSCOPY
- Application of Fourier-transform infrared spectroscopy to the characterization of fractionated coal liquids 26 p0249 A80-30525

INORGANIC MATERIALS
- Hydrogenation of brown coal. I - The effects of additional quantities of the inorganic constituents 26 p0249 A80-30523

INORGANIC SULFIDES
- Electrochemistry of amorphous V2S5 in lithium cells 26 p0247 A80-29895

INSOLATION
- Accuracies achievable with indirect measurements of the direct solar irradiance component 26 p0183 A80-21108
- Storage of solar energy 26 p0188 A80-21937
- Estimation and prediction of global solar radiation over Greece 26 p0248 A80-29923
- The sensitivity of solar transmittance, reflectance and absorptance to selected averaging procedures and solar irradiance distributions 26 p0251 A80-30774
- Operating thresholds of solar collection systems 26 p0251 A80-30775
- Solar availability for winter space heating: An analysis of the calendar period 1953-1975 [ANL/SPG-14] 26 p0268 N80-16532

INSTALLING
- Installation and checkout of the DOE/NASA Mod-1 2000-kW wind turbine generator [NASA-TM-81444] 26 p0292 N80-19614

INSULATION
- Performance effects of Trombe wall control strategies --- passive solar building heating 26 p0183 A80-21105

INTEGRATED CIRCUITS
- Computer modeling of a two-junction, monolithic cascade solar cell 26 p0234 A80-28330

INTEGRATED ENERGY SYSTEMS
- An integrated approach to energy supply for small communities [AIAA 80-0651] 26 p0240 A80-28830
- Prototype solar heating and combined heating cooling systems [NASA-CR-161340] 26 p0264 N80-16485
- Screening evaluation of electric power cycles integrated with coal gasification plants [EPRI-AF-1160] 26 p0295 N80-19646
- Heat-pump-centered integrated community energy systems: System development [ANL/CNSV/TM-8] 26 p0305 N80-20880
- Performance of heat pumps at elevated evaporating temperatures with application to solar input [BNL-26772] 26 p0307 N80-20896
- Solar heating and hot water system installed at the Senior Citizen Center, Huntsville, Alabama [NASA-CR-161384] 26 p0315 N80-21835
- Solar thermal repowering systems integration [SERI/TR-8037-1] 26 p0316 N80-21847
- Performance of a solar energy-assisted heat pump heating system: Analysis and correlation of field-collected data [COO-2704-T1] 26 p0318 N80-21875

INTERFACIAL TENSION
- Surface-active materials from Athabasca oil sands 26 p0192 A80-22770

INTERMETALLICS
- Use of binary titanium alloys for hydrogen storage 26 p0202 A80-23164
- Effect of the interstitial hole size and electron concentration on complex metal hydride formation 26 p0202 A80-23168
- The influence of Al on the hydrogen sorption properties of intermetallic compounds 26 p0203 A80-23173
- Numerical physical property data for metal hydrides utilized for hydrogen storage - Three primary candidate materials 26 p0204 A80-23183
- Kinetics of hydrogen absorption and desorption by ternary LaNi5 type intermetallic compounds 26 p0206 A80-23203
- Kinetics of hydrogen absorption and desorption by ternary LaNi5-type intermetallic compounds 26 p0234 A80-28277

INTERNAL COMBUSTION ENGINES
- Electronic fuel injection techniques for hydrogen powered I.C. engines 26 p0206 A80-23205
- Possible energy savings through tribological measures - Especially in automobiles 26 p0227 A80-26184
- Trends in the construction of Otto engines in the U.S 26 p0235 A80-28472
- A study on plasma plug --- high energy ignition plugs for exhaust pollution reduction and fuel consumption decrease in automotive gasoline engines 26 p0252 A80-31775
- Exhaust characterization of neat alcohol fueled IC engines [BETC/P-B-8-1943-1] 26 p0314 N80-21760

INTERNATIONAL COOPERATION
- International tokamak reactor - Executive summary of the IAEA Workshop, 1979 26 p0252 A80-31626
- Objectives and strategies of the International Photovoltaic Program Plan [SERI/TR-52-250] 26 p0266 N80-16513

INTERNATIONAL LAW
- Satellite solar power plants 26 p0252 A80-31200

INTERSTITIALS
- Effect of the interstitial hole size and electron concentration on complex metal hydride formation 26 p0202 A80-23168

INVERTED CONVERTERS (DC TO AC)
Design, construction and initial operation of an MHD inverter system for the Mark VI generator
26 p0219 A80-25092
A rotary inverter system for a multiple-electrode MHD generator
26 p0219 A80-25093
Analysis of losses in a high-frequency converter with low-cosine capacitance load
26 p0252 A80-31501

INVERTERS
A control strategy for a variable-speed wind energy conversion system
26 p0194 A80-22976
Workshop on Power Conditioning for Alternative Energy Technologies, executive summary
[SERI-TP-35-217-PT-25] 26 p0265 N80-16505

INVISCID FLOW
Numerical calculation of steady inviscid full potential compressible flow about wind turbine blades
[NASA-TM-81438] 26 p0284 N80-18497

IODIDES
Experimental verification of the mercury-iodine thermochemical cycle for the production of hydrogen from water - ANL-4
26 p0199 A80-23136

IODINE
Chemical studies on the general atomic sulfur-iodine thermochemical water-splitting cycle
26 p0197 A80-23122
The reaction of sulfur dioxide with water and a halogen - The cases of bromine and iodine
26 p0197 A80-23125
The magnesium-iodine cycle for the thermochemical decomposition of water
26 p0199 A80-23137

IODINE COMPOUNDS
Material corrosion investigations for the General Atomic sulfur-iodine thermochemical water-splitting cycle
26 p0204 A80-23189

ION CURRENTS
Observation of radio-frequency-driven plasma current in the octopole tokamak
26 p0224 A80-25483
Theory of current generation by electrostatic traveling waves in collisionless magnetized plasmas
26 p0229 A80-27263
Toroidal effects on nonlocal collisionless drift instability
26 p0229 A80-27278

ION DISTRIBUTION
Spatial profiles of light impurity ions in the Alcator A tokamak plasma
26 p0224 A80-25478

ION IMPLANTATION
Properties of ion-implanted junctions in mercury-cadmium-telluride
26 p0234 A80-28307

ION INJECTION
Low-density ignition scenarios in injection-heated tokamaks
26 p0213 A80-24482
Neutral beam injectors
26 p0215 A80-24675
Neutral-beam injection calculations for torsatrons --- plasma heating effectiveness
26 p0224 A80-25479

ION SOURCES
Neutral beam injectors
26 p0215 A80-24675

IONIC DIFFUSION
Laser treatment of phosphorus-diffused silicon solar cells
26 p0186 A80-21915

IONIZED GASES
Electrical processes in the interaction of a magnetic field wave with an ionized-gas stream
26 p0252 A80-31509

IRON
Thermal energy storage in a packed bed of iron spheres with liquid sodium coolant
26 p0183 A80-21109
Sr-Ca-Fe water-decomposition cycles for hydrogen production
26 p0199 A80-23135
Resource and energy constraints of regional and global availability of aluminum copper, and iron 1975 - 2000: A computer study
26 p0301 N80-20720

IRON ALLOYS
Technological aspects and characteristics of industrial hydrides reservoirs
26 p0203 A80-23171

IRON COMPOUNDS
The decomposition of hydrogen bromide using iron bromide and magnetite
26 p0198 A80-23130
Hydrogen in iron-titanium - Experimental investigations of structure, heat of solution, diffusion, and hydriding kinetics
26 p0204 A80-23184

IRON OXIDES
Iron oxide reduction kinetics by hydrogen
26 p0203 A80-23174

IRRADIANCE
Accuracies achievable with indirect measurements of the direct solar irradiance component
26 p0183 A80-21108

IRREVERSIBLE PROCESSES
Irreversibility analysis of hydrogen separation schemes in thermochemical cycles
26 p0197 A80-23120
Electrochemical aspects of the H2SO4-SO2 thermoelectrochemical cycle for hydrogen production
26 p0198 A80-23128

IRRIGATION
Wind turbines for irrigation pumping
[AIAA 80-0639] 26 p0239 A80-28822
Solar powered liquid piston Stirling cycle irrigation pump
[SAN-1894-1] 26 p0294 N80-19641

ISLANDS
Design characteristics of the 224 kW Magdalen Islands VAWT
26 p0261 N80-16463

ISOMERIZATION
Photosensitization mechanisms for energy storing isomerizations
26 p0244 A80-29060

J

JAPAN
Geological and geochemical characteristics of geothermal resources in Japan
26 p0187 A80-21928
National R&D program on MHD in Japan
26 p0220 A80-25100
Hydrogen energy research programs in Japan
26 p0233 A80-28271
Electric vehicle in Japan
26 p0236 A80-28484

JET ENGINE FUELS
Initial characterization of an Experimental Referee Broadened-Specification (ERBS) aviation turbine fuel
[NASA-TM-81440] 26 p0283 N80-18205
Stability survey of hydrocarbon fuels
[BETC-1778-4] 26 p0300 N80-20424

K

KANSAS
Oil and gas exploration by pattern recognition of lineament assemblages associated with bends in wrench faults
26 p0191 A80-22441

KENTUCKY
Gas production of Devonian shale wells relative to photo lineament locations: A statistical analysis
[METC/CR-79/28] 26 p0260 N80-16410

KEROGEN
Alkanes obtained by thermal conversion of Green River oil-shale kerogen using CO and H2O at elevated pressure
26 p0226 A80-25888
Gasification of oil shale
26 p0226 A80-25889

KINEMATICS
Kinematic synthesis of drive mechanisms for solar concentrating collector using auxilliary mirrors
26 p0212 A80-23998

L

LAMINATES
Effective thermal and electrical resistances of stabilized layered superconductors with nonideal phase contact 26 p0252 A80-31507
Composite-laminate flywheel-rotor development program [UCRL-83554] 26 p0317 N80-21855

LAND USE
Urban activity allocation under criteria of transportation energy efficiency 26 p0192 A80-22788
Methodology for evaluating physical constraints on residential solar energy use [UCRL-15001] 26 p0307 N80-20901

LANDSAT SATELLITES
Monitoring urban population and energy utilization patterns from satellite data 26 p0207 A80-23293

LANTHANUM ALLOYS
Effect of Ni, Ce and Co on hydrogen absorption by La-Ni alloys 26 p0202 A80-23169

LANTHANUM COMPOUNDS
Kinetics of hydrogen absorption and desorption by ternary LaNi5 type intermetallic compounds 26 p0206 A80-23203
Kinetics of hydrogen absorption and desorption by ternary LaNi5-type intermetallic compounds 26 p0234 A80-28277

LARGE SPACE STRUCTURES
Just over the horizon in space 26 p0256 A80-32511

LASER APPLICATIONS
Laser treatment of phosphorus-diffused silicon solar cells 26 p0186 A80-21915
Hydrogen production from water using fission-pumped laser 26 p0206 A80-23200
Silicon ribbon growth using scanned lasers 26 p0229 A80-27337
Laser 79 opto-electronics; Proceedings of the Fourth Conference, Munich, West Germany, July 2-6, 1979 26 p0245 A80-29334

LASER FUSION
The evolution of a large laser control system - From Shiva to Nova 26 p0185 A80-21901
Laser-fusion production of hydrogen by radiolytic-thermochemical cycles 26 p0206 A80-23201
Controlled fusion research in China 26 p0226 A80-25786
Choice of an optimum multichannel Nd:glass laser system for fusion experiments 26 p0230 A80-27340
Possible solution of the controlled thermonuclear fusion problem based on magnetogasdynamic energy storage 26 p0230 A80-27567
Magnetooptical switch for synchronization of CO2 and red laser beams --- in laser fusion systems 26 p0236 A80-28735
Helios, a 20 TW CO2 laser fusion facility 26 p0245 A80-29370
Factors affecting potential market penetration of laser fusion power plants [PNL-2803] 26 p0269 N80-16552

LASER PLASMA INTERACTIONS
Transverse self-focusing of a Gaussian beam - Moment method 26 p0229 A80-27195
Choice of an optimum multichannel Nd:glass laser system for fusion experiments 26 p0230 A80-27340

LAVA
Magma energy research, 79-1 [SAND-79-1344] 26 p0277 N80-17568

LEAD ACID BATTERIES
Lead-acid batteries for remote photovoltaic applications 26 p0232 A80-28014
Test and evaluation report of the ERDC Hybrid-Electric Van (HEVAN) [DOE/TIC-10232] 26 p0312 N80-21210

LIFE (DURABILITY)
LSA field test [NASA-CR-162798] 26 p0291 N80-19611
Advanced technology light weight fuel cell program --- orbiting space vehicle long-life hydrogen oxygen fuel cell [NASA-CR-159807] 26 p0292 N80-19615
Life test results of the NASA standard 20 ampere hour cells 26 p0303 N80-20846

LIFE CYCLE COSTS
Analysis of life-cycle costs and market applications of flywheel energy-storage transit vehicles [PB-300289/6] 26 p0282 N80-17922

LIGHT AIRCRAFT
The potential for development of high performance light aircraft 26 p0208 A80-23307

LIGHT TRANSMISSION
Transverse self-focusing of a Gaussian beam - Moment method 26 p0229 A80-27195

LIGNITE
Methanol derivation from North Dakota lignite and use as a fuel 26 p0230 A80-27417
Lignite and coal in the U.S. energy future 26 p0230 A80-27420
Balancing the process of hydrating gasification of brown coal 26 p0250 A80-30597

LIQUEFACTION
The cryogenic storage of hydrogen 26 p0202 A80-23162

LIQUEFIED GASES
Laboratory investigation of the performance of a Holden engine operating on liquified petroleum gas [AD-A076145] 26 p0284 N80-18411

LIQUEFIED NATURAL GAS
Chemical kinetics in LNG detonations [UCRL-82293-REV-1] 26 p0258 N80-16180

LIQUID CHROMATOGRAPHY
Development of high temperature subtractive column and chromatographic analysis of hydrocarbons present in diesel exhaust [BETC/RI-78/12] 26 p0257 N80-16130

LIQUID COOLING
Helium research in support of superconducting power transmission [PB80-116502] 26 p0314 N80-21697

LIQUID HELIUM
Helium research in support of superconducting power transmission [PB80-116502] 26 p0314 N80-21697

LIQUID HYDROGEN
Durability of foam insulation for LH2 fuel tanks of future subsonic transports 26 p0191 A80-22687
The cryogenic storage of hydrogen 26 p0202 A80-23162
A plan for active development of LH2 for use in aircraft 26 p0206 A80-23204
A storage tank for vehicular storage of liquid hydrogen 26 p0231 A80-27729
Safety of liquid hydrogen in air transportation [LA-UR-79-1416] 26 p0259 N80-16236

LIQUID METALS
Control of liquid metal-gas two phase flow by application of axial magnetic field 26 p0218 A80-25083
High-power-density liquid-metal MHD generator results 26 p0218 A80-25084
High-temperature liquid-metal MHD generator experiments 26 p0218 A80-25085
A magnetohydrodynamic piston engine 26 p0254 A80-32221

LITHIUM CHLORIDES
Lithium thionyl chloride high rate discharge 26 p0303 N80-20830

LITHIUM COMPOUNDS
Lithium battery discharge tests
26 p0303 N80-20831

LITHIUM SULFUR BATTERIES
Safety studies on Li/SO2 cells. II - Kinetics of lithium-organic solvent exothermic reactions
26 p0247 A80-29894
Electrochemistry of amorphous V2S5 in lithium cells
26 p0247 A80-29895
Lithium thionyl chloride high rate discharge
26 p0303 N80-20830
Lithium battery discharge tests
26 p0303 N80-20831
Characterization of prototype secondary lithium battery
26 p0303 N80-20832
The Exxon rechargeable cells --- solar rechargeable clocks
26 p0303 N80-20834

LOCOMOTIVES
Flywheel energy storage switcher. Volume 1: Study summary and detailed description of analysis
[PB80-121478] 26 p0320 N80-21888

LOGISTICS MANAGEMENT
Energy material transport, now through 2000, system characteristics and potential problems. Task 3: Petroleum transportation
[PNL-2421] 26 p0278 N80-17574

LOW COST
Structure of deformed silicon and implications for low-cost solar cells
26 p0191 A80-22526
Tubular solar collector
26 p0231 A80-27730
Low cost composite blades for large wind turbines
[AIAA 80-0634] 26 p0239 A80-28820
Low cost composite blades for large wind turbines
26 p0253 A80-32074
Large, low cost composite wind turbine blades
26 p0263 N80-16475
Development of high efficiency, low cost ZnSiAs2 solar cells.
[DOE/ET-23001/T1] 26 p0278 N80-17572

LOW TEMPERATURE
Low-temperature thermionic converter with an expanded-area collector
26 p0249 A80-30242

LOWER CALIFORNIA (MEXICO)
Vertical movement along the Cerro Prieto transform fault, Baja California, Mexico - a mechanism for geothermal energy renewal
[LBL-8905] 26 p0273 N80-16652

LUBRICATING OILS
Possible energy savings through tribological measures - Especially in automobiles
26 p0227 A80-26184

M

MAGMA
Magma energy research, 79-1
[SAND-79-1344] 26 p0277 N80-17568

MAGNESIUM ALLOYS
Technological aspects and characteristics of industrial hydrides reservoirs
26 p0203 A80-23171

MAGNESIUM COMPOUNDS
Development of high-temperature hydrides for vehicular applications
26 p0203 A80-23172

MAGNESIUM OXIDES
The magnesium-iodine cycle for the thermochemical decomposition of water
26 p0199 A80-23137

MAGNETIC DIPOLES
A superconducting dipole magnet for the CFFF MHD facility at the University of Tennessee Space Institute --- Coal-Fired Flow Facility
26 p0218 A80-25079

MAGNETIC EFFECTS
End effects with a slowly varying magnetic field in a MHD channel with segmented electrodes
26 p0193 A80-22793
Control of liquid metal-gas two phase flow by application of axial magnetic field
26 p0218 A80-25083
The effect of a weak vertical magnetic field on fluctuation-induced transport in a Bumpy-Torus plasma
26 p0224 A80-25476

MAGNETIC FIELD CONFIGURATIONS
The physics of field reversed mirrors
26 p0214 A80-24664
Field-reversed mirror reactor
26 p0215 A80-24668
Mirror hybrid reactors --- fusion-fission reactor design
26 p0215 A80-24670
Superconducting magnets for mirror machines
26 p0215 A80-24672
The theory of a free-field inductive MHD-propulsor
26 p0216 A80-25021
Quiescent and turbulent plasmas under mirror-configurations of magnetic field
26 p0223 A80-25322
Discharge start-up in a tokamak with a poloidal divertor
26 p0223 A80-25472
Shape control of doublets --- for tokamak plasma stability control
26 p0223 A80-25473
Transverse confinement of a high-pressure plasma in a corrugated magnetic field
26 p0224 A80-25474
The effect of a weak vertical magnetic field on fluctuation-induced transport in a Bumpy-Torus plasma
26 p0224 A80-25476

MAGNETIC FIELD INVERSIONS
Interchange stability of axisymmetric field reversed equilibria --- in plasma control with magnetic mirror
26 p0250 A80-30552

MAGNETIC FIELDS
Energy storage --- Book
26 p0184 A80-21123

MAGNETIC FLUX
A linear magnetic motor/generator --- to generate electric energy using magnetic flux for spacecraft's power supply
[NASA-CASE-GSC-12518-1] 26 p0290 N80-19424
Nonideal compensation in MHD generators --- models of the distortion of the total magnetic flux density by the induced magnetic flux density
26 p0310 N80-21149

MAGNETIC INDUCTION
The theory of a free-field inductive MHD-propulsor
26 p0216 A80-25021

MAGNETIC LEVITATION VEHICLES
Combined magnetic levitation and propulsion - The Mag-Transit concept
26 p0231 A80-27677
The development of the magnetically suspended transportation system in the Federal Republic of Germany
26 p0235 A80-28458

MAGNETIC MIRRORS
Driven magnetic fusion reactors; Proceedings of the Course, Erice, Italy, September 18-26, 1978
26 p0214 A80-24661
The physics of field reversed mirrors
26 p0214 A80-24664
The mirror fusion test facility
26 p0214 A80-24665
The economic significance of Q for mirror reactors - Combinations of Q and M which look promising --- parameters affecting energy conversion efficiency in fusion reactor
26 p0215 A80-24666
Tandem mirror reactors
26 p0215 A80-24667
Field-reversed mirror reactor
26 p0215 A80-24668
Mirror hybrid reactors --- fusion-fission reactor design
26 p0215 A80-24670
Beam and plasma direct converters
26 p0215 A80-24671
Superconducting magnets for mirror machines
26 p0215 A80-24672
Quiescent and turbulent plasmas under mirror-configurations of magnetic field
26 p0223 A80-25322

Transverse confinement of a high-pressure plasma in a corrugated magnetic field
26 p0224 A80-25474

Interchange stability of axisymmetric field reversed equilibria --- in plasma control with magnetic mirror
26 p0250 A80-30552

MAGNETIC SUSPENSION

A storage tank for vehicular storage of liquid hydrogen
26 p0231 A80-27729

MAGNETITE

The decomposition of hydrogen bromide using iron bromide and magnetite
26 p0198 A80-23130

MAGNETO-OPTICS

Magnetooptical switch for synchronization of CO2 and red laser beams --- in laser fusion systems
26 p0236 A80-28735

MAGNETOHYDRODYNAMIC FLOW

Transient response of large experimental MHD power generator flowtrain systems
[AIAA PAPER 80-0025] 26 p0212 A80-23954

Long duration channel development and testing --- for MHD generator electrode corrosion measurement
26 p0216 A80-25063

Quiescent and turbulent plasmas under mirror-configurations of magnetic field
26 p0223 A80-25322

MAGNETOHYDRODYNAMIC GENERATORS

Magnetohydrodynamic power generation - Program planning and status
26 p0184 A80-21449

Turbulation of plasma in combustion chamber of an MHD generator
26 p0190 A80-22348

Equivalent circuits for the channel of the magnetohydrodynamic generator
26 p0190 A80-22349

Open-cycle MHD powerplants - Performance, cost and technology demonstration strategies
[AIAA PAPER 80-0180] 26 p0192 A80-22739

Current transport mechanisms in the boundary regions of MHD generators
[AIAA PAPER 80-0249] 26 p0192 A80-22745

End effects with a slowly varying magnetic field in a MHD channel with segmented electrodes
26 p0193 A80-22793

Scale-up of advanced MHD generators
[AIAA PAPER 80-0179] 26 p0212 A80-23938

The STD/MHD codes - Comparison of analyses with experiments --- MHD generator performance prediction and tests
[AIAA PAPER 80-0024] 26 p0212 A80-23953

Transient response of large experimental MHD power generator flowtrain systems
[AIAA PAPER 80-0025] 26 p0212 A80-23954

The theory of a free-field inductive MHD-propulsor
26 p0216 A80-25021

Symposium on the Engineering Aspects of Magnetohydrodynamics, 18th, Butte, Mont., June 18-20, 1979, Preprints
26 p0216 A80-25061

Design description and performance predictions for the first CDIF power train --- MHD generator combustor, power channel and diffusers
26 p0216 A80-25062

Electrical characteristics of an arc-mode slagging electrode generator --- in Faraday MHD generators
26 p0216 A80-25064

Study of the U-25B MHD generator system in strong electric and magnetic fields
26 p0216 A80-25065

Local analysis of electrical performance of the U-25B generator --- MHD generator
26 p0216 A80-25066

Radiative and convective heat transfer in the MHD generator duct
26 p0217 A80-25068

Investigations of heat transfer from plasma flux to electrode and insulating walls of the MHD generator channel
26 p0217 A80-25069

Application of black-liquor boiler technology to MHD heat and seed recovery equipment design
26 p0217 A80-25070

Condensation and deposition of seed in the MHD bottoming plant
26 p0217 A80-25071

An evaluation of candidate seed processing systems for open cycle MHD --- sulfur removal and control
26 p0217 A80-25072

A four-component model for the vaporization of seeded slags - The system KO/.5/-CaO-AlO/1.5/SiO2 --- in MHD generator coal combustor
26 p0217 A80-25073

Wettability and corrosion of MHD ceramics by Rosebud coal slag
26 p0217 A80-25074

Operability and materials testing for MHD air heaters
26 p0217 A80-25075

Particulate size and rates of pressure drop increase in an MHD air preheater
26 p0217 A80-25076

Superconducting MHD magnets - Technology development, procurement and the path to commercial scale
26 p0218 A80-25077

A modular design for a superconducting magnet for the ETF and larger MHD generators
26 p0218 A80-25078

A superconducting dipole magnet for the CFFF MHD facility at the University of Tennessee Space Institute --- Coal-Fired Flow Facility
26 p0218 A80-25079

The effect of electrochemical and arcing phenomena on electrode performance --- in coal-fired MHD generators
26 p0218 A80-25080

Control of liquid metal-gas two phase flow by application of axial magnetic field
26 p0218 A80-25083

High-power-density liquid-metal MHD generator results
26 p0218 A80-25084

High-temperature liquid-metal MHD generator experiments
26 p0218 A80-25085

Experiments on the nonuniform discharge structure in noble gas MHD generators
26 p0219 A80-25086

Experimental studies of an inert gas disk MHD generator with a small seed fraction
26 p0219 A80-25088

Impurity effects on non-equilibrium MHD gas heated by a fossil fuel-fired heat exchanger
26 p0219 A80-25089

Plasma measurements of Joule heating effects in the near electrode region of an open cycle MHD generator
26 p0219 A80-25090

Electrical nonuniformities in U-25 MHD channels
26 p0219 A80-25091

Design, construction and initial operation of an MHD inverter system for the Mark VI generator
26 p0219 A80-25092

A rotary inverter system for a multiple-electrode MHD generator
26 p0219 A80-25093

Characterization of dynamic influences in a coal-fired MHD system
26 p0219 A80-25094

First-principle component models for control system simulation of MHD-steam plants
26 p0220 A80-25095

Oxygen-enriched air for MHD power plants
26 p0220 A80-25096

Conceptual design of an MHD/steam power plant of pilot scale /ETF/ and preliminary analyses of early commercial MHD power plants
26 p0220 A80-25097

A 250 MWt MHD Engineering Test Facility /ETF/ system design
26 p0220 A80-25098

Coupled generator and combustor performance calculations for potential early commercial MHD power plants
26 p0220 A80-25099

National R&D program on MHD in Japan
26 p0220 A80-25100

Preliminary assessment of the requirements and potential of open cycle MHD as an electric utility power plant
26 p0220 A80-25101

The retrofit approach to MHD demonstration and commercialization --- for coal-fired MHD plants
26 p0221 A80-25102

A modular approach to an engineering test facility and beyond --- for coal-fired MHD generators
26 p0221 A80-25103
The transition MHD power plant concept
26 p0221 A80-25104
Fluctuations in combustion MHD generator systems
26 p0221 A80-25105
Fluctuations in MHD generators
26 p0221 A80-25106
Experiments concerning inhomogeneities in combustion MHD generators
26 p0221 A80-25107
Kinetics of char burnout and ash vaporization in coal-fired MHD combustors
26 p0221 A80-25108
Wall combustion in high-swirl combustors --- for coal-fired MHD generators
26 p0222 A80-25110
One-stage cyclone combustor for coal fired test stand of 4MW thermal power --- for MHD generators
26 p0222 A80-25111
High slag rejection, high carbon conversion rate, air cooled cyclone coal combustor for MHD regenerative heat exchangers
26 p0222 A80-25112
Development of a slagging cyclone gasifier for MHD applications
26 p0222 A80-25113
Scaling MHD cyclone coal combustors
26 p0222 A80-25114
Simplified correlations for prediction of NO/x/ emissions from MHD power plants
26 p0227 A80-26001
Condensation of aluminum when used as a fuel additive in MHD power generation
26 p0242 A80-28859
Explosive-driven magnetic generator with a plasma load
26 p0252 A80-31357
Electrical processes in the interaction of a magnetic field wave with an ionized-gas stream
26 p0252 A80-31509
Promising fuels for MHD power stations
26 p0252 A80-31750
End zone of a channel with segmented electrodes, carrying nonuniform flow --- current and potential fields in plasma
26 p0254 A80-32220
A magnetohydrodynamic piston engine
26 p0254 A80-32221
MHD electrical potentials - Uniqueness of solutions to an extended class of elliptic boundary value problems
26 p0254 A80-32318
Electrical conductivity of a seeded H2/O2 system
26 p0254 A80-32330
Experiments on H2-O2MHD power generation
[NASA-TM-81424] 26 p0273 N80-16886
Magnetohydrodynamic (MHD) magnet modeling
[AD-A078865] 26 p0290 N80-19443
Nonideal compensation in MHD generators --- models of the distortion of the total magnetic flux density by the induced magnetic flux density
26 p0310 N80-21149
Development, testing and evaluation of MHD materials and components designs
[FE-2248-22] 26 p0311 N80-21160
Advances in MHD technology
[CONF-790598-5] 26 p0311 N80-21166

MAGNETOHYDRODYNAMIC STABILITY
Turbulation of plasma in combustion chamber of an MHD generator
26 p0190 A80-22348
MHD equilibrium and stability of axial symmetric toroidal plasma with an elliptic cross section of triangular deformation
26 p0209 A80-23366
Transient response of large experimental MHD power generator flowtrain systems
[AIAA PAPER 80-0025] 26 p0212 A80-23954
Model for description of transient behavior of a tokamak discharge
26 p0213 A80-24498
The physics of field reversed mirrors
26 p0214 A80-24664
Shape control of doublets --- for tokamak plasma stability control
26 p0223 A80-25473
Active burn control of nearly ignited plasmas
26 p0224 A80-25480
Application of plasma focus device to compression of toroidal plasma
26 p0229 A80-27058
Numerical investigation of current driven dissipative drift wave turbulence including finite beta and quasilinear effects in a tokamak plasma
26 p0229 A80-27276
Toroidal effects on nonlocal collisionless drift instability
26 p0229 A80-27278
Microtearing modes and anomalous transport in tokamaks
26 p0248 A80-29975
Interchange stability of axisymmetric field reversed equilibria --- in plasma control with magnetic mirror
26 p0250 A80-30552
Ideal magnetohydrodynamic stability of tokamak plasmas
26 p0250 A80-30554

MAGNETOHYDRODYNAMIC WAVES
Fluctuations in MHD generators
26 p0221 A80-25106

MAGNETOHYDRODYNAMICS
Symposium on the Engineering Aspects of Magnetohydrodynamics, 18th, Butte, Mont., June 18-20, 1979, Preprints
26 p0216 A80-25061
Possible solution of the controlled thermonuclear fusion problem based on magnetogasdynamic energy storage
26 p0230 A80-27567
Parametric study of potential early commercial MHD power plants
[NASA-CR-159633] 26 p0286 N80-18559
Development, testing and evaluation of MHD materials and components designs
[FE-2248-22] 26 p0311 N80-21160
Advances in MHD technology
[CONF-790598-5] 26 p0311 N80-21166
Development program for MHD direct coal-fired power generation test facility
[FE-1760-34] 26 p0318 N80-21864

MAGNETOSTATIC FIELDS
Transverse self-focusing of a Gaussian beam - Moment method
26 p0229 A80-27195

MAGNETRONS
Graded metal carbide solar selective surfaces coated onto glass tubes by a magnetron sputtering system
26 p0246 A80-29742
Cylindrical magnetron sputtering system for coating solar selective surfaces onto batches of tubes
26 p0246 A80-29743

MAGNETS
Permanent magnet and superconducting generators in airborne, high power systems --- computer program to predict weight of the generators and component systems
[AD-A078424] 26 p0284 N80-18311

MAINE
Cataract hydroelectric development expansion study
[DOE/ID-01796-1] 26 p0295 N80-19650
Solar energy system performance evaluation: Seasonal report for IBM System 2, Togus, Maine
[NASA-CR-161383] 26 p0315 N80-21836

MAINTENANCE
Cost of energy evaluation
26 p0263 N80-16482

MAN ENVIRONMENT INTERACTIONS
Power plant impacts on visibility in the west - Siting and emissions control implications
26 p0216 A80-24735

MANAGEMENT PLANNING
Multi-objective energy analysis
[BNL-26882] 26 p0317 N80-21856

MANUALS
Midtemperature solar systems test facility experiment manual and test plan
[SAND-79-0379] 26 p0268 N80-16528

MANUFACTURING
Aluminium or copper substrate panel for selective absorption of solar energy
[NASA-CASE-MFS-23518-3] 26 p0260 N80-16452

Solar collector manufacturing activity
[DOE/EIA-0174/78] 26 p0265 N80-16500

MARINE ENVIRONMENTS
The MINI-OTEC test
26 p0232 A80-28259

MARINE RESOURCES
OCEANS '79; Proceedings of the Fifth Annual Combined Conference, San Diego, Calif., September 17-19, 1979
26 p0232 A80-28251

MARKET RESEARCH
An overview of photovoltaic market research
26 p0186 A80-21917
Short haul transport for the 1990s
26 p0190 A80-22046
Markets for wind energy systems - When, where and at what price
[AIAA 80-0613] 26 p0238 A80-28810
Economic incentives to wind systems commercialization
[AIAA 80-0617] 26 p0238 A80-28811
Solar collector manufacturing activity
[DOE/EIA-0174/78] 26 p0265 N80-16500
Advanced electric generation. Commercialization in phase 3 planning
[DOE/ERD-0014] 26 p0269 N80-16547
Some potential material supply constraints in solar systems for heating and cooling of buildings and process heat. A preliminary screening to identify critical materials
[PNL-2972] 26 p0278 N80-17570
Analysis of life-cycle costs and market applications of flywheel energy-storage transit vehicles
[PB-300289/6] 26 p0282 N80-17922
Market definition study of photovoltaic power for remote villages in the United States
[NASA-CR-159800] 26 p0302 N80-20812

MARKETING
Marketing and market acceptance data from the Residential Solar Demonstration Program. Volume 1: Detailed analysis, autumn 1979
[PB80-115298] 26 p0311 N80-21197
Geothermal energy market penetration: Development of a model for the residential section
[PB80-118359] 26 p0311 N80-21198

MARYLAND
Preliminary assessment of the prospects for use of refuse-derived fuel in Maryland
[BNL-51065] 26 p0258 N80-16179

MASS SPECTROSCOPY
The application of chromatography and ancillary techniques to the characterization of shale oil/oil shale compound classes and of organometallics
26 p0282 N80-18125

MASS TRANSFER
Investigation of heat and mass transfer for a regenerator model of a solar cooling system
26 p0232 A80-28200

MATERIALS
Some potential material supply constraints in solar systems for heating and cooling of buildings and process heat. A preliminary screening to identify critical materials
[PNL-2972] 26 p0278 N80-17570

MATERIALS HANDLING
Energy material transport, now through 2000, system characteristics and potential problems. Task 3: Petroleum transportation
[PNL-2421] 26 p0278 N80-17574

MATERIALS RECOVERY
Application of Fourier-transform infrared spectroscopy to the characterization of fractionated coal liquids
26 p0249 A80-30525
Survey on metallurgical recycling processes
[ANL/OEPM-79-2] 26 p0282 N80-17918

MATERIALS TESTS
Operability and materials testing for MHD air heaters
26 p0217 A80-25075

MATHEMATICAL MODELS
Optimal development strategies for a whole energy system based on hydrogen
26 p0205 A80-23190
Application of computer models to the retorting of oil shale
26 p0228 A80-26708
Preliminary work concerning the near wake structure of the Darrieus turbine
[AIAA 80-0627] 26 p0239 A80-28818
Aggregated vectorial model of petroleum flow in the United States
[LBL-8874] 26 p0258 N80-16178
Independent assessment of energy policy models
[EPRI-EA-1071] 26 p0266 N80-16510
Factors affecting potential market penetration of laser fusion power plants
[PNL-2803] 26 p0269 N80-16552
Modeling the space conditioning energy demand of a community as a function of weather
[COO-1340-65] 26 p0294 N80-19644
Performance model for molten carbonate fuel cells
[TR-190] 26 p0305 N80-20884
Industrial Sector Technology Use Model (ISTUM): Industrial energy use in the United States, 1974 - 2000. Volume 2: Results
[DOE/FE-2344/2] 26 p0305 N80-20885
Limits to energy modeling
[ORAU/IEA-79-16(0)] 26 p0308 N80-20907
Wind Energy System Time-domain (WEST) analyzers using hybrid simulation techniques
[NASA-CR-159737] 26 p0308 N80-20909
A global biogeocenotical biosphere simulation
[NASA-TM-76042] 26 p0309 N80-20920
Nonideal compensation in MHD generators --- models of the distortion of the total magnetic flux density by the induced magnetic flux density
26 p0310 N80-21149
Geothermal energy market penetration: Development of a model for the residential section
[PB80-118359] 26 p0311 N80-21198
Multi-objective energy analysis
[BNL-26882] 26 p0317 N80-21856
Estimation of wind characteristics at potential wind energy conversion sites
[PNL-3074] 26 p0321 N80-21955

MATHEMATICAL PROGRAMMING
A Newton method for the PIES energy model
[AD-A077102] 26 p0287 N80-18825

MECHANICAL DRIVES
Kinematic synthesis of drive mechanisms for solar concentrating collector using auxilliary mirrors
26 p0212 A80-23998
Effect of geometry and operating conditions on spur gear system power loss
[NASA-TM-81426] 26 p0284 N80-18406
Parametric tests of a traction drive retrofitted to an automotive gas turbine
[NASA-TM-81457] 26 p0314 N80-21754

MECHANICAL ENGINEERING
Mechnical energy storage technology development
[SAND-79-1151] 26 p0304 N80-20874

MECHANICAL PROPERTIES
The use of wood for wind turbine blade construction
26 p0262 N80-16474

MERCURY (METAL)
Experimental verification of the mercury-iodine thermochemical cycle for the production of hydrogen from water - ANL-4
26 p0199 A80-23136

MERCURY TELLURIDES
Comparison of Hg/0.6/Cd/0.4/Te LPE layer growth from Te-, Hg-, and HgTe-rich solutions
26 p0234 A80-28305
Properties of ion-implanted junctions in mercury-cadmium-telluride
26 p0234 A80-28307

MERCURY VAPOR
Mercury partitioning in a power plant plume and its influence on atmospheric removal mechanisms
26 p0223 A80-25170

METAL AIR BATTERIES
Metal/air batteries: Their status and potential - A review
26 p0231 A80-28012

METAL COATINGS
Evaluation of selective absorbers
[TP-5461] 26 p0317 N80-21851

METAL COMBUSTION
Condensation of aluminum when used as a fuel additive in MHD power generation
26 p0242 A80-28859

METAL FILMS
Antireflection coatings on solar cells
26 p0186 A80-21914

METAL FOILS
Metal foils for direct application of absorber coatings on solar collectors
[LBL-9324] 26 p0277 N80-17560
METAL HYDRIDES
Hydrogen storage in metal hydrides
26 p0193 A80-22867
Storage, transmission and distribution of hydrogen
26 p0194 A80-23103
The role of metal hydrides in hydrogen storage and utilization
26 p0202 A80-23163
Use of binary titanium alloys for hydrogen storage
26 p0202 A80-23164
Cubic metal-alloys for hydrogen storage
26 p0202 A80-23165
Mixing effects of different types of hydrides
26 p0202 A80-23166
Effect of the interstitial hole size and electron concentration on complex metal hydride formation
26 p0202 A80-23168
Development of low cost nickel-rare earth hydrides for hydrogen storage
26 p0202 A80-23170
Technological aspects and characteristics of industrial hydrides reservoirs
26 p0203 A80-23171
Development of high-temperature hydrides for vehicular applications
26 p0203 A80-23172
Materials and performance characteristics of the HYCSOS chemical heat pump and energy conversion system
26 p0204 A80-23180
A metal hydrogen heat pump as topping process for power generation
26 p0204 A80-23181
Numerical physical property data for metal hydrides utilized for hydrogen storage - Three primary candidate materials
26 p0204 A80-23183
Hysteresis in metal/hydrogen systems
26 p0246 A80-29725
Storing hydrogen in the form of light alloy hydrides
[IFP-26-209] 26 p0274 N80-17246
METAL OXIDE SEMICONDUCTORS
Open-circuit voltage and interface study of silicon MOS solar cells
26 p0234 A80-28331
MOS and oxide-charge-induced /OCI/ BSF solar cells
26 p0234 A80-28337
METAL OXIDES
A four-component model for the vaporization of seeded slags - The system KO/.5/-CaO-AlO/1.5/SiO2 --- in MHD generator coal combustor
26 p0217 A80-25073
Methanol and methyl fuel catalysts
[FE-3177-4] 26 p0288 N80-19302
METAL SURFACES
Model for hydrogen production on illuminated transition metal surfaces
26 p0206 A80-23202
Material requirements for coal gasification
26 p0212 A80-23833
Low-temperature thermionic converter with an expanded-area collector
26 p0249 A80-30242
METAL-GAS SYSTEMS
Effect of Ni, Ce and Co on hydrogen absorption by La-Ni alloys
26 p0202 A80-23169
The influence of Al on the hydrogen sorption properties of intermetallic compounds
26 p0203 A80-23173
Hysteresis in metal/hydrogen systems
26 p0246 A80-29725
METAL-WATER REACTIONS
Pitting resistance of engineering materials in geothermal brines. I - Low salinity brine
26 p0249 A80-30474
METALLIZING
A new method of metallization for silicon solar cells
[NASA-CR-162823] 26 p0292 N80-19620
METEOROLOGICAL PARAMETERS
Describing wind data --- using characteristic wind speed and shape factor parameters
26 p0211 A80-23534
METHANE
Studies in biogas technology. I - Performance of a convectional biogas plant
26 p0188 A80-21938
Nuclear methane reforming for coal gasification
26 p0195 A80-23105
Exotic energy R&D has potential --- ocean wave and windpower utilization
26 p0213 A80-24124
Biogas - Fuel of the future
26 p0227 A80-26175
Nuclear methane reforming for coal gasification
26 p0233 A80-28276
Unconventional gas recovery program
[METC/SP-79/8] 26 p0258 N80-16181
Flash hydropyrolysis of coal
[BNL-51010] 26 p0258 N80-16185
Production of methane using an anaerobic filter
[ANL-TRANS-1164] 26 p0300 N80-20428
METHOD OF CHARACTERISTICS
Computation of synthetic seismograms by the method of characteristics --- geophysical prospecting
26 p0287 N80-18593
METHYL ALCOHOLS
Methanol derivation from North Dakota lignite and use as a fuel
26 p0230 A80-27417
Experience with alcohol fuels
26 p0236 A80-28476
Conceptual design of a coal-to-methanol-to-gasoline commercial plant: Executive summary
[FE-2416-43] 26 p0258 N80-16182
Methanol as a transportation fuel: Assessment of environmental and health research
[UCRL-52697] 26 p0288 N80-19295
Methanol and methyl fuel catalysts
[FE-3177-4] 26 p0288 N80-19302
Coal-to-methanol via new processes under development: An engineering and economic evaluation
[EPRI-AF-1227] 26 p0314 N80-21558
MICHIGAN
Coping with energy limitations in transportation: Proposals for Michigan
[PB-299737/7] 26 p0270 N80-16559
MICROBIOLOGY
Microbial production of energy sources from biomass
26 p0210 A80-23523
MICROPROCESSORS
Design considerations of a CAMAC system for large tokamak JT-60
26 p0231 A80-27672
Peak power tracking technique for photovoltaic arrays
26 p0242 A80-28908
A microprocessor-based system for the monitoring and control of a solar installation
26 p0242 A80-29006
MICROSTRUCTURE
Characterization of deliberately nickel-doped silicon wafers and solar cells --- microstructure, electrical properties, and energy conversion efficiency
[NASA-CR-162790] 26 p0276 N80-17551
MICROWAVE TRANSMISSION
Microwave power beaming for long range energy transfer
26 p0193 A80-22833
Effect of solar power satellite transmissions on radio-astronomical research
26 p0211 A80-23525
Free space microwave power transmission systems for microwave powered atmospheric platforms
26 p0228 A80-26813
Airborne spacecraft - A remotely powered, high-altitude RPV for environmental applications
26 p0228 A80-26820
Solar power satellite system definition study, volume 4, phase 2
[NASA-CR-160565] 26 p0313 N80-21395
MICROWAVES
Microwave power transmission beam safety system
[NASA-CASE-NPO-14224-1] 26 p0283 N80-18287
MILITARY OPERATIONS
Militarized thermoelectric power sources
[AD-A075609] 26 p0304 N80-20869

MILITARY TECHNOLOGY
Improved thermal battery --- military applications
[AD-A075835] 26 p0276 N80-17554
MINERAL EXPLORATION
Computation of synthetic seismograms by the method of characteristics --- geophysical prospecting
26 p0287 N80-18593
MINERALS
A global biogeocenotical biosphere simulation
[NASA-TM-76042] 26 p0309 N80-20920
MINES (EXCAVATIONS)
Environmental development plan: Underground coal gasification
[DOE/EDP-0047] 26 p0260 N80-16411
MINICOMPUTERS
Continuing regional solar energy information mini-center activities and updating the SOLCOST program
[COO-4643-T2] 26 p0267 N80-16521
MINING
Environmental development plan: Coal extraction and preparation
[DOE/EDP-0050] 26 p0309 N80-20921
MINNESOTA
Solar heating system design package for a single-family residence at William O'Brien State Park, Minnesota
[NASA-CR-161357] 26 p0303 N80-20866
MIRRORS
Mirror enclosures for double-exposure solar collectors
26 p0184 A80-21110
Kinematic synthesis of drive mechanisms for solar concentrating collector using auxilliary mirrors
26 p0212 A80-23998
Installation and startup of the fixed mirror solar concentrator collector field subsystem
[GA-A-15344] 26 p0306 N80-20888
MIS (SEMICONDUCTORS)
Native oxide and external dielectric polycrystalline GaAs MIS solar cells
26 p0223 A80-25444
The barrier height change and current transport phenomena with the presence of interfacial layer in MIS Schottky barrier solar cells
26 p0247 A80-29815
MISSION PLANNING
Orbiter fuel cell performance constraints. STS/OPS Pratt Whitney fuel cells. Operating limits for mission planning
[NASA-TM-80958] 26 p0291 N80-19610
MODELS
Magnetohydrodynamic (MHD) magnet modeling
[AD-A078865] 26 p0290 N80-19443
MOJAVE DESERT (CA)
Project windsheet - An interim report --- on wind measurement at sites in American Southwest
[AIAA 80-0647] 26 p0239 A80-28827
MOLECULAR STRUCTURE
Molecular thermodynamics of dew-point calculations in coal gasification processes
26 p0273 N80-16926
MOLTEN SALT ELECTROLYTES
Mixed potential analysis of sulfation of molten carbonate fuel cells
26 p0255 A80-32501
MOLTEN SALTS
High-temperature molten salt thermal energy storage systems
[NASA-CR-159663] 26 p0275 N80-17547
Molten carbonate fuel cell program: EMF and temperature relaxation in LiKCO 3 tiles, transference cell measurements
[ORNL/TM-7003] 26 p0318 N80-21865
MOLYBDENUM
A new method of metallization for silicon solar cells
[NASA-CR-162823] 26 p0292 N80-19620
Exploratory studies in catalytic coal liquefaction
[EPRI-AP-1184] 26 p0299 N80-20422
Catalyst characterization in coal liquefaction
[SAND-79-1969] 26 p0299 N80-20423
MONTANA
Potential hydroelectric power, vertical turbine, spillway combine Broadwater Dam
[DOE/ID-01822-1] 26 p0295 N80-19651
Energy source book --- Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming
[DOE/TIC-10190] 26 p0306 N80-20895
MOTOR VEHICLES
International Symposium on Traffic and Transportation Technologies, Hamburg, West Germany, June 18-20, 1979, Proceedings. Volumes C1 & C2 - Motor vehicle and road traffic technologies
26 p0235 A80-28470
Hybrid drive-systems for municipal buses
26 p0235 A80-28475
MULTILAYER INSULATION
A storage tank for vehicular storage of liquid hydrogen
26 p0231 A80-27729

N

N-TYPE SEMICONDUCTORS
The doping of amorphous silicon for solar cells
26 p0187 A80-21521
NAPHTHALENE
Industrial scale production of hydrogen from natural gas, naphtha and coal
26 p0199 A80-23141
Kinetics and mechanism of desulfurization and denitrogenation of coal-derived liquids --- quioline, indole, dibenzothiophene, and naphthalene
[FE-2028-15] 26 p0287 N80-19292
NASA PROGRAMS
Overview of NASA battery technology program
26 p0302 N80-20821
NATURAL GAS
Oil and gas exploration by pattern recognition of lineament assemblages associated with bends in wrench faults
26 p0191 A80-22441
A kinetic investigation of the reforming of natural gas for the production of hydrogen
26 p0199 A80-23139
Industrial scale production of hydrogen from natural gas, naphtha and coal
26 p0199 A80-23141
Mixture properties for hydrogen supplementation of natural gas
26 p0201 A80-23159
The role of navigation satellites in oil exploration
26 p0222 A80-25152
The use of different-scale multispectral space photographs of the earth for the geological study of lands with oil and natural gas
26 p0254 A80-32276
Oil and gas replacement cost: Development and production. Volume 1: Discussion of methodology, exhibits, and projections
[DOE/TIC-10078] 26 p0258 N80-16187
Gas production of Devonian shale wells relative to photo lineament locations: A statistical analysis
[METC/CR-79/28] 26 p0260 N80-16410
Subsurface stratigraphy of the Middle and Upper Devonian clastic sequence in southern West Virginia and its relation to gas production
26 p0273 N80-16628
Report on the gas supply industry
[EHG-027] 26 p0286 N80-18579
Analysis of current trends in U.S. petroleum and natural gas production
[PB80-116056] 26 p0301 N80-20800
Characterization and analysis of devonian shales as related to release of gaseous hydrocarbons
[ORO-5205-10] 26 p0310 N80-20973
NAVIGATION SATELLITES
The role of navigation satellites in oil exploration
26 p0222 A80-25152
NAVSTAR SATELLITES
GPS application to seismic oil exploration
26 p0222 A80-25159
NEAR WAKES
Preliminary work concerning the near wake structure of the Darrieus turbine
[AIAA 80-0627] 26 p0239 A80-28818
NEODYMIUM LASERS
Enhancement of the efficiency of neodymium lasers by conversion of the pump radiation in a luminescent liquid
26 p0209 A80-23404
Choice of an optimum multichannel Nd:glass laser system for fusion experiments
26 p0230 A80-27340

NEUTRAL BEAMS
- Low-density ignition scenarios in injection-heated tokamaks 26 p0213 A80-24482
- Beam and plasma direct converters 26 p0215 A80-24671
- Neutral beam injectors 26 p0215 A80-24675
- Neutral-beam injection calculations for torsatrons --- plasma heating effectiveness 26 p0224 A80-25479

NEVADA
- Assessment of low- to moderate-temperature geothermal resources of Nevada [NVO-01556-1] 26 p0301 N80-20792

NEW ENGLAND (US)
- Regional environment-energy data book: Northeast region [DOE/TIC-10114/3] 26 p0279 N80-17578
- A feasibility study of windpower for the New England area [AD-A076614] 26 p0286 N80-18568

NEW HAMPSHIRE
- Wind energy in the mountains of New Hampshire as a potential energy source for Portsmouth Naval Shipyard [AD-A076975] 26 p0303 N80-20868

NEW MEXICO
- Test results of the DOE/Sandia 17 meter VAWT 26 p0262 N80-16465
- Blade design and operating experience on the MOD-OA 200 kW wind turbine at Clayton, New Mexico 26 p0262 N80-16470
- Evaluation of an operating MOD-OA 200 kW wind turbine blade 26 p0262 N80-16471
- Environmental system study on the development of fossil fuel resources in the Southwest [PB-300526/1] 26 p0272 N80-16596
- Bibliography of geology and hydrology, eastern New Mexico [PB-300832/3] 26 p0273 N80-16663
- An economical solar heated and cooled residence for southern New Mexico [PB80-108616] 26 p0309 N80-20914

NEW YORK
- A comparative study of the energy alternatives for the State of New York 26 p0302 N80-20807

NEW ZEALAND
- Wind energy research and development at Lincoln 26 p0211 A80-23535

NICKEL
- Nickel pigmented anodic aluminum oxide for selective absorption of solar energy 26 p0209 A80-23499
- Exploratory studies in catalytic coal liquefaction [EPRI-AF-1184] 26 p0299 N80-20422

NICKEL ALLOYS
- Effect of Ni, Ce and Co on hydrogen absorption by La-Ni alloys 26 p0202 A80-23169

NICKEL CADMIUM BATTERIES
- Plastic bonded electrodes for nickel-cadmium accumulators. III - Influence of active layer composition on galvanostatic and potentiostatic discharge curves 26 p0232 A80-28016

NICKEL COMPOUNDS
- The kinetics of oxygen evolution on non-traditional electrodic materials --- for hydrogen production by electrolysis of KOH aqueous solutions 26 p0196 A80-23111
- Development of low cost nickel-rare earth hydrides for hydrogen storage 26 p0202 A80-23170
- Kinetics of hydrogen absorption and desorption by ternary LaNi5 type intermetallic compounds 26 p0206 A80-23203

NICKEL OXIDES
- Plastic bonded electrodes for nickel-cadmium accumulators. III - Influence of active layer composition on galvanostatic and potentiostatic discharge curves 26 p0232 A80-28016

NIOBIUM
- Hysteresis in metal/hydrogen systems 26 p0246 A80-29725

NITRIC OXIDE
- Cogeneration of electric energy and nitric oxide 26 p0255 A80-32412
- Flame tube parametric studies for control of fuel bound nitrogen using rich-lean two-stage combustion [NASA-TM-81472] 26 p0315 N80-21837

NITROGEN
- Nitrogen reducing solar cells 26 p0244 A80-29059

NITROGEN OXIDES
- Simplified correlations for prediction of NO/x/ emissions from MHD power plants 26 p0227 A80-26001
- Environmental assessment of stationary source NOx control technologies [PB-300469/4] 26 p0272 N80-16601
- Evaluation of a photochemical system for nitrogen oxides control --- coal fired boilers 26 p0287 N80-18583

NONAQUEOUS ELECTROLYTES
- Present state and outlook of the electrolytic H2-production route 26 p0195 A80-23104
- Development of Billings SPE electrolyzer --- for hydrogen production 26 p0196 A80-23117

NONEQUILIBRIUM PLASMAS
- Decomposition of water in a nonequilibrium plasma 26 p0185 A80-21881
- Plasmochemical cycle of hydrogen production from the water 26 p0200 A80-23149
- Impurity effects on non-equilibrium MHD gas heated by a fossil fuel-fired heat exchanger 26 p0219 A80-25089

NONFERROUS METALS
- Survey on metallurgical recycling processes [ANL/CEPM-79-2] 26 p0282 N80-17918

NONUNIFORM FLOW
- End zone of a channel with segmented electrodes, carrying nonuniform flow --- current and potential fields in plasma 26 p0254 A80-32220

NONUNIFORM MAGNETIC FIELDS
- Electrical processes in the interaction of a magnetic field wave with an ionized-gas stream 26 p0252 A80-31509

NORTH CAROLINA
- Measurements of wind shear at the Mod-1 Site, Boone, N.C --- for wind turbine [AIAA 80-0648] 26 p0240 A80-28828

NORTH DAKOTA
- Methanol derivation from North Dakota lignite and use as a fuel 26 p0230 A80-27417
- Energy source book --- Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming [DOE/TIC-10190] 26 p0306 N80-20895

NUCLEAR ELECTRIC POWER GENERATION
- Sweden beyond oil - Nuclear commitments and solar options 26 p0255 A80-32410
- Study of a French national energy system based on coal and nuclear energy 26 p0255 A80-32500
- Environmental development plan for space applications --- development of nuclear power supplies for use in space [DOE/EDP-0057] 26 p0309 N80-20922

NUCLEAR ENERGY
- Production of synthetic gas from nuclear energy sources [LA-7592-MS] 26 p0274 N80-17244

NUCLEAR FISSION
- Hydrogen production from nuclear fission product waste heat and use in gas turbines 26 p0195 A80-23106

NUCLEAR FUSION
- Direct energy conversion systems [COO-2218-117] 26 p0269 N80-16543
- Fusion technology development [DOE/ET-0116/1] 26 p0311 N80-21165

NUCLEAR HEAT
- Nuclear energy as a primary energy source for hydrogen production 26 p0194 A80-23102
- Nuclear methane reforming for coal gasification 26 p0195 A80-23105

NUCLEAR POWER PLANTS
Use of nuclear reactors for simultaneous radiation and power generation as a cost effective means of hydrogen production
26 p0185 A80-21877
Prospects of developing nuclear power plants with chemothermal accumulation of thermal energy
26 p0185 A80-21879
Nuclear Science Symposium, 26th and Symposium on Nuclear Power Systems, 11th, San Francisco, Calif., October 17-19, 1979, Proceedings
26 p0231 A80-27656
Factors affecting potential market penetration of laser fusion power plants
[PNL-2803] 26 p0269 N80-16552

NUCLEAR POWER REACTORS
Nuclear Science Symposium, 26th and Symposium on Nuclear Power Systems, 11th, San Francisco, Calif., October 17-19, 1979, Proceedings
26 p0231 A80-27656

NUCLEAR PROPELLED AIRCRAFT
The changing horizons for technical progress. II
26 p0229 A80-27270

NUCLEAR PUMPED LASERS
Hydrogen production from water using fission-pumped laser
26 p0206 A80-23200

NUCLEAR RADIATION
Nuclear Science Symposium, 26th and Symposium on Nuclear Power Systems, 11th, San Francisco, Calif., October 17-19, 1979, Proceedings
26 p0231 A80-27656

NUCLEAR REACTORS
A method for the techno-economic evaluation of chemical processes - Improvements to the 'OPTIMO' code --- improved computer program for hydrogen production and nuclear reactor-chemical plant coupling processes
26 p0205 A80-23192

NUCLEAR RESEARCH
US tokamak research
26 p0226 A80-25777

NUMERICAL CONTROL
Master Control and Data Acquisition System for a Solar Central Receiver Electric Power Plant
26 p0186 A80-21903
Photovoltaic cost blitz spawns new silicon processes
26 p0186 A80-21913

O

OCEAN THERMAL ENERGY CONVERSION
OTEC for hydrogen production
26 p0195 A80-23109
Advances in energy systems and technology. Volume 2 --- Book
26 p0207 A80-23218
Sea thermal power - Competitive electricity and chemicals from the sea
26 p0207 A80-23220
The OTEC connection - Power from the sea
26 p0222 A80-25115
The MINI-OTEC test
26 p0232 A80-28259
Coriolis Program - A review of the status of the ocean turbine energy system
26 p0233 A80-28261
Solar sea power plants. Citations from the NTIS data base
[PB80-802590] 26 p0297 N80-19661
Solar seapower plants. Citations from the Engineering Index data base
[PB80-802598] 26 p0297 N80-19662
Analysis of a heat exchanger-thermoelectric generator system
[SERI/TP-35-253] 26 p0316 N80-21848

OCEANOGRAPHY
OCEANS '79; Proceedings of the Fifth Annual Combined Conference, San Diego, Calif., September 17-19, 1979
26 p0232 A80-28251

OFFSHORE ENERGY SOURCES
The role of navigation satellites in oil exploration
26 p0222 A80-25152
GPS application to seismic oil exploration
26 p0222 A80-25159
Offshore wind energy conversion systems
[AIAA 80-0619] 26 p0241 A80-28839
New concepts in vertical axis wind turbines /VAWT/ and applications to large multi-MW size, off-shore wind turbine systems
[AIAA 80-0620] 26 p0241 A80-28840
Outer continental shelf environment monitoring concerns
[PB-299861/5] 26 p0273 N80-16625

OHMIC DISSIPATION
Plasma measurements of Joule heating effects in the near electrode region of an open cycle MHD generator
26 p0219 A80-25090

OIL EXPLORATION
Some application of Landsat imagery interpretation for petroleum targetting in India
26 p0191 A80-22433
Oil and gas exploration by pattern recognition of lineament assemblages associated with bends in wrench faults
26 p0191 A80-22441
The price of oil in the year 2000
[AAS 79-172] 26 p0215 A80-24717
The role of navigation satellites in oil exploration
26 p0222 A80-25152
GPS application to seismic oil exploration
26 p0222 A80-25159
The use of different-scale multispectral space photographs of the earth for the geological study of lands with oil and natural gas
26 p0254 A80-32276
Oil and gas replacement cost: Development and production. Volume 1: Discussion of methodology, exhibits, and projections
[DOE/TIC-10078] 26 p0258 N80-16187
Energy from the situ processing of antrim oil shale
[FE-2346-44] 26 p0278 N80-17576
Computation of synthetic seismograms by the method of characteristics --- geophysical prospecting
26 p0287 N80-18593
Analysis of current trends in U.S. petroleum and natural gas production
[PB80-116056] 26 p0301 N80-20800

OIL FIELDS
Analysis of water resources requirement for the enhanced (tertiary) oil recovery in the southern plains region of the United States
[PB80-110869] 26 p0301 N80-20801
Adequacy analysis of air quality monitoring activities relevant to California thermal enhanced oil recovery fields
[SAN-12093-1] 26 p0309 N80-20929

OIL RECOVERY
Turbulent flows through annular spaces
26 p0250 A80-30614
Petroleum production at maximum efficient rate, Naval Petroleum Reserve no. 1 (Elk Hills), Kern County, California
[DOE/EIS-0012] 26 p0272 N80-16581
Analysis of water resources requirement for the enhanced (tertiary) oil recovery in the southern plains region of the United States
[PB80-110869] 26 p0301 N80-20801
Adequacy analysis of air quality monitoring activities relevant to California thermal, enhanced oil recovery fields
[SAN-12093-1] 26 p0309 N80-20929
Projections of enhanced oil recovery, 1985 - 1995
[DOE/EIA-0183/11] 26 p0314 N80-21824

OILS
Oils and rubber from arid land plants
26 p0253 A80-32055

OPERATIONS RESEARCH
Methodology for evaluating physical constraints on residential solar energy use
[UCRL-15001] 26 p0307 N80-20901

OPTICAL EMISSION SPECTROSCOPY
Space- and time-resolved study of impurities by visible spectroscopy in the high-density regime of JIPP T-II tokamak plasma
26 p0224 A80-25481

OPTICAL PROPERTIES
Technology and performance of a high concentration solar cell power supply
26 p0226 A80-25886
Selective optical surfaces for solar energy convertors --- Russian book
26 p0228 A80-26511

Incidence-angle modifier and average optical efficiency of parabolic trough collectors
26 p0250 A80-30772
The sensitivity of solar transmittance, reflectance and absorptance to selected averaging procedures and solar irradiance distributions
26 p0251 A80-30774
Optical analysis and optimization of line focus collectors
[SERI/TR-34-092] 26 p0306 N80-20893

OPTICAL PUMPING
Enhancement of the efficiency of neodymium lasers by conversion of the pump radiation in a luminescent liquid
26 p0209 A80-23404

OPTIMAL CONTROL
Optimal controllers of the second kind --- for flat plate solar collectors
26 p0184 A80-21112
A control strategy for a variable-speed wind energy conversion system
26 p0194 A80-22976

OPTIMIZATION
Antireflection coatings on solar cells
26 p0186 A80-21914
The temperature dependence of the characteristics of sputtered a-Si-H solar cells
26 p0187 A80-21920
Studies in biogas technology. II - Optimization of plant dimensions
26 p0188 A80-21939
Optimization of a thermochemical water splitting cycle - Thermodynamic analysis - Experimental work with a solar furnace
26 p0199 A80-23142
Optimization of a solar water heating system for a Negev kibbutz
26 p0226 A80-25887
The potential for optimizing the economics of wind energy utilization on a dairy farm through load management
[AIAA 80-0640] 26 p0241 A80-28838
Optimizing a regional energy provision system for multi-task achievement
26 p0246 A80-29474

ORBITAL ASSEMBLY
The development of solar power satellites
26 p0207 A80-23219

ORGANIC COMPOUNDS
Organic photochemical storage of solar energy
[COO-4380-2] 26 p0267 N80-16527

ORGANIC LITHIUM COMPOUNDS
Safety studies on Li/SO2 cells. II - Kinetics of lithium-organic solvent exothermic reactions
26 p0247 A80-29894

ORGANIC MATERIALS
Application of black-liquor boiler technology to MHD heat and seed recovery equipment design
26 p0217 A80-25070

ORGANIC WASTES (FUEL CONVERSION)
Studies in biogas technology. I - Performance of a convectional biogas plant
26 p0188 A80-21938
Biogas - Fuel of the future
26 p0227 A80-26175
Organic content of particulate matter in turbine engine exhaust
26 p0229 A80-27099
Environmental and economic evaluations of energy recovery from agricultural and forestry residues
[ANL/EES/TM-58] 26 p0297 N80-19668
Production of methane using an anaerobic filter
[ANL-TRANS-1164] 26 p0300 N80-20428

ORGANOMETALLIC COMPOUNDS
The application of chromatography and ancillary techniques to the characterization of shale oil/oil shale compound classes and of organometallics
26 p0282 N80-18125

OTTO CYCLE
Electronic fuel injection techniques for hydrogen powered I.C. engines
26 p0206 A80-23205
Trends in the construction of Otto engines in the U.S
26 p0235 A80-28472

OUTGASSING
Outgassing behavior of carbon-bonded carbon-fiber thermal insulation
[CONF-790625-8] 26 p0313 N80-21456

OXIDATION
A kinetic investigation of the reforming of natural gas for the production of hydrogen
26 p0199 A80-23139

OXIDATION-REDUCTION REACTIONS
Light-induced electron transfer reactions in solution, organized assemblies and at interfaces - Scope and potential applications
26 p0243 A80-29055
Catalyst surfaces for the chromous/chromic redox couple
[NASA-CASE-LEW-13148-2] 26 p0285 N80-18557

OXIDE FILMS
Native oxide and external dielectric polycrystalline GaAs MIS solar cells
26 p0223 A80-25444

OXYGEN
Oxygen-enriched air for MHD power plants
26 p0220 A80-25096
Electrical conductivity of a seeded H2/O2 system
26 p0254 A80-32330
Experiments on H2-O2MHD power generation
[NASA-TM-81424] 26 p0273 N80-16886

OXYGEN PRODUCTION
The kinetics of oxygen evolution on non-traditional electrodic materials --- for hydrogen production by electrolysis of KOH aqueous solutions
26 p0196 A80-23111
Electrodes for generation of hydrogen and oxygen for seawater
26 p0196 A80-23115

P

P-N JUNCTIONS
The open-circuit voltage of n/+/-n-p high-low-emitter /HLE/ junction solar cells in concentrated sunlight
26 p0209 A80-23496
Photovoltaics. II - Flat panels
26 p0214 A80-24532
MOS and oxide-charge-induced /OCI/ BSF solar cells
26 p0234 A80-28337
The open-circuit voltage of back-surface-field /BSF/ p-n junction solar cells in concentrated sunlight
26 p0247 A80-29812
The characteristics of high current amorphous silicon diodes
26 p0253 A80-31966
The spectral response of a front surface field solar cell
26 p0254 A80-32331
The effects of titanium impurities in N/+//P silicon solar cells
26 p0256 A80-32503
Studies of silicon p-n junction solar cells
[NASA-CR-162832] 26 p0291 N80-19609

P-N-P JUNCTIONS
Shallow-homojunction GaAs cells with high resistance to 1-MeV electron radiation
26 p0183 A80-21089

PACIFIC NORTHWEST (US)
Regional environment-energy data book: Northwest region
[DOE/TIC-10114/5] 26 p0281 N80-17599

PALLADIUM
Hysteresis in metal/hydrogen systems
26 p0246 A80-29725

PALLADIUM ALLOYS
The significance of studies with palladium to basic problems of electrolytic hydrogen evolution
26 p0196 A80-23114

PANELS
Aluminium or copper substrate panel for selective absorption of solar energy
[NASA-CASE-MFS-23518-3] 26 p0260 N80-16452
Phase 2 of the array automated assembly task for the low cost solar array project
[NASA-CR-162628] 26 p0315 N80-21833

PARABOLIC REFLECTORS
Incidence-angle modifier and average optical efficiency of parabolic trough collectors
26 p0250 A80-30772

PARABOLOID MIRRORS
Industrial solar thermal concentrators
26 p0189 A80-21953
Design of nonimaging concentrators as second stages in tandem with image-forming first-stage concentrators
26 p0253 A80-32021
PARAFFINS
Analysis of the geothermal binary cycle using paraffin hydrocarbons as working fluids
26 p0285 N80-18553
PARTIAL DIFFERENTIAL EQUATIONS
Combined ADI iteration and implicit central difference numerical method for solving nonlinear conjugated partial differential equations with moving boundary heat transfer in in-situ coal liquefaction
26 p0228 A80-26681
Application of computer models to the retorting of oil shale
26 p0228 A80-26708
PARTICLE DIFFUSION
The effect of a weak vertical magnetic field on fluctuation-induced transport in a Bumpy-Torus plasma
26 p0224 A80-25476
Anomalous diffusion of alpha particles in a tokamak reactor due to the trapped-ion mode
26 p0224 A80-25482
PARTICLE SIZE DISTRIBUTION
Effect of coal particle size on the coal hydrogenation reaction - In relation to the plasticity of coal
26 p0192 A80-22768
Condensation and deposition of seed in the MHD bottoming plant
26 p0217 A80-25071
PASSENGER AIRCRAFT
Implications of fuel-efficient vehicles on ride quality and passenger acceptance: Workshop proceedings
[NASA-CP-2096] 26 p0287 N80-18990
PATTERN RECOGNITION
Oil and gas exploration by pattern recognition of lineament assemblages associated with bends in wrench faults
26 p0191 A80-22441
PEAT
Synthetic fuels from peat gasification
[CONF-790803-55] 26 p0298 N80-20412
PENNSYLVANIA
Installation guidelines for solar heating system, single-family residence at New Castle, Pennsylvania
[NASA-CR-161355] 26 p0293 N80-19630
PERFORMANCE
Solar energy system performance evaluation: A seasonal report for SEMCO, Macon, Georgia
[NASA-CR-161380] 26 p0293 N80-19629
PERFORMANCE PREDICTION
Equivalent circuits for the channel of the magnetohydrodynamic generator
26 p0190 A80-22349
Open-cycle MHD powerplants - Performance, cost and technology demonstration strategies
[AIAA PAPER 80-0180] 26 p0192 A80-22739
The open-circuit voltage of n/+/-n-p high-low-emitter /HLE/ junction solar cells in concentrated sunlight
26 p0209 A80-23496
The STD/MHD codes - Comparison of analyses with experiments --- MHD generator performance prediction and tests
[AIAA PAPER 80-0024] 26 p0212 A80-23953
Design description and performance predictions for the first CDIF power train --- MHD generator combustor, power channel and diffusers
26 p0216 A80-25062
Simplified correlations for prediction of NO/x/ emissions from MHD power plants
26 p0227 A80-26001
Flap type weather proof ocean wave energy converter
26 p0232 A80-28258
Model wind rotors in wind tunnels - Performance and the effect of Reynolds number
[AIAA 80-0623] 26 p0238 A80-28815
Gust models for design and performance analyses of wind turbines
[AIAA 80-0644] 26 p0240 A80-28833
General sensitivity analysis of solar thermal-electric plants
26 p0313 N80-21379
PERFORMANCE TESTS
The STD/MHD codes - Comparison of analyses with experiments --- MHD generator performance prediction and tests
[AIAA PAPER 80-0024] 26 p0212 A80-23953
Long duration channel development and testing --- for MHD generator electrode corrosion measurement
26 p0216 A80-25063
Local analysis of electrical performance of the U-25B generator --- MHD generator
26 p0216 A80-25066
Development of a spherical reflector/tracking absorber solar energy collector
26 p0226 A80-25885
Technology and performance of a high concentration solar cell power supply
26 p0226 A80-25886
Optimization of a solar water heating system for a Negev kibbutz
26 p0226 A80-25887
Tubular solar collector
26 p0231 A80-27730
Demonstration and analysis of a combined wind-solar energy conversion system
[AIAA 80-0643] 26 p0239 A80-28824
UTRC 8 kW wind turbine tests
[AIAA 80-0657] 26 p0240 A80-28831
Aerodynamic tests of Darrieus turbine blades
[AIAA 80-0625] 26 p0240 A80-28832
An assessment of utility-related test data from large wind turbine generator tests
[AIAA 80-0631] 26 p0240 A80-28834
Installation and checkout of the DOE/NASA Mod-1 2000-kW wind turbine generator
[AIAA 80-0638] 26 p0241 A80-28835
Teetered, tip-controlled rotor - Preliminary test results from Mod-0 100-kW experimental wind turbine
[AIAA 80-0642] 26 p0241 A80-28836
Aerodynamic performance of the DOE/Sandia 17-m vertical axis wind turbine in the two-bladed configuration
[AIAA 80-0655] 26 p0241 A80-28842
Incidence-angle modifier and average optical efficiency of parabolic trough collectors
26 p0250 A80-30772
Measurement of heliostat performance characteristics
26 p0250 A80-30773
Test results of the DOE/Sandia 17 meter VAWT
26 p0262 N80-16465
Performance sensitivity analysis of Department of Energy-Chrysler upgraded automotive gas turbine engine, S/N 5-4
[NASA-TM-79242] 26 p0274 N80-17467
Laboratory investigation of the performance of a Holden engine operating on liquified petroleum gas
[AD-A076145] 26 p0284 N80-18411
Solar energy system performance evaluation: Seasonal report for SEMCO, Loxahatchee, Florida
[NASA-CR-161379] 26 p0293 N80-19627
PERIODICALS
Energy information data base
[DOE/TIC-4579-R10-SUPPL-6] 26 p0305 N80-20881
PERSIAN GULF
The use of different-scale multispectral space photographs of the earth for the geological study of lands with oil and natural gas
26 p0254 A80-32276
PETROLEUM PRODUCTS
Aggregated vectorial model of petroleum flow in the United States
[LBL-8874] 26 p0258 N80-16178
PHASE TRANSFORMATIONS
Solvolysis liquefaction of coal
26 p0187 A80-21926
Thermal storage in density-stratified fluids and phase-change materials
26 p0225 A80-25496
Hysteresis in metal/hydrogen systems
26 p0246 A80-29725
PHOSPHORUS
Laser treatment of phosphorus-diffused silicon solar cells
26 p0186 A80-21915

PHOTOCHEMICAL REACTIONS
Storage of light energy by chemical systems - Comment on long-term efficiency of iterative cyclic reactions
26 p0184 A80-21116
On the potential of solar energy conversion into hydrogen and/or other fuels
26 p0195 A80-23107
Solar beam-assisted electrolyser applied to Yokohama Mark 5 and 6 --- hydrogen production
26 p0200 A80-23144
Photochemical production of hydrogen from water
26 p0201 A80-23154
A high energy hybrid system: Hydrogen - chlorine - solar - water
26 p0206 A80-23199
Light-induced electron transfer reactions in solution, organized assemblies and at interfaces - Scope and potential applications
26 p0243 A80-29055
Nitrogen reducing solar cells
26 p0244 A80-29059
Photosensitization mechanisms for energy storing isomerizations
26 p0244 A80-29060
The norbornadiene-quadricyclene energy storage system
26 p0244 A80-29061
Organic photochemical storage of solar energy
[COO-4380-2] 26 p0267 N80-16527
Photochemical conversion of coal to gasoline in an entrained bed reactor
26 p0283 N80-18202
Evaluation of a photochemical system for nitrogen oxides control --- coal fired boilers
26 p0287 N80-18583
Photochemical conversion of coal to gasoline in an entrained bed reactor
[ORO-5020-T1] 26 p0299 N80-20415

PHOTOCONDUCTIVITY
Organic photochemical storage of solar energy
[COO-4380-2] 26 p0267 N80-16527

PHOTODECOMPOSITION
Solar hydrogen energy
26 p0185 A80-21878
Energy conversion and corrosion processes in electrochemical solar cells with semiconductor electrodes --- German thesis
26 p0225 A80-25679

PHOTOELECTRIC GENERATORS
Common properties of bacterial and visual rhodopsines - The conversion of optical energy into electric-potential difference
26 p0216 A80-25026

PHOTOELECTRICITY
Photovoltaic effect, its present understanding and remaining mysteries
[DOE/ET-23103/6] 26 p0268 N80-16535

PHOTOELECTROCHEMICAL DEVICES
Polyacetylene, /CH/x - Photoelectrochemical solar cell
26 p0183 A80-21091
A speculation on a general photoelectrochemical reactor
26 p0193 A80-22794
Hydrogen generation via photoelectrolysis of water - Recent advances
26 p0200 A80-23152
Photoelectrochemical generation of hydrogen with hybrid electrodes
26 p0200 A80-23153
Photoelectrochemical cells --- with photoactive semiconducting electrodes
26 p0210 A80-23520
Thin film CdSe photoanodes for electrochemical photovoltaic cells
26 p0228 A80-26466
Hydrogen energy research programs in Japan
26 p0233 A80-28271
Solar energy: Chemical conversion and storage --- Book
26 p0243 A80-29051
The 'tandem photoelectrolysis plant' concept - A strategy for fuel production via biomass conversion wastes
26 p0243 A80-29054
Photochemical determinants of the efficiency of photogalvanic conversion of solar energy
26 p0243 A80-29056
Photogalvanovoltaic cells and photovoltaic cells using glassy carbon electrodes
26 p0243 A80-29057
The norbornadiene-quadricyclene energy storage system
26 p0244 A80-29061
Simultaneous determination of quantum efficiency and energy efficiency of semiconductor photoelectrochemical cells by photothermal spectroscopy
26 p0247 A80-29897

PHOTOELECTRON SPECTROSCOPY
Simultaneous determination of quantum efficiency and energy efficiency of semiconductor photoelectrochemical cells by photothermal spectroscopy
26 p0247 A80-29897

PHOTOGEOLOGY
Some application of Landsat imagery interpretation for petroleum targetting in India
26 p0191 A80-22433
Oil and gas exploration by pattern recognition of lineament assemblages associated with bends in wrench faults
26 p0191 A80-22441
The use of different-scale multispectral space photographs of the earth for the geological study of lands with oil and natural gas
26 p0254 A80-32276
Gas production of Devonian shale wells relative to photo lineament locations: A statistical analysis
[METC/CR-79/28] 26 p0260 N80-16410

PHOTOINTERPRETATION
Some application of Landsat imagery interpretation for petroleum targetting in India
26 p0191 A80-22433
Oil and gas exploration by pattern recognition of lineament assemblages associated with bends in wrench faults
26 p0191 A80-22441
Remote sensing of sulfur dioxide effects on vegetation - photometric analysis of aerial photographs
[PB-300460/3] 26 p0272 N80-16600

PHOTOLUMINESCENCE
Enhancement of the efficiency of neodymium lasers by conversion of the pump radiation in a luminescent liquid
26 p0209 A80-23404

PHOTOLYSIS
Photochemical production of hydrogen from water
26 p0201 A80-23154
Photolysis of water for H2 production with the use of biological and artificial catalysts
26 p0210 A80-23521

PHOTOMAPPING
Gas production of Devonian shale wells relative to photo lineament locations: A statistical analysis
[METC/CR-79/28] 26 p0260 N80-16410

PHOTOSENSITIVITY
Photosensitization mechanisms for energy storing isomerizations
26 p0244 A80-29060
Grown junction GaAs solar cells with a thin graded band-gap Al/x/Ga/1-x/As surface layer
26 p0250 A80-30668

PHOTOSYNTHESIS
Bio-solar hydrogen production
26 p0201 A80-23155
Attempts to produce hydrogen by coupling hydrogenase and chloroplast photosystems
26 p0201 A80-23156
Energy from the biological conversion of solar energy
26 p0210 A80-23522
Petroleum plantations
26 p0243 A80-29052
Solar energy conversion in photosynthesis - Features relevant to artificial systems for the photochemical conversion of solar energy
26 p0243 A80-29053
Photobiological production of hydrogen
26 p0247 A80-29920
Plant power fuels hydrogen production
26 p0249 A80-30465

PHOTOTHERMAL CONVERSION
The sensitivity of solar transmittance, reflectance and absorptance to selected averaging procedures and solar irradiance distributions
26 p0251 A80-30774
Black a-Si solar selective absorber surfaces
26 p0254 A80-32325
Technology assessment: Line-focus concentrators
[SAND-79-2221C] 26 p0318 N80-21871
PHOTOVOLTAGES
The open-circuit voltage of n/+/-n-p high-low-emitter /HLE/ junction solar cells in concentrated sunlight
26 p0209 A80-23496
PHOTOVOLTAIC CELLS
Polyacetylene, /CH/x - Photoelectrochemical solar cell
26 p0183 A80-21091
Photovoltaic cost blitz spawns new silicon processes
26 p0186 A80-21913
Unique high concentration solar test facility
26 p0186 A80-21916
An overview of photovoltaic market research
26 p0186 A80-21917
Heterojunction solar cells
26 p0210 A80-23519
Photoelectrochemical cells --- with photoactive semiconducting electrodes
26 p0210 A80-23520
Photovoltaics. I - Solar-cell arrays
26 p0214 A80-24531
Photovoltaics. II - Flat panels
26 p0214 A80-24532
Photovoltaics. III - Concentrators
26 p0214 A80-24533
Photovoltaics. IV - Advanced materials
26 p0214 A80-24534
Photovoltaics. V - Amorphous silicon cells
26 p0214 A80-24535
Thin film CdSe photoanodes for electrochemical photovoltaic cells
26 p0228 A80-26466
Lead-acid batteries for remote photovoltaic applications
26 p0232 A80-28014
Photovoltaic power for telecommunications
26 p0232 A80-28015
Comparison of Hg/0.6/Cd/0.4/Te LPE layer growth from Te-, Hg-, and HgTe-rich solutions
26 p0234 A80-28305
Photogalvanovoltaic cells and photovoltaic cells using glassy carbon electrodes
26 p0243 A80-29057
Growth and characterization of thin film III-V compound semiconductor material for solar cell applications
26 p0244 A80-29058
Silicon ribbon for photovoltaic cells
26 p0245 A80-29394
Photovoltaic hybrid collectors
26 p0245 A80-29396
The current-voltage characteristics of semiconductor-electrolyte junction photovoltaic cells
26 p0251 A80-30939
Solar cells for photovoltaic generation of electricity: Materials, devices and applications --- Book
26 p0253 A80-31900
Evaluation of concentrated space solar arrays using computer modeling --- for spacecraft propulsion and power supplies
[NASA-CR-162681] 26 p0264 N80-16487
Objectives and strategies of the International Photovoltaic Program Plan
[SERI/TR-52-250] 26 p0266 N80-16513
Federal photovoltaics utilization program
[DOE/EA-0087] 26 p0267 N80-16525
Low-cost structures for photovoltaic arrays
[SAND-79-7006] 26 p0268 N80-16537
Assessment of low-cost manufacturing process sequences --- photovoltaic solar arrays
[NASA-CR-162745] 26 p0278 N80-17575
Economic analysis of the design and fabrication of a space qualified power system
[NASA-TM-81418] 26 p0282 N80-18098
LSA field test
[NASA-CR-162798] 26 p0291 N80-19611
Develop silicone encapsulation systems for terrestrial silicon solar arrays
[NASA-CR-162840] 26 p0292 N80-19617
On influencing the operating temperatures of Motorola and Arco solar photovoltaic modules
[COO-4094-59] 26 p0295 N80-19649
Cadmium sulfide solar cells, volume 1. Citations from the NTIS data base
[PB80-802218] 26 p0296 N80-19656
Comparison of theoretical and experimental solar cell performance
26 p0301 N80-20806
Market definition study of photovoltaic power for remote villages in the United States
[NASA-CR-159800] 26 p0302 N80-20812
The Exxon rechargeable cells --- solar rechargeable clocks
26 p0303 N80-20834
Design and fabrication of prototype combined photovoltaic/thermal non-tracking collector
[SAND-79-7014] 26 p0307 N80-20899
PHOTOVOLTAIC CONVERSION
Structure of deformed silicon and implications for low-cost solar cells
26 p0191 A80-22526
Thin solid solution films Zn/x/Cd/1-x/S
26 p0194 A80-23014
Preparation and photovoltaic properties of screen printed CdS/Cu/x/S solar cells
26 p0228 A80-27057
Peak power tracking technique for photovoltaic arrays
26 p0242 A80-28908
Solar generators for terrestrial use
26 p0245 A80-29384
Semiconductor grade, solar silicon purification project
[NASA-CR-162746] 26 p0264 N80-16495
Flywheel energy storage and conversion system for photovoltaic applications
[COO-4094-57] 26 p0265 N80-16501
Solar photovoltaic field tests and applications project
[COO-4094-26] 26 p0266 N80-16512
Proceedings: Photovoltaics user Review Panel
[SERI/TP-69-276] 26 p0266 N80-16514
Application analysis and photovoltaic system conceptual design for service/commercial/institutional and industrial sectors, task 1 report
[SAND-78-7032] 26 p0269 N80-16550
Photovoltaic conversion research and development in the United Kingdom
[RAE-TM-SPACE-247] 26 p0279 N80-17583
PHOTOVOLTAIC EFFECT
The temperature dependence of the characteristics of sputtered a-Si-H solar cells
26 p0187 A80-21920
Photovoltaic effect, its present understanding and remaining mysteries
[DOE/ET-23103/6] 26 p0268 N80-16535
Criteria for an ideal solar photovoltaic powered industry
[HCP/T5433-01] 26 p0279 N80-17577
PHYSICAL CHEMISTRY
The chemistry of sulfur in char and the implications for hydrogasification/hydrodesulfurization
[FE-2449-9] 26 p0288 N80-19298
PHYSICAL PROPERTIES
Numerical physical property data for metal hydrides utilized for hydrogen storage - Three primary candidate materials
26 p0204 A80-23183
PIGMENTS
Nickel pigmented anodic aluminum oxide for selective absorption of solar energy
26 p0209 A80-23499
Common properties of bacterial and visual rhodopsines - The conversion of optical energy into electric-potential difference
26 p0216 A80-25026
PILOT PLANTS
Studies in biogas technology. I - Performance of a convectional biogas plant
26 p0188 A80-21938

Studies in biogas technology. IV - A novel biogas plant incorporating a solar water-heater and solar still
26 p0188 A80-21941
Development, design and operation of a continuous laboratory-scale plant for hydrogen production by the Mark-13 cycle
26 p0197 A80-23126
Conceptual design of an MHD/steam power plant of pilot scale /ETF/ and preliminary analyses of early commercial MHD power plants
26 p0220 A80-25097
The transition MHD power plant concept
26 p0221 A80-25104
The MINI-OTEC test
26 p0232 A80-28259
Conceptual design of a coal-to-methanol-to-gasoline commercial plant: Executive summary
[FE-2416-43] 26 p0258 N80-16182
Environmental assessment of the HYGAS process. Volume 1: HYGAS environmental characterization, data synthesis, analysis, and interpretation, tests 37 - 64
[FE-2433-25-VOL-1] 26 p0289 N80-19305
Synthesis gas demonstration plant program, phase 1
[FE-25770-6] 26 p0289 N80-19308

PIPE FLOW
Analysis of the potential transmission of hydrogen by pipeline in Switzerland
26 p0201 A80-23158

PIPELINES
Storage, transmission and distribution of hydrogen
26 p0194 A80-23103
Analysis of the potential transmission of hydrogen by pipeline in Switzerland
26 p0201 A80-23158
The cryogenic storage of hydrogen
26 p0202 A80-23162

PIPES (TUBES)
Tubular solar collector
26 p0231 A80-27730
Performance calculations of tubular cover collectors
26 p0248 A80-29924

PISTON ENGINES
A magnetohydrodynamic piston engine
26 p0254 A80-32221
A 15 kWe (nominal) solar thermal-electric power conversion concept definition study: Steam Rankin reciprocator system
[NASA-CR-159591] 26 p0291 N80-19612

PITCH (INCLINATION)
System configuration improvement
26 p0263 N80-16481

PITTING
Pitting resistance of engineering materials in geothermal brines. I - Low salinity brine
26 p0249 A80-30474

PLANTS (BOTANY)
Oils and rubber from arid land plants
26 p0253 A80-32055
Energy from aquatic plant wastewater treatment systems
[NASA-TM-X-72733] 26 p0275 N80-17545

PLASMA CHEMISTRY
Decomposition of water in a nonequilibrium plasma
26 p0185 A80-21881
Plasmochemical cycle of hydrogen production from the water
26 p0200 A80-23149

PLASMA COMPOSITION
Neutral beam injectors
26 p0215 A80-24675
Space- and time-resolved study of impurities by visible spectroscopy in the high-density regime of JIPP T-II tokamak plasma
26 p0224 A80-25481

PLASMA CONTROL
Gradient bounds for plasma confinement
26 p0213 A80-24223
Model for description of transient behavior of a tokamak discharge
26 p0213 A80-24498
The physics of field reversed mirrors
26 p0214 A80-24664
Tandem mirror reactors
26 p0215 A80-24667
Field-reversed mirror reactor
26 p0215 A80-24668
Beam and plasma direct converters
26 p0215 A80-24671
Superconducting magnets for mirror machines
26 p0215 A80-24672
Plasma parametric studies and potential applications of driven fusion reactors
26 p0215 A80-24674
Control of liquid metal-gas two phase flow by application of axial magnetic field
26 p0218 A80-25083
Quiescent and turbulent plasmas under mirror-configurations of magnetic field
26 p0223 A80-25322
Discharge start-up in a tokamak with a poloidal divertor
26 p0223 A80-25472
Shape control of doublets --- for tokamak plasma stability control
26 p0223 A80-25473
Transverse confinement of a high-pressure plasma in a corrugated magnetic field
26 p0224 A80-25474
Characteristics of lower-hybrid-wave-driven steady-state tokamak power reactors
26 p0224 A80-25475
The effect of a weak vertical magnetic field on fluctuation-induced transport in a Bumpy-Torus plasma
26 p0224 A80-25476
Active burn control of nearly ignited plasmas
26 p0224 A80-25480
Controlled fusion research in China
26 p0226 A80-25786
Numerical investigation of current driven dissipative drift wave turbulence including finite beta and quasilinear effects in a tokamak plasma
26 p0229 A80-27276
Microtearing modes and anomalous transport in tokamaks
26 p0248 A80-29975
Interchange stability of axisymmetric field reversed equilibria --- in plasma control with magnetic mirror
26 p0250 A80-30552

PLASMA CYLINDERS
Toroidal Trivelpiece-Gould modes --- quasi-electrostatic approximation for electron plasma waves in fusion reactor
26 p0189 A80-22042

PLASMA DENSITY
Spatial profiles of light impurity ions in the Alcator A tokamak plasma
26 p0224 A80-25478

PLASMA DIAGNOSTICS
Experiments on the nonuniform discharge structure in noble gas MHD generators
26 p0219 A80-25086
Experiments concerning inhomogeneities in combustion MHD generators
26 p0221 A80-25107
Spatial profiles of light impurity ions in the Alcator A tokamak plasma
26 p0224 A80-25478

PLASMA DIFFUSION
Turbulation of plasma in combustion chamber of an MHD generator
26 p0190 A80-22348
The effect of a weak vertical magnetic field on fluctuation-induced transport in a Bumpy-Torus plasma
26 p0224 A80-25476
Anomalous diffusion of alpha particles in a tokamak reactor due to the trapped-ion mode
26 p0224 A80-25482

PLASMA ELECTRODES
End effects with a slowly varying magnetic field in a MHD channel with segmented electrodes
26 p0193 A80-22793
Long duration channel development and testing --- for MHD generator electrode corrosion measurement
26 p0216 A80-25063
Electrical characteristics of an arc-mode slagging electrode generator --- in Faraday MHD generators
26 p0216 A80-25064
The effect of electrochemical and arcing phenomena on electrode performance --- in coal-fired MHD generators
26 p0218 A80-25080

Experiments on the nonuniform discharge structure in noble gas MHD generators
26 p0219 A80-25086
Experimental studies of an inert gas disk MHD generator with a small seed fraction
26 p0219 A80-25088
A rotary inverter system for a multiple-electrode MHD generator
26 p0219 A80-25093
End zone of a channel with segmented electrodes, carrying nonuniform flow --- current and potential fields in plasma
26 p0254 A80-32220

PLASMA EQUILIBRIUM
MHD equilibrium and stability of axial symmetric toroidal plasma with an elliptic cross section of triangular deformation
26 p0209 A80-23366
Interchange stability of axisymmetric field reversed equilibria --- in plasma control with magnetic mirror
26 p0250 A80-30552

PLASMA FLUX MEASUREMENTS
Investigations of heat transfer from plasma flux to electrode and insulating walls of the MHD generator channel
26 p0217 A80-25069

PLASMA FOCUS
Application of plasma focus device to compression of toroidal plasma
26 p0229 A80-27058

PLASMA FREQUENCIES
Toroidal Trivelpiece-Gould modes --- quasi-electrostatic approximation for electron plasma waves in fusion reactor
26 p0189 A80-22042

PLASMA HEATING
MHD equilibrium and stability of axial symmetric toroidal plasma with an elliptic cross section of triangular deformation
26 p0209 A80-23366
Low-density ignition scenarios in injection-heated tokamaks
26 p0213 A80-24482
Impurity effects on non-equilibrium MHD gas heated by a fossil fuel-fired heat exchanger
26 p0219 A80-25089
Plasma measurements of Joule heating effects in the near electrode region of an open cycle MHD generator
26 p0219 A80-25090
Discharge start-up in a tokamak with a poloidal divertor
26 p0223 A80-25472
Shape control of doublets --- for tokamak plasma stability control
26 p0223 A80-25473
Transverse confinement of a high-pressure plasma in a corrugated magnetic field
26 p0224 A80-25474
Neutral-beam injection calculations for torsatrons --- plasma heating effectiveness
26 p0224 A80-25479
Active burn control of nearly ignited plasmas
26 p0224 A80-25480

PLASMA JETS
Experiments on the nonuniform discharge structure in noble gas MHD generators
26 p0219 A80-25086
Explosive-driven magnetic generator with a plasma load
26 p0252 A80-31357

PLASMA PHYSICS
European Conference on Controlled Fusion and Plasma Physics, 9th, Oxford, England, September 17-21, 1979, Invited Papers
26 p0225 A80-25771
US tokamak research
26 p0226 A80-25777

PLASMA RESONANCE
Observation of radio-frequency-driven plasma current in the octopole tokamak
26 p0224 A80-25483

PLASMA SPECTRA
Space- and time-resolved study of impurities by visible spectroscopy in the high-density regime of JIPP T-II tokamak plasma
26 p0224 A80-25481

PLASMA TURBULENCE
Turbulation of plasma in combustion chamber of an MHD generator
26 p0190 A80-22348
Quiescent and turbulent plasmas under mirror-configurations of magnetic field
26 p0223 A80-25322
Numerical investigation of current driven dissipative drift wave turbulence including finite beta and quasilinear effects in a tokamak plasma
26 p0229 A80-27276

PLASMA WAVES
Toroidal Trivelpiece-Gould modes --- quasi-electrostatic approximation for electron plasma waves in fusion reactor
26 p0189 A80-22042
Numerical investigation of current driven dissipative drift wave turbulence including finite beta and quasilinear effects in a tokamak plasma
26 p0229 A80-27276

PLASMA-ELECTROMAGNETIC INTERACTION
Characteristics of lower-hybrid-wave-driven steady-state tokamak power reactors
26 p0224 A80-25475
Electrical processes in the interaction of a magnetic field wave with an ionized-gas stream
26 p0252 A80-31509

PLASMA-PARTICLE INTERACTIONS
Neutral-beam injection calculations for torsatrons --- plasma heating effectiveness
26 p0224 A80-25479
Theory of current generation by electrostatic traveling waves in collisionless magnetized plasmas
26 p0229 A80-27263

PLASTIC COATINGS
Flexible formulated plastic separators for alkaline batteries
[NASA-CASE-LEW-12363-4] 26 p0285 N80-18555
Flexible formulated plastic separators for alkaline batteries
[NASA-CASE-LEW-12363-3] 26 p0285 N80-18556

PLASTIC PROPERTIES
Effect of coal particle size on the coal hydrogenation reaction - In relation to the plasticity of coal
26 p0192 A80-22768

PLATFORMS
Free space microwave power transmission systems for microwave powered atmospheric platforms
26 p0228 A80-26813

PLATINUM
Electrolysis of hydrobromic acid --- hybrid cycle for hydrogen production
26 p0198 A80-23129
Optimization of Pt-doped Kocite (trade name) electrodes in H3Po4 fuel cells
[AD-A075372] 26 p0294 N80-19639

PLUMES
Mercury partitioning in a power plant plume and its influence on atmospheric removal mechanisms
26 p0223 A80-25170

PLUTONIUM OXIDES
Environmental development plan for space applications --- development of nuclear power supplies for use in space
[DOE/EDP-0057] 26 p0309 N80-20922

PNEUMATIC EQUIPMENT
Economically working big scale solar power stations pneumatic light-weight construction
26 p0208 A80-23326

POLES (SUPPORTS)
Shadow effect of adjacent solar collectors in large scale systems
26 p0183 A80-21107

POLITICS
United States energy policy - The continuing failure
26 p0185 A80-21766
Power consumption in the high-tension field between the government's responsibility to provide energy and politics
26 p0185 A80-21846

POLLUTION CONTROL
Health benefits derived from a planned hydrogen community
26 p0205 A80-23193

Power plant impacts on visibility in the west - Siting and emissions control implications
26 p0216 A80-24735
An evaluation of candidate seed processing systems for open cycle MHD --- sulfur removal and control
26 p0217 A80-25072
Mercury partitioning in a power plant plume and its influence on atmospheric removal mechanisms
26 p0223 A80-25170
An economic analysis of air pollution from coal-fired power plants
26 p0230 A80-27649
A technical conception for highly developed spark-ignition engines
26 p0235 A80-28471
Trends in the construction of Otto engines in the U.S
26 p0235 A80-28472
Environmental development plan: Underground coal gasification
[DOE/EDP-0047] 26 p0260 N80-16411
Status of pollutant removal technology for coal fired plants in the northeastern U.S.
[BNL-51004] 26 p0272 N80-16580
Environmental assessment of stationary source NOx control technologies
[PB-300469/4] 26 p0272 N80-16601
A review of standards of performance for new stationary sources: Petroleum refineries
[PB-300480/1] 26 p0272 N80-16602
Evaluation of a photochemical system for nitrogen oxides control --- coal fired boilers
26 p0287 N80-18583
Pollutants from synthetic fuels production: Sampling and analysis methods for coal gasification
[PB80-104656] 26 p0289 N80-19309
Application of coke plant control technologies to coal conversion
[PB80-108954] 26 p0290 N80-19310
Engineering evaluation of control technology for H-Coal and Exxon donor solvent processes
[PB80-108566] 26 p0297 N80-19678
Effect of water injection and off scheduling of variable inlet guide vanes, gas generator speed and power turbine nozzle angle on the performance of an automotive gas turbine engine
[NASA-TM-81415] 26 p0298 N80-20272
Control technologies for particulate and tar emissions from coal converters
[PB80-108392] 26 p0310 N80-20949
Hot gas cleanup process
[PB80-108467] 26 p0310 N80-20950
Pollution control practices, fuel conversion and its environmental effects
[PB80-119704] 26 p0320 N80-21896
Symposium Proceedings: Environmental Aspects of Fuel conversion technology, IV
[PB80-134729] 26 p0320 N80-21913

POLLUTION MONITORING
Combined flue gas desulfurization and water treatment in coal-fired power plants
26 p0225 A80-25690
Outer continental shelf environment monitoring concerns
[PB-299861/5] 26 p0273 N80-16625
Adequacy analysis of air quality monitoring activities relevant to California thermal enhanced oil recovery fields
[SAN-12093-1] 26 p0309 N80-20929
Light-duty diesel gaseous emissions measurement - comparison of dilution tunnel test results to certification cell test results
[PB80-115991] 26 p0310 N80-20945

POLYCRYSTALS
Grain size and its influence on efficiency in polycrystalline GaAs solar cells
26 p0186 A80-21919
Native oxide and external dielectric polycrystalline GaAs MIS solar cells
26 p0223 A80-25444
Photovoltaic Materials and Device Measurements Workshop: Focus on polycrystalline thin film cells
[SERI/TP-49-185] 26 p0268 N80-16538

POLYESTER RESINS
Compressive fatigue tests on a unidirectional glass/polyester composite at cryogenic temperatures --- for superconducting energy storage magnet structural supports
26 p0191 A80-22690

POLYMERIC FILMS
Polyacetylene, /CH/x - Photoelectrochemical solar cell
26 p0183 A80-21091

POLYMERS
Polymer materials basic research needs for energy applications. Proceedings of a Workshop Recommending Future Directions in Energy-Related Polymer Research
[CONF-780643] 26 p0257 N80-16172

POPULATION THEORY
Perspective on world energy
[DOE/TIC-10273] 26 p0307 N80-20898

POPULATIONS
A global biogeocenotical biosphere simulation
[NASA-TM-76042] 26 p0309 N80-20920

POROUS MATERIALS
The use of porous metallic diaphragm for hydrogen mass-production with alkaline water electrolysis
26 p0196 A80-23113

POSITIONING DEVICES (MACHINERY)
Solar-powered sun tracker
[AD-A078653] 26 p0294 N80-19640

POTASSIUM COMPOUNDS
An evaluation of candidate seed processing systems for open cycle MHD --- sulfur removal and control
26 p0217 A80-25072

POTENTIAL ENERGY
Solar energy storage using chemical potential changes associated with drying of zeolites
26 p0183 A80-21106
Energy storage --- Book
26 p0184 A80-21123

POTENTIAL FLOW
A comparison of aerodynamic analyses for the Darrieus Rotor
[AIAA 80-0605] 26 p0237 A80-28802

POTENTIOMETRIC ANALYSIS
Development of sulfur-tolerant components for the molten carbonate fuel cell
26 p0190 A80-22167

POWER CONDITIONING
Control performance of an air-blown fixed bed coal gasification combined cycle plant in utility power systems application
26 p0213 A80-24256
Design, construction and initial operation of an MHD inverter system for the Mark VI generator
26 p0219 A80-25092
A rotary inverter system for a multiple-electrode MHD generator
26 p0219 A80-25093
PESC '79; Power Electronics Specialists Conference, San Diego, Calif., June 18-22, 1979, Record
26 p0242 A80-28892
Peak power tracking technique for photovoltaic arrays
26 p0242 A80-28908
Workshop on Power Conditioning for Alternative Energy Technologies, executive summary
[SERI-TP-35-217-PT-25] 26 p0265 N80-16505
Studies of silicon p-n junction solar cells
[NASA-CR-162832] 26 p0291 N80-19609
Measurement techniques for high power semiconductor materials and devices
[DOE/RA-0041] 26 p0301 N80-20506

POWER EFFICIENCY
Decomposition of water in a nonequilibrium plasma
26 p0185 A80-21881
Possible use of honeycomb-type structures for high power batteries and fuel cells
26 p0190 A80-22169
High-power-density liquid-metal MHD generator results
26 p0218 A80-25084
Wind-turbine power improvement with modern airfoil sections and multiple-speed generators
[AIAA 80-0633] 26 p0239 A80-28819

Simultaneous determination of quantum efficiency and energy efficiency of semiconductor photoelectrochemical cells by photothermal spectroscopy
26 p0247 A80-29897
Characteristics of Salter's cam for extracting energy from ocean waves
26 p0251 A80-30802
Performance characteristics of a commercially available point-focus solar power --- systems analysis of a solar energy conversion system in terms of power efficiency and energy conversion efficiency
[SERI/TP-34-169] 26 p0268 N80-16529
Effect of geometry and operating conditions on spur gear system power loss
[NASA-TM-81426] 26 p0284 N80-18406
On influencing the operating temperatures of Motorola and Arco solar photovoltaic modules
[COO-4094-59] 26 p0295 N80-19649
Effect of water injection and off scheduling of variable inlet guide vanes, gas generator speed and power turbine nozzle angle on the performance of an automotive gas turbine engine
[NASA-TM-81415] 26 p0298 N80-20272

POWER PLANTS
An economic analysis of air pollution from coal-fired power plants
26 p0230 A80-27649

POWER SUPPLY CIRCUITS
The open-circuit voltage of back-surface-field /BSF/ p-n junction solar cells in concentrated sunlight
26 p0247 A80-29812
The application of DC-DC energy conversion in a solar energy system
[AD-A077112] 26 p0303 N80-20867

PRESSURE DROP
Particulate size and rates of pressure drop increase in an MHD air preheater
26 p0217 A80-25076

PRESSURE EFFECTS
Filtration in coal liquefaction - Influence of filtration conditions in non-hydrogenated systems
26 p0254 A80-32371

PRESSURE OSCILLATIONS
Fluctuations in combustion MHD generator systems
26 p0221 A80-25105
Fluctuations in MHD generators
26 p0221 A80-25106

PRESSURE REDUCTION
Turbulent flows through annular spaces
26 p0250 A80-30614

PROCESS CONTROL (INDUSTRY)
The evolution of a large laser control system - From Shiva to Nova
26 p0185 A80-21901
Control performance of an air-blown fixed bed coal gasification combined cycle plant in utility power systems application
26 p0213 A80-24256
Engineering evaluation of control technology for H-Coal and Exxon donor solvent processes
[PB80-108566] 26 p0297 N80-19678
Advanced coal gasification system for electric power generation, FY 1978
[FE-1514-93] 26 p0313 N80-21554
Solvent refined coal process: Data correlation and analysis
[EPRI-AF-1157] 26 p0313 N80-21557
Coal-to-methanol via new processes under development: An engineering and economic evaluation
[EPRI-AF-1227] 26 p0314 N80-21558

PRODUCT DEVELOPMENT
Superconducting MHD magnets - Technology development, procurement and the path to commercial scale
26 p0218 A80-25077
Possibilities and limits of the conception of an up-to-date compact vehicle for the nineties
26 p0236 A80-28481
The contribution of Volkswagenwerk AG to the automobile concept of the 90's
26 p0236 A80-28482
Electric vehicle in Japan
26 p0236 A80-28484
Future prospects for use of the gas turbine for automobiles
26 p0236 A80-28485
Proceedings of the 13th Project integration meeting
[NASA-CR-162787] 26 p0276 N80-17549
Development of improved wraparound contacts for silicon
[NASA-CR-159748] 26 p0285 N80-18554
Low cost point focus solar concentrator, phase 1
[NASA-CR-162848] 26 p0292 N80-19624
Design and fabrication of prototype combined photovoltaic/thermal non-tracking collector
[SAND-79-7014] 26 p0307 N80-20899
Solvent refined coal process: Data correlation and analysis
[EPRI-AF-1157] 26 p0313 N80-21557
Phase 2 of the array automated assembly task for the low cost solar array project
[NASA-CR-162628] 26 p0315 N80-21833
High efficiency solar panel, phase 2, gallium arsenide
[AD-A079635] 26 p0316 N80-21838
Solar Central Receiver prototype heliostat, volume 1
[SAN-1604-1] 26 p0316 N80-21846

PRODUCTION ENGINEERING
Photovoltaic cost blitz spawns new silicon processes
26 p0186 A80-21913
Industrial scale production of hydrogen from natural gas, naphtha and coal
26 p0199 A80-23141
Main requirements on the nuclear installations used for hydrogen production and in technological processes
26 p0205 A80-23195
Use of solar energy under terrestrial conditions - Automated production of solar generator components
26 p0229 A80-27204
Present state and future prospects of thermochemical hydrogen production
26 p0233 A80-28272
Processing of solid fossil-fuel deposits by electrical induction heating
26 p0242 A80-29007
Survey of potential chlorine production processes --- for energy efficiency
[ANL/OEPM-79-1] 26 p0257 N80-16131
Coal gasification
[DOE/ET-0067/3] 26 p0258 N80-16184
Alcoa wind turbines
26 p0261 N80-16464
Slicing of silicon into sheet material. Silicon sheet growth development for the large area silicon sheet task of the low cost solar array project
[NASA-CR-162828] 26 p0292 N80-19623
Coal liquefaction with synthesis gas
[PETC/TR-79/1] 26 p0299 N80-20416
Trace and minor element analyses of coal liquefaction products
[PETC/TR-79/3] 26 p0299 N80-20417
Analysis and evaluation in the production process and equipment area of the low-cost solar array project
[NASA-CR-162904] 26 p0302 N80-20814
Benefits of increased use of continuous casting by the United States steel industry
[PB80-104904] 26 p0314 N80-21612
Phase 2 of the array automated assembly task for the low cost solar array project
[NASA-CR-162628] 26 p0315 N80-21833

PRODUCTIVITY
Projections of enhanced oil recovery, 1985 - 1995
[DOE/EIA-0183/11] 26 p0314 N80-21824

PROJECT MANAGEMENT
Overview of Federal wind energy program
26 p0261 N80-16454

PROJECT PLANNING
Magnetohydrodynamic power generation - Program planning and status
26 p0184 A80-21449
Hydrothermal electric and direct heat. Commercialization phase 3 planning
[DOE/SRD-0005] 26 p0269 N80-16545

PROPELLER BLADES
Torsional oscillations of the rotor disc for horizontal axis wind turbines with hinged or teetered blades, Part 12
[FFA-TN-AU-1499-PT-12] 26 p0319 N80-21881

PROPELLERS
The utilization of ocean hydropower systems for advanced electrolytic hydrogen energy production technology
26 p0196 A80-23110

PROPULSION SYSTEM CONFIGURATIONS
Future large cargo aircraft technology
26 p0229 A80-27269
International Symposium on Traffic and Transportation Technologies, Hamburg, West Germany, June 18-20, 1979, Proceedings. Volumes C1 & C2 - Motor vehicle and road traffic technologies
26 p0235 A80-28470
Advanced electric propulsion system concept for electric vehicles
[NASA-CR-159651] 26 p0282 N80-17916
Fuel economy screening study of advanced automotive gas turbine engines
[NASA-TM-81433] 26 p0311 N80-21201
Energy storage systems for automobile propulsion
[UCID-18320] 26 p0312 N80-21211
Advanced automotive propulsion systems: Incentive financing
[CONS-5181-1] 26 p0321 N80-22128

PROPULSION SYSTEM PERFORMANCE
Combined magnetic levitation and propulsion - The Mag-Transit concept
26 p0231 A80-27677
A technical conception for highly developed spark-ignition engines
26 p0235 A80-28471

PROTOTYPES
SWECS qualifications criteria for state tax incentive programs --- Small Wind Energy Conversion System
[AIAA 80-0650] 26 p0240 A80-28829
Specification, siting and selection of large WECS prototypes
26 p0261 N80-16459

PUBLIC HEALTH
Health benefits derived from a planned hydrogen community
26 p0205 A80-23193
Coal-conversion technologies: Some health and environmental effects
[BNL-5103] 26 p0309 N80-20930

PULSED LASERS
Transverse self-focusing of a Gaussian beam - Moment method
26 p0229 A80-27195
Choice of an optimum multichannel Nd:glass laser system for fusion experiments
26 p0230 A80-27340

PULSED RADIATION
Controlled fusion research in China
26 p0226 A80-25786

PUMPS
Pumped water storage
26 p0225 A80-25495
Solar powered liquid piston Stirling cycle irrigation pump
[SAN-1894-1] 26 p0294 N80-19641
Solar water pumps. Citations from the Engineering Index data base
[PB80-802531] 26 p0308 N80-20910

PURIFICATION
Electrical purifiers for dielectric fluids --- charged particle contaminants separation from fuels, oils and hydraulic fluids
26 p0254 A80-32287
Semiconductor grade, solar silicon purification project
[NASA-CR-162746] 26 p0264 N80-16495

PYRHELIOMETERS
Normal incident solar radiation measurements at Upton, New York
[BNL-50939] 26 p0273 N80-16653

PYROLYSIS
In-situ combustion retorting of oil shale
26 p0192 A80-22764
A feasibility study on thermochemical water-splitting cycles using sulfur compounds
26 p0197 A80-23121
Chemical studies on the general atomic sulfur-iodine thermochemical water-splitting cycle
26 p0197 A80-23122
The decomposition of hydrogen bromide using iron bromide and magnetite
26 p0198 A80-23130
Separation of hydrogen from the mixture of hydrogen iodide, hydrogen and iodine in thermogravitational column
26 p0200 A80-23145
Thermoelectrochemical cycles for power and hydrogen production
26 p0201 A80-23157
Hydrogen energy research programs in Japan
26 p0233 A80-28271
Flash hydropyrolysis of coal
[BNL-51010] 26 p0258 N80-16185
Systems studies of coal conversion processes using a reference simulator
[FE-2275-11] 26 p0289 N80-19307
Analysis of thermal decomposition products of flue gas conditioning agents
[PB80-111818] 26 p0297 N80-19672

Q

QUALITY CONTROL
Qualification test procedures and results for Honeywell solar collector subsystem, single-family residence
[NASA-CR-161382] 26 p0302 N80-20813

QUARTZ TRANSDUCERS
High temperature electronics for geothermal energy
26 p0185 A80-21902

QUENCHING (ATOMIC PHYSICS)
Light-induced electron transfer reactions in solution, organized assemblies and at interfaces - Scope and potential applications
26 p0243 A80-29055

QUINOLINE
Kinetics and mechanism of desulfurization and denitrogenation of coal-derived liquids --- quioline, indole, dibenzothiophene, and naphthalene
[FE-2028-15] 26 p0287 N80-19292

R

RADIAL FLOW
Study of advanced radial outflow turbine for solar steam Rankine engines
[NASA-CR-159695] 26 p0263 N80-16483

RADIANT FLUX DENSITY
Microwave power transmission beam safety system
[NASA-CASE-NPO-14224-1] 26 p0283 N80-18287

RADIANT HEATING
Radiant heat for energy conservation
26 p0253 A80-32056

RADIATION DETECTORS
Nuclear Science Symposium, 26th and Symposium on Nuclear Power Systems, 11th, San Francisco, Calif., October 17-19, 1979, Proceedings
26 p0231 A80-27656

RADIATION MEASUREMENT
Accuracies achievable with indirect measurements of the direct solar irradiance component
26 p0183 A80-21108
Estimation and prediction of global solar radiation over Greece
26 p0248 A80-29923
Normal incident solar radiation measurements at Upton, New York
[BNL-50939] 26 p0273 N80-16653

RADIATION TOLERANCE
Shallow-homojunction GaAs cells with high resistance to 1-MeV electron radiation
26 p0183 A80-21089

RADIATIVE HEAT TRANSFER
Technical evaluation of gaseous suspensions of graphite for the absorption of concentrated solar radiation --- Book
26 p0214 A80-24660
Radiative and convective heat transfer in the MHD generator duct
26 p0217 A80-25068
Investigations of heat transfer from plasma flux to electrode and insulating walls of the MHD generator channel
26 p0217 A80-25069

RADIATIVE TRANSFER
Aerosols and solar energy
[SERI/TP-36-309] 26 p0278 N80-17573

RADIO ASTRONOMY
Effect of solar power satellite transmissions on radio-astronomical research
26 p0211 A80-23525

RADIO FREQUENCY DISCHARGE
Observation of radio-frequency-driven plasma current in the octopole tokamak
26 p0224 A80-25483

RADIO FREQUENCY HEATING
Characteristics of lower-hybrid-wave-driven steady-state tokamak power reactors
26 p0224 A80-25475

RADIO TELESCOPES
Effect of solar power satellite transmissions on radio-astronomical research
26 p0211 A80-23525

RADIOACTIVE DECAY
Environmental development plan for space applications --- development of nuclear power supplies for use in space
[DOE/EDP-0057] 26 p0309 N80-20922

RADIOACTIVE WASTES
Space disposal of nuclear wastes
26 p0246 A80-29448

RADIOGRAPHY
Application of radiography to coal liquefaction
[SAND-79-1226C] 26 p0274 N80-17243

RADIOLYSIS
Laser-fusion production of hydrogen by radiolytic-thermochemical cycles
26 p0206 A80-23201

RAFTS
Wave power extraction by a train of rafts - Hydrodynamic theory and optimum design
26 p0251 A80-30804

RAIL TRANSPORTATION
Electric transport - The future prospects
26 p0189 A80-21956
Hydrogen-fueled railroad motive power systems - A North American view
26 p0203 A80-23175
Combined magnetic levitation and propulsion - The Mag-Transit concept
26 p0231 A80-27677
Light rail transit in the United States
26 p0252 A80-31770

RANKINE CYCLE
Study of advanced radial outflow turbine for solar steam Rankine engines
[NASA-CR-159695] 26 p0263 N80-16483
A 15kWe (nominal) solar thermal electric power conversion concept definition study: Steam Rankine reheat reciprocator system
[NASA-CR-159590] 26 p0264 N80-16491
The 15 kW sub e (nominal) solar thermal electric power conversion concept definition study: Steam Rankine turbine system
[NASA-CR-159589] 26 p0264 N80-16493
A 15 kWe (nominal) solar thermal-electric power conversion concept definition study: Steam Rankin reciprocator system
[NASA-CR-159591] 26 p0291 N80-19612

RAPID TRANSIT SYSTEMS
Combined magnetic levitation and propulsion - The Mag-Transit concept
26 p0231 A80-27677
The development of the magnetically suspended transportation system in the Federal Republic of Germany
26 p0235 A80-28458
AGT guideway and station technology. Volume 8: Weather protection concepts
[PB-299746/8] 26 p0274 N80-16974

RARE EARTH COMPOUNDS
Development of low cost nickel-rare earth hydrides for hydrogen storage
26 p0202 A80-23170

RARE GASES
Experiments on the nonuniform discharge structure in noble gas MHD generators
26 p0219 A80-25086

REACTION KINETICS
The kinetics of oxygen evolution on non-traditional electrodic materials --- for hydrogen production by electrolysis of KOH aqueous solutions
26 p0196 A80-23111
A study of the cerium-chlorine system for thermochemical production of hydrogen
26 p0198 A80-23134
A kinetic investigation of the reforming of natural gas for the production of hydrogen
26 p0199 A80-23139
Hydrogen generation via photoelectrolysis of water - Recent advances
26 p0200 A80-23152
Photochemical production of hydrogen from water
26 p0201 A80-23154
Thermoelectrochemical cycles for power and hydrogen production
26 p0201 A80-23157
Iron oxide reduction kinetics by hydrogen
26 p0203 A80-23174
Safety studies on Li/SO2 cells. II - Kinetics of lithium-organic solvent exothermic reactions
26 p0247 A80-29894
Reaction kinetics between CO2 and oil-shale residual carbon. I - Effect of heating rate on reactivity
26 p0249 A80-30524
Reaction kinetics between CO2 and oil-shale residual carbon. II - Partial-pressure and catalytic-mineral effects
26 p0250 A80-30527
Reaction kinetics between steam and oil-shale residual carbon
26 p0250 A80-30528
Chemical kinetics in LNG detonations
[UCRL-82293-REV-1] 26 p0258 N80-16180
Kinetics and mechanism of desulfurization and denitrogenation of coal-derived liquids --- quioline, indole, dibenzothiophene, and naphthalene
[FE-2028-15] 26 p0287 N80-19292

REACTION WHEELS
Design and applications of flywheels, volume 1. Citations from the NTIS data base --- bibliographies
[PB80-900303] 26 p0280 N80-17591
Design and applications of flywheels, volume 2. Citations from the NTIS data base --- bibliographies
[PB80-800311] 26 p0280 N80-17592
Design and applications of flywheels. Citations from the Engineering Index data base --- bibliographies
[P80-800329] 26 p0280 N80-17593

REACTOR DESIGN
A speculation on a general photoelectrochemical reactor
26 p0193 A80-22794
Nuclear energy as a primary energy source for hydrogen production
26 p0194 A80-23102
A high energy hybrid system: Hydrogen - chlorine - solar - water
26 p0206 A80-23199
Low-density ignition scenarios in injection-heated tokamaks
26 p0213 A80-24482
Two-stroke tokamak reactor
26 p0213 A80-24487
Driven magnetic fusion reactors; Proceedings of the Course, Erice, Italy, September 18-26, 1978
26 p0214 A80-24661
The physics of field reversed mirrors
26 p0214 A80-24664
The mirror fusion test facility
26 p0214 A80-24665
The economic significance of Q for mirror reactors - Combinations of Q and M which look promising --- parameters affecting energy conversion efficiency in fusion reactor
26 p0215 A80-24666
Tandem mirror reactors
26 p0215 A80-24667
Field-reversed mirror reactor
26 p0215 A80-24668
Mirror hybrid reactors --- fusion-fission reactor design
26 p0215 A80-24670
Beam and plasma direct converters
26 p0215 A80-24671
Superconducting magnets for mirror machines
26 p0215 A80-24672

Plasma parametric studies and potential applications of driven fusion reactors
26 p0215 A80-24674
Neutral beam injectors
26 p0215 A80-24675
Characteristics of lower-hybrid-wave-driven steady-state tokamak power reactors
26 p0224 A80-25475
Anomalous diffusion of alpha particles in a tokamak reactor due to the trapped-ion mode
26 p0224 A80-25482
Design considerations of a CAMAC system for large tokamak JT-60
26 p0231 A80-27672
International tokamak reactor - Executive summary of the IAEA Workshop, 1979
26 p0252 A80-31626
Advanced development of a short-residence-time hydrogasifier
[FE-3125-5] 26 p0299 N80-20414

REACTOR MATERIALS
Material requirements for coal gasification
26 p0212 A80-23833
Development, testing and evaluation of MHD materials and components designs
[FE-2248-22] 26 p0311 N80-21160

REACTOR TECHNOLOGY
Non-electric fusion energy applications
26 p0215 A80-24676

RECEIVERS
Receiver assembly design studies for 2-m 90 deg parabolic-cylindrical solar collectors
[SAND-79-1026] 26 p0277 N80-17564

RECYCLING
Survey on metallurgical recycling processes
[ANL/OEPM-79-2] 26 p0282 N80-17918
Energy conservation in the U.S. economy from increased recycle of obsolete steel scrap
26 p0290 N80-19492

REDUCTION (CHEMISTRY)
Nitrogen reducing solar cells
26 p0244 A80-29059

REFINING
A review of standards of performance for new stationary sources: Petroleum refineries
[PB-300480/1] 26 p0272 N80-16602
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[FE-2315-37] 26 p0298 N80-20407

REFRACTORY METAL ALLOYS
Materials review for improved automotive gas turbine engine --- superalloys, refractory alloys, and ceramics
[NASA-CR-159673] 26 p0275 N80-17470

REFRIGERATING MACHINERY
Heat pumps --- Book
26 p0207 A80-23224

REGENERATION (ENGINEERING)
Regenerative energy sources --- technology impact on the Federal Republic of Germany
26 p0255 A80-32397
Regenerative burner system for thermoelectric power sources --- military equipment
[AD-A075955] 26 p0276 N80-17553

REGENERATIVE COOLING
Solar-MEC development program, project 9103
[COO-4495-7] 26 p0267 N80-16522

REGIONAL PLANNING
Optimizing a regional energy provision system for multi-task achievement
26 p0246 A80-29474
Regional systems development for geothermal energy resources. Pacific region: California and Hawaii. Task 1: Implementation plan development --- for the generation of electric power
[DOE/ET-28432/1] 26 p0290 N80-19604
Regional systems development for geothermal energy resources. Pacific region: California and Hawaii. Task 2: Regional program monitoring and progress evaluation --- for the generation of electric power
[DOE/ET-28432/2] 26 p0291 N80-19605
Regional systems development for geothermal energy resources. Pacific region: California and Hawaii. Task 3: Water resources evaluation --- for generation of electric power
[DOE/ET-28432/3-1] 26 p0291 N80-19606
Regional systems development for geothermal energy resources. Pacific region: (California and Hawaii). Task 3: Water resources evaluation, appendices --- for generation of electric power
[DOE/ET-28432/3-2] 26 p0291 N80-19607
Determining the feasibility of incorporating water resource constraints into energy models
[EPRI-EA-1147] 26 p0308 N80-20908

REGIONS
Regional environment-energy data book: Western region
[DOE/TIC-10114/2] 26 p0280 N80-17597
Regional environment-energy data book: Southern region
[DOE/TIC-10114/4] 26 p0281 N80-17598

RELATIVISTIC ELECTRON BEAMS
Progress in the production and energy flux concentration of the REB accelerator for ICF
26 p0226 A80-25785

RELIABILITY ENGINEERING
General reliability and safety methodology and its application to wind energy conversion systems
[SERI/TR-35-234] 26 p0294 N80-19645

REMOTE REGIONS
Lead-acid batteries for remote photovoltaic applications
26 p0232 A80-28014
Market definition study of photovoltaic power for remote villages in the United States
[NASA-CR-159800] 26 p0302 N80-20812

REMOTELY PILOTED VEHICLES
Airborne spacecraft - A remotely powered, high-altitude RPV for environmental applications
26 p0228 A80-26820
Power units for mini RPV's
26 p0246 A80-29662

RESEARCH AND DEVELOPMENT
Magnetohydrodynamic power generation - Program planning and status
26 p0184 A80-21449
Heat pumps --- Book
26 p0207 A80-23224
New standards in research and development
26 p0208 A80-23317
Exotic energy R&D has potential --- ocean wave and windpower utilization
26 p0213 A80-24124
National R&D program on MHD in Japan
26 p0220 A80-25100
Progress in coal combustion research at Avco Everett Research Laboratory, Inc.
26 p0221 A80-25109
Current trends in the development of sodium-sulphur batteries
26 p0232 A80-28013
Stirling engine design and feasibility for automotive use --- Book
26 p0234 A80-28425
Future trends in the automobile
26 p0234 A80-28426
Air transport and travel in 2000 - Future requirements
26 p0234 A80-28427
The development of the magnetically suspended transportation system in the Federal Republic of Germany
26 p0235 A80-28458
Electric vehicle in Japan
26 p0236 A80-28484
Low cost composite blades for large wind turbines
[AIAA 80-0634] 26 p0239 A80-28820
Light rail transit in the United States
26 p0252 A80-31770
Advanced automotive propulsion systems: Incentive financing
[CONS-5181-1] 26 p0321 N80-22128

RESEARCH MANAGEMENT
Hydrogen energy research programs in Japan
26 p0233 A80-28271
Polymer materials basic research needs for energy applications. Proceedings of a Workshop Recommending Future Directions in Energy-Related Polymer Research
[CONF-780643] 26 p0257 N80-16172
Coal gasification
[DOE/ET-0067/3] 26 p0258 N80-16184
Energy policy and research planning, volume 3. A bibliography with abstracts
[NTIS/PS-79/1069/8] 26 p0271 N80-16563

Survey of the research into energy-economic interactions. Volume 2: Annotated bibliography
[DOE/TIC-10134-VOL-2] 26 p0281 N80-17909

RESEARCH VEHICLES

Marginal conditions in automobile construction and their implications on the design of upper-category vehicles
26 p0236 A80-28477

RESIDENTIAL AREAS

Federal demonstrations of solar heating and cooling on private residences: Only limited success
[PB-301123/6] 26 p0270 N80-16555

Comparative assessment of residential energy supply systems that use fuel cells
[PB-299208/9] 26 p0271 N80-16565

Overview of developing programs in solar desiccant cooling for residential buildings
[SERI/TP-34-187] 26 p0278 N80-17569

Characterization and assessment of selected solar thermal energy systems for residential and process heat applications
[LA-7995-TASE] 26 p0295 N80-19648

Geothermal energy market penetration: Development of a model for the residential section
[PB80-118359] 26 p0311 N80-21198

RESIDUES

Fluid coking of coal liquefaction residues: The fourth residue
[FE-2422-28] 26 p0289 N80-19304

RESISTANCE HEATING

MHD equilibrium and stability of axial symmetric toroidal plasma with an elliptic cross section of triangular deformation
26 p0209 A80-23366

Plasma measurements of Joule heating effects in the near electrode region of an open cycle MHD generator
26 p0219 A80-25090

RESOURCES MANAGEMENT

Alaskan environmental research. Section 12.0 of part 2: Ecological sciences
[PNL-2850-PT-2-SUPPL] 26 p0297 N80-19666

Analysis of current trends in U.S. petroleum and natural gas production
[PB80-116056] 26 p0301 N80-20800

Perspective on world energy
[DOE/TIC-10273] 26 p0307 N80-20898

Determining the feasibility of incorporating water resource constraints into energy models
[EPRI-EA-1147] 26 p0308 N80-20908

A global biogeocenotical biosphere simulation
[NASA-TM-76042] 26 p0309 N80-20920

Geothermal energy: Obstacles and uncertainties impede its widespread use
[PB80-134430] 26 p0315 N80-21827

RETORT PROCESSING

In-situ combustion retorting of oil shale
26 p0192 A80-22764

Application of computer models to the retorting of oil shale
26 p0228 A80-26708

Oil shale processing technology
26 p0247 A80-29800

Reaction kinetics between CO2 and oil-shale residual carbon. II - Partial-pressure and catalytic-mineral effects
26 p0250 A80-30527

Reaction kinetics between steam and oil-shale residual carbon
26 p0250 A80-30528

RETROFITTING

The retrofit approach to MHD demonstration and commercialization --- for coal-fired MHD plants
26 p0221 A80-25102

REVERSE FIELD PINCH

The mirror fusion test facility
26 p0214 A80-24665

RIBBONS

Silicon ribbon growth using scanned lasers
26 p0229 A80-27337

RIDING QUALITY

Implications of fuel-efficient vehicles on ride quality and passenger acceptance: Workshop proceedings
[NASA-CP-2096] 26 p0287 N80-18990

RIGID ROTORS

WTG Energy Systems' MP1-200 200 kilowatt wind turbine generator --- a fixed pitch rotor configuration driving a synchronous generator
26 p0261 N80-16458

RIVER BASINS

Some application of Landsat imagery interpretation for petroleum targetting in India
26 p0191 A80-22433

ROTATING GENERATORS

Wind wheel electric power generator
[NASA-CASE-MFS-23515-1] 26 p0315 N80-21828

ROTATION

Lateral and tilt whirl modes of flexibly mounted flywheel systems
26 p0259 N80-16215

ROTOR AERODYNAMICS

Development of vertical axis wind turbines
26 p0187 A80-21929

Technical development of the Diffuser Augmented Wind Turbine /DAWT/ concept
26 p0211 A80-23533

Study of a vortex augmentor for a wind-powered turbine
26 p0227 A80-26002

A comparison of aerodynamic analyses for the Darrieus Rotor
[AIAA 80-0605] 26 p0237 A80-28802

Numerical calculation of steady inviscid full potential compressible flow about wind turbine blades
[AIAA 80-0607] 26 p0237 A80-28804

Numerical solution of the flow near the rotor of a horizontal-axis wind turbine and comparisons with data
[AIAA 80-0608] 26 p0237 A80-28805

Model wind rotors in wind tunnels - Performance and the effect of Reynolds number
[AIAA 80-0623] 26 p0238 A80-28815

New concepts in vertical axis wind turbines /VAWT/ and applications to large multi-MW size, off-shore wind turbine systems
[AIAA 80-0620] 26 p0241 A80-28840

Aerodynamic performance of the DOE/Sandia 17-m vertical axis wind turbine in the two-bladed configuration
[AIAA 80-0655] 26 p0241 A80-28842

WTG Energy Systems' rotor: Steel at 80 feet
26 p0262 N80-16473

Numerical calculation of steady inviscid full potential compressible flow about wind turbine blades
[NASA-TM-81438] 26 p0284 N80-18497

ROTOR BLADES

Model wind rotors in wind tunnels - Performance and the effect of Reynolds number
[AIAA 80-0623] 26 p0238 A80-28815

Teetered, tip-controlled rotor - Preliminary test results from Mod-0 100-kW experimental wind turbine
[AIAA 80-0642] 26 p0241 A80-28836

A refined windmill rotor model
[AIAA 80-0628] 26 p0241 A80-28841

ROTOR BLADES (TURBOMACHINERY)

Coriolis Program - A review of the status of the ocean turbine energy system
26 p0233 A80-28261

Design characteristics of the 224 kW Magdalen Islands VAWT
26 p0261 N80-16463

Alcoa wind turbines
26 p0261 N80-16464

Test results of the DOE/Sandia 17 meter VAWT
26 p0262 N80-16465

WTG Energy Systems' rotor: Steel at 80 feet
26 p0262 N80-16473

The use of wood for wind turbine blade construction
26 p0262 N80-16474

The Boeing MOD-2 wind turbine system rotor
26 p0263 N80-16477

Status of the Southern California Edison Company 3 MW Wind Turbine Generator (WTG) demonstration project
26 p0263 N80-16478

System configuration improvement
26 p0263 N80-16481

Flutter analysis of small windturbine, designed for manufacture and use in developing countries
[UTH-LR-272] 26 p0284 N80-18415

ROTOR SPEED
A refined windmill rotor model
[AIAA 80-0628] 26 p0241 A80-28841
ROTORS
A rotary inverter system for a multiple-electrode MHD generator
26 p0219 A80-25093
Teetered, tip-controlled rotor: Preliminary test results from Mod-0 100-kW experimental wind turbine
[NASA-TM-81445] 26 p0291 N80-19613
Composite-laminate flywheel-rotor development program
[UCRL-83554] 26 p0317 N80-21855
RUBBER
Oils and rubber from arid land plants
26 p0253 A80-32055
RUBY LASERS
Laser treatment of phosphorus-diffused silicon solar cells
26 p0186 A80-21915
RURAL AREAS
The potential for optimizing the economics of wind energy utilization on a dairy farm through load management
[AIAA 80-0640] 26 p0241 A80-28838

S

SAFETY DEVICES
Microwave power transmission beam safety system
[NASA-CASE-NPO-14224-1] 26 p0283 N80-18287
SAFETY FACTORS
Safety of liquid hydrogen in air transportation
[LA-UR-79-1416] 26 p0259 N80-16236
SAFETY MANAGEMENT
Nuclear Science Symposium, 26th and Symposium on Nuclear Power Systems, 11th, San Francisco, Calif., October 17-19, 1979, Proceedings
26 p0231 A80-27656
General reliability and safety methodology and its application to wind energy conversion systems
[SERI/TR-35-234] 26 p0294 N80-19645
SAILS
New approaches to sailing
26 p0228 A80-26344
SALINITY
Non-convecting solar ponds
26 p0210 A80-23517
Salinity gradient energy conversion
26 p0233 A80-28262
Pitting resistance of engineering materials in geothermal brines. I - Low salinity brine
26 p0249 A80-30474
SATELLITE ANTENNAS
Microwave power beaming for long range energy transfer
26 p0193 A80-22833
SATELLITE ORBITS
Solar power satellites and the ITU - Some U.S. policy options
26 p0223 A80-25253
SATELLITE POWER TRANSMISSION (TO EARTH)
Microwave power beaming for long range energy transfer
26 p0193 A80-22833
The development of solar power satellites
26 p0207 A80-23219
Effect of solar power satellite transmissions on radio-astronomical research
26 p0211 A80-23525
Solar power satellites and the ITU - Some U.S. policy options
26 p0223 A80-25253
Microwave power transmission beam safety system
[NASA-CASE-NPO-14224-1] 26 p0283 N80-18287
Solar power satellite system definition study, volume 4, phase 2
[NASA-CR-160565] 26 p0313 N80-21395
Study on European aspects of solar power satellites, volume 1
[ESA-CR(P)-1266] 26 p0319 N80-21880
SATELLITE SOLAR POWER STATIONS
Space manufacturing, satellite power and human exploration
26 p0186 A80-21908
Solar power satellites and the ITU - Some U.S. policy options
26 p0223 A80-25253
Satellite solar power plants
26 p0252 A80-31200
Study on European aspects of solar power satellites, volume 1
[ESA-CR(P)-1266] 26 p0319 N80-21880
SCALING LAWS
Scale-up of advanced MHD generators
[AIAA PAPER 80-0179] 26 p0212 A80-23938
Scaling MHD cyclone coal combustors
26 p0222 A80-25114
SCHOTTKY DIODES
Antireflection coatings on solar cells
26 p0186 A80-21914
The temperature dependence of the characteristics of sputtered a-Si-H solar cells
26 p0187 A80-21920
The doping of amorphous silicon for solar cells
26 p0187 A80-21921
Recombination in the space-charge region of Schottky barrier solar cells
26 p0207 A80-23272
Native oxide and external dielectric polycrystalline GaAs MIS solar cells
26 p0223 A80-25444
The barrier height change and current transport phenomena with the presence of interfacial layer in MIS Schottky barrier solar cells
26 p0247 A80-29815
SCRAP
Energy conservation in the U.S. economy from increased recycle of obsolete steel scrap
26 p0290 N80-19492
SEA WATER
The utilization of ocean hydropower systems for advanced electrolytic hydrogen energy production technology
26 p0196 A80-23110
Electrodes for generation of hydrogen and oxygen for seawater
26 p0196 A80-23115
Plasmochemical cycle of hydrogen production from the water
26 p0200 A80-23149
Characteristics of Salter's cam for extracting energy from ocean waves
26 p0251 A80-30802
Absorption of wave energy by elongated bodies --- in ocean water
26 p0251 A80-30805
SEISMOGRAMS
Computation of synthetic seismograms by the method of characteristics --- geophysical prospecting
26 p0287 N80-18593
SEISMOLOGY
GPS application to seismic oil exploration
26 p0222 A80-25159
SELENIUM
Emerging materials systems for solar cell applications-Cu/sub 2-x/Se
[DOE/ET-23005/T2] 26 p0296 N80-19653
SELF FOCUSING
Transverse self-focusing of a Gaussian beam - Moment method
26 p0229 A80-27195
SEMICONDUCTING FILMS
Thin solid solution films Zn/x/Cd/1-x/S
26 p0194 A80-23014
Photoelectrochemical generation of hydrogen with hybrid electrodes
26 p0200 A80-23153
Photovoltaics. I - Solar-cell arrays
26 p0214 A80-24531
Photovoltaics. IV - Advanced materials
26 p0214 A80-24534
Photovoltaics. V - Amorphous silicon cells
26 p0214 A80-24535
Thin film CdSe photoanodes for electrochemical photovoltaic cells
26 p0228 A80-26466
Selective optical surfaces for solar energy convertors --- Russian book
26 p0228 A80-26511
Preparation and photovoltaic properties of screen printed CdS/Cu/x/S solar cells
26 p0228 A80-27057
Silicon ribbon growth using scanned lasers
26 p0229 A80-27337

Growth and characterization of thin film III-V compound semiconductor material for solar cell applications 26 p0244 A80-29058
SEMICONDUCTOR DEVICES
A speculation on a general photoelectrochemical reactor 26 p0193 A80-22794
Photoelectrochemical cells --- with photoactive semiconducting electrodes 26 p0210 A80-23520
Energy conversion and corrosion processes in electrochemical solar cells with semiconductor electrodes --- German thesis 26 p0225 A80-25679
Simultaneous determination of quantum efficiency and energy efficiency of semiconductor photoelectrochemical cells by photothermal spectroscopy 26 p0247 A80-29897
SEMICONDUCTOR DIODES
High temperature electronics for geothermal energy 26 p0185 A80-21902
SEMICONDUCTOR JUNCTIONS
Properties of ion-implanted junctions in mercury-cadmium-telluride 26 p0234 A80-28307
The current-voltage characteristics of semiconductor-electrolyte junction photovoltaic cells 26 p0251 A80-30939
SEMICONDUCTORS (MATERIALS)
Comparison of Hg/0.6/Cd/0.4/Te LPE layer growth from Te-, Hg-, and HgTe-rich solutions 26 p0234 A80-28305
Possible direct conversion of chemical energy into electrical energy in a semiconductor 26 p0247 A80-29795
Semiconductor grade, solar silicon purification project [NASA-CR-162746] 26 p0264 N80-16495
Emerging materials systems for solar cell applications-Cu/sub 2-x/Se [DOE/ET-23005/T2] 26 p0296 N80-19653
Cadmium sulfide solar cells, volume 1. Citations from the NTIS data base [PB80-802218] 26 p0296 N80-19656
Measurement techniques for high power semiconductor materials and devices [DOE/RA-0041] 26 p0301 N80-20506
SENSITIVITY
General sensitivity analysis of solar thermal-electric plants 26 p0313 N80-21379
SEPARATORS
Electrical purifiers for dielectric fluids --- charged particle contaminants separation from fuels, oils and hydraulic fluids 26 p0254 A80-32287
Flexible formulated plastic separators for alkaline batteries [NASA-CASE-LEW-12363-4] 26 p0285 N80-18555
Flexible formulated plastic separators for alkaline batteries [NASA-CASE-LEW-12363-3] 26 p0285 N80-18556
SHADOWS
Shadow effect of adjacent solar collectors in large scale systems 26 p0183 A80-21107
SHALE OIL
In-situ combustion retorting of oil shale 26 p0192 A80-22764
Surface-active materials from Athabasca oil sands 26 p0192 A80-22770
Alkanes obtained by thermal conversion of Green River oil-shale kerogen using CO and H2O at elevated pressure 26 p0226 A80-25888
Gasification of oil shale 26 p0226 A80-25889
Application of computer models to the retorting of oil shale 26 p0228 A80-26708
Oil shale processing technology 26 p0247 A80-29800
Reaction kinetics between CO2 and oil-shale residual carbon. I - Effect of heating rate on reactivity 26 p0249 A80-30524
Reaction kinetics between CO2 and oil-shale residual carbon. II - Partial-pressure and catalytic-mineral effects 26 p0250 A80-30527
Reaction kinetics between steam and oil-shale residual carbon 26 p0250 A80-30528
Groundwater quality monitoring of western oil shale development. Identification and priority ranking of potential pollution sources --- in eastern Utah [PB-300536/0] 26 p0272 N80-16623
Energy from the situ processing of antrim oil shale [FE-2346-44] 26 p0278 N80-17576
The application of chromatography and ancillary techniques to the characterization of shale oil/oil shale compound classes and of organometallics 26 p0282 N80-18125
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes [FE-2315-37] 26 p0298 N80-20407
SHALES
Study of hydrocarbon-shale interaction [ORO-5197-14] 26 p0260 N80-16409
Gas production of Devonian shale wells relative to photo lineament locations: A statistical analysis [METC/CR-79/28] 26 p0260 N80-16410
Characterization and analysis of devonian shales as related to release of gaseous hydrocarbons [ORO-5205-10] 26 p0310 N80-20973
SHIP HULLS
New approaches to sailing 26 p0228 A80-26344
SHIVA LASER SYSTEM
The evolution of a large laser control system - From Shiva to Nova 26 p0185 A80-21901
SHORT CIRCUITS
The spectral response of a front surface field solar cell 26 p0254 A80-32331
SHORT HAUL AIRCRAFT
Short haul transport for the 1990s 26 p0190 A80-22046
SILICON
Photovoltaic cost blitz spawns new silicon processes 26 p0186 A80-21913
Laser treatment of phosphorus-diffused silicon solar cells 26 p0186 A80-21915
The temperature dependence of the characteristics of sputtered a-Si-H solar cells 26 p0187 A80-21920
Silicon ribbon growth using scanned lasers 26 p0229 A80-27337
Silicon ribbon for photovoltaic cells 26 p0245 A80-29394
Studies of silicon p-n junction solar cells [NASA-CR-162832] 26 p0291 N80-19609
Slicing of silicon into sheet material. Silicon sheet growth development for the large area silicon sheet task of the low cost solar array project [NASA-CR-162828] 26 p0292 N80-19623
Analysis and evaluation in the production process and equipment area of the low-cost solar array project [NASA-CR-162904] 26 p0302 N80-20814
Phase 2 of the array automated assembly task for the low cost solar array project [NASA-CR-162628] 26 p0315 N80-21833
SILICON ALLOYS
Photovoltaics. V - Amorphous silicon cells 26 p0214 A80-24535
SILICON COMPOUNDS
Development of high efficiency, low cost ZnSiAs2 solar cells. [DOE/ET-23001/T1] 26 p0278 N80-17572
SILICON FILMS
Thin film solar cells based on amorphous silicon 26 p0245 A80-29395
Black a-Si solar selective absorber surfaces 26 p0254 A80-32325
SILICON JUNCTIONS
Structure of deformed silicon and implications for low-cost solar cells 26 p0191 A80-22526

Photovoltaics. II - Flat panels
26 p0214 A80-24532
Amorphous Si-F-H solar cells prepared by dc glow discharge
26 p0251 A80-30940
Field-dependent quantum efficiency in hydrogenated amorphous silicon --- for solar cells
26 p0251 A80-30942
The characteristics of high current amorphous silicon diodes
26 p0253 A80-31966

SILICON POLYMERS
Semiconductor grade, solar silicon purification project
[NASA-CR-162746] 26 p0264 N80-16495

SILICONES
Develop silicone encapsulation systems for terrestrial silicon solar arrays
[NASA-CR-162840] 26 p0292 N80-19617

SINGLE CRYSTALS
Shallow-homojunction GaAs cells with high resistance to 1-MeV electron radiation
26 p0183 A80-21089

SLAGS
Electrical characteristics of an arc-mode slagging electrode generator --- in Faraday MHD generators
26 p0216 A80-25064
Condensation and deposition of seed in the MHD bottoming plant
26 p0217 A80-25071
A four-component model for the vaporization of seeded slags - The system KO/.5/-CaO-AlO/1.5/SiO2 --- in MHD generator coal combustor
26 p0217 A80-25073
Wettability and corrosion of MHD ceramics by Rosebud coal slag
26 p0217 A80-25074
High slag rejection, high carbon conversion rate, air cooled cyclone coal combustor for MHD regenerative heat exchangers
26 p0222 A80-25112

SLENDER BODIES
Absorption of wave energy by elongated bodies --- in ocean water
26 p0251 A80-30805

SLURRIES
Studies in biogas technology. III - Thermal analysis of biogas plants
26 p0188 A80-21940
Filtration in coal liquefaction - Influence of filtration conditions in non-hydrogenated systems
26 p0254 A80-32371

SNOW
Snow and ice accumulation at solar collector installations in the Chicago metropolitan area
[PB80-113749] 26 p0308 N80-20912

SODIUM COOLING
Thermal energy storage in a packed bed of iron spheres with liquid sodium coolant
26 p0183 A80-21109

SODIUM SULFUR BATTERIES
Current trends in the development of sodium-sulphur batteries
26 p0232 A80-28013

SOIL SCIENCE
Soil fertility and soil loss constraints on crop residue removal for energy production
[SERI/RR-52-324] 26 p0266 N80-16511

SOILS
Soil fertility and soil loss constraints on crop residue removal for energy production
[SERI/RR-52-324] 26 p0266 N80-16511

SOLAR ARRAYS
Shadow effect of adjacent solar collectors in large scale systems
26 p0183 A80-21107
Calculation of performance of N collectors in series from test data on a single collector
26 p0184 A80-21113
Photovoltaic cost blitz spawns new silicon processes
26 p0186 A80-21913
Theoretical concentrations of solar radiation by central receiver systems
26 p0208 A80-23327
Present status and future prospects of silicon solar cell arrays and systems
26 p0210 A80-23518
Photovoltaics. I - Solar-cell arrays
26 p0214 A80-24531
Peak power tracking technique for photovoltaic arrays
26 p0242 A80-28908
Photovoltaic hybrid collectors
26 p0245 A80-29396
Evaluation of concentrated space solar arrays using computer modeling --- for spacecraft propulsion and power supplies
[NASA-CR-162681] 26 p0264 N80-16487
Semiconductor grade, solar silicon purification project
[NASA-CR-162746] 26 p0264 N80-16495
Low-cost structures for photovoltaic arrays
[SAND-79-7006] 26 p0268 N80-16537
Proceedings of the 13th Project integration meeting
[NASA-CR-162787] 26 p0276 N80-17549
Suntech Solar Linear Array Thermal System (SLATS) test results
[SAND-79-0658] 26 p0277 N80-17563
Assessment of low-cost manufacturing process sequences --- photovoltaic solar arrays
[NASA-CR-162745] 26 p0278 N80-17575
Economic analysis of the design and fabrication of a space qualified power system
[NASA-TM-81418] 26 p0282 N80-18098
LSA field test
[NASA-CR-162798] 26 p0291 N80-19611
Develop silicone encapsulation systems for terrestrial silicon solar arrays
[NASA-CR-162840] 26 p0292 N80-19617
Slicing of silicon into sheet material. Silicon sheet growth development for the large area silicon sheet task of the low cost solar array project
[NASA-CR-162828] 26 p0292 N80-19623
Thermal performance evaluation of the Northrop model NSC-01-0732 concentrating solar collector array at outdoor conditions --- Marshall Space Flight Center solar house test facility
[NASA-CR-161354] 26 p0293 N80-19628
Analysis and evaluation in the production process and equipment area of the low-cost solar array project
[NASA-CR-162904] 26 p0302 N80-20814
Solar power satellite system definition study, volume 4, phase 2
[NASA-CR-160565] 26 p0313 N80-21395
Phase 2 of the array automated assembly task for the low cost solar array project
[NASA-CR-162628] 26 p0315 N80-21833

SOLAR CELLS
Shallow-homojunction GaAs cells with high resistance to 1-MeV electron radiation
26 p0183 A80-21089
Polyacetylene, /CH/x - Photoelectrochemical solar cell
26 p0183 A80-21091
Antireflection coatings on solar cells
26 p0186 A80-21914
Laser treatment of phosphorus-diffused silicon solar cells
26 p0186 A80-21915
Energy analysis of CdS:Cu2S sputtered solar cells
26 p0186 A80-21918
Grain size and its influence on efficiency in polycrystalline GaAs solar cells
26 p0186 A80-21919
Temperature dependence of the maximum theoretical efficiency in solar cells
26 p0187 A80-21922
Structure of deformed silicon and implications for low-cost solar cells
26 p0191 A80-22526
Photoelectrochemical generation of hydrogen with hybrid electrodes
26 p0200 A80-23153
Recombination in the space-charge region of Schottky barrier solar cells
26 p0207 A80-23272
The open-circuit voltage of n/+/-n-p high-low-emitter /HLE/ junction solar cells in concentrated sunlight
26 p0209 A80-23496
Present status and future prospects of silicon solar cell arrays and systems
26 p0210 A80-23518
Heterojunction solar cells
26 p0210 A80-23519

Photovoltaics. I - Solar-cell arrays
26 p0214 A80-24531
Photovoltaics. II - Flat panels
26 p0214 A80-24532
Photovoltaics. III - Concentrators
26 p0214 A80-24533
Photovoltaics. IV - Advanced materials
26 p0214 A80-24534
Photovoltaics. V - Amorphous silicon cells
26 p0214 A80-24535
Native oxide and external dielectric polycrystalline GaAs MIS solar cells
26 p0223 A80-25444
Energy conversion and corrosion processes in electrochemical solar cells with semiconductor electrodes --- German thesis
26 p0225 A80-25679
Technology and performance of a high concentration solar cell power supply
26 p0226 A80-25886
Carrier generation, recombination, and transport in amorphous silicon solar cells
26 p0227 A80-26340
Preparation and photovoltaic properties of screen printed CdS/Cu/x/S solar cells
26 p0228 A80-27057
Use of solar energy under terrestrial conditions - Automated production of solar generator components
26 p0229 A80-27204
High photocurrent polycrystalline thin-film CdS/CuInSe2 solar cell
26 p0229 A80-27321
Lead-acid batteries for remote photovoltaic applications
26 p0232 A80-28014
Photovoltaic power for telecommunications
26 p0232 A80-28015
Computer modeling of a two-junction, monolithic cascade solar cell
26 p0234 A80-28330
Open-circuit voltage and interface study of silicon MOS solar cells
26 p0234 A80-28331
MOS and oxide-charge-induced /OCI/ BSF solar cells
26 p0234 A80-28337
Growth and characterization of thin film III-V compound semiconductor material for solar cell applications
26 p0244 A80-29058
Nitrogen reducing solar cells
26 p0244 A80-29059
Arabs turn their eyes to the sun --- solar energy development in Middle East
26 p0244 A80-29280
Heterojunction for thin-film solar cells
26 p0245 A80-29393
Silicon ribbon for photovoltaic cells
26 p0245 A80-29394
Thin film solar cells based on amorphous silicon
26 p0245 A80-29395
Photovoltaic hybrid collectors
26 p0245 A80-29396
The open-circuit voltage of back-surface-field /BSF/ p-n junction solar cells in concentrated sunlight
26 p0247 A80-29812
The barrier height change and current transport phenomena with the presence of interfacial layer in MIS Schottky barrier solar cells
26 p0247 A80-29815
The influence of a voltage ramp on the measurement of I-V characteristics of a solar cell
26 p0247 A80-29817
Grown junction GaAs solar cells with a thin graded band-gap Al/x/Ga/1-x/As surface layer
26 p0250 A80-30668
Amorphous Si-F-H solar cells prepared by dc glow discharge
26 p0251 A80-30940
Field-dependent quantum efficiency in hydrogenated amorphous silicon --- for solar cells
26 p0251 A80-30942
Solar cells for photovoltaic generation of electricity: Materials, devices and applications --- Book
26 p0253 A80-31900
The spectral response of a front surface field solar cell
26 p0254 A80-32331
The effects of titanium impurities in N/+//P silicon solar cells
26 p0256 A80-32503
Federal photovoltaics utilization program
[DOE/EA-0087] 26 p0267 N80-16525
Photovoltaic effect, its present understanding and remaining mysteries
[DOE/ET-23103/6] 26 p0268 N80-16535
Photovoltaic Materials and Device Measurements Workshop: Focus on polycrystalline thin film cells
[SERI/TP-49-185] 26 p0268 N80-16538
Characterization of deliberately nickel-doped silicon wafers and solar cells --- microstructure, electrical properties, and energy conversion efficiency
[NASA-CR-162790] 26 p0276 N80-17551
Segmented dish concentrator design project
[SAND-79-7024] 26 p0277 N80-17561
Photovoltaic conversion research and development in the United Kingdom
[RAE-TM-SPACE-247] 26 p0279 N80-17583
Silicon solar cells, volume 3. Citations from the Engineering Index data base --- bibliographies
[PB80-800717] 26 p0280 N80-17588
Silicon solar cells, volume 3. Citations from the NTIS data base --- bibliographies
[PB80-800691] 26 p0280 N80-17589
Silicon solar cells, volume 2. Citations from the Engineering Index data base --- bibliographies
[PB80-800709] 26 p0280 N80-17590
Development of improved wraparound contacts for silicon
[NASA-CR-159748] 26 p0285 N80-18554
Studies of silicon p-n junction solar cells
[NASA-CR-162832] 26 p0291 N80-19609
A new method of metallization for silicon solar cells
[NASA-CR-162823] 26 p0292 N80-19620
On influencing the operating temperatures of Motorola and Arco solar photovoltaic modules
[COO-4094-59] 26 p0295 N80-19649
Emerging materials systems for solar cell applications-Cu/sub 2-x/Se
[DOE/ET-23005/T2] 26 p0296 N80-19653
Cadmium sulfide solar cells, volume 1. Citations from the NTIS data base
[PB80-802218] 26 p0296 N80-19656
Comparison of theoretical and experimental solar cell performance
26 p0301 N80-20806
Analysis and evaluation in the production process and equipment area of the low-cost solar array project
[NASA-CR-162904] 26 p0302 N80-20814
High efficiency solar panel, phase 2, gallium arsenide
[AD-A079635] 26 p0316 N80-21838

SOLAR COLLECTORS
Shadow effect of adjacent solar collectors in large scale systems
26 p0183 A80-21107
Mirror enclosures for double-exposure solar collectors
26 p0184 A80-21110
Optimal controllers of the second kind --- for flat plate solar collectors
26 p0184 A80-21112
Calculation of performance of N collectors in series from test data on a single collector
26 p0184 A80-21113
The effect of a self consistent effective ambient temperature on collector efficiency parameters
26 p0184 A80-21115
Calculation of the monthly-average transmittance-absorptance product --- for solar collectors
26 p0184 A80-21117
Master Control and Data Acquisition System for a Solar Central Receiver Electric Power Plant
26 p0186 A80-21903
Fundamental characteristics of the reverse flat plate collector
26 p0187 A80-21927
Storage of solar energy
26 p0188 A80-21937
Solar heat production - Generalizations
26 p0188 A80-21950

Industrial solar thermal collectors
26 p0189 A80-21951
The utilization of industrially produced moderate-temperature solar heat
26 p0189 A80-21952
Industrial solar thermal concentrators
26 p0189 A80-21953
The real problems of solar energy
26 p0189 A80-21955
Some geometrical design aspects of a linear Fresnel reflector concentrator
26 p0193 A80-22791
Economically working big scale solar power stations pneumatic light-weight construction
26 p0208 A80-23326
Theoretical concentrations of solar radiation by central receiver systems
26 p0208 A80-23327
Theoretical study of the heating of air in a plane honeycomb solar collector
26 p0208 A80-23333
Nickel pigmented anodic aluminum oxide for selective absorption of solar energy
26 p0209 A80-23499
Research at the Building Research Establishment into the applications of solar collectors for space and water heating in buildings
26 p0209 A80-23515
Kinematic synthesis of drive mechanisms for solar concentrating collector using auxilliary mirrors
26 p0212 A80-23998
Photovoltaics. I - Solar-cell arrays
26 p0214 A80-24531
Photovoltaics. III - Concentrators
26 p0214 A80-24533
Photovoltaics. IV - Advanced materials
26 p0214 A80-24534
Development of a spherical reflector/tracking absorber solar energy collector
26 p0226 A80-25885
Tubular solar collector
26 p0231 A80-27730
A microprocessor-based system for the monitoring and control of a solar installation
26 p0242 A80-29006
Arabs turn their eyes to the sun --- solar energy development in Middle East
26 p0244 A80-29280
Photovoltaic hybrid collectors
26 p0245 A80-29396
The prospects for solar energy use in industry within the United Kingdom
26 p0248 A80-29921
Transient response of thermosyphon solar collectors
26 p0248 A80-29922
Performance calculations of tubular cover collectors
26 p0248 A80-29924
Instantaneous collector thermal efficiencies in less time
26 p0248 A80-29925
Incidence-angle modifier and average optical efficiency of parabolic trough collectors
26 p0250 A80-30772
Operating thresholds of solar collection systems
26 p0251 A80-30775
Design and testing of a cavity-type, steam-generating, central receiver for a solar thermal power plant
26 p0253 A80-31856
Design of nonimaging concentrators as second stages in tandem with image-forming first-stage concentrators
26 p0253 A80-32021
Outdoor test for thermal performance evaluation of the Owens-Illinois Sunpack SEC-601 (air) solar collector
[NASA-CR-161339] 26 p0264 N80-16492
Characterization of crushed glass as a transpired air heating solar collector material
[LA-UR-79-1336] 26 p0265 N80-16498
Solar collector manufacturing activity
[DOE/EIA-0174/78] 26 p0265 N80-16500
Fixed mirror solar concentrator for application to a 100 MW(e) electric generating plant
[GA-A-15340] 26 p0266 N80-16508
Solar energy concentrator design and operations. Citations from the NTIS data base
[NTIS/PS-79/0926/0] 26 p0270 N80-16557
Solar energy concentrator design and operations. Citations from the Engineering Index data base
[NTIS/PS-79/0927/8] 26 p0270 N80-16558
Addition of an air-cooled collector test capability to the solar collector test facility
[PB-300482/7] 26 p0270 N80-16562
Flat plate solar collector design and performance. Citations from the NTIS data base
[NTIS/PS-79/0928/6] 26 p0271 N80-16566
Flat plate solar collector design and performance. Citations from the Engineering Index data base
[NTIS/PS-79/0929/4] 26 p0271 N80-16567
Performance of a packaged solar space-heating system used with a mobile home
[PB-300890/1] 26 p0272 N80-16572
Information theory applied to solar radiation concentrators
26 p0275 N80-17539
Optical and thermal effects in linear solar concentrating collectors
26 p0275 N80-17541
Metal foils for direct application of absorber coatings on solar collectors
[LBL-9324] 26 p0277 N80-17560
Segmented dish concentrator design project
[SAND-79-7024] 26 p0277 N80-17561
Receiver assembly design studies for 2-m 90 deg parabolic-cylindrical solar collectors
[SAND-79-1026] 26 p0277 N80-17564
Performance of linear solar concentrating collectors
[SAND-79-1378C] 26 p0277 N80-17565
Preliminary study of a solar selective coating system using black cobalt oxide for high temperature solar collectors
[NASA-TM-81385] 26 p0282 N80-18156
Solar energy design improvement: A methodology for hydronic flatplate collector systems
[AD-A076836] 26 p0286 N80-18567
High temperature solar thermal receiver
[NASA-CR-162831] 26 p0292 N80-19621
Low cost point focus solar concentrator. Phase 1: Preliminary design
[JPL-9950-273] 26 p0292 N80-19622
Low cost point focus solar concentrator, phase 1
[NASA-CR-162848] 26 p0292 N80-19624
Low-cost point-focus solar concentrator, phase 1
[NASA-CR-162839] 26 p0293 N80-19625
Thermal performance evaluation of the Northrop model NSC-01-0732 concentrating solar collector array at outdoor conditions --- Marshall Space Flight Center solar house test facility
[NASA-CR-161354] 26 p0293 N80-19628
Annual technical report, fiscal year 1979. Volume 1: Executive summary
[NASA-CR-159715] 26 p0293 N80-19632
Combined solar collector and energy storage system
[NASA-CASE-LAR-12205-1] 26 p0302 N80-20810
Qualification test procedures and results for Honeywell solar collector subsystem, single-family residence
[NASA-CR-161382] 26 p0302 N80-20813
Computer simulation of a solar energy system which utilizes flat-plate collectors
[AD-A079906] 26 p0304 N80-20870
Installation and startup of the fixed mirror solar concentrator collector field subsystem
[GA-A-15344] 26 p0306 N80-20888
Optical analysis and optimization of line focus collectors
[SERI/TR-34-092] 26 p0306 N80-20893
Design and fabrication of prototype combined photovoltaic/thermal non-tracking collector
[SAND-79-7014] 26 p0307 N80-20899
Interferometric study of the natural convection characteristics of flat plate, slat and vee-corrugated solar collectors
[COO-2971-6] 26 p0307 N80-20900
Snow and ice accumulation at solar collector installations in the Chicago metropolitan area
[PB80-113749] 26 p0308 N80-20912
Solar ponds for residential heating, heat extraction from a salt gradient solar pond
[PB80-108624] 26 p0308 N80-20913
Effect of a heated atmosphere on the temperature dependence of the total emittance of black chrome solar absorber pipes
[UCRL-52851] 26 p0316 N80-21842

Application of glass technology to novel solar energy collectors
[CONF-7906118-1] 26 p0317 N80-21852
Technology assessment: Line-focus concentrators
[SAND-79-2221C] 26 p0318 N80-21871

SOLAR COOLING
Royal Society, Discussion on Solar Energy, London, England, November 15, 16, 1978, Proceedings
26 p0209 A80-23511
Solar space heating with air and liquid systems
26 p0209 A80-23512
Solar heating and air conditioning
26 p0209 A80-23516
Investigation of heat and mass transfer for a regenerator model of a solar cooling system
26 p0232 A80-28200
Prototype solar heating and combined heating cooling systems
[NASA-CR-161340] 26 p0264 N80-16485
Outdoor test for thermal performance evaluation of the Owens-Illinois Sunpack SEC-601 (air) solar collector
[NASA-CR-161339] 26 p0264 N80-16492
Commercial prototype design of a solar heating/cooling system for a manufactured home
[TREE-1384] 26 p0267 N80-16520
Solar-MEC development program, project 9103
[COO-4495-7] 26 p0267 N80-16522
Federal demonstrations of solar heating and cooling on private residences: Only limited success
[PB-301123/6] 26 p0270 N80-16555
Thermal mats for space heating and cooling
[BNL-51019] 26 p0276 N80-17555
Overview of developing programs in solar desiccant cooling for residential buildings
[SERI/TP-34-187] 26 p0278 N80-17569
National solar heating and cooling programs
[PB80-104987] 26 p0309 N80-20915
Marketing and market acceptance data from the Residential Solar Demonstration Program. Volume 1: Detailed analysis, autumn 1979
[PB80-115298] 26 p0311 N80-21197
Data requirements and thermal performance evaluation procedures for solar heating and cooling systems
[PB80-120173] 26 p0320 N80-21885

SOLAR ENERGY
Materials and performance characteristics of the HYCSOS chemical heat pump and energy conversion system
26 p0204 A80-23180
Sweden beyond oil - Nuclear commitments and solar options
26 p0255 A80-32410
Comparative analysis of solar energy storage cycles
[SAND-79-1803C] 26 p0267 N80-16516
Preparation of thin films for solar energy utilization
[SAND-79-1754C] 26 p0267 N80-16517
Continuing regional solar energy information mini-center activities and updating the SOLCOST program
[COO-4643-T2] 26 p0267 N80-16521
Solar central test facility
[SAND-79-1730C] 26 p0267 N80-16524
Solar energy for agriculture: Review of research
[PB-298688/3] 26 p0271 N80-16568
Aerosols and solar energy
[SERI/TP-36-309] 26 p0278 N80-17573
Energy accounting for solar and alternative energy sources
[ORAU/IEA-79-11(R)] 26 p0295 N80-19647
Characterization and assessment of selected solar thermal energy systems for residential and process heat applications
[LA-7995-TASE] 26 p0295 N80-19648
Solar energy heating system design package for a single-family residence at New Castle, Pennsylvania
[NASA-CR-161356] 26 p0303 N80-20865
Review of selected on-site DOE small solar thermal power plant experiments
[SAND-79-1040C] 26 p0317 N80-21854
Potential for solar/conservation technologies in the state of Washington
[WAOENG-79-3] 26 p0317 N80-21859

SOLAR ENERGY ABSORBERS
Fundamental characteristics of the reverse flat plate collector
26 p0187 A80-21927
Nickel pigmented anodic aluminum oxide for selective absorption of solar energy
26 p0209 A80-23499
Technical evaluation of gaseous suspensions of graphite for the absorption of concentrated solar radiation --- Book
26 p0214 A80-24660
Spectral selectivity of high-temperature solar absorbers
26 p0225 A80-25657
Graded metal carbide solar selective surfaces coated onto glass tubes by a magnetron sputtering system
26 p0246 A80-29742
Cylindrical magnetron sputtering system for coating solar selective surfaces onto batches of tubes
26 p0246 A80-29743
Alternative grading profile for sputtered solar selective surfaces
26 p0246 A80-29744
Performance calculations of tubular cover collectors
26 p0248 A80-29924
The sensitivity of solar transmittance, reflectance and absorptance to selected averaging procedures and solar irradiance distributions
26 p0251 A80-30774
Black a-Si solar selective absorber surfaces
26 p0254 A80-32325
Aluminium or copper substrate panel for selective absorption of solar energy
[NASA-CASE-MFS-23518-3] 26 p0260 N80-16452
Metal foils for direct application of absorber coatings on solar collectors
[LBL-9324] 26 p0277 N80-17560
Effect of a heated atmosphere on the temperature dependence of the total emittance of black chrome solar absorber pipes
[UCRL-52851] 26 p0316 N80-21842
Evaluation of selective absorbers
[TP-5461] 26 p0317 N80-21851

SOLAR ENERGY CONVERSION
Solar energy storage using chemical potential changes associated with drying of zeolites
26 p0183 A80-21106
Accuracies achievable with indirect measurements of the direct solar irradiance component
26 p0183 A80-21108
Thermal energy storage in a packed bed of iron spheres with liquid sodium coolant
26 p0183 A80-21109
Mirror enclosures for double-exposure solar collectors
26 p0184 A80-21110
Calculation of the monthly-average transmittance-absorptance product --- for solar collectors
26 p0184 A80-21117
Solar hydrogen energy
26 p0185 A80-21878
Master Control and Data Acquisition System for a Solar Central Receiver Electric Power Plant
26 p0186 A80-21903
Space manufacturing, satellite power and human exploration
26 p0186 A80-21908
Unique high concentration solar test facility
26 p0186 A80-21916
Temperature dependence of the maximum theoretical efficiency in solar cells
26 p0187 A80-21922
Storage of solar energy
26 p0188 A80-21937
Introduction to the study of solar technology
26 p0188 A80-21949
Solar heat production - Generalizations
26 p0188 A80-21950
The utilization of industrially produced moderate-temperature solar heat
26 p0189 A80-21952
The real problems of solar energy
26 p0189 A80-21955

Analyses of single and double exposure solar air heaters
26 p0193 A80-22792
On the potential of solar energy conversion into hydrogen and/or other fuels
26 p0195 A80-23107
The theoretical design of a solar engine for the production of hydrogen
26 p0195 A80-23108
Solar beam-assisted electrolyser applied to Yokohama Mark 5 and 6 --- hydrogen production
26 p0200 A80-23144
On the study of hydrogen production from water using solar thermal energy
26 p0200 A80-23147
Bio-solar hydrogen production
26 p0201 A80-23155
Attempts to produce hydrogen by coupling hydrogenase and chloroplast photosystems
26 p0201 A80-23156
A high energy hybrid system: Hydrogen - chlorine - solar - water
26 p0206 A80-23199
Advances in energy systems and technology. Volume 2 --- Book
26 p0207 A80-23218
The development of solar power satellites
26 p0207 A80-23219
Onsite solar energy systems - Economics and system design
26 p0207 A80-23221
Solar and geothermal energy
26 p0208 A80-23328
Status and development of production of cheap hydrogen
26 p0208 A80-23330
Autonomous solar electricity production with hydraulic active storage systems on the territory
26 p0208 A80-23332
Royal Society, Discussion on Solar Energy, London, England, November 15, 16, 1978, Proceedings
26 p0209 A80-23511
Photoelectrochemical cells --- with photoactive semiconducting electrodes
26 p0210 A80-23520
Energy from the biological conversion of solar energy
26 p0210 A80-23522
Indirect utilization of solar energy --- utilization of wind power created by ocean surface waves
26 p0211 A80-23524
Common properties of bacterial and visual rhodopsines - The conversion of optical energy into electric-potential difference
26 p0216 A80-25026
A central solar domestic hot water system - Performance and economic analysis
26 p0223 A80-25261
Thermal storage in density-stratified fluids and phase-change materials
26 p0225 A80-25496
Soft-energy provision - A new Utopia --- present problems of solar and biomass energy conversion
26 p0227 A80-26169
Selective optical surfaces for solar energy convertors --- Russian book
26 p0228 A80-26511
Airborne spacecraft - A remotely powered, high-altitude RPV for environmental applications
26 p0228 A80-26820
Salinity gradient energy conversion
26 p0233 A80-28262
Computer modeling of a two-junction, monolithic cascade solar cell
26 p0234 A80-28330
MOS and oxide-charge-induced /OCI/ BSF solar cells
26 p0234 A80-28337
Demonstration and analysis of a combined wind-solar energy conversion system
[AIAA 80-0643] 26 p0239 A80-28824
An integrated approach to energy supply for small communities
[AIAA 80-0651] 26 p0240 A80-28830
Solar energy: Chemical conversion and storage --- Book
26 p0243 A80-29051
Solar energy conversion in photosynthesis - Features relevant to artificial systems for the photochemical conversion of solar energy
26 p0243 A80-29053
Photochemical determinants of the efficiency of photogalvanic conversion of solar energy
26 p0243 A80-29056
Heterojunction for thin-film solar cells
26 p0245 A80-29393
Silicon ribbon for photovoltaic cells
26 p0245 A80-29394
The prospects for solar energy use in industry within the United Kingdom
26 p0248 A80-29921
Estimation and prediction of global solar radiation over Greece
26 p0248 A80-29923
Performance calculations of tubular cover collectors
26 p0248 A80-29924
Solar cells for photovoltaic generation of electricity: Materials, devices and applications --- Book
26 p0253 A80-31900
A 15kWe (nominal) solar thermal electric power conversion concept definition study: Steam Rankine reheat reciprocator system
[NASA-CR-159590] 26 p0264 N80-16491
The 15 kW sub e (nominal) solar thermal electric power conversion concept definition study: Steam Rankine turbine system
[NASA-CR-159589] 26 p0264 N80-16493
Use of solar energy for the production of electricity in the Alps
[SAND-79-6000] 26 p0265 N80-16499
Solar photovoltaic field tests and applications project
[COO-4094-26] 26 p0266 N80-16512
Objectives and strategies of the International Photovoltaic Program Plan
[SERI/TR-52-250] 26 p0266 N80-16513
Proceedings: Photovoltaics user Review Panel
[SERI/TP-69-276] 26 p0266 N80-16514
Solar central test facility
[SAND-79-1730C] 26 p0267 N80-16524
Organic photochemical storage of solar energy
[COO-4380-2] 26 p0267 N80-16527
Midtemperature solar systems test facility experiment manual and test plan
[SAND-79-0379] 26 p0268 N80-16528
Performance characteristics of a commercially available point-focus solar power --- systems analysis of a solar energy conversion system in terms of power efficiency and energy conversion efficiency
[SERI/TP-34-169] 26 p0268 N80-16529
Solar energy concentrator design and operations. Citations from the NTIS data base
[NTIS/PS-79/0926/0] 26 p0270 N80-16557
Solar energy concentrator design and operations. Citations from the Engineering Index data base
[NTIS/PS-79/0927/8] 26 p0270 N80-16558
Flat plate solar collector design and performance. Citations from the NTIS data base

Solar water pumps. Citations from the Engineering Index data base [PB80-802531] 26 p0308 N80-20910
Review of selected on-site DOE small solar thermal power plant experiments [SAND-79-1040C] 26 p0317 N80-21854

SOLAR HEATING
Energy resource requirements of a solar heating system 26 p0184 A80-21746
Fundamental characteristics of the reverse flat plate collector 26 p0187 A80-21927
Storage of solar energy 26 p0188 A80-21937

Studies in biogas technology. IV - A novel biogas plant incorporating a solar water-heater and solar still
26 p0188 A80-21941
Solar heat production - Generalizations
26 p0188 A80-21950
The utilization of industrially produced moderate-temperature solar heat
26 p0189 A80-21952
Industrial solar thermal concentrators
26 p0189 A80-21953
The industrial applications of high-temperature heat - Solar thermal and electric plants
26 p0189 A80-21954
Analyses of single and double exposure solar air heaters
26 p0193 A80-22792
Solar-thermochemical production of hydrogen from water
26 p0200 A80-23143
Multifunctional collectors for dwellings - Examples of application
26 p0208 A80-23329
Theoretical study of the heating of air in a plane honeycomb solar collector
26 p0208 A80-23333
Royal Society, Discussion on Solar Energy, London, England, November 15, 16, 1978, Proceedings
26 p0209 A80-23511
Solar space heating with air and liquid systems
26 p0209 A80-23512
Results of solar heating experiments --- for full scale domestic system performance
26 p0209 A80-23513
Systematic design assessment techniques for solar buildings
26 p0209 A80-23514
Research at the Building Research Establishment into the applications of solar collectors for space and water heating in buildings
26 p0209 A80-23515
Solar heating and air conditioning
26 p0209 A80-23516
Non-convecting solar ponds
26 p0210 A80-23517
Development of a spherical reflector/tracking absorber solar energy collector
26 p0226 A80-25885
Optimization of a solar water heating system for a Negev kibbutz
26 p0226 A80-25887
Solar water heating in the Midwest - An economic assessment based on measured performance
26 p0241 A80-28858
The prospects for solar energy use in industry within the United Kingdom
26 p0248 A80-29921
Transient response of thermosyphon solar collectors
26 p0248 A80-29922
Instantaneous collector thermal efficiencies in less time
26 p0248 A80-29925
The energy impacts of solar heating
26 p0248 A80-29946
Design and testing of a cavity-type, steam-generating, central receiver for a solar thermal power plant
26 p0253 A80-31856
The effect of material properties on the thermal efficiency of the Minto solar wheel
26 p0253 A80-31857
Prototype solar heating and combined heating cooling systems
[NASA-CR-161340] 26 p0264 N80-16485
Characterization of crushed glass as a transpired air heating solar collector material
[LA-UR-79-1336] 26 p0265 N80-16498
Computer simulation of ground coupled storage in a series solar assisted heat pump system
[BNL-26216] 26 p0266 N80-16507
Solar availability for winter space heating: An analysis of the calendar period 1953-1975
[ANL/SPG-14] 26 p0268 N80-16532
Federal demonstrations of solar heating and cooling on private residences: Only limited success
[PB-301123/6] 26 p0270 N80-16555
Performance of a packaged solar space-heating system used with a mobile home
[PB-300890/1] 26 p0272 N80-16572
Solar energy control system
[NASA-CASE-MFS-25287-1] 26 p0275 N80-17544
Thermal mats for space heating and cooling
[BNL-51019] 26 p0276 N80-17555
Solar energy system performance evaluation: Seasonal report for SEMCO, Loxahatchee, Florida
[NASA-CR-161379] 26 p0293 N80-19627
Solar energy system performance evaluation: A seasonal report for SEMCO, Macon, Georgia
[NASA-CR-161380] 26 p0293 N80-19629
Installation guidelines for solar heating system, single-family residence at New Castle, Pennsylvania
[NASA-CR-161355] 26 p0293 N80-19630
Combined solar collector and energy storage system
[NASA-CASE-LAR-12205-1] 26 p0302 N80-20810
Solar energy heating system design package for a single-family residence at New Castle, Pennsylvania
[NASA-CR-161356] 26 p0303 N80-20865
Solar heating system design package for a single-family residence at William O'Brien State Park, Minnesota
[NASA-CR-161357] 26 p0303 N80-20866
Residential solar heating and cooling using evacuated tube solar collectors: CSU Solar House 3
[COO-2858-24-SUMM] 26 p0305 N80-20887
National solar heating and cooling programs
[PB80-104987] 26 p0309 N80-20915
Marketing and market acceptance data from the Residential Solar Demonstration Program. Volume 1: Detailed analysis, autumn 1979
[PB80-115298] 26 p0311 N80-21197
Solar heating and hot water system installed at the Senior Citizen Center, Huntsville, Alabama
[NASA-CR-161384] 26 p0315 N80-21835
Economic analysis of solar industrial process heat systems. A methodology to determine annual required revenue and internal rate of return
[UCRL-52814] 26 p0317 N80-21853
Performance of a solar energy-assisted heat pump heating system: Analysis and correlation of field-collected data
[COO-2704-T1] 26 p0318 N80-21875
Low cost performance evaluation of passive solar buildings
[SERI/RR-63-223] 26 p0319 N80-21877
Performance monitoring of a passive solar heated house, Stockton, California
[EPRI-ER-1177] 26 p0319 N80-21879
Data requirements and thermal performance evaluation procedures for solar heating and cooling systems
[PB80-120173] 26 p0320 N80-21885

SOLAR HOUSES
Performance effects of Trombe wall control strategies --- passive solar building heating
26 p0183 A80-21105
Solar heat production - Generalizations
26 p0188 A80-21950
Domestic space-heating and solar energy in Ireland
26 p0193 A80-22790
Multifunctional collectors for dwellings - Examples of application
26 p0208 A80-23329
Royal Society, Discussion on Solar Energy, London, England, November 15, 16, 1978, Proceedings
26 p0209 A80-23511
Solar space heating with air and liquid systems
26 p0209 A80-23512
Results of solar heating experiments --- for full scale domestic system performance
26 p0209 A80-23513
Systematic design assessment techniques for solar buildings
26 p0209 A80-23514
Research at the Building Research Establishment into the applications of solar collectors for space and water heating in buildings
26 p0209 A80-23515
Solar heating and air conditioning
26 p0209 A80-23516
A microprocessor-based system for the monitoring and control of a solar installation
26 p0242 A80-29006

Outdoor test for thermal performance evaluation of the Owens-Illinois Sunpack SEC-601 (air) solar collector
[NASA-CR-161339] 26 p0264 N80-16492
Performance of a packaged solar space-heating system used with a mobile home
[PB-300890/1] 26 p0272 N80-16572
First passive solar home awards
[DSE-1020-T17] 26 p0276 N80-17556
Solar energy heating system design package for a single-family residence at New Castle, Pennsylvania
[NASA-CR-161356] 26 p0303 N80-20865
Residential solar heating and cooling using evacuated tube solar collectors: CSU Solar House 3
[COO-2858-24-SUMM] 26 p0305 N80-20887
Review of recent research on energy storage in residential solar total energy systems
[BNL-51012] 26 p0315 N80-21830

SOLAR PONDS (HEAT STORAGE)
Autonomous solar electricity production with hydraulic active storage systems on the territory
26 p0208 A80-23332
Non-convecting solar ponds
26 p0210 A80-23517
Salinity gradient energy conversion
26 p0233 A80-28262
Solar ponds for residential heating, heat extraction from a salt gradient solar pond
[PB80-108624] 26 p0308 N80-20913
Solar pond for industrial process heat
[SERI/TD-351-460] 26 p0319 N80-21876

SOLAR POWER SATELLITES
Microwave power beaming for long range energy transfer
26 p0193 A80-22833
Advances in energy systems and technology. Volume 2 --- Book
26 p0207 A80-23218
The development of solar power satellites
26 p0207 A80-23219
Effect of solar power satellite transmissions on radio-astronomical research
26 p0211 A80-23525
Solar power satellites and the ITU - Some U.S. policy options
26 p0223 A80-25253
Space-manufactured satellite power systems
26 p0227 A80-26003
Satellite solar power plants
26 p0252 A80-31200
Solar power satellite system definition study. Volume 1, phase 2: Executive summary
[NASA-CR-160540] 26 p0293 N80-19631
Solar power satellite system definition study, volume 4, phase 2
[NASA-CR-160565] 26 p0313 N80-21395

SOLAR RADIATION
Storage of light energy by chemical systems - Comment on long-term efficiency of iterative cyclic reactions
26 p0184 A80-21116
Theoretical concentrations of solar radiation by central receiver systems
26 p0208 A80-23327
Estimation and prediction of global solar radiation over Greece
26 p0248 A80-29923
Input data for solar systems
[DOE/TIC-10193-REV-1] 26 p0265 N80-16504
Normal incident solar radiation measurements at Upton, New York
[BNL-50939] 26 p0273 N80-16653

SOLAR REFLECTORS
Unique high concentration solar test facility
26 p0186 A80-21916
Measurement of heliostat performance characteristics
26 p0250 A80-30773
Optical and thermal effects in linear solar concentrating collectors
26 p0275 N80-17541

SOLAR SEA POWER PLANTS
Advances in energy systems and technology. Volume 2 --- Book
26 p0207 A80-23218
Sea thermal power - Competitive electricity and chemicals from the sea
26 p0207 A80-23220
Solar sea power plants. Citations from the NTIS data base
[PB80-802580] 26 p0297 N80-19661
Solar seapower plants. Citations from the Engineering Index data base
[PB80-802598] 26 p0297 N80-19662

SOLAR TOTAL ENERGY SYSTEMS
Soft-energy provision - A new Utopia --- present problems of solar and biomass energy conversion
26 p0227 A80-26169
Decentralized energy: Technology assessment and systems description
[BNL-50987] 26 p0265 N80-16502
Environmental development plan: Solar thermal power systems
[DOE/EDP-0035] 26 p0265 N80-16503
First passive solar home awards
[DSE-1020-T17] 26 p0276 N80-17556
Criteria for an ideal solar photovoltaic powered industry
[HCP/T5433-01] 26 p0279 N80-17577
Review of recent research on energy storage in residential solar total energy systems
[BNL-51012] 26 p0315 N80-21830

SOLID ELECTRODES
The kinetics of oxygen evolution on non-traditional electrodic materials --- for hydrogen production by electrolysis of KOH aqueous solutions
26 p0196 A80-23111

SOLID SOLUTIONS
Thin solid solution films Zn/x/Cd/1-x/S
26 p0194 A80-23014

SOLID WASTES
Preliminary assessment of the prospects for use of refuse-derived fuel in Maryland
[BNL-51065] 26 p0258 N80-16179

SOLID-SOLID INTERFACES
Open-circuit voltage and interface study of silicon MOS solar cells
26 p0234 A80-28331
The barrier height change and current transport phenomena with the presence of interfacial layer in MIS Schottky barrier solar cells
26 p0247 A80-29815

SOLUTIONS
Light-induced electron transfer reactions in solution, organized assemblies and at interfaces - Scope and potential applications
26 p0243 A80-29055

SOLVENT EXTRACTION
Solvolysis liquefaction of coal
26 p0187 A80-21926
Numerical modeling of heat flow in underground coal liquefaction
26 p0213 A80-24319
Filtration in coal liquefaction - Influence of filtration conditions in non-hydrogenated systems
26 p0254 A80-32371
Filtration in coal liquefaction - Influence of digestion conditions in the filtration of non-hydrogenated coal digests
26 p0255 A80-32372
Solvent refined coal process: Data correlation and analysis
[EPRI-AF-1157] 26 p0313 N80-21557

SOLVENTS
Performance of low rank coals in the Exxon Donor Solvent Process
26 p0230 A80-27419

SORPTION
The influence of Al on the hydrogen sorption properties of intermetallic compounds
26 p0203 A80-23173

SOUTH DAKOTA
Energy source book --- Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming
[DOE/TIC-10190] 26 p0306 N80-20895

SOUTHERN CALIFORNIA
Status of the Southern California Edison Company 3 MW Wind Turbine Generator (WTG) demonstration project
26 p0263 N80-16478

SOYBEANS
Remote sensing of sulfur dioxide effects on vegetation - photometric analysis of aerial photographs
[PB-300460/3] 26 p0272 N80-16600

SPACE CHARGE
Recombination in the space-charge region of Schottky barrier solar cells 26 p0207 A80-23272

SPACE EXPLORATION
Just over the horizon in space 26 p0256 A80-32511

SPACE HEATING (BUILDINGS)
Performance effects of Trombe wall control strategies --- passive solar building heating 26 p0183 A80-21105
Energy resource requirements of a solar heating system 26 p0184 A80-21746
Warm water storage in district heating systems incorporating combined heat and power plant 26 p0185 A80-21825
Heat loss detection from flat roof buildings by means of aerial thermography 26 p0191 A80-22475
Domestic space-heating and solar energy in Ireland 26 p0193 A80-22790
Analyses of single and double exposure solar air heaters 26 p0193 A80-22792
Multifunctional collectors for dwellings - Examples of application 26 p0208 A80-23329
Solar space heating with air and liquid systems 26 p0209 A80-23512
Research at the Building Research Establishment into the applications of solar collectors for space and water heating in buildings 26 p0209 A80-23515
Problems concerning the interpretation of thermographic data for the detection of energy losses from buildings 26 p0212 A80-24071
Thermography at the earth's surface and the energy efficiency of buildings 26 p0213 A80-24072
The thermodynamics of heating. I - The second law and conventional heating systems 26 p0213 A80-24512
The energy impacts of solar heating 26 p0248 A80-29946
Geothermal heating in Creil 26 p0255 A80-32499
Solar availability for winter space heating: An analysis of the calendar period 1953-1975 [ANL/SPG-14] 26 p0268 N80-16532
Federal demonstrations of solar heating and cooling on private residences: Only limited success [PB-301123/6] 26 p0270 N80-16555
Feasibility study of geothermal energy for heating greenhouses [PB-299517/3] 26 p0271 N80-16569
Performance of a packaged solar space-heating system used with a mobile home [PB-300890/1] 26 p0272 N80-16572
Performance of solar passive buildings [SAND-79-1574C] 26 p0277 N80-17566
Installation guidelines for solar heating system, single-family residence at New Castle, Pennsylvania [NASA-CR-161355] 26 p0293 N80-19630
Modeling the space conditioning energy demand of a community as a function of weather [COO-1340-65] 26 p0294 N80-19644
Characterization and assessment of selected solar thermal energy systems for residential and process heat applications [LA-7995-TASE] 26 p0295 N80-19648
Qualification test procedures and results for Honeywell solar collector subsystem, single-family residence [NASA-CR-161382] 26 p0302 N80-20813
Solar heating system design package for a single-family residence at William O'Brien State Park, Minnesota [NASA-CR-161357] 26 p0303 N80-20866
Energy efficient buildings program [LBL-9576] 26 p0304 N80-20877
Heat-pump-centered integrated community energy systems: System development [ANL/CNSV/TM-8] 26 p0305 N80-20880
Thermal energy storage application areas --- for building heating and cooling [CONS/5113-T4] 26 p0306 N80-20894
Solar ponds for residential heating, heat extraction from a salt gradient solar pond [PB80-108624] 26 p0308 N80-20913
An economical solar heated and cooled residence for southern New Mexico [PB80-108616] 26 p0309 N80-20914
Marketing and market acceptance data from the Residential Solar Demonstration Program. Volume 1: Detailed analysis, autumn 1979 [PB80-115298] 26 p0311 N80-21197
Geothermal energy market penetration: Development of a model for the residential section [PB80-118359] 26 p0311 N80-21198
Low cost performance evaluation of passive solar buildings [SERI/RR-63-223] 26 p0319 N80-21877

SPACE INDUSTRIALIZATION
The industrialisation of space 26 p0252 A80-31791

SPACE LAW
Solar power satellites and the ITU - Some U.S. policy options 26 p0223 A80-25253

SPACE MANUFACTURING
Space manufacturing, satellite power and human exploration 26 p0186 A80-21908
Space-manufactured satellite power systems 26 p0227 A80-26003

SPACE SHUTTLE ORBITERS
Orbiter fuel cell performance constraints. STS/OPS Pratt Whitney fuel cells. Operating limits for mission planning [NASA-TM-80958] 26 p0291 N80-19610

SPACE TRANSPORTATION SYSTEM
The development of solar power satellites 26 p0207 A80-23219
Solar power satellite system definition study. Volume 1, phase 2: Executive summary [NASA-CR-160540] 26 p0293 N80-19631

SPACECRAFT POWER SUPPLIES
Evaluation of concentrated space solar arrays using computer modeling --- for spacecraft propulsion and power supplies [NASA-CR-162681] 26 p0264 N80-16487
Economic analysis of the design and fabrication of a space qualified power system [NASA-TM-81418] 26 p0282 N80-18098
A linear magnetic motor/generator --- to generate electric energy using magnetic flux for spacecraft's power supply [NASA-CASE-GSC-12518-1] 26 p0290 N80-19424
Orbiter fuel cell performance constraints. STS/OPS Pratt Whitney fuel cells. Operating limits for mission planning [NASA-TM-80958] 26 p0291 N80-19610
Advanced technology light weight fuel cell program --- orbiting space vehicle long-life hydrogen oxygen fuel cell [NASA-CR-159807] 26 p0292 N80-19615
Solar power satellite system definition study. Volume 1, phase 2: Executive summary [NASA-CR-160540] 26 p0293 N80-19631
Lightweight fuel cell powerplant components program [NASA-CR-161412] 26 p0298 N80-20306
The 1979 Goddard Space Flight Center Battery Workshop [NASA-CP-2117] 26 p0302 N80-20820
Environmental development plan for space applications --- development of nuclear power supplies for use in space [DOE/EDP-0057] 26 p0309 N80-20922

SPACECRAFT PROPULSION
Evaluation of concentrated space solar arrays using computer modeling --- for spacecraft propulsion and power supplies [NASA-CR-162681] 26 p0264 N80-16487

SPANLOADER AIRCRAFT
The changing horizons for technical progress. II 26 p0229 A80-27270

SPARK IGNITION
Hydrogen injection two-stroke spark ignition engine 26 p0203 A80-23177
A technical conception for highly developed spark-ignition engines 26 p0235 A80-28471

Trends in the construction of Otto engines in the U.S
26 p0235 A80-28472
A study on plasma plug --- high energy ignition plugs for exhaust pollution reduction and fuel consumption decrease in automotive gasoline engines
26 p0252 A80-31775
Combustion and operating characteristics of spark-ignition engines
[NASA-CR-162896] 26 p0298 N80-20340

SPARK PLUGS
A study on plasma plug --- high energy ignition plugs for exhaust pollution reduction and fuel consumption decrease in automotive gasoline engines
26 p0252 A80-31775

SPATIAL FILTERING
Choice of an optimum multichannel Nd:glass laser system for fusion experiments
26 p0230 A80-27340

SPECIFICATIONS
The Boeing MOD-2 wind turbine system rotor
26 p0263 N80-16477

SPECTRAL EMISSION
Spectral selectivity of high-temperature solar absorbers
26 p0225 A80-25657

SPECTRAL SENSITIVITY
Selective optical surfaces for solar energy convertors --- Russian book
26 p0228 A80-26511
Graded metal carbide solar selective surfaces coated onto glass tubes by a magnetron sputtering system
26 p0246 A80-29742
The sensitivity of solar transmittance, reflectance and absorptance to selected averaging procedures and solar irradiance distributions
26 p0251 A80-30774
Black a-Si solar selective absorber surfaces
26 p0254 A80-32325

SPECTRAL SIGNATURES
Remote sensing of sulfur dioxide effects on vegetation - photometric analysis of aerial photographs
[PB-300460/3] 26 p0272 N80-16600

SPEED CONTROL
Control strategy for a variable-speed wind energy conversion system
[NASA-TM-75512] 26 p0285 N80-18558

SPIN-SPIN COUPLING
Spin-aligned hydrogen --- atoms at lowest electronic energy magnetic sublevels as substance for molecular production
26 p0200 A80-23151

SPRINGS (WATER)
A model for the Sulphur Springs geothermal field St. Lucia
26 p0231 A80-27924

SPUTTERING
Energy analysis of CdS:Cu2S sputtered solar cells
26 p0186 A80-21918
Graded metal carbide solar selective surfaces coated onto glass tubes by a magnetron sputtering system
26 p0246 A80-29742
Cylindrical magnetron sputtering system for coating solar selective surfaces onto batches of tubes
26 p0246 A80-29743
Alternative grading profile for sputtered solar selective surfaces
26 p0246 A80-29744

STAINLESS STEELS
Hydrogen embrittlement, stress state and design considerations
26 p0204 A80-23186

STATISTICAL ANALYSIS
Gas production of Devonian shale wells relative to photo lineament locations: A statistical analysis
[METC/CR-79/28] 26 p0260 N80-16410

STATISTICAL WEATHER FORECASTING
A statistical methodology for study of wind characteristics from a close array of stations
26 p0211 A80-23536

STEAM
Nuclear methane reforming for coal gasification
26 p0195 A80-23105
The ZnSe thermochemical cycle for hydrogen production - Chemical and process design studies
26 p0198 A80-23133
A kinetic investigation of the reforming of natural gas for the production of hydrogen
26 p0199 A80-23139
Nuclear methane reforming for coal gasification
26 p0233 A80-28276
Coal gasification in steam at very high temperatures
26 p0249 A80-30522
Reaction kinetics between steam and oil-shale residual carbon
26 p0250 A80-30528

STEAM TURBINES
Co-generation at a practical plant level - Single stage steam turbine generator set replaces pressure reducing station to reduce plant energy consumption
26 p0222 A80-25116
Gas turbines
26 p0255 A80-32399
Study of advanced radial outflow turbine for solar steam Rankine engines
[NASA-CR-159695] 26 p0263 N80-16483
The 15 kW sub e (nominal) solar thermal electric power conversion concept definition study: Steam Rankine turbine system
[NASA-CR-159589] 26 p0264 N80-16493
Waste heat recovery unit design for gas turbine propulsion systems
[AD-A078154] 26 p0290 N80-19503

STEEL STRUCTURES
Design, fabrication, and test of a steel spar wind turbine blade
26 p0262 N80-16472
WTG Energy Systems' rotor: Steel at 80 feet
26 p0262 N80-16473
The MOD-1 steel blade
26 p0263 N80-16476

STEELS
Energy conservation in the U.S. economy from increased recycle of obsolete steel scrap
26 p0290 N80-19492
Benefits of increased use of continuous casting by the United States steel industry
[PB80-104904] 26 p0314 N80-21612

STIRLING CYCLE
The theoretical design of a solar engine for the production of hydrogen
26 p0195 A80-23108
Stirling engine design and feasibility for automotive use --- Book
26 p0234 A80-28425
Solar powered liquid piston Stirling cycle irrigation pump
[SAN-1894-1] 26 p0294 N80-19641
Supporting research and technology for automotive Stirling engine development
[NASA-TM-81495] 26 p0311 N80-21200

STORAGE BATTERIES
Development of electrochemical storage batteries with improved energy density
[BMFT-FB-T-77-88] 26 p0279 N80-17582
Characterization of prototype secondary lithium battery
26 p0303 N80-20832
The Exxon rechargeable cells --- solar rechargeable clocks
26 p0303 N80-20834
Status of the DOE battery and electrochemical technology program
[MTR-8026] 26 p0307 N80-20902
Research, development and demonstration of lead-acid batteries for electric vehicle propulsion
[ANL/OEPM-78-7] 26 p0317 N80-21860

STORAGE STABILITY
Stability studies of coal liquids
[PETC/TR-79/5] 26 p0257 N80-16129
Hydrogen as a fuel --- automobiles
[TT-7903] 26 p0283 N80-18212
Stability survey of hydrocarbon fuels
[BETC-1778-4] 26 p0300 N80-20424

STORAGE TANKS
A storage tank for vehicular storage of liquid hydrogen
26 p0231 A80-27729
SEAS - A system for undersea storage of thermal energy
26 p0232 A80-28257

STRATIGRAPHY
Subsurface stratigraphy of the Middle and Upper Devonian clastic sequence in southern West Virginia and its relation to gas production
26 p0273 N80-16628

STRESS ANALYSIS
Mod 1 wind turbine generator failure modes and effects analysis
[NASA-CR-159494] 26 p0303 N80-20864

STRESS MEASUREMENT
Operational experience with VAWT blades --- structural performance
26 p0262 N80-16468

STRUCTURAL ANALYSIS
Operational experience with VAWT blades --- structural performance
26 p0262 N80-16468
Structural analysis considerations for wind turbine blades
26 p0262 N80-16469

STRUCTURAL DESIGN
Possibilities and limits of the conception of an up-to-date compact vehicle for the nineties
26 p0236 A80-28481
The contribution of Volkswagenwerk AG to the automobile concept of the 90's
26 p0236 A80-28482
Low cost composite blades for large wind turbines
[AIAA 80-0634] 26 p0239 A80-28820
Installation and checkout of the DOE/NASA Mod-1 2000-kW wind turbine generator
[AIAA 80-0638] 26 p0241 A80-28835
Design evolution of large wind turbine generators
26 p0261 N80-16455
The General Electric MOD-1 wind turbine generator program
26 p0261 N80-16456
The Boeing MOD-2 wind tunnel system rated at 2.5 MW
26 p0261 N80-16457
Structural analysis considerations for wind turbine blades
26 p0262 N80-16469
Design, fabrication, and test of a steel spar wind turbine blade
26 p0262 N80-16472
System configuration improvement
26 p0263 N80-16481
Low-cost structures for photovoltaic arrays
[SAND-79-7006] 26 p0268 N80-16537
Design, fabrication, test, and evaluation of a prototype 150-foot long composite wind turbine blade
[NASA-CR-159775] 26 p0276 N80-17548
First passive solar home awards
[DSE-1020-T17] 26 p0276 N80-17556
Segmented dish concentrator design project
[SAND-79-7024] 26 p0277 N80-17561
Receiver assembly design studies for 2-m 90 deg parabolic-cylindrical solar collectors
[SAND-79-1026] 26 p0277 N80-17564
Solar energy design improvement: A methodology for hydronic flatplate collector systems
[AD-A076836] 26 p0286 N80-18567
Magnetohydrodynamic (MHD) magnet modeling
[AD-A078865] 26 p0290 N80-19443
Low cost point focus solar concentrator. Phase 1: Preliminary design
[JPL-9950-273] 26 p0292 N80-19622
Low-cost point-focus solar concentrator, phase 1
[NASA-CR-162839] 26 p0293 N80-19625
Design and fabrication of prototype combined photovoltaic/thermal non-tracking collector
[SAND-79-7014] 26 p0307 N80-20899

STRUCTURAL DESIGN CRITERIA
Wind loading definition for the structural design of wind turbine generators
[AIAA 80-0610] 26 p0237 A80-28807
Alcoa wind turbines
26 p0261 N80-16464
Large, low cost composite wind turbine blades
26 p0263 N80-16475

STRUCTURAL ENGINEERING
Fabrication of extruded vertical axis turbine blades
26 p0262 N80-16467
The use of wood for wind turbine blade construction
26 p0262 N80-16474
The MOD-1 steel blade
26 p0263 N80-16476
The Boeing MOD-2 wind turbine system rotor
26 p0263 N80-16477
Proceedings of the 13th Project integration meeting
[NASA-CR-162787] 26 p0276 N80-17549

STRUCTURAL FAILURE
Hydrogen embrittlement, stress state and design considerations
26 p0204 A80-23186

STRUCTURAL MEMBERS
Low-cost structures for photovoltaic arrays
[SAND-79-7006] 26 p0268 N80-16537

STRUCTURAL PROPERTIES (GEOLOGY)
Some application of Landsat imagery interpretation for petroleum targetting in India
26 p0191 A80-22433
Oil and gas exploration by pattern recognition of lineament assemblages associated with bends in wrench faults
26 p0191 A80-22441
Gas production of Devonian shale wells relative to photo lineament locations: A statistical analysis
[METC/CR-79/28] 26 p0260 N80-16410
Bibliography of geology and hydrology, eastern New Mexico
[PB-300832/3] 26 p0273 N80-16663

STRUCTURAL WEIGHT
Possibilities and limits of the conception of an up-to-date compact vehicle for the nineties
26 p0236 A80-28481

SUBMERGED BODIES
Flap type weather proof ocean wave energy converter
26 p0232 A80-28258
Submerged cylinder wave energy device - Theory and experiment
26 p0251 A80-30801

SUBSONIC AIRCRAFT
Durability of foam insulation for LH2 fuel tanks of future subsonic transports
26 p0191 A80-22687

SUBSTRATES
The doping of amorphous silicon for solar cells
26 p0187 A80-21921
Evaluation of high chromium overlays to protect less alloyed substrates from corrosion in a coal gasification atmosphere
[FE-2621-5] 26 p0313 N80-21520

SULFATES
An evaluation of candidate seed processing systems for open cycle MHD --- sulfur removal and control
26 p0217 A80-25072

SULFATION
Mixed potential analysis of sulfation of molten carbonate fuel cells
26 p0255 A80-32501

SULFUR
Development of sulfur-tolerant components for the molten carbonate fuel cell
26 p0190 A80-22167

SULFUR COMPOUNDS
Fluidized bed combustion of high sulphur coals
26 p0225 A80-25494

SULFUR DIOXIDES
A feasibility study on thermochemical water-splitting cycles using sulfur compounds
26 p0197 A80-23121
Chemical studies on the general atomic sulfur-iodine thermochemical water-splitting cycle
26 p0197 A80-23122
The reaction of sulfur dioxide with water and a halogen - The cases of bromine and iodine
26 p0197 A80-23125
Electrochemical aspects of the H2SO4-SO2 thermoelectrochemical cycle for hydrogen production
26 p0198 A80-23128
The oxidation of sulphur dioxide by bromine and water
26 p0245 A80-29407
Remote sensing of sulfur dioxide effects on vegetation - photometric analysis of aerial photographs
[PB-300460/3] 26 p0272 N80-16600

Coal processing fuel cell utilization. Task 8: H2S removal by calcium-based sorbents
[PSI-TR-167] 26 p0288 N80-19300

SULFUR OXIDES

Evaluation of a sulfur oxide chemical heat storage process for a steam solar electric plant
[LBL-7868-REV] 26 p0306 N80-20890

SULFURIC ACID

Electrochemical aspects of the H2SO4-SO2 thermoelectrochemical cycle for hydrogen production
26 p0198 A80-23128

Energy balance calculations and assessment of two thermochemical sulfur cycles
26 p0198 A80-23131

Material corrosion investigations for the General Atomic sulfur-iodine thermochemical water-splitting cycle
26 p0204 A80-23189

A heat penalty and economic analysis of the hybrid sulfuric acid process
26 p0245 A80-29406

SUPERCONDUCTING MAGNETS

Compressive fatigue tests on a unidirectional glass/polyester composite at cryogenic temperatures --- for superconducting energy storage magnet structural supports
26 p0191 A80-22690

Superconducting magnets for mirror machines
26 p0215 A80-24672

Superconducting MHD magnets - Technology development, procurement and the path to commercial scale
26 p0218 A80-25077

A modular design for a superconducting magnet for the ETF and larger MHD generators
26 p0218 A80-25078

A superconducting dipole magnet for the CFFF MHD facility at the University of Tennessee Space Institute --- Coal-Fired Flow Facility
26 p0218 A80-25079

Effective thermal and electrical resistances of stabilized layered superconductors with nonideal phase contact
26 p0252 A80-31507

Magnetohydrodynamic (MHD) magnet modeling
[AD-A078865] 26 p0290 N80-19443

The 1-GWh diurnal load-leveling superconducting magnetic energy storage system reference design. Appendix C: Dewar and structural support
[LA-7885-MS-VOL-6] 26 p0307 N80-20897

SUPERCONDUCTING POWER TRANSMISSION

Permanent magnet and superconducting generators in airborne, high power systems --- computer program to predict weight of the generators and component systems
[AD-A078424] 26 p0284 N80-18311

Helium research in support of superconducting power transmission
[PB80-116502] 26 p0314 N80-21697

SUPERHEATING

The effect of superheating on the performance of floating droplet direct contact heat exchangers
26 p0260 N80-16293

SUPERSONIC DIFFUSERS

Design description and performance predictions for the first CDIF power train --- MHD generator combustor, power channel and diffusers
26 p0216 A80-25062

SUPERSONIC TRANSPORTS

The changing horizons for technical progress. II
26 p0229 A80-27270

SUPPLYING

Report on the gas supply industry
[ERG-027] 26 p0286 N80-18579

SURFACE PROPERTIES

Selective optical surfaces for solar energy convertors --- Russian book
26 p0228 A80-26511

The spectral response of a front surface field solar cell
26 p0254 A80-32331

SURFACE TEMPERATURE

Input data for solar systems
[DOE/TIC-10193-REV-1] 26 p0265 N80-16504

SURFACE VEHICLES

Hydrogen energy in United States Post Office delivery systems
26 p0203 A80-23178

Light rail transit in the United States
26 p0252 A80-31770

SWITCHING CIRCUITS

A battery-run pulsed motor with inherent dynamic electronic switch control
26 p0242 A80-29008

SYNCHRONOUS MOTORS

WTG Energy Systems' MP1-200 200 kilowatt wind turbine generator --- a fixed pitch rotor configuration driving a synchronous generator
26 p0261 N80-16458

SYNTHETIC FUELS

Application of centrifugal separation to the production of hydrogen from coal
26 p0194 A80-22869

On the potential of solar energy conversion into hydrogen and/or other fuels
26 p0195 A80-23107

Equilibrium effects in high-pressure hydrogen production from thermochemical water-splitting cycles
26 p0198 A80-23127

Energy balance calculations and assessment of two thermochemical sulfur cycles
26 p0198 A80-23131

Recent research on thermochemical hydrogen production at the Oak Ridge National Laboratory
26 p0198 A80-23132

Coal liquefaction processes --- Book
26 p0242 A80-28953

The global carbon dioxide problem - Impacts of U.S. synthetic fuel- and coal-fired electricity generating plants
26 p0248 A80-29938

Balancing the process of hydrating gasification of brown coal
26 p0250 A80-30597

Development studies on selected conversion of synthesis gas from coal to high octane gasoline
[FE-2276-27] 26 p0259 N80-16190

Gasohol: A technical memorandum
[PB80-105885] 26 p0259 N80-16194

Alcohol fuels. Citations from the American petroleum institute data base --- a bibliography with abstracts
[NTIS/PS-79/0911/2] 26 p0259 N80-16195

Production of synthetic gas from nuclear energy sources
[LA-7592-MS] 26 p0274 N80-17244

Experimental alcohol fuel plants
[ATF-P-5000-2] 26 p0283 N80-18203

Alcohol fuels information directory
[ATF-P-5000-3] 26 p0283 N80-18204

Methanol and methyl fuel catalysts
[FE-3177-4] 26 p0288 N80-19302

Synthesis gas demonstration plant program, phase 1
[FE-25770-6] 26 p0289 N80-19308

Pollutants from synthetic fuels production: Sampling and analysis methods for coal gasification
[PB80-104656] 26 p0289 N80-19309

Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[FE-2315-37] 26 p0298 N80-20407

Synthetic fuels from peat gasification
[CONF-790803-55] 26 p0298 N80-20412

Liquid phase methanation/shift pilot plant operation and laboratory support work
[FE-2036-37] 26 p0298 N80-20413

Zinc halide hydrocracking process for distillate fuels from coal
[FE-1743-68] 26 p0300 N80-20426

Biomass energy systems: Environmental readiness document
[DOE/ERD-0021] 26 p0308 N80-20905

SYSTEM EFFECTIVENESS

Energy accounting of alternative energy sources
26 p0193 A80-22868

Thermodynamics of heating. II
26 p0227 A80-26309

Geothermal heating in Creil
26 p0255 A80-32499

SYSTEM FAILURES

Mod 1 wind turbine generator failure modes and effects analysis
[NASA-CR-159494] 26 p0303 N80-20864

SYSTEMS ANALYSIS
A performance and economic evaluation of annual cycle energy storage /ACES/
26 p0223 A80-25260
Independent assessment of energy policy models
[EPRI-EA-1071] 26 p0266 N80-16510
Performance characteristics of a commercially available point-focus solar power --- systems analysis of a solar energy conversion system in terms of power efficiency and energy conversion efficiency
[SERI/TP-34-169] 26 p0268 N80-16529
Direct energy conversion systems
[COO-2218-117] 26 p0269 N80-16543
Comparative assessment of residential energy supply systems that use fuel cells: Executive summary --- domestic energy supply systems analysis of coal fired power plants using fuel cells
[PB-299207/1] 26 p0271 N80-16564
First passive solar home awards
[DSE-1020-T17] 26 p0276 N80-17556
Low cost performance evaluation of passive solar buildings
[SERI/RR-63-223] 26 p0319 N80-21877
Data requirements and thermal performance evaluation procedures for solar heating and cooling systems
[PB80-120173] 26 p0320 N80-21885

SYSTEMS ENGINEERING
Shadow effect of adjacent solar collectors in large scale systems
26 p0183 A80-21107
Magnetohydrodynamic power generation - Program planning and status
26 p0184 A80-21449
Open-cycle MHD powerplants - Performance, cost and technology demonstration strategies
[AIAA PAPER 80-0180] 26 p0192 A80-22739
Heat pumps --- Book
26 p0207 A80-23224
Systematic design assessment techniques for solar buildings
26 p0209 A80-23514
The economic significance of Q for mirror reactors - Combinations of Q and M which look promising --- parameters affecting energy conversion efficiency in fusion reactor
26 p0215 A80-24666
First-principle component models for control system simulation of MHD-steam plants
26 p0220 A80-25095
Choice of an optimum multichannel Nd:glass laser system for fusion experiments
26 p0230 A80-27340
Photovoltaic power for telecommunications
26 p0232 A80-28015
Demonstration and analysis of a combined wind-solar energy conversion system
[AIAA 80-0643] 26 p0239 A80-28824
Design and testing of a cavity-type, steam-generating, central receiver for a solar thermal power plant
26 p0253 A80-31856
System configuration improvement
26 p0263 N80-16481
Prototype solar heating and combined heating cooling systems
[NASA-CR-161340] 26 p0264 N80-16485
Application analysis and photovoltaic system conceptual design for service/commercial/institutional and industrial sectors, task 1 report
[SAND-78-7032] 26 p0269 N80-16550
Solar energy control system
[NASA-CASE-MFS-25287-1] 26 p0275 N80-17544
A fluorescent radiation converter
[NASA-CASE-GSC-12528-1] 26 p0283 N80-18261
Solar energy heating system design package for a single-family residence at New Castle, Pennsylvania
[NASA-CR-161356] 26 p0303 N80-20865
Solar heating system design package for a single-family residence at William O'Brien State Park, Minnesota
[NASA-CR-161357] 26 p0303 N80-20866
Solar power satellite system definition study, volume 4, phase 2
[NASA-CR-160565] 26 p0313 N80-21395

SYSTEMS STABILITY
Experimental studies of an inert gas disk MHD generator with a small seed fraction
26 p0219 A80-25088

T

TAR SANDS
Surface-active materials from Athabasca oil sands
26 p0192 A80-22770

TARS
Heavy hydrocarbons from coal gasification vapor pressures and dew point
26 p0257 N80-16111
Control technologies for particulate and tar emissions from coal converters
[PB80-108392] 26 p0310 N80-20949

TAYLOR INSTABILITY
Application of plasma focus device to compression of toroidal plasma
26 p0229 A80-27058

TECHNOLOGICAL FORECASTING
Photovoltaic cost blitz spawns new silicon processes
26 p0186 A80-21913
Photovoltaics. I - Solar-cell arrays
26 p0214 A80-24531
Photovoltaics. II - Flat panels

Energy from the west: Impact analysis report. Volume 1: Introduction and summary [PB80-113566] 26 p0319 N80-21884

TECHNOLOGY TRANSFER
Electrolysis-based hydrogen storage systems overview and rationale of the Brookhaven National Laboratory managed program [BNL-26904] 26 p0296 N80-19654

TECHNOLOGY UTILIZATION
Heat pumps --- Book 26 p0207 A80-23224
Non-electric fusion energy applications 26 p0215 A80-24676
Application of black-liquor boiler technology to MHD heat and seed recovery equipment design 26 p0217 A80-25070
Metal/air batteries: Their status and potential - A review 26 p0231 A80-28012
Hydrogen energy research programs in Japan 26 p0233 A80-28271
The industrialisation of space 26 p0252 A80-31791
Space benefits: The secondary application of aerospace technology in other sectors of the economy [NASA-CR-162697] 26 p0274 N80-16950
State-of-the-art of solar control systems in industrial process heat applications [SERI/TP-39-240] 26 p0277 N80-17562
Criteria for an ideal solar photovoltaic powered industry [HCP/T5433-01] 26 p0279 N80-17577
NASA authorization, 1981, program review, volume 1 [GPO-53-814] 26 p0281 N80-17913
Geothermal energy development in the eastern United States. Evaluation of potential geothermal resource areas [PB-299925/8] 26 p0285 N80-18547
National solar heating and cooling programs [PB80-104987] 26 p0309 N80-20915
Marketing and market acceptance data from the Residential Solar Demonstration Program. Volume 1: Detailed analysis, autumn 1979 [PB80-115298] 26 p0311 N80-21197
Hydro for the eighties: Bringing hydroelectric power to low income people, the work book. A slide presentation: Audio cassette and workbook [PB80-103948] 26 p0319 N80-21883

TECTONICS
The use of different-scale multispectral space photographs of the earth for the geological study of lands with oil and natural gas 26 p0254 A80-32276
The Yallahs fan delta, southeastern Jamaica: A depositional model for active tectonic coastlines 26 p0273 N80-16632

TEETERING
Teetered, tip-controlled rotor: Preliminary test results from Mod-0 100-kW experimental wind turbine [NASA-TM-81445] 26 p0291 N80-19613

TELECOMMUNICATION
Solar power satellites and the ITU - Some U.S. policy options 26 p0223 A80-25253
Photovoltaic power for telecommunications 26 p0232 A80-28015

TEMPERATURE DEPENDENCE
The temperature dependence of the characteristics of sputtered a-Si-H solar cells 26 p0187 A80-21920
Temperature dependence of the maximum theoretical efficiency in solar cells 26 p0187 A80-21922

TEMPERATURE EFFECTS
The doping of amorphous silicon for solar cells 26 p0187 A80-21921
Structure of deformed silicon and implications for low-cost solar cells 26 p0191 A80-22526
Filtration in coal liquefaction - Influence of filtration conditions in non-hydrogenated systems 26 p0254 A80-32371
Effect of a heated atmosphere on the temperature dependence of the total emittance of black chrome solar absorber pipes [UCRL-52851] 26 p0316 N80-21842

TEMPERATURE MEASUREMENT
Simultaneous determination of quantum efficiency and energy efficiency of semiconductor photoelectrochemical cells by photothermal spectroscopy 26 p0247 A80-29897
Solar energy control system [NASA-CASE-MFS-25287-1] 26 p0275 N80-17544

TEMPERATURE PROFILES
Assessment of low- to moderate-temperature geothermal resources of Nevada [NVO-01556-1] 26 p0301 N80-20792

TENNESSEE
Remote sensing of sulfur dioxide effects on vegetation - photometric analysis of aerial photographs
[PB-300460/3] 26 p0272 N80-16600

TENSILE STRENGTH
Thermal, mechanical, and physical properties of selected bituminous coals and cokes
[PB-300398/5] 26 p0273 N80-16932

TERRAIN ANALYSIS
Wind characteristics over complex terrain relative to WECS siting --- Wind Energy Conversion System
[AIAA 80-0645] 26 p0239 A80-28825

TEST EQUIPMENT
Light-duty diesel gaseous emissions measurement - comparison of dilution tunnel test results to certification cell test results
[PB80-115991] 26 p0310 N80-20945

TEST FACILITIES
Unique high concentration solar test facility
26 p0186 A80-21916
A superconducting dipole magnet for the CFFF MHD facility at the University of Tennessee Space Institute --- Coal-Fired Flow Facility
26 p0218 A80-25079
Conceptual design of an MHD/steam power plant of pilot scale /ETF/ and preliminary analyses of early commercial MHD power plants
26 p0220 A80-25097
A 250 MWt MHD Engineering Test Facility /ETF/ system design
26 p0220 A80-25098
A modular approach to an engineering test facility and beyond --- for coal-fired MHD generators
26 p0221 A80-25103
Solar central test facility
[SAND-79-1730C] 26 p0267 N80-16524
Midtemperature solar systems test facility experiment manual and test plan
[SAND-79-0379] 26 p0268 N80-16528
Development program for MHD direct coal-fired power generation test facility
[FE-1760-34] 26 p0318 N80-21864

TEST STANDS
One-stage cyclone combustor for coal fired test stand of 4MW thermal power --- for MHD generators
26 p0222 A80-25111
Addition of an air-cooled collector test capability to the solar collector test facility
[PB-300482/7] 26 p0270 N80-16562

TETHERED BALLOONS
Measurements of wind shear at the Mod-1 Site, Boone, N.C --- for wind turbine
[AIAA 80-0648] 26 p0240 A80-28828

THEMATIC MAPPING
Estimation of primary production of vegetation in agricultural and forested areas using Landsat data
26 p0191 A80-22456

THERMAL ABSORPTION
A metal hydrogen heat pump as topping process for power generation
26 p0204 A80-23181

THERMAL BATTERIES
Improved thermal battery --- military applications
[AD-A075835] 26 p0276 N80-17554

THERMAL CONDUCTIVITY
Numerical modeling of heat flow in underground coal liquefaction
26 p0213 A80-24319
Thermal, mechanical, and physical properties of selected bituminous coals and cokes
[PB-300398/5] 26 p0273 N80-16932

THERMAL DECOMPOSITION
Open-loop thermochemical cycles for the production of hydrogen
26 p0233 A80-28274

THERMAL DIFFUSION
Separation of hydrogen from the mixture of hydrogen iodide, hydrogen and iodine in thermogravitational column
26 p0200 A80-23145

THERMAL EMISSION
Spectral selectivity of high-temperature solar absorbers
26 p0225 A80-25657

THERMAL ENERGY
On the study of hydrogen production from water using solar thermal energy
26 p0200 A80-23147
The effect of material properties on the thermal efficiency of the Minto solar wheel
26 p0253 A80-31857
Energy storage
26 p0255 A80-32398
High-temperature molten salt thermal energy storage systems
[NASA-CR-159663] 26 p0275 N80-17547
Thermal energy storage, volume 2. Citations from the NTIS data base
[NTIS/PS-79/0952/6] 26 p0279 N80-17584
Thermal energy storage, volume 1. Citations from the NTIS data base
[NTIS/PS-79/0951/8] 26 p0279 N80-17585
Thermal energy storage, volume 1. Citations from the Engineering Index data base
[NTIS/PS-79/0953/4] 26 p0279 N80-17586
Thermal energy storage, volume 2. Citations from the Engineering Index data base
[NTIS/PS-79/0954/2] 26 p0279 N80-17587
Thermal fluid selection for long-distance heat transmission
[CONF-790803-47] 26 p0305 N80-20879
Thermal energy storage application areas --- for building heating and cooling
[CONS/5113-T4] 26 p0306 N80-20894
Environmental development plan for space applications --- development of nuclear power supplies for use in space
[DOE/EDP-0057] 26 p0309 N80-20922
General sensitivity analysis of solar thermal-electric plants
26 p0313 N80-21379

THERMAL EXPANSION
Thermal, mechanical, and physical properties of selected bituminous coals and cokes
[PB-300398/5] 26 p0273 N80-16932

THERMAL INSULATION
Durability of foam insulation for LH2 fuel tanks of future subsonic transports
26 p0191 A80-22687
Aerial thermography - A tool for making people aware of energy conservation
26 p0212 A80-24070
Problems concerning the interpretation of thermographic data for the detection of energy losses from buildings
26 p0212 A80-24071
Thermography at the earth's surface and the energy efficiency of buildings
26 p0213 A80-24072
Outgassing behavior of carbon-bonded carbon-fiber thermal insulation
[CONF-790625-8] 26 p0313 N80-21456

THERMAL MAPPING
Heat loss detection from flat roof buildings by means of aerial thermography
26 p0191 A80-22475
Aerial thermography - A tool for making people aware of energy conservation
26 p0212 A80-24070
Problems concerning the interpretation of thermographic data for the detection of energy losses from buildings
26 p0212 A80-24071
A model for the Sulphur Springs geothermal field St. Lucia
26 p0231 A80-27924

THERMAL RESISTANCE
Effective thermal and electrical resistances of stabilized layered superconductors with nonideal phase contact
26 p0252 A80-31507

THERMAL SIMULATION
Systematic design assessment techniques for solar buildings
26 p0209 A80-23514

THERMIONIC CONVERTERS
Cesium vapor source with a gas-controlled heat pipe for thermionic energy converters
26 p0249 A80-30241
Low-temperature thermionic converter with an expanded-area collector
26 p0249 A80-30242
DOE/JPL advanced thermionic technology program
[COO-3056-37] 26 p0304 N80-20873
Potentialities of TEC topping: A simplified view of parametric effects
[NASA-TM-81468] 26 p0321 N80-22083

THERMIONIC POWER GENERATION
Comments on TEC trends
[NASA-TM-79317] 26 p0273 N80-16885
DOE/JPL advanced thermionic technology program
[COO-3056-37] 26 p0304 N80-20873
Potentialities of TEC topping: A simplified view of parametric effects
[NASA-TM-81468] 26 p0321 N80-22083
THERMIONICS
Comments on TEC trends
[NASA-TM-79317] 26 p0273 N80-16885
THERMOCHEMICAL PROPERTIES
Development, design and operation of a continuous laboratory-scale plant for hydrogen production by the Mark-13 cycle
26 p0197 A80-23126
Equilibrium effects in high-pressure hydrogen production from thermochemical water-splitting cycles
26 p0198 A80-23127
Thermochemical water splitting cycles - Impact of thermal burdens and kinetics
26 p0199 A80-23138
Solar-thermochemical production of hydrogen from water
26 p0200 A80-23143
Thermochemical or hybrid cycles of hydrogen production techno-economical comparison with water electrolysis
26 p0205 A80-23191
Engineering impact on the validity of the Mark-16 thermochemical cycle --- hydrogen production restrictions and prospects
26 p0205 A80-23198
Laser-fusion production of hydrogen by radiolytic-thermochemical cycles
26 p0206 A80-23201
THERMOCHEMISTRY
Nuclear energy as a primary energy source for hydrogen production
26 p0194 A80-23102
On the potential of solar energy conversion into hydrogen and/or other fuels
26 p0195 A80-23107
Irreversibility analysis of hydrogen separation schemes in thermochemical cycles
26 p0197 A80-23120
A feasibility study on thermochemical water-splitting cycles using sulfur compounds
26 p0197 A80-23121
Chemical studies on the general atomic sulfur-iodine thermochemical water-splitting cycle
26 p0197 A80-23122
The reaction of sulfur dioxide with water and a halogen - The cases of bromine and iodine
26 p0197 A80-23125
Electrochemical aspects of the H2SO4-SO2 thermoelectrochemical cycle for hydrogen production
26 p0198 A80-23128
The decomposition of hydrogen bromide using iron bromide and magnetite
26 p0198 A80-23130
Energy balance calculations and assessment of two thermochemical sulfur cycles
26 p0198 A80-23131
Recent research on thermochemical hydrogen production at the Oak Ridge National Laboratory
26 p0198 A80-23132
The ZnSe thermochemical cycle for hydrogen production - Chemical and process design studies
26 p0198 A80-23133
A study of the cerium-chlorine system for thermochemical production of hydrogen
26 p0198 A80-23134
Br-Ca-Fe water-decomposition cycles for hydrogen production
26 p0199 A80-23135
Experimental verification of the mercury-iodine thermochemical cycle for the production of hydrogen from water - ANL-4
26 p0199 A80-23136
The magnesium-iodine cycle for the thermochemical decomposition of water
26 p0199 A80-23137
A kinetic investigation of the reforming of natural gas for the production of hydrogen
26 p0199 A80-23139
Optimization of a thermochemical water splitting cycle - Thermodynamic analysis - Experimental work with a solar furnace
26 p0199 A80-23142
Plasmochemical cycle of hydrogen production from the water
26 p0200 A80-23149
Thermoelectrochemical cycles for power and hydrogen production
26 p0201 A80-23157
Present state and future prospects of thermochemical hydrogen production
26 p0205 A80-23194
Status and development of production of cheap hydrogen
26 p0208 A80-23330
Alkanes obtained by thermal conversion of Green River oil-shale kerogen using CO and H2O at elevated pressure
26 p0226 A80-25888
Gasification of oil shale
26 p0226 A80-25889
Present state and future prospects of thermochemical hydrogen production
26 p0233 A80-28272
Basic chemistry of a new cycle, based on reactions of Ce/III/ titanate, for splitting water
26 p0233 A80-28273
Open-loop thermochemical cycles for the production of hydrogen
26 p0233 A80-28274
Engineering impact on the validity of the Mark-16 thermochemical cycle
26 p0233 A80-28275
The oxidation of sulphur dioxide by bromine and water
26 p0245 A80-29407
THERMOCOUPLES
Solar energy control system
[NASA-CASE-MFS-25287-1] 26 p0275 N80-17544
THERMODYNAMIC COUPLING
Use of earth coupling in solar assisted heat pumps
[BNL-26748] 26 p0316 N80-21849
THERMODYNAMIC CYCLES
Open-cycle MHD powerplants - Performance, cost and technology demonstration strategies
[AIAA PAPER 80-0180] 26 p0192 A80-22739
Irreversibility analysis of hydrogen separation schemes in thermochemical cycles
26 p0197 A80-23120
A feasibility study on thermochemical water-splitting cycles using sulfur compounds
26 p0197 A80-23121
Chemical studies on the general atomic sulfur-iodine thermochemical water-splitting cycle
26 p0197 A80-23122
The ZnSe thermochemical cycle for hydrogen production - Chemical and process design studies
26 p0198 A80-23133
Br-Ca-Fe water-decomposition cycles for hydrogen production
26 p0199 A80-23135
Experimental verification of the mercury-iodine thermochemical cycle for the production of hydrogen from water - ANL-4
26 p0199 A80-23136
The magnesium-iodine cycle for the thermochemical decomposition of water
26 p0199 A80-23137
Optimization of a thermochemical water splitting cycle - Thermodynamic analysis - Experimental work with a solar furnace
26 p0199 A80-23142
Mixing effects of different types of hydrides
26 p0202 A80-23166
Thermochemical or hybrid cycles of hydrogen production techno-economical comparison with water electrolysis
26 p0205 A80-23191
Engineering impact on the validity of the Mark-16 thermochemical cycle --- hydrogen production restrictions and prospects
26 p0205 A80-23198
Laser-fusion production of hydrogen by radiolytic-thermochemical cycles
26 p0206 A80-23201
Present state and future prospects of thermochemical hydrogen production
26 p0233 A80-28272

Basic chemistry of a new cycle, based on reactions of Ce/III/ titanate, for splitting water
26 p0233 A80-28273
Open-loop thermochemical cycles for the production of hydrogen
26 p0233 A80-28274
Engineering impact on the validity of the Mark-16 thermochemical cycle
26 p0233 A80-28275

THERMODYNAMIC EFFICIENCY
The theoretical design of a solar engine for the production of hydrogen
26 p0195 A80-23108
Hydrogen production by high temperature electrolysis of water vapour
26 p0197 A80-23118
Thermochemical water splitting cycles - Impact of thermal burdens and kinetics
26 p0199 A80-23138
The thermodynamics of heating. I - The second law and conventional heating systems
26 p0213 A80-24512
Fluidized bed combustion of high sulphur coals
26 p0225 A80-25494
Development of a spherical reflector/tracking absorber solar energy collector
26 p0226 A80-25885
The MINI-OTEC test
26 p0232 A80-28259
Instantaneous collector thermal efficiencies in less time
26 p0248 A80-29925
Operating thresholds of solar collection systems
26 p0251 A80-30775
The effect of material properties on the thermal efficiency of the Minto solar wheel
26 p0253 A80-31857
Thermal performance evaluation of the Northrop model NSC-01-0732 concentrating solar collector array at outdoor conditions --- Marshall Space Flight Center solar house test facility
[NASA-CR-161354] 26 p0293 N80-19628
Data requirements and thermal performance evaluation procedures for solar heating and cooling systems
[PB80-120173] 26 p0320 N80-21885

THERMODYNAMIC EQUILIBRIUM
Active burn control of nearly ignited plasmas
26 p0224 A80-25480

THERMODYNAMIC PROPERTIES
Thermodynamics of heating. II
26 p0227 A80-26309

THERMODYNAMICS
Molecular thermodynamics of dew-point calculations in coal gasification processes
26 p0273 N80-16926
Basic research in engineering: Fluid dynamics and thermal processes --- workshop
[FE-2468-54] 26 p0301 N80-20551

THERMOELECTRIC GENERATORS
Geothermal energy and the environment - The global experience
26 p0223 A80-25259
Conversion system overview assessment. Volume 1: Solar thermoelectrics
[SERI/TR-35-078-VOL-1] 26 p0305 N80-20882
Analysis of a heat exchanger-thermoelectric generator system
[SERI/TP-35-253] 26 p0316 N80-21848

THERMOELECTRIC POWER GENERATION
A 15kWe (nominal) solar thermal electric power conversion concept definition study: Steam Rankine reheat reciprocator system
[NASA-CR-159590] 26 p0264 N80-16491
The 15 kW sub e (nominal) solar thermal electric power conversion concept definition study: Steam Rankine turbine system
[NASA-CR-159589] 26 p0264 N80-16493
Heliostat system design and operation. Citations from the Engineering Index data base
[NTIS/PS-79/0930/2] 26 p0271 N80-16571
Regenerative burner system for thermoelectric power sources --- military equipment
[AD-A075955] 26 p0276 N80-17553
A 15 kWe (nominal) solar thermal-electric power conversion concept definition study: Steam Rankin reciprocator system
[NASA-CR-159591] 26 p0291 N80-19612
Annual technical report, fiscal year 1979. Volume 1: Executive summary
[NASA-CR-159715] 26 p0293 N80-19632
The effects of regional insolation differences upon advanced solar thermal electric power plant performance and energy costs
[NASA-CR-162886] 26 p0294 N80-19634
Screening evaluation of electric power cycles integrated with coal gasification plants
[EPRI-AF-1160] 26 p0295 N80-19646
Militarized thermoelectric power sources
[AD-A075609] 26 p0304 N80-20869
Environmental assessment methodology: Solar power plant applications. Volume 3. Environmental impact assessment application
[EPRI-ER-1070-VOL-3] 26 p0306 N80-20889
Evaluation of a sulfur oxide chemical heat storage process for a steam solar electric plant
[LBL-7868-REV] 26 p0306 N80-20890

THERMONUCLEAR POWER GENERATION
Progress in the production and energy flux concentration of the REB accelerator for ICF
26 p0226 A80-25785
Possible solution of the controlled thermonuclear fusion problem based on magnetogasdynamic energy storage
26 p0230 A80-27567

THERMOPHYSICAL PROPERTIES
Mixture properties for hydrogen supplementation of natural gas
26 p0201 A80-23159
Experimental laboratory measurement of thermophysical properties of selected coal types
[NASA-CR-162913] 26 p0298 N80-20404

THERMOSIPHONS
Transient response of thermosyphon solar collectors
26 p0248 A80-29922

THIN FILMS
Thin solid solution films Zn/x/Cd/1-x/S
26 p0194 A80-23014
Growth and characterization of thin film III-V compound semiconductor material for solar cell applications
26 p0244 A80-29058
Heterojunction for thin-film solar cells
26 p0245 A80-29393
Thin film solar cells based on amorphous silicon
26 p0245 A80-29395
Preparation of thin films for solar energy utilization
[SAND-79-1754C] 26 p0267 N80-16517
Photovoltaic Materials and Device Measurements Workshop: Focus on polycrystalline thin film cells
[SERI/TP-49-185] 26 p0268 N80-16538
Silicon solar cells, volume 3. Citations from the Engineering Index data base --- bibliographies
[PB80-800717] 26 p0280 N80-17588
Silicon solar cells, volume 3. Citations from the NTIS data base --- bibliographies
[PB80-800691] 26 p0280 N80-17589
Silicon solar cells, volume 2. Citations from the Engineering Index data base --- bibliographies
[PB80-800709] 26 p0280 N80-17590

THIOLS
Kinetics and mechanism of desulfurization and denitrogenation of coal-derived liquids --- quioline, indole, dibenzothiophene, and naphthalene
[FE-2028-15] 26 p0287 N80-19292

THRUST AUGMENTATION
Effect of water injection and off scheduling of variable inlet guide vanes, gas generator speed and power turbine nozzle angle on the performance of an automotive gas turbine engine
[NASA-TM-81415] 26 p0298 N80-20272

THYRISTORS
A control strategy for a variable-speed wind energy conversion system
26 p0194 A80-22976
Analysis of losses in a high-frequency converter with low-cosine capacitance load
26 p0252 A80-31501
Measurement techniques for high power semiconductor materials and devices
[DOE/RA-0041] 26 p0301 N80-20506

TIDE POWERED GENERATORS
Cheap electricity from French tides
26 p0214 A80-24537

TIMBER INVENTORY
Estimation of primary production of vegetation in agricultural and forested areas using Landsat data
26 p0191 A80-22456

TIN
A new method of metallization for silicon solar cells
[NASA-CR-162823] 26 p0292 N80-19620

TITANATES
Basic chemistry of a new cycle, based on reactions of Ce/III/ titanate, for splitting water
26 p0233 A80-28273

TITANIUM ALLOYS
Use of binary titanium alloys for hydrogen storage
26 p0202 A80-23164
Technological aspects and characteristics of industrial hydrides reservoirs
26 p0203 A80-23171

TITANIUM BORIDES
Energy savings through use of an improved reduction cell cathode
[SAN-1257-T2] 26 p0267 N80-16515

TITANIUM CARBIDES
Development of sulfur-tolerant components for the molten carbonate fuel cell
26 p0190 A80-22167

TITANIUM COMPOUNDS
Hydrogen in iron-titanium - Experimental investigations of structure, heat of solution, diffusion, and hydriding kinetics
26 p0204 A80-23184
Characterization of prototype secondary lithium battery
26 p0303 N80-20832

TITANIUM OXIDES
The effects of titanium impurities in N/+//P silicon solar cells
26 p0256 A80-32503

TOKAMAK DEVICES
Gradient bounds for plasma confinement
26 p0213 A80-24223
Low-density ignition scenarios in injection-heated tokamaks
26 p0213 A80-24482
Two-stroke tokamak reactor
26 p0213 A80-24487
Model for description of transient behavior of a tokamak discharge
26 p0213 A80-24498
Driven magnetic fusion reactors; Proceedings of the Course, Erice, Italy, September 18-26, 1978
26 p0214 A80-24661
Plasma parametric studies and potential applications of driven fusion reactors
26 p0215 A80-24674
Discharge start-up in a tokamak with a poloidal divertor
26 p0223 A80-25472
Shape control of doublets --- for tokamak plasma stability control
26 p0223 A80-25473
Characteristics of lower-hybrid-wave-driven steady-state tokamak power reactors
26 p0224 A80-25475
Spatial profiles of light impurity ions in the Alcator A tokamak plasma
26 p0224 A80-25478
Active burn control of nearly ignited plasmas
26 p0224 A80-25480
Space- and time-resolved study of impurities by visible spectroscopy in the high-density regime of JIPP T-II tokamak plasma
26 p0224 A80-25481
Anomalous diffusion of alpha particles in a tokamak reactor due to the trapped-ion mode
26 p0224 A80-25482
Observation of radio-frequency-driven plasma current in the octopole tokamak
26 p0224 A80-25483
US tokamak research
26 p0226 A80-25777
Controlled fusion research in China
26 p0226 A80-25786
Theory of current generation by electrostatic traveling waves in collisionless magnetized plasmas
26 p0229 A80-27263
Numerical investigation of current driven dissipative drift wave turbulence including finite beta and quasilinear effects in a tokamak plasma
26 p0229 A80-27276
Toroidal effects on nonlocal collisionless drift instability
26 p0229 A80-27278
Design considerations of a CAMAC system for large tokamak JT-60
26 p0231 A80-27672
Microtearing modes and anomalous transport in tokamaks
26 p0248 A80-29975
Ideal magnetohydrodynamic stability of tokamak plasmas
26 p0250 A80-30554
International tokamak reactor - Executive summary of the IAEA Workshop, 1979
26 p0252 A80-31626
Design study of a fusion-driven Tokamak hybrid reactor for fissile fuel production, volume 1
[EPRI-ER-1083-VOL-1] 26 p0281 N80-17863
Design study of a fusion-driven Tokamak hybrid reactor for fissile fuel production, volume 2
[EPRI-ER-1083-VOL-2] 26 p0281 N80-17864

TOROIDAL PLASMAS
Toroidal Trivelpiece-Gould modes --- quasi-electrostatic approximation for electron plasma waves in fusion reactor
26 p0189 A80-22042
MHD equilibrium and stability of axial symmetric toroidal plasma with an elliptic cross section of triangular deformation
26 p0209 A80-23366
Two-stroke tokamak reactor
26 p0213 A80-24487
Shape control of doublets --- for tokamak plasma stability control
26 p0223 A80-25473
The effect of a weak vertical magnetic field on fluctuation-induced transport in a Bumpy-Torus plasma
26 p0224 A80-25476
Spatial profiles of light impurity ions in the Alcator A tokamak plasma
26 p0224 A80-25478
Observation of radio-frequency-driven plasma current in the octopole tokamak
26 p0224 A80-25483
Application of plasma focus device to compression of toroidal plasma
26 p0229 A80-27058
Numerical investigation of current driven dissipative drift wave turbulence including finite beta and quasilinear effects in a tokamak plasma
26 p0229 A80-27276
Toroidal effects on nonlocal collisionless drift instability
26 p0229 A80-27278
Microtearing modes and anomalous transport in tokamaks
26 p0248 A80-29975
Ideal magnetohydrodynamic stability of tokamak plasmas
26 p0250 A80-30554

TOWERS
Aerodynamic interference between two Darrieus wind turbines
[AIAA 80-0606] 26 p0237 A80-28803

TRACE ELEMENTS
Trace and minor element analyses of coal liquefaction products
[PETC/TR-79/3] 26 p0299 N80-20417

TRACKING (POSITION)
Solar-powered sun tracker
[AD-A078653] 26 p0294 N80-19640

TRANSIENT RESPONSE
Transient response of large experimental MHD power generator flowtrain systems
[AIAA PAPER 80-0025] 26 p0212 A80-23954
Model for description of transient behavior of a tokamak discharge
26 p0213 A80-24498
Transient response of thermosyphon solar collectors
26 p0248 A80-29922

TRANSIT SATELLITES
The role of navigation satellites in oil exploration
26 p0222 A80-25152
TRANSITION METALS
Model for hydrogen production on illuminated transition metal surfaces
26 p0206 A80-23202
Light-induced electron transfer reactions in solution, organized assemblies and at interfaces - Scope and potential applications
26 p0243 A80-29055
TRANSITION POINTS
Molecular thermodynamics of dew-point calculations in coal gasification processes
26 p0273 N80-16926
TRANSLATIONAL MOTION
Lateral and tilt whirl modes of flexibly mounted flywheel systems
26 p0259 N80-16215
TRANSMISSION EFFICIENCY
Free space microwave power transmission systems for microwave powered atmospheric platforms
26 p0228 A80-26813
TRANSMISSION LINES
Helium research in support of superconducting power transmission
[PB80-116502] 26 p0314 N80-21697
TRANSMISSIONS (MACHINE ELEMENTS)
Parametric tests of a traction drive retrofitted to an automotive gas turbine
[NASA-TM-81457] 26 p0314 N80-21754
TRANSMITTANCE
Calculation of the monthly-average transmittance-absorptance product --- for solar collectors
26 p0184 A80-21117
TRANSPORT AIRCRAFT
Durability of foam insulation for LH2 fuel tanks of future subsonic transports
26 p0191 A80-22687
TRANSPORT PROPERTIES
Current transport mechanisms in the boundary regions of MHD generators
[AIAA PAPER 80-0249] 26 p0192 A80-22745
TRANSPORT THEORY
Microtearing modes and anomalous transport in tokamaks
26 p0248 A80-29975
TRANSPORT VEHICLES
Electric transport - The future prospects
26 p0189 A80-21956
TRANSPORTATION ENERGY
Electric transport - The future prospects
26 p0189 A80-21956
Urban activity allocation under criteria of transportation energy efficiency
26 p0192 A80-22788
Hydrogen storage in metal hydrides
26 p0193 A80-22867
Cubic metal-alloys for hydrogen storage
26 p0202 A80-23165
Development of high-temperature hydrides for vehicular applications
26 p0203 A80-23172
Hydrogen-fueled railroad motive power systems - A North American view
26 p0203 A80-23175
Design considerations for the Riverside hydrogen bus
26 p0203 A80-23176
Hydrogen energy in United States Post Office delivery systems
26 p0203 A80-23178
A plan for active development of LH2 for use in aircraft
26 p0206 A80-23204
International Symposium on Traffic and Transportation Technologies, Hamburg, West Germany, June 18-20, 1979, Proceedings. Volumes C1 & C2 - Motor vehicle and road traffic technologies
26 p0235 A80-28470
The energy problem - Its effect on aircraft design. II - The effects of fuel cost
26 p0254 A80-32201
Worldwide transportation/energy demand forecast, 1975 - 2000
[ORNL/SUB-78/13536/1] 26 p0269 N80-16546
Contributions to the foundations of supply for energy and transportation: Concepts, economics, and technologies
[PB-300541/0] 26 p0269 N80-16554
Coping with energy limitations in transportation: Proposals for Michigan
[PB-239737/7] 26 p0270 N80-16559
Methanol as a transportation fuel: Assessment of environmental and health research
[UCRL-52697] 26 p0288 N80-19295
Projections of direct energy consumption by mode: The 1975 - 2000 baseline
[ANL/CNSV-4] 26 p0304 N80-20878
Urban mass transportation energy conservation: SBGP operating instructions and program documentation, volume 5
[DOE/PE-8628/1-VOL-5] 26 p0312 N80-21205
Urban transportation energy conservation: Case city applications of analysis methodologies, volume 3
[DOE/PE-8628/1-VOL-3] 26 p0312 N80-21206
Urban transportation energy conservation: Analytic procedures for estimating changes in travel demand and fuel consumption, volume 2
[DOE/PE-8628/1-VOL-2] 26 p0312 N80-21207
Mechanical energy storage technology for transportation applications project plan
[UCRL-15138] 26 p0312 N80-21209
Energy storage systems for automobile propulsion
[UCID-18320] 26 p0312 N80-21211
Analytic procedures for urban transportation energy conservation. Volume 1: Summary of findings and methodologies
[CONS-8626-T1-VOL-1] 26 p0317 N80-21857
TRANSPORTATION NETWORKS
The development of the magnetically suspended transportation system in the Federal Republic of Germany
26 p0235 A80-28458
TRAPPED PARTICLES
Anomalous diffusion of alpha particles in a tokamak reactor due to the trapped-ion mode
26 p0224 A80-25482
TRAVELING WAVES
Theory of current generation by electrostatic traveling waves in collisionless magnetized plasmas
26 p0229 A80-27263
TREES (PLANTS)
Energy from the biological conversion of solar energy
26 p0210 A80-23522
TRIBOLOGY
Possible energy savings through tribological measures - Especially in automobiles
26 p0227 A80-26184
TUNDRA
Research on dynamics of tundra ecosystems and their potential response to energy resource development
[DOE/SP-01525/1] 26 p0294 N80-19642
TURBINE BLADES
Coriolis Program - A review of the status of the ocean turbine energy system
26 p0233 A80-28261
Numerical calculation of steady inviscid full potential compressible flow about wind turbine blades
[AIAA 80-0607] 26 p0237 A80-28804
Dynamic rotor loads of a wind turbine via hand-held calculations
[AIAA 80-0611] 26 p0237 A80-28808
Low cost composite blades for large wind turbines
[AIAA 80-0634] 26 p0239 A80-28820
UTRC 8 kW wind turbine tests
[AIAA 80-0657] 26 p0240 A80-28831
Aerodynamic tests of Darrieus turbine blades
[AIAA 80-0625] 26 p0240 A80-28832
Aerodynamic performance of the DOE/Sandia 17-m vertical axis wind turbine in the two-bladed configuration
[AIAA 80-0655] 26 p0241 A80-28842
Low cost composite blades for large wind turbines
26 p0253 A80-32074
Alcoa wind turbines
26 p0261 N80-16464
Overview of Vertical Axis Wind Turbine (VAWT)
26 p0262 N80-16466

Fabrication of extruded vertical axis turbine blades
26 p0262 N80-16467
Operational experience with VAWT blades --- structural performance
26 p0262 N80-16468
Structural analysis considerations for wind turbine blades
26 p0262 N80-16469
Blade design and operating experience on the MOD-OA 200 kW wind turbine at Clayton, New Mexico
26 p0262 N80-16470
Evaluation of an operating MOD-OA 200 kW wind turbine blade
26 p0262 N80-16471
Design, fabrication, and test of a steel spar wind turbine blade
26 p0262 N80-16472
WTG Energy Systems' rotor: Steel at 80 feet
26 p0262 N80-16473
The use of wood for wind turbine blade construction
26 p0262 N80-16474
Large, low cost composite wind turbine blades
26 p0263 N80-16475
The MOD-1 steel blade
26 p0263 N80-16476
The Boeing MOD-2 wind turbine system rotor
26 p0263 N80-16477
Design, fabrication, test, and evaluation of a prototype 150-foot long composite wind turbine blade
[NASA-CR-159775] 26 p0276 N80-17548
Aeroelastic equations of motion of a Darrieus vertical-axis wind-turbine blade
[NASA-TM-79295] 26 p0284 N80-18446
Numerical calculation of steady inviscid full potential compressible flow about wind turbine blades
[NASA-TM-81438] 26 p0284 N80-18497

TURBINE ENGINES

Future prospects for use of the gas turbine for automobiles
26 p0236 A80-28485

TURBINES

Technical development of the Diffuser Augmented Wind Turbine /DAWT/ concept
26 p0211 A80-23533
Water turbine technology for small power stations
26 p0213 A80-24125
A comparison of aerodynamic analyses for the Darrieus Rotor
[AIAA 80-0605] 26 p0237 A80-28802
Aerodynamic interference between two Darrieus wind turbines
[AIAA 80-0606] 26 p0237 A80-28803
Numerical solution of the flow near the rotor of a horizontal-axis wind turbine and comparisons with data
[AIAA 80-0608] 26 p0237 A80-28805
Wind loading definition for the structural design of wind turbine generators
[AIAA 80-0610] 26 p0237 A80-28807
Experiments on an oscillating aerofoil and applications to wind energy converters
[AIAA 80-0624] 26 p0238 A80-28816
Preliminary work concerning the near wake structure of the Darrieus turbine
[AIAA 80-0627] 26 p0239 A80-28818
An assessment of utility-related test data from large wind turbine generator tests
[AIAA 80-0631] 26 p0240 A80-28834
Design evolution of large wind turbine generators
26 p0261 N80-16455
The General Electric MOD-1 wind turbine generator program
26 p0261 N80-16456
The Boeing MOD-2 wind tunnel system rated at 2.5 MW
26 p0261 N80-16457
Characteristics of future Vertical Axis Wind Turbines (VAWTs) --- to generate utility grid electric power
26 p0261 N80-16462
Preliminary analysis of performance and loads data from the 2-megawatt mod-1 wind turbine generator
[NASA-TM-81408] 26 p0264 N80-16494
Economic analysis of Darrieus vertical axis wind turbine systems for the generation of utility grid electrical power. Volume 1: Executive summary
[SAND-78-0962-VOL-1] 26 p0268 N80-16539
Economic analysis of Darrieus vertical axis wind turbine systems for the generation of utility grid electrical power. Volume 2: Economic optimization model
[SAND-78-0962-VOL-2] 26 p0268 N80-16540
Economic analysis of Darrieus vertical axis wind turbine systems for the generation of utility grid electrical power. Volume 3: Point designs
[SAND-78-0962-VOL-3] 26 p0269 N80-16541
Economic analysis of Darrieus axis wind turbine systems for the generation of utility grid electrical power. Volume 4: Summary and analysis of the A. T. Kearney and Alcoa Laboratories point design economic studies
[SAND-78-0962-VOL-4] 26 p0269 N80-16542
Gust-rise exceedance statistics for wind turbine design
[PNL-2530] 26 p0277 N80-17567
Darrieus vertical axis wind turbine program overview
[SAND-79-2146C] 26 p0306 N80-20891
Amplified wind turbine apparatus
[NASA-CASE-MFS-23830-1] 26 p0315 N80-21831

TURBOGENERATORS

Co-generation at a practical plant level - Single stage steam turbine generator set replaces pressure reducing station to reduce plant energy consumption
26 p0222 A80-25116
Pumped water storage
26 p0225 A80-25495
Wind Energy Conference, Boulder, Colo., April 9-11, 1980, Technical Papers
26 p0237 A80-28801
Installation and checkout of the DOE/NASA Mod-1 2000-kW wind turbine generator
[AIAA 80-0638] 26 p0241 A80-28835
New concepts in vertical axis wind turbines /VAWT/ and applications to large multi-MW size, off-shore wind turbine systems
[AIAA 80-0620] 26 p0241 A80-28840

TURBOMACHINERY

Further studies on wind turbine generator wakes
[AIAA 80-0626] 26 p0238 A80-28817
Wind-turbine power improvement with modern airfoil sections and multiple-speed generators
[AIAA 80-0633] 26 p0239 A80-28819
Multi-speed electrical generator application to wind turbines
[AIAA 80-0635] 26 p0239 A80-28821
Wind turbines for irrigation pumping
[AIAA 80-0639] 26 p0239 A80-28822

TURBULENT FLOW

Turbulent flows through annular spaces
26 p0250 A80-30614

TURBULENT MIXING

Mixing and gasification of coal in entraining flow systems
[FE-2666-T1] 26 p0289 N80-19303

TWO PHASE FLOW

Control of liquid metal-gas two phase flow by application of axial magnetic field
26 p0218 A80-25083
High-power-density liquid-metal MHD generator results
26 p0218 A80-25084

U

U.S.S.R.

The use of different-scale multispectral space photographs of the earth for the geological study of lands with oil and natural gas
26 p0254 A80-32276

UNDERGROUND STORAGE

Large energy storage systems for utilities
26 p0231 A80-27731
Physical, chemical and energy aspects of underground hydrogen storage
26 p0234 A80-28278
Computer simulation of ground coupled storage in a series solar assisted heat pump system
[BNL-26216] 26 p0266 N80-16507

UNDERWATER STRUCTURES

SEAS - A system for undersea storage of thermal energy
26 p0232 A80-28257

UNIQUENESS THEOREM
MHD electrical potentials - Uniqueness of solutions to an extended class of elliptic boundary value problems
26 p0254 A80-32318

UNITED KINGDOM
Energy accounting of alternative energy sources
26 p0193 A80-22868

UNITED STATES OF AMERICA
United States energy policy - The continuing failure
26 p0185 A80-21766
Monitoring urban population and energy utilization patterns from satellite data
26 p0207 A80-23293
Light rail transit in the United States
26 p0252 A80-31770
Energy material transport, now through 2000, system characteristics and potential problems. Task 3: Petroleum transportation
[PNL-2421] 26 p0278 N80-17574
Regional environment-energy data book: Northeast region
[DOE/TIC-10114/3] 26 p0279 N80-17578
Regional environment-energy data book: Western region
[DOE/TIC-10114/2] 26 p0280 N80-17597
Regional environment-energy data book: Southern region
[DOE/TIC-10114/4] 26 p0281 N80-17598
Regional environment-energy data book: Northwest region
[DOE/TIC-10114/5] 26 p0281 N80-17599
Geothermal energy development in the eastern United States. Evaluation of potential geothermal resource areas
[PB-299925/8] 26 p0285 N80-18547
Industrial Sector Technology Use Model (ISTUM): Industrial energy use in the United States, 1974 - 2000. Volume 2: Results
[DOE/PE-2344/2] 26 p0305 N80-20885
Pollution control practices, fuel conversion and its environmental effects
[PB80-119704] 26 p0320 N80-21896
Overview of pollution from combustion of fossil fuels in boilers of the United States
[PB80-124969] 26 p0320 N80-21912

URANIUM
Environmental system study on the development of fossil fuel resources in the Southwest
[PB-300526/1] 26 p0272 N80-16596

URBAN PLANNING
Analytical procedures for urban transportation energy conservation: Summary of findings and methodologies, volume 1
[DOE/PE-8628/1-VOL-1] 26 p0312 N80-21208

URBAN RESEARCH
Monitoring urban population and energy utilization patterns from satellite data
26 p0207 A80-23293

URBAN TRANSPORTATION
Urban activity allocation under criteria of transportation energy efficiency
26 p0192 A80-22788
Design considerations for the Riverside hydrogen bus
26 p0203 A80-23176
The dual-mode bus and further bus developments in France
26 p0235 A80-28431
Hybrid drive-systems for municipal buses
26 p0235 A80-28475
Marginal conditions in automobile construction and their implications on the design of upper-category vehicles
26 p0236 A80-28477
Light rail transit in the United States
26 p0252 A80-31770
Simulation of an urban battery bus vehicle
[PB-300306/8] 26 p0282 N80-17923
Urban mass transportation energy conservation: SRGP operating instructions and program documentation, volume 5
[DOE/PE-8628/1-VOL-5] 26 p0312 N80-21205
Urban transportation energy conservation: Case city applications of analysis methodologies, volume 3
[DOE/PE-8628/1-VOL-3] 26 p0312 N80-21206
Urban transportation energy conservation: Analytic procedures for estimating changes in travel demand and fuel consumption, volume 2
[DOE/PE-8628/1-VOL-2] 26 p0312 N80-21207
Analytical procedures for urban transportation energy conservation: Summary of findings and methodologies, volume 1
[DOE/PE-8628/1-VOL-1] 26 p0312 N80-21208
Analytic procedures for urban transportation energy conservation. Volume 1: Summary of findings and methodologies
[CONS-8626-T1-VOL-1] 26 p0317 N80-21857

USER REQUIREMENTS
An overview of photovoltaic market research
26 p0186 A80-21917
Optimization of a solar water heating system for a Negev kibbutz
26 p0226 A80-25887

UTAH
Groundwater quality monitoring of western oil shale development. Identification and priority ranking of potential pollution sources --- in eastern Utah
[PB-300536/0] 26 p0272 N80-16623
Energy source book --- Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming
[DOE/TIC-10190] 26 p0306 N80-20895

UTILITIES
Preliminary assessment of the requirements and potential of open cycle MHD as an electric utility power plant
26 p0220 A80-25101
Large energy storage systems for utilities
26 p0231 A80-27731
Economic incentives to wind systems commercialization
[AIAA 80-0617] 26 p0238 A80-28811
An assessment of utility-related test data from large wind turbine generator tests
[AIAA 80-0631] 26 p0240 A80-28834
Results of a utility survey of the status of large wind turbine development
26 p0263 N80-16479
Simulation studies of multiple large wind turbine generators on a utility network
26 p0263 N80-16480

V

V/STOL AIRCRAFT
The changing horizons for technical progress. II
26 p0229 A80-27270

VANADIUM COMPOUNDS
Electrochemistry of amorphous V2S5 in lithium cells
26 p0247 A80-29895

VAPOR DEPOSITION
Grain size and its influence on efficiency in polycrystalline GaAs solar cells
26 p0186 A80-21919

VAPOR PRESSURE
Heavy hydrocarbons from coal gasification vapor pressures and dew point
26 p0257 N80-16111

VAPORIZING
A four-component model for the vaporization of seeded slags - The system KO/.5/-CaO-AlO/1.5/SiO2 --- in MHD generator coal combustor
26 p0217 A80-25073

VARIATIONAL PRINCIPLES
Ideal magnetohydrodynamic stability of tokamak plasmas
26 p0250 A80-30554

VEGETATION
Estimation of primary production of vegetation in agricultural and forested areas using Landsat data
26 p0191 A80-22456
Remote sensing of sulfur dioxide effects on vegetation - photometric analysis of aerial photographs
[PB-300460/3] 26 p0272 N80-16600

VELOCITY DISTRIBUTION
Preliminary work concerning the near wake structure of the Darrieus turbine
[AIAA 80-0627] 26 p0239 A80-28818

VERTICAL DISTRIBUTION
Design characteristics of the 224 kW Magdalen Islands VAWT
26 p0261 N80-16463

Test results of the DOE/Sandia 17 meter VAWT
26 p0262 N80-16465
Fabrication of extruded vertical axis turbine blades
26 p0262 N80-16467
VERTICAL ORIENTATION
Darrieus vertical axis wind turbine program overview
[SAND-79-2146C] 26 p0306 N80-20891
VOLT-AMPERE CHARACTERISTICS
Recombination in the space-charge region of Schottky barrier solar cells
26 p0207 A80-23272
The open-circuit voltage of n/+/-n-p high-low-emitter /HLE/ junction solar cells in concentrated sunlight
26 p0209 A80-23496
Experimental studies of an inert gas disk MHD generator with a small seed fraction
26 p0219 A80-25088
Electrical nonuniformities in U-25 MHD channels
26 p0219 A80-25091
Fluctuations in MHD generators
26 p0221 A80-25106
The influence of a voltage ramp on the measurement of I-V characteristics of a solar cell
26 p0247 A80-29817
The current-voltage characteristics of semiconductor-electrolyte junction photovoltaic cells
26 p0251 A80-30939
The characteristics of high current amorphous silicon diodes
26 p0253 A80-31966
VOLTAGE CONVERTERS (DC TO DC)
PESC '79; Power Electronics Specialists Conference, San Diego, Calif., June 18-22, 1979, Record
26 p0242 A80-28892
The application of DC-DC energy conversion in a solar energy system
[AD-A077112] 26 p0303 N80-20867
VOLTAGE REGULATORS
PESC '79; Power Electronics Specialists Conference, San Diego, Calif., June 18-22, 1979, Record
26 p0242 A80-28892
The application of DC-DC energy conversion in a solar energy system
[AD-A077112] 26 p0303 N80-20867
VORTEX GENERATORS
Study of a vortex augmentor for a wind-powered turbine
26 p0227 A80-26002
VORTICES
Preliminary work concerning the near wake structure of the Darrieus turbine
[AIAA 80-0627] 26 p0239 A80-28818

W

WAFERS
The effects of titanium impurities in N/+//P silicon solar cells
26 p0256 A80-32503
Characterization of deliberately nickel-doped silicon wafers and solar cells --- microstructure, electrical properties, and energy conversion efficiency
[NASA-CR-162790] 26 p0276 N80-17551
Slicing of silicon into sheet material. Silicon sheet growth development for the large area silicon sheet task of the low cost solar array project
[NASA-CR-162828] 26 p0292 N80-19623
WAKES
Further studies on wind turbine generator wakes
[AIAA 80-0626] 26 p0238 A80-28817
WALL FLOW
Wall combustion in high-swirl combustors --- for coal-fired MHD generators
26 p0222 A80-25110
WALLS
Performance effects of Trombe wall control strategies --- passive solar building heating
26 p0183 A80-21105
WASHINGTON
Potential for solar/conservation technologies in the state of Washington
[WAOENG-79-3] 26 p0317 N80-21859
Washington state energy use profile, 1960-1978
[WAOENG-79-1] 26 p0318 N80-21869
WASTE DISPOSAL
Incineration of industrial waste
26 p0192 A80-22766
Space disposal of nuclear wastes
26 p0246 A80-29448
WASTE ENERGY UTILIZATION
Nuclear energy as a primary energy source for hydrogen production
26 p0194 A80-23102
Nuclear methane reforming for coal gasification
26 p0195 A80-23105
Hydrogen production from nuclear fission product waste heat and use in gas turbines
26 p0195 A80-23106
Co-generation at a practical plant level - Single stage steam turbine generator set replaces pressure reducing station to reduce plant energy consumption
26 p0222 A80-25116
Combined cycle for solar-fossil hybrid power generation
[CONF-790803-43] 26 p0276 N80-17557
State-of-the-art of solar control systems in industrial process heat applications
[SERI/TP-39-240] 26 p0277 N80-17562
Some potential material supply constraints in solar systems for heating and cooling of buildings and process heat. A preliminary screening to identify critical materials
[PNL-2972] 26 p0278 N80-17570
Combined cycle power generation. Citations from the Engineering Index data base --- bibliographies
[P80-800923] 26 p0280 N80-17595
Waste heat recovery unit design for gas turbine propulsion systems
[AD-A079154] 26 p0290 N80-19503
Energy conservation in the US: Some interdisciplinary approaches with an emphasis on industrial cogeneration
26 p0302 N80-20811
Thermal energy storage application areas --- for building heating and cooling
[CONS/5113-T4] 26 p0306 N80-20894
WASTE TREATMENT
Production of methane using an anaerobic filter
[ANL-TRANS-1164] 26 p0300 N80-20428
WASTE UTILIZATION
Biogas - Fuel of the future
26 p0227 A80-26175
Open-loop thermochemical cycles for the production of hydrogen
26 p0233 A80-28274
Preliminary assessment of the prospects for use of refuse-derived fuel in Maryland
[BNL-51055] 26 p0258 N80-16179
WASTE WATER
Energy from aquatic plant wastewater treatment systems
[NASA-TM-X-72733] 26 p0275 N80-17545
WATER
Unipolar water electrolysers - A competitive technology
26 p0196 A80-23116
A feasibility study on thermochemical water-splitting cycles using sulfur compounds
26 p0197 A80-23121
The reaction of sulfur dioxide with water and a halogen - The cases of bromine and iodine
26 p0197 A80-23125
Equilibrium effects in high-pressure hydrogen production from thermochemical water-splitting cycles
26 p0198 A80-23127
Experimental verification of the mercury-iodine thermochemical cycle for the production of hydrogen from water - ANL-4
26 p0199 A80-23136
Thermochemical water splitting cycles - Impact of thermal burdens and kinetics
26 p0199 A80-23138
Solar-thermochemical production of hydrogen from water
26 p0200 A80-23143
On the study of hydrogen production from water using solar thermal energy
26 p0200 A80-23147

Thermochemical or hybrid cycles of hydrogen production techno-economical comparison with water electrolysis
26 p0205 A80-23191
Present state and future prospects of thermochemical hydrogen production
26 p0205 A80-23194
Theoretical efficiency limit of water electrolysis and practical means to approach it
26 p0205 A80-23197
A high energy hybrid system: Hydrogen - chlorine - solar - water
26 p0206 A80-23199
Hydrogen production from water using fission-pumped laser
26 p0206 A80-23200
Photolysis of water for H2 production with the use of biological and artificial catalysts
26 p0210 A80-23521
Pumped water storage
26 p0225 A80-25495
Alkanes obtained by thermal conversion of Green River oil-shale kerogen using CO and H2O at elevated pressure
26 p0226 A80-25888
Basic chemistry of a new cycle, based on reactions of Ce/III/ titanate, for splitting water
26 p0233 A80-28273
Electrochemical gasification of coal - Simultaneous production of hydrogen and carbon dioxide by a single reaction involving coal, water, and electrons
26 p0244 A80-29152
The oxidation of sulphur dioxide by bromine and water
26 p0245 A80-29407

WATER HEATING
Energy resource requirements of a solar heating system
26 p0184 A80-21746
Warm water storage in district heating systems incorporating combined heat and power plant
26 p0185 A80-21825
Solar space heating with air and liquid systems
26 p0209 A80-23512
Results of solar heating experiments --- for full scale domestic system performance
26 p0209 A80-23513
Research at the Building Research Establishment into the applications of solar collectors for space and water heating in buildings
26 p0209 A80-23515
A central solar domestic hot water system - Performance and economic analysis
26 p0223 A80-25261
Optimization of a solar water heating system for a Negev kibbutz
26 p0226 A80-25887
SEAS - A system for undersea storage of thermal energy
26 p0232 A80-28257
Solar water heating in the Midwest - An economic assessment based on measured performance
26 p0241 A80-28858
Transient response of thermosyphon solar collectors
26 p0248 A80-29922
The energy impacts of solar heating
26 p0248 A80-29946
The effect of material properties on the thermal efficiency of the Minto solar wheel
26 p0253 A80-31857
Solar energy system performance evaluation: Seasonal report for SEMCO, Loxahatchee, Florida
[NASA-CR-161379] 26 p0293 N80-19627
Solar energy system performance evaluation: A seasonal report for SEMCO, Macon, Georgia
[NASA-CR-161380] 26 p0293 N80-19629
Installation guidelines for solar heating system, single-family residence at New Castle, Pennsylvania
[NASA-CR-161355] 26 p0293 N80-19630
Solar energy system performance evaluation: Seasonal report for IBM System 2, Togus, Maine
[NASA-CR-161383] 26 p0315 N80-21836
Solar pond for industrial process heat
[SERI/TD-351-460] 26 p0319 N80-21876

WATER INJECTION
Effect of water injection and off scheduling of variable inlet guide vanes, gas generator speed and power turbine nozzle angle on the performance of an automotive gas turbine engine
[NASA-TM-81415] 26 p0298 N80-20272

WATER POLLUTION
Environmental development plan: Underground coal gasification
[DOE/EDP-0047] 26 p0260 N80-16411
Groundwater quality monitoring of western oil shale development. Identification and priority ranking of potential pollution sources --- in eastern Utah
[PB-300536/0] 26 p0272 N80-16623
Pollution control practices, fuel conversion and its environmental effects
[PB80-119704] 26 p0320 N80-21896

WATER QUALITY
Groundwater quality monitoring of western oil shale development. Identification and priority ranking of potential pollution sources --- in eastern Utah
[PB-300536/0] 26 p0272 N80-16623

WATER RESOURCES
Regional systems development for geothermal energy resources. Pacific region: California and Hawaii. Task 3: Water resources evaluation --- for generation of electric power
[DOE/ET-28432/3-1] 26 p0291 N80-19606
Regional systems development for geothermal energy resources. Pacific region: (California and Hawaii). Task 3: Water resources evaluation, appendices --- for generation of electric power
[DOE/ET-28432/3-2] 26 p0291 N80-19607
Analysis of water resources requirement for the enhanced (tertiary) oil recovery in the southern plains region of the United States
[PB80-110869] 26 p0301 N80-20801
Determining the feasibility of incorporating water resource constraints into energy models
[EPRI-EA-1147] 26 p0308 N80-20908

WATER TREATMENT
Combined flue gas desulfurization and water treatment in coal-fired power plants
26 p0225 A80-25690
Energy from aquatic plant wastewater treatment systems
[NASA-TM-X-72733] 26 p0275 N80-17545

WATER VAPOR
Decomposition of water in a nonequilibrium plasma
26 p0185 A80-21881
Hydrogen production by high temperature electrolysis of water vapour
26 p0197 A80-23118

WATERWAVE ENERGY
Exotic energy R&D has potential --- ocean wave and windpower utilization
26 p0213 A80-24124
Characteristics of Salter's cam for extracting energy from ocean waves
26 p0251 A80-30802

WATERWAVE ENERGY CONVERSION
Indirect utilization of solar energy --- utilization of wind power created by ocean surface waves
26 p0211 A80-23524
Flap type weather proof ocean wave energy converter
26 p0232 A80-28258
Ocean wave energy conversion concepts
26 p0232 A80-28260
Wave power extraction by a train of rafts - Hydrodynamic theory and optimum design
26 p0251 A80-30804
Absorption of wave energy by elongated bodies --- in ocean water
26 p0251 A80-30805
Wave power extraction by floating bodies
[AD-A078058] 26 p0294 N80-19637
Hydropower, an energy source whose time has come again
[PB80-127715] 26 p0320 N80-21886

WATERWAVE POWERED MACHINES
Flap type weather proof ocean wave energy converter
26 p0232 A80-28258
Ocean wave energy conversion concepts
26 p0232 A80-28260

Submerged cylinder wave energy device - Theory and experiment 26 p0251 A80-30801

Characteristics of Salter's cam for extracting energy from ocean waves 26 p0251 A80-30802

Wave power extraction by a train of rafts - Hydrodynamic theory and optimum design 26 p0251 A80-30804

WAVELENGTHS

A fluorescent radiation converter [NASA-CASE-GSC-12528-1] 26 p0283 N80-18261

WEAR

Blade design and operating experience on the MOD-OA 200 kW wind turbine at Clayton, New Mexico 26 p0262 N80-16470

Evaluation of an operating MOD-OA 200 kW wind turbine blade 26 p0262 N80-16471

WEATHER

Modeling the space conditioning energy demand of a community as a function of weather [COO-1340-65] 26 p0294 N80-19644

WEATHER STATIONS

A statistical methodology for study of wind characteristics from a close array of stations 26 p0211 A80-23536

WEATHERPROOFING

AGT guideway and station technology. Volume 8: Weather protection concepts [PB-299746/8] 26 p0274 N80-16974

WEIBULL DENSITY FUNCTIONS

Describing wind data --- using characteristic wind speed and shape factor parameters 26 p0211 A80-23534

WEIGHT ANALYSIS

Permanent magnet and superconducting generators in airborne, high power systems --- computer program to predict weight of the generators and component systems [AD-A078424] 26 p0284 N80-18311

WELLS

Gas production of Devonian shale wells relative to photo lineament locations: A statistical analysis [METC/CR-79/28] 26 p0260 N80-16410

Energy from the situ processing of antrim oil shale [PE-2346-44] 26 p0278 N80-17576

WEST VIRGINIA

Subsurface stratigraphy of the Middle and Upper Devonian clastic sequence in southern West Virginia and its relation to gas production 26 p0273 N80-16628

WETTABILITY

Wettability and corrosion of MHD ceramics by Rosebud coal slag 26 p0217 A80-25074

WHEELS

The effect of material properties on the thermal efficiency of the Minto solar wheel 26 p0253 A80-31857

WIND MEASUREMENT

Wind energy research and development at Lincoln 26 p0211 A80-23535

Project windsheet - An interim report --- on wind measurement at sites in American Southwest [AIAA 80-0647] 26 p0239 A80-28827

Measurements of wind shear at the Mod-1 Site, Boone, N.C --- for wind turbine [AIAA 80-0648] 26 p0240 A80-28828

Wind characteristics for field testing of wind conversion systems [SAND-78-1563] 26 p0310 N80-20993

WIND PROFILES

Wind characteristics for field testing of wind conversion systems [SAND-78-1563] 26 p0310 N80-20993

Estimation of wind characteristics at potential wind energy conversion sites [PNL-3074] 26 p0321 N80-21955

WIND SHEAR

Measurements of wind shear at the Mod-1 Site, Boone, N.C --- for wind turbine [AIAA 80-0648] 26 p0240 A80-28828

WIND TUNNEL TESTS

Development of vertical axis wind turbines 26 p0187 A80-21929

Study of a vortex augmentor for a wind-powered turbine 26 p0227 A80-26002

Model wind rotors in wind tunnels - Performance and the effect of Reynolds number [AIAA 80-0623] 26 p0238 A80-28815

UTRC 8 kW wind turbine tests [AIAA 80-0657] 26 p0240 A80-28831

New concepts in vertical axis wind turbines /VAWT/ and applications to large multi-MW size, off-shore wind turbine systems [AIAA 80-0620] 26 p0241 A80-28840

WIND VARIATIONS

Gust-rise exceedance statistics for wind turbine design [PNL-2530] 26 p0277 N80-17567

WIND VELOCITY

Gust models for design and performance analyses of wind turbines [AIAA 80-0644] 26 p0240 A80-28833

Wind force analysis for the Federal Republic of Germany to determine the usefulness of wind power [ISBN-3-88148-164-8] 26 p0281 N80-17635

WIND VELOCITY MEASUREMENT

Describing wind data --- using characteristic wind speed and shape factor parameters 26 p0211 A80-23534

A statistical methodology for study of wind characteristics from a close array of stations 26 p0211 A80-23536

WINDMILLS (WINDPOWERED MACHINES)

Development of vertical axis wind turbines 26 p0187 A80-21929

An oscillatory wind energy convertor 26 p0211 A80-23537

Study of a vortex augmentor for a wind-powered turbine 26 p0227 A80-26002

The Lanchester-Betz limit --- energy conversion efficiency factor for windmills 26 p0227 A80-26004

A comparison of aerodynamic analyses for the Darrieus Rotor [AIAA 80-0605] 26 p0237 A80-28802

Aerodynamic interference between two Darrieus wind turbines [AIAA 80-0606] 26 p0237 A80-28803

Numerical calculation of steady inviscid full potential compressible flow about wind turbine blades [AIAA 80-0607] 26 p0237 A80-28804

Numerical solution of the flow near the rotor of a horizontal-axis wind turbine and comparisons with data [AIAA 80-0608] 26 p0237 A80-28805

Dynamic rotor loads of a wind turbine via hand-held calculations [AIAA 80-0611] 26 p0237 A80-28808

The wingmill - An oscillating-wing windmill [AIAA 80-0521] 26 p0238 A80-28813

Tension-field wind machine - A new concept in large-scale energy production [AIAA 80-0622] 26 p0238 A80-28814

Model wind rotors in wind tunnels - Performance and the effect of Reynolds number [AIAA 80-0623] 26 p0238 A80-28815

A refined windmill rotor model [AIAA 80-0628] 26 p0241 A80-28841

DOE/NASA wind turbine data acquisition. Part 1: Equipment [NASA-CR-159779] 26 p0275 N80-17543

Wind Energy System Time-domain (WEST) analyzers using hybrid simulation techniques [NASA-CR-159737] 26 p0308 N80-20909

Torsional oscillations of the rotor disc for horizontal axis wind turbines with hinged or teetered blades, Part 12 [FFA-TN-AU-1499-PT-12] 26 p0319 N80-21881

WINDPOWER UTILIZATION

Wind power excites utility interest 26 p0190 A80-22281

Indirect utilization of solar energy --- utilization of wind power created by ocean surface waves 26 p0211 A80-23524

Technical development of the Diffuser Augmented Wind Turbine /DAWT/ concept 26 p0211 A80-23533

Wind energy research and development at Lincoln 26 p0211 A80-23535

A statistical methodology for study of wind characteristics from a close array of stations
26 p0211 A80-23536
Exotic energy R&D has potential --- ocean wave and windpower utilization
26 p0213 A80-24124
New approaches to sailing
26 p0228 A80-26344
Wind Energy Conference, Boulder, Colo., April 9-11, 1980, Technical Papers
26 p0237 A80-28801
Wind energy conversion system simulation program
[AIAA 80-0609] 26 p0237 A80-28806
Markets for wind energy systems - When, where and at what price
[AIAA 80-0613] 26 p0238 A80-28810
Economic incentives to wind systems commercialization
[AIAA 80-0617] 26 p0238 A80-28811
Experiments on an oscillating aerofoil and applications to wind energy converters
[AIAA 80-0624] 26 p0238 A80-28816
Technical and economic feasibility of wind-powered systems for dairy farms
[AIAA 80-0641] 26 p0239 A80-28823
Demonstration and analysis of a combined wind-solar energy conversion system
[AIAA 80-0643] 26 p0239 A80-28824
Wind characteristics over complex terrain relative to WECS siting --- Wind Energy Conversion System
[AIAA 80-0645] 26 p0239 A80-28825
Project windsheet - An interim report --- on wind measurement at sites in American Southwest
[AIAA 80-0647] 26 p0239 A80-28827
Measurements of wind shear at the Mod-1 Site, Boone, N.C --- for wind turbine
[AIAA 80-0648] 26 p0240 A80-28828
SWECS qualifications criteria for state tax incentive programs --- Small Wind Energy Conversion System
[AIAA 80-0650] 26 p0240 A80-28829
An integrated approach to energy supply for small communities
[AIAA 80-0651] 26 p0240 A80-28830
Aerodynamic tests of Darrieus turbine blades
[AIAA 80-0625] 26 p0240 A80-28832
Offshore wind energy conversion systems
[AIAA 80-0619] 26 p0241 A80-28839
Aerodynamic performance of the DOE/Sandia 17-m vertical axis wind turbine in the two-bladed configuration
[AIAA 80-0655] 26 p0241 A80-28842
Going with the wind
26 p0243 A80-29037
Large Wind Turbine Design Characteristics and R and D Requirements
[NASA-CP-2106] 26 p0260 N80-16453
Overview of Federal wind energy program
26 p0261 N80-16454
Operational experience with VAWT blades --- structural performance
26 p0262 N80-16468
Structural analysis considerations for wind turbine blades
26 p0262 N80-16469
Blade design and operating experience on the MOD-OA 200 kW wind turbine at Clayton, New Mexico
26 p0262 N80-16470
Evaluation of an operating MOD-OA 200 kW wind turbine blade
26 p0262 N80-16471
Design, fabrication, and test of a steel spar wind turbine blade
26 p0262 N80-16472
Preliminary analysis of performance and loads data from the 2-megawatt mod-1 wind turbine generator
[NASA-TM-81408] 26 p0264 N80-16494
Decentralized energy: Technology assessment and systems description
[BNL-50987] 26 p0265 N80-16502
Economic analysis of Darrieus vertical axis wind turbine systems for the generation of utility grid electrical power. Volume 1: Executive summary
[SAND-78-0962-VOL-1] 26 p0268 N80-16539
Economic analysis of Darrieus vertical axis wind turbine systems for the generation of utility grid electrical power. Volume 2: Economic optimization model
[SAND-78-0962-VOL-2] 26 p0268 N80-16540
Economic analysis of Darrieus vertical axis wind turbine systems for the generation of utility grid electrical power. Volume 3: Point designs
[SAND-78-0962-VOL-3] 26 p0269 N80-16541
Economic analysis of Darrieus axis wind turbine systems for the generation of utility grid electrical power. Volume 4: Summary and analysis of the A. T. Kearney and Alcoa Laboratories point design economic studies
[SAND-78-0962-VOL-4] 26 p0269 N80-16542
DOE/NASA wind turbine data acquisition. Part 1: Equipment
[NASA-CR-159779] 26 p0275 N80-17543
Design, fabrication, test, and evaluation of a prototype 150-foot long composite wind turbine blade
[NASA-CR-159775] 26 p0276 N80-17548
Gust-rise exceedance statistics for wind turbine design
[PNL-2530] 26 p0277 N80-17567
Wind force analysis for the Federal Republic of Germany to determine the usefulness of wind power
[ISBN-3-88148-164-8] 26 p0281 N80-17635
Aeroelastic equations of motion of a Darrieus vertical-axis wind-turbine blade
[NASA-TM-79295] 26 p0284 N80-18446
Control strategy for a variable-speed wind energy conversion system
[NASA-TM-75512] 26 p0285 N80-18558
Appendix: MOD-1 wind turbine generator analysis and design report, volume 2
[NASA-CR-159496] 26 p0286 N80-18565
A feasibility study of windpower for the New England area
[AD-A076614] 26 p0286 N80-18568
Teetered, tip-controlled rotor: Preliminary test results from Mod-0 100-kW experimental wind turbine
[NASA-TM-81445] 26 p0291 N80-19613
Installation and checkout of the DOE/NASA Mod-1 2000-kW wind turbine generator
[NASA-TM-81444] 26 p0292 N80-19614
General reliability and safety methodology and its application to wind energy conversion systems
[SERI/TR-35-234] 26 p0294 N80-19645
Wind energy in the mountains of New Hampshire as a potential energy source for Portsmouth Naval Shipyard
[AD-A076975] 26 p0303 N80-20868
Wind energy information directory
[SERI/SP-69-290] 26 p0305 N80-20883
Darrieus vertical axis wind turbine program overview
[SAND-79-2146C] 26 p0306 N80-20891
Wind energy systems
[SERI/PR-351-480] 26 p0306 N80-20892
Wind Energy System Time-domain (WEST) analyzers using hybrid simulation techniques
[NASA-CR-159737] 26 p0308 N80-20909
Wind characteristics for field testing of wind conversion systems
[SAND-78-1563] 26 p0310 N80-20993
Amplified wind turbine apparatus
[NASA-CASE-MFS-23830-1] 26 p0315 N80-21831
Estimation of wind characteristics at potential wind energy conversion sites
[PNL-3074] 26 p0321 N80-21955

WINDPOWERED GENERATORS
A control strategy for a variable-speed wind energy conversion system
26 p0194 A80-22976
Wind Energy Conference, Boulder, Colo., April 9-11, 1980, Technical Papers
26 p0237 A80-28801
Wind loading definition for the structural design of wind turbine generators
[AIAA 80-0610] 26 p0237 A80-28807
Economics of selected WECS dispersed applications
[AIAA 80-0618] 26 p0238 A80-28812
Tension-field wind machine - A new concept in large-scale energy production
[AIAA 80-0622] 26 p0238 A80-28814
Further studies on wind turbine generator wakes
[AIAA 80-0626] 26 p0238 A80-28817

Preliminary work concerning the near wake structure of the Darrieus turbine
[AIAA 80-0627] 26 p0239 A80-28818
Wind-turbine power improvement with modern airfoil sections and multiple-speed generators
[AIAA 80-0633] 26 p0239 A80-28819
Multi-speed electrical generator application to wind turbines
[AIAA 80-0635] 26 p0239 A80-28821
UTRC 8 kW wind turbine tests
[AIAA 80-0657] 26 p0240 A80-28831
Gust models for design and performance analyses of wind turbines
[AIAA 80-0644] 26 p0240 A80-28833
An assessment of utility-related test data from large wind turbine generator tests
[AIAA 80-0631] 26 p0240 A80-28834
Installation and checkout of the DOE/NASA Mod-1 2000-kW wind turbine generator
[AIAA 80-0638] 26 p0241 A80-28835
Teetered, tip-controlled rotor - Preliminary test results from Mod-0 100-kW experimental wind turbine
[AIAA 80-0642] 26 p0241 A80-28836
Economic assessment of the Darrieus wind turbine
[AIAA 80-0614] 26 p0241 A80-28837
The potential for optimizing the economics of wind energy utilization on a dairy farm through load management
[AIAA 80-0640] 26 p0241 A80-28838
Offshore wind energy conversion systems
[AIAA 80-0619] 26 p0241 A80-28839
New concepts in vertical axis wind turbines /VAWT/ and applications to large multi-MW size, off-shore wind turbine systems
[AIAA 80-0620] 26 p0241 A80-28840
Wind power: Recent developments --- Book
26 p0242 A80-28954
Low cost composite blades for large wind turbines
26 p0253 A80-32074
Large Wind Turbine Design Characteristics and R and D Requirements
[NASA-CP-2106] 26 p0260 N80-16453
Design evolution of large wind turbine generators
26 p0261 N80-16455
The General Electric MOD-1 wind turbine generator program
26 p0261 N80-16456
The Boeing MOD-2 wind tunnel system rated at 2.5 MW
26 p0261 N80-16457
WTG Energy Systems' MP1-200 200 kilowatt wind turbine generator --- a fixed pitch rotor configuration driving a synchronous generator
26 p0261 N80-16458
Specification, siting and selection of large WECS prototypes
26 p0261 N80-16459
The Danish large wind turbine program --- feasibility of wind power in a utility grid
26 p0261 N80-16460
Large wind energy converter: Growian 3 MW
26 p0261 N80-16461
Characteristics of future Vertical Axis Wind Turbines (VAWTs) --- to generate utility grid electric power
26 p0261 N80-16462
Design characteristics of the 224 kW Magdalen Islands VAWT
26 p0261 N80-16463
Alcoa wind turbines
26 p0261 N80-16464
Test results of the DOE/Sandia 17 meter VAWT
26 p0262 N80-16465
Overview of Vertical Axis Wind Turbine (VAWT)
26 p0262 N80-16466
Fabrication of extruded vertical axis turbine blades
26 p0262 N80-16467
WTG Energy Systems' rotor: Steel at 80 feet
26 p0262 N80-16473
The use of wood for wind turbine blade construction
26 p0262 N80-16474
Large, low cost composite wind turbine blades
26 p0263 N80-16475
The MOD-1 steel blade
26 p0263 N80-16476
The Boeing MOD-2 wind turbine system rotor
26 p0263 N80-16477
Status of the Southern California Edison Company 3 MW Wind Turbine Generator (WTG) demonstration project
26 p0263 N80-16478
Results of a utility survey of the status of large wind turbine development
26 p0263 N80-16479
Simulation studies of multiple large wind turbine generators on a utility network
26 p0263 N80-16480
System configuration improvement
26 p0263 N80-16481
Cost of energy evaluation
26 p0263 N80-16482
Preliminary analysis of performance and loads data from the 2-megawatt mod-1 wind turbine generator
[NASA-TM-81408] 26 p0264 N80-16494
Design, fabrication, test, and evaluation of a prototype 150-foot long composite wind turbine blade
[NASA-CR-159775] 26 p0276 N80-17548
Flutter analysis of small windturbine, designed for manufacture and use in developing countries
[UTH-LR-272] 26 p0284 N80-18415
Numerical calculation of steady inviscid full potential compressible flow about wind turbine blades
[NASA-TM-81438] 26 p0284 N80-18497
Appendix: MOD-1 wind turbine generator analysis and design report, volume 2
[NASA-CR-159496] 26 p0286 N80-18565
A feasibility study of windpower for the New England area
[AD-A076614] 26 p0286 N80-18568
Teetered, tip-controlled rotor: Preliminary test results from Mod-0 100-kW experimental wind turbine
[NASA-TM-81445] 26 p0291 N80-19613
Installation and checkout of the DOE/NASA Mod-1 2000-kW wind turbine generator
[NASA-TM-81444] 26 p0292 N80-19614
Mod 1 wind turbine generator failure modes and effects analysis
[NASA-CR-159494] 26 p0303 N80-20864
Wind energy information directory
[SERI/SP-69-290] 26 p0305 N80-20883
Darrieus vertical axis wind turbine program overview
[SAND-79-2146C] 26 p0306 N80-20891
Wind energy systems
[SERI/PR-351-480] 26 p0306 N80-20892
Wind Energy System Time-domain (WEST) analyzers using hybrid simulation techniques
[NASA-CR-159737] 26 p0308 N80-20909
Wind wheel electric power generator
[NASA-CASE-MFS-23515-1] 26 p0315 N80-21828
Amplified wind turbine apparatus
[NASA-CASE-MFS-23830-1] 26 p0315 N80-21831

WINDPOWERED PUMPS
Wind turbines for irrigation pumping
[AIAA 80-0639] 26 p0239 A80-28822

WING OSCILLATIONS
The wingmill - An oscillating-wing windmill
[AIAA 80-0621] 26 p0238 A80-28813

WINTER
Solar availability for winter space heating: An analysis of the calendar period 1953-1975
[ANL/SPG-14] 26 p0268 N80-16532

WOOD
Wood gasification in a fluidized bed
26 p0244 A80-29154
Assessment of the technical and economic feasibility of converting wood residues to liquid and gaseous fuel products using state-of-the-art and advanced coal conversion technology
[COO-4862-3] 26 p0258 N80-16189
The use of wood for wind turbine blade construction
26 p0262 N80-16474

WORKING FLUIDS
The state-of-the-art of cryogenic heat pipes
[AIAA PAPER 80-0211] 26 p0212 A80-23956
The effect of material properties on the thermal efficiency of the Minto solar wheel
26 p0253 A80-31857
Electrical conductivity of a seeded H2/O2 system
26 p0254 A80-32330
Analysis of the geothermal binary cycle using paraffin hydrocarbons as working fluids
26 p0285 N80-18553

WYOMING
Energy source book --- Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming
[DOE/TIC-10190] 26 p0306 N80-20895

X

X RAY ANALYSIS
Application of radiography to coal liquefaction
[SAND-79-1226C] 26 p0274 N80-17243

Z

ZEEMAN EFFECT
Spin-aligned hydrogen --- atoms at lowest electronic energy magnetic sublevels as substance for molecular production
26 p0200 A80-23151

ZEOLITES
Solar energy storage using chemical potential changes associated with drying of zeolites
26 p0183 A80-21106

ZINC
Zinc halide hydrocracking process for distillate fuels from coal
[FE-1743-68] 26 p0300 N80-20426

ZINC COMPOUNDS
Development of high efficiency, low cost ZnSiAs2 solar cells.
[DOE/ET-23001/T1] 26 p0278 N80-17572

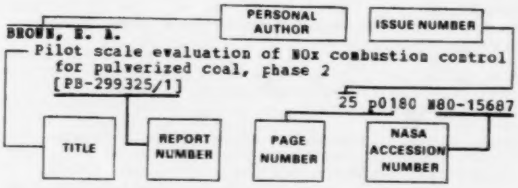
ZINC SELENIDES
The ZnSe thermochemical cycle for hydrogen production - Chemical and process design studies
26 p0198 A80-23133

ZINC SULFIDES
Thin solid solution films Zn/x/Cd/1-x/S
26 p0194 A80-23014

ZIRCONIUM OXIDES
The effect of electrochemical and arcing phenomena on electrode performance --- in coal-fired MHD generators
26 p0218 A80-25080

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The issue, page and accession numbers are located beneath and to the right of the title, e.g., 25 p0180 N80-15687. Under any one author's name the accession numbers are arranged in sequence with the *IAA* accession numbers appearing first.

A

ABBOTT, D. E.
Computer modeling of a two-junction, monolithic cascade solar cell
26 p0234 A80-28330

ABDELRAHMAN, M. A. M.
Technical evaluation of gaseous suspensions of graphite for the absorption of concentrated solar radiation
26 p0214 A80-24660

ABRAHAM, B. M.
Experimental verification of the mercury-iodine thermochemical cycle for the production of hydrogen from water - ANL-4
26 p0199 A80-23136
Thermochemical water splitting cycles - Impact of thermal burdens and kinetics
26 p0199 A80-23138

ABRAHAM, R.
Air transport and travel in 2000 - Future requirements
26 p0234 A80-28427

ACHARD, J. C.
Kinetics of hydrogen absorption and desorption by ternary LaNi5 type intermetallic compounds
26 p0206 A80-23203
Kinetics of hydrogen absorption and desorption by ternary LaNi5-type intermetallic compounds
26 p0234 A80-28277

ADAMS, M.
Plant power fuels hydrogen production
26 p0249 A80-30465

ADAMS, M. W. W.
Photolysis of water for H2 production with the use of biological and artificial catalysts
26 p0210 A80-23521

ADKINS, J. W.
Trace and minor element analyses of coal liquefaction products
[PETC/TR-79/3] 26 p0299 N80-20417

AGARWAL, R. C.
Tubular solar collector
26 p0231 A80-27730

AHMADI, G.
An oscillatory wind energy convertor
26 p0211 A80-23537

AHNER, D. J.
Control performance of an air-blown fixed bed coal gasification combined cycle plant in utility power systems application
26 p0213 A80-24256
Screening evaluation of electric power cycles integrated with coal gasification plants
[EPRI-AF-1160] 26 p0295 N80-19646

AHRENKIEL, R. K.
Magnetooptical switch for synchronization of CO2 and red laser beams
26 p0236 A80-28735

AI, D. K.
Alcoa wind turbines
26 p0261 N80-16464

AIMAN, W. R.
An underground coal gasification experiment - Hoe Creek II
26 p0251 A80-31042

AIROLDI CRESCENTINI, A.
Model for description of transient behavior of a tokamak discharge
26 p0213 A80-24498

AKIN, D. L.
Space-manufactured satellite power systems
26 p0227 A80-26003

AKINS, R. E.
Wind characteristics for field testing of wind conversion systems
[SAND-78-1563] 26 p0310 N80-20993

ALBANESE, A. S.
The global carbon dioxide problem - Impacts of U.S. synthetic fuel- and coal-fired electricity generating plants
26 p0248 A80-29938

ALBERTS, R. D.
Application analysis and photovoltaic system conceptual design for service/commercial/institutional and industrial sectors, task 1 report
[SAND-78-7032] 26 p0269 N80-16550

ALDRIDGE, M. H.
The preparation of some novel electrolytes: Synthesis of partially fluorinated alkanesulfonic acids as potential fuel cell electrolytes
[AD-A078473] 26 p0286 N80-18570

ALEFELD, G.
A metal hydrogen heat pump as topping process for power generation
26 p0204 A80-23181

ALEXANDER, G.
Report on the gas supply industry
[ERG-027] 26 p0286 N80-18579

ALFENAAR, M.
Prospects for an alkaline hydrogen air fuel cell system
26 p0204 A80-23182

ALFORD, C.
SWECS qualifications criteria for state tax incentive programs
[AIAA 80-0650] 26 p0240 A80-28829

ALKAISI, M. M.
The temperature dependence of the characteristics of sputtered a-Si-H solar cells
26 p0187 A80-21920

ALLEN, G.
Washington state energy use profile, 1960-1978
[WAOENG-79-1] 26 p0318 N80-21869

ALLEN, R. J.
Energy savings by means of fuel cell electrodes in electro-chemical industries
[COO-4881-6] 26 p0318 N80-21870

ALLIER, J.
Multifunctional collectors for dwellings - Examples of application
26 p0208 A80-23329

ALLSUP, J.
Exhaust characterization of neat alcohol fueled IC engines
[BETC/P-B-8-1943-1] 26 p0314 N80-21760
ALPAUGH, R. T.
Hydrogen-fueled railroad motive power systems - A North American view
26 p0203 A80-23175
ALSON, J.
Light-duty diesel gaseous emissions measurement - comparison of dilution tunnel test results to certification cell test results
[PB80-115991] 26 p0310 N80-20945
ALVIS, R. L.
Review of selected on-site DOE small solar thermal power plant experiments
[SAND-79-1040C] 26 p0317 N80-21854
ANEEL, T. A.
Particulate size and rates of pressure drop increase in an MHD air preheater
26 p0217 A80-25076
ANACONA, D. F.
Offshore wind energy conversion systems
[AIAA 80-0619] 26 p0241 A80-28839
ANASTASIA, L. J.
Environmental assessment of the HYGAS process. Volume 1: HYGAS environmental characterization, data synthesis, analysis, and interpretation, tests 37 - 64
[FE-2433-25-VOL-1] 26 p0289 N80-19305
ANCONA, D. F.
Overview of Federal wind energy program
26 p0261 N80-16454
ANDERSEN, T. S.
Multi-speed electrical generator application to wind turbines
[AIAA 80-0635] 26 p0239 A80-28821
ANDERSON, A.
Nickel pigmented anodic aluminum oxide for selective absorption of solar energy
26 p0209 A80-23499
ANDERSON, B.
Effect of solar power satellite transmissions on radio-astronomical research
26 p0211 A80-23525
ANDERSON, C. A.
Production of synthetic gas from nuclear energy sources
[LA-7592-MS] 26 p0274 N80-17244
ANDERSON, D. T.
Neutral-beam injection calculations for torsatrons
26 p0224 A80-25479
ANDERSON, E.
Analysis of the potential transmission of hydrogen by pipeline in Switzerland
26 p0201 A80-23158
ANDERSON, J. H.
Sea thermal power - Competitive electricity and chemicals from the sea
26 p0207 A80-23220
ANDERSON, N. E.
Effect of geometry and operating conditions on spur gear system power loss
[NASA-TM-81426] 26 p0284 N80-18406
Parametric tests of a traction drive retrofitted to an automotive gas turbine
[NASA-TM-81457] 26 p0314 N80-21754
ANDERSON, T. D.
Perspective on world energy
[DOE/TIC-10273] 26 p0307 N80-20898
ANDERSON, V. R.
Hydrogen energy in United States Post Office delivery systems
26 p0203 A80-23178
ANDRE, H.
Cheap electricity from French tides
26 p0214 A80-24537
ANDREWS, J. R.
Development of high efficiency, low cost ZnSiAs2 solar cells.
[DOE/ET-23001/T1] 26 p0278 N80-17572
ANDREWS, J. N.
Use of earth coupling in solar assisted heat pumps
[BNL-26748] 26 p0316 N80-21849
ANDREWS, J. W.
Computer simulation of ground coupled storage in a series solar assisted heat pump system
[BNL-26216] 26 p0266 N80-16507
ANG, P. G. P.
Development of sulfur-tolerant components for the molten carbonate fuel cell
26 p0190 A80-22167
ANGELLO, J.
Regenerative burner system for thermoelectric power sources
[AD-A075955] 26 p0276 N80-17553
Militarized thermoelectric power sources
[AD-A075609] 26 p0304 N80-20869
ANTONOPOULOS, A. A.
Environmental and economic evaluations of energy recovery from agricultural and forestry residues
[ANL/EES/TM-58] 26 p0297 N80-19668
APPELBAUM, J.
Shadow effect of adjacent solar collectors in large scale systems
26 p0183 A80-21107
APPELL, H. R.
Coal liquefaction with synthesis gas
[PETC/TR-79/1] 26 p0299 N80-20416
APPELMAN, E. H.
Experimental verification of the mercury-iodine thermochemical cycle for the production of hydrogen from water - ANL-4
26 p0199 A80-23136
APPLEBY, A. J.
Improvements in electrolysis technology in alkaline solution
26 p0196 A80-23112
Electrochemical aspects of the H2SO4-SO2 thermoelectrochemical cycle for hydrogen production
26 p0198 A80-23128
ARMENTROUT, C. J.
Observation of radio-frequency-driven plasma current in the octopole tokamak
26 p0224 A80-25483
ARMSON, R.
Report on the gas supply industry
[ERG-027] 26 p0286 N80-18579
ARMSTRONG, J.
Conceptual design of an AFBC electric power generating plant. Volume 3: Appendices
[FE-2455-27-VOL-3] 26 p0318 N80-21866
ASBURY, J. G.
Solar availability for winter space heating: An analysis of the calendar period 1953-1975
[ANL/SPG-14] 26 p0268 N80-16532
Peak-load problem with storage technology
[ANL/SPG-8] 26 p0269 N80-16549

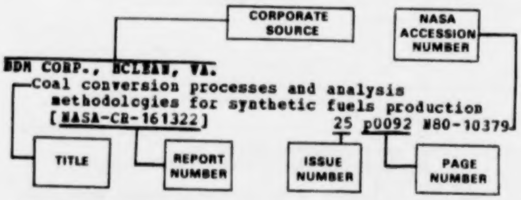
CORPORATE SOURCE INDEX

ENERGY / *A Continuing Bibliography (Issue 26)*

JULY 1980

Typical Corporate Source Index Listing



The title of the document is used to provide a brief description of the subject matter. The issue, page number and NASA or AIAA accession number are included in each entry to assist the user in locating the abstract in the abstract section of an individual supplement of *Energy*. If applicable, a report number is also included as an aid in identifying the document.

A

ACUREX CORP., MOUNTAIN VIEW, CALIF.
Environmental assessment of stationary source NOx control technologies

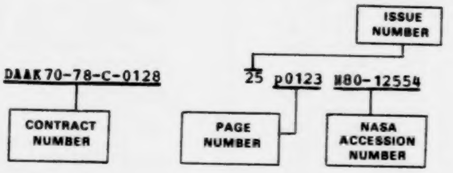
CONTRACT NUMBER INDEX

ENERGY / *A Continuing Bibliography (Issue 26)*

JULY 1980

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the *IAA* accession numbers appearing first. The accession number denotes the number by which the citation is identified in either the *IAA* or *STAR* section. Preceding the accession number are the issue and page number in the particular supplement in which the citation may be found.

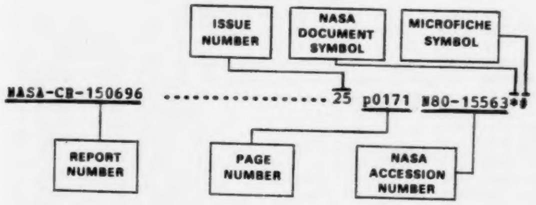
REPORT/ACCESSION INDEX

ENERGY */A Continuing Bibliography (Issue 26)*

JULY 1980

Typical Report/Accession Number Index Listing



Listings in this index are arranged alphanumerically by report number. The issue and page number indicate the actual Supplement and page where the citation may be located. The accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley

COLORADO
University of Colorado, Boulder

DISTRICT OF COLUMBIA
Library of Congress

GEORGIA
Georgia Institute of Technology, Atlanta

ILLINOIS
The John Crerar Library, Chicago

MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge

MISSOURI
Linda Hall Library, Kansas City

NEW YORK
Columbia University, New York

OKLAHOMA
University of Oklahoma, Bizzell Library

PENNSYLVANIA
Carnegie Library of Pittsburgh

WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library

COLORADO
Denver Public Library

CONNECTICUT
Hartford Public Library

MARYLAND
Enoch Pratt Free Library, Baltimore

MASSACHUSETTS
Boston Public Library

MICHIGAN

Fort Worth Public Library

WASHINGTON
Seattle Public Library

WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

A Continuing Bibliography

With Indexes

Issue 27

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced from July 1 through September 30, 1980 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

Scientific and Technical Information Branch 1980
National Aeronautics and Space Administration
Washington, DC

This supplement is available as NTISUB/026/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $15.00 domestic; $30.00 foreign.

INTRODUCTION

This issue of *Energy: A Continuing Bibliography with Indexes* (NASA SP-7043(27)) lists 1920 reports, journal articles, and other documents announced between July 1, 1980 and September 30, 1980 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of this continuing bibliography was published in May 1974 and succeeding issues are published quarterly.

The coverage includes regional, national and international energy systems; research and development on fuels and other sources of energy; energy conversion, transport, transmission, distribution and storage, with special emphasis on use of hydrogen and of solar energy. Also included are methods of locating or using new energy resources. Of special interest is energy for heating, lighting, for powering aircraft, surface vehicles, or other machinery.

Each entry in the bibliography consists of a standard bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections, *IAA Entries* and *STAR Entries* in that order. The citation, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR* including the original accession numbers from the respective announcement journals. This procedure, which saves time and money accounts for the slight variation in citation appearances.

Five indexes -- subject, personal author, corporate source, contract number, and report number -- are included.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A78-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $6.00 per document up to a maximum of 20 pages. The charge for each additional page is $0.25. Microfiche(1) of documents announced in *IAA* are available at the rate of $2.50 per microfiche on demand, and at the rate of $1.10 per microfiche for standing orders for all *IAA* microfiche. The price for the *IAA* microfiche by category is available at the rate of $1.25 per microfiche plus a $1.00 service charge per category per issue. Microfiche of all the current AIAA Meeting Papers are available on a standing order basis at the rate of $1.35 per microfiche.

Minimum air-mail postage to foreign countries is $1.00 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N78-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code followed by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Microfiche is available regardless of age for those accessions followed by a # symbol.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Unit.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $3.00 price, for those documents identified by a # symbol.)

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

GENERAL AVAILABILITY

All publications abstracted in this bibliography are available to the public through the sources as indicated in the *STAR Entries* and *IAA Entries* sections. It is suggested that the bibliography user contact his own library or other local libraries prior to ordering any publication inasmuch as many of the documents have been widely distributed by the issuing agencies, especially NASA. A listing of public collections of NASA documents is included on the inside back cover.

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the quarterly supplements is $50.00 domestic; $100.00 foreign. All questions relating to the subscriptions should be referred to NTIS, Attn: Subscriptions, 5285 Port Royal Road, Springfield, Virginia 22161.

TABLE OF CONTENTS

Subject Categories

Abstracts in this Bibliography are grouped under the following categories: *page:*

01 ENERGY POLICIES AND ENERGY SYSTEMS ANALYSIS 323
Includes energy requirements, energy conservation, and environmental impacts of energy systems.

02 SOLAR ENERGY 357
Includes solar collectors, solar cells, solar heating and cooling systems, and solar generators.

03 HYDROGEN 459
Includes hydrogen production, storage, and distribution.

04 FUELS AND OTHER SOURCES OF ENERGY 465
Includes fossil fuels, nuclear fuels, geothermal and ocean thermal energy, tidal energy, and wind energy.

05 ENERGY CONVERSION 505
Includes photovoltaic, thermoelectric, geothermal, ocean thermal, and wind energy conversion. Also includes nuclear reactors and magnetohydrodynamic generators.

06 ENERGY TRANSPORT, TRANSMISSION, AND DISTRIBUTION 539
Includes transport of fuels by pipelines, tubes, etc., microwave power transmission, and superconducting power transmission.

07 ENERGY STORAGE 545
Includes flywheels, heat storage, underground air storage, compressed air, storage batteries, and electric hybrid vehicles.

EVALUATION OF FEASIBILITY OF PRESTRESSED CONCRETE FOR USE IN WIND TURBINE BLADES
Seymour Leiblein, D. S. Londahl, Donn B. Furlong, and Mark E. Dreier Sep. 1979 119 p refs Prepared in cooperation with Tuthill Pump Co., San Rafael, Calif. and Paragon Pacific, Inc., El Segundo, Calif.
(Contracts NAS3-20596; NAS3-30813; EX-76-I-01-1028; NASA Order C-25906)
(NASA-CR-159725; DOE/NASA/5906-79/1) Avail: NTIS HC A06/MF A01 CSCL 10B

A preliminary evaluation of the feasibility of the use of prestressed concrete as a material for low cost blades for wind turbines was conducted. A baseline blade design was achieved for an experimental wind turbine that met aerodynamic and structural requirements. Significant cost reductions were indicated for volume production. Casting of a model blade section showed no fabrication problems. Coupled dynamic analysis revealed that adverse rotor tower interactions can be significant with heavy rotor blades.

A80-18297 * # Advanced solar thermal receiver technology.
A. A. Kudirka and L. P. Leibowitz (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). *American Institute of Aeronautics and Astronautics, Aerospace Sciences Meeting, 18th, Pasadena, Calif., Jan. 14-16, 1980, Paper 80-0292.* 10 p. 6 refs. Research sponsored by the U.S. Department of Energy.

Development of advanced receiver technology for solar thermal receivers designed for electric power generation or for industrial applications, such as fuels and chemical production or industrial process heat, is described. The development of this technology is focused on receivers that operate from 1000 F to 3000 F and above. Development strategy is mapped in terms of application requirements, and the related system and technical requirements. Receiver performance requirements and current development efforts are covered for five classes of receiver applications: high temperature, advanced Brayton, Stirling, and Rankine cycle engines, and fuels and chemicals.

ENERGY

A Continuing Bibliography (Issue 27)

OCTOBER 1980

01

ENERGY POLICIES AND ENERGY SYSTEMS ANALYSIS

Includes energy requirements, energy conservation, and environmental impacts of energy systems.

A80-33433 **Energy self-sufficiency in monsoonal Australia.** T. R. Lee (Environment Council /N.J./, Inc., Darwin, Australia). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 173-177.

The paper presents the development concept of the Darwin Solar Village project, an energy self-sufficient residential development now in construction on the north coast of Australia. The project will employ windmill water pumping, commercial solar hot water systems, solar electrical systems, aerogeneration, and solar air conditioning. The use of methane produced from household wastes and wastes from agricultural and animal husbandry activities will have an important role in reducing the electrical power demand, primarily for cooking. The social requirements for the achievement of energy self-sufficiency are also discussed. V.L.

A80-33436 **Canada's federal solar energy program.** R. M. Aldwinckle (National Research Council, Ottawa, Canada). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 187-191.

A80-33437 **Solar energy R & D projects in Denmark.** V. Korsgaard and T. V. Esbensen (Danmarks Tekniske Hojskole, Lyngby, Denmark). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 192-194.

A80-33441 **National solar heating and cooling programme in the Netherlands.** K. Joon, P. F. Sens (Netherlands Energy Research Foundation, Petten, Netherlands), and C. W. J. van Koppen (Eindhoven, Technische Hogeschool, Eindhoven, Netherlands). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 215-218.

A80-33442 **National solar heating and cooling programme - New Zealand.** R. F. Benseman and M. A. Collins. In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 219-223. 10 refs.

A80-33443 **Solar Heating '85 - Sweden's national solar heating program.** L. O. Matsson (Solar Energy Association of Scandinavia, Stockholm, Sweden). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 224-228.

A80-33444 **Solar energy research in Sweden.** L. Kristoferson (Kungl. Svenska Vetenskapsakademien, Beijer Institutet; Swedish Energy R&D Commission, Stockholm, Sweden). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 229-232. 10 refs.

A80-33445 **The United Kingdom solar heating programme.** D. W. Jefferson-Loveday (Department of Energy, Energy Technology Support Unit, Harwell, Oxon, England). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 233-237. 7 refs.

A80-33446 **Status of the United States' Solar Heating and Cooling Program.** F. H. Morse (U.S. Department of Energy, Office of Solar Applications, Washington, D.C.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 238-242. 5 refs.

A80-33672 **International development assistance for renewable technologies - Current programs and institutional requirements.** J. H. Ashworth and R. E. Meunier (Solar Energy Research Institute, Golden, Colo.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1460-1464.

Within the last several years, foreign assistance donor agencies have begun to provide significant aid for the search for renewable energy sources in developing nations. This paper reports preliminary results from a survey of development assistance projects in renewable energy sources, indicating which areas are extensions of traditional assistance areas and which are new areas of involvement. The last two portions of the paper indicate certain shortcomings in the current effort, and linkages which must be emphasized in order to increase the effectiveness of the range of donor activities. (Author)

A80-33675 **A renewable energy system for developing countries.** H. J. Allison (Oklahoma State University, Stillwater, Okla.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1475-1479. Research sponsored by the United Nations Environment Program.

Decentralized power systems which operate from renewable energy resources can supply reliable energy to remote areas of the developing nations of the world. Such systems can do much to improve the quality of life for millions of people throughout the world. This paper describes an energy system which integrates solar, wind, and biomass resources in a manner which produces a more flexible and reliable power source than could be made available from separate uses of these renewable resources. Prototype systems based on the concepts described in this paper are planned for Sri Lanka, Senegal, and Mexico. (Author)

A80-33677 **Energy systems based on local renewable energy resources for a rural community in a developing country.** D. Cavard and P. Criqui (CNRS, Institut Economique et Juridique de l'Energie, Grenoble, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1485-1489.

The application of energy balance to a particular case, an isolated, rural developing community, shows the following relevant facts: (1) a relatively great actual importance and a large potentiality of the renewable energy sources, which could solve certain problems of development, (2) in general, present energy needs remain largely unsatisfied, and (3) the increase of the consumption of imported energy resources (mainly oil products) might cause some socio-economic disequilibria in this area. It is shown that it will be advantageous for such a country to develop all the biomass energy resources and the wind and photovoltaic solar sources in order to provide for the local needs of electricity and water-pumping.

(Author)

A80-33690 **Integrating energy approaches in a large office building.** M. Villecco. In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1561-1564.

The TVA office complex for Chattanooga will be a demonstration of energy conscious design, pushing the state of the art in combining urban density with a solar envelope and in using daylight as a primary energy strategy. The paper describes the quantitative and qualitative design objectives of the project, the interdisciplinary team approach, and the technical conclusions of the design team. The paper also discusses the impact of the project on Chattanooga in terms of solar zoning and efforts to use cogeneration with renewable resources to provide off-the-grid power.

(Author)

A80-33706 **Design and performance of low heat loss window systems.** A. L. Berlad, Y. J. Yeh, N. Tutu, and R. Jaung (New York, State University, Stony Brook, N.Y.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1652-1655.

A80-34018 # **Two new energy information bases - ERDI/West, an energy research and development inventory for the West; and ESIDD, energy saving and investment data and documents.** A. H. Rosenfeld and F. C. Winkelmann (California, University, Berkeley, Calif.). *CODATA Bulletin*, no. 23, May 1977, p. 1-3; Discussion, p. 3, 4. ERDA-supported research.

Two new energy information bases, ERDI/West and ESIDD are described. ERDI/West is a computer-based inventory destined to cover all energy-related activity in the Western Region of the U.S. It now contains information on projects and investigators in California, but ultimately will also have document and data files. ERDI/West is expected to be a useful tool for administrators, legislators, and researchers in planning, funding, or conducting energy research and development in the West. The second data base, ESIDD, Energy Savings and Investment Data and Documents, contains up-to-date information on existing documents and data on annual energy savings and required investment for different energy conservation measures in homes, commercial buildings, industry, and in home appliance selection. To illustrate the importance of cost-to-saving data for setting energy priorities, two energy strategies are compared: producing more energy by building a $1.6 billion synthetic gas plant, versus conserving energy by adding extra insulation to existing homes and appliances.

(Author)

A80-34056 # **Siemens/Düwag H-Bahn - Technology and comparative assessment.** F. Frederich (Waggonfabrik Uerdingen AG, Krefeld-Uerdingen, West Germany). In: Advanced transit and urban revitalization - An international dialogue; Proceedings of the International Conference, Indianapolis, Ind., April 25-28, 1978. Volume 1. Washington, D.C., Advanced Transit Association, 1978. 19 p. 16 refs. Research supported by the Bundesministerium für Forschung und Technologie.

The paper deals with the technology of the H-Bahn. A brief description is given of the system components, comprising the track beams, track support columns, points, cabins and cars of various sizes and running gear units with linear and rotating motor drives, as well as the automatic control system. A comparison with existing rapid transit systems proves the suitability of the H-Bahn as a rapid transit system. The criteria applied are capacity, riding comfort, noise propagation, width of traffic corridor, pollution emission, energy consumption, capital investment and operating costs.

(Author)

A80-34067 # **The bus systems, passenger transit system of the future.** M. Krüger (Maschinenfabrik Augsburg-Nürnberg AG, Munich, West Germany). In: Advanced transit and urban revitalization - An international dialogue; Proceedings of the International Conference, Indianapolis, Ind., April 25-28, 1978. Volume 1. Washington, D.C., Advanced Transit Association, 1978. 21 p. 14 refs.

The paper examines future bus systems which will integrate passenger requirements, vehicle design, and operation for improved reliability, frequency, speed, and comfort of bus riding. Traffic density, areas required for traffic, energy consumption, and safety are discussed, presenting an improved system which integrates the infrastructure such as the bus route, the bus stop, and traffic signals; the organization of passenger handling in regard to travel routes, ticket information and ticket purchase; and bus designs incorporating low energy consumption, low emissions, and independence from the use of oil.

A80-34122 **Investigation of further economics development of regional electricity supply concerns (Untersuchung zur weiteren wirtschaftlichen Entwicklung regionaler EVU).** K. Hubig and G. Sickmüller (Uberlandwerk Oberfranken AG, Bamberg, West Germany). *Energiewirtschaftliche Tagesfragen*, vol. 30, Apr. 1980, p. 225-229. In German.

The article examines the year-end results of the power plant operating costs during 1977 and 1978 in the Federal Republic of Germany. A complete economic analysis is made considering such factors as productivity and stagnation of capital budgets.

M.E.P.

A80-34124 **The energy supply of today and tomorrow (Die Energieversorgung von heute und morgen).** W. Janssen (Überlandwerk Unterfranken AG, Würzburg, West Germany). *Energiewirtschaftliche Tagesfragen*, vol. 30, Apr. 1980, p. 280-286. In German.

The paper examines present worldwide energy demand and compares it with predictions of future demand. Topics discussed include the exhaustible energies, regenerative energies, nuclear energy, electrical power, power plant capacities, safety and the environment, and the necessity and possibilities for energy conservation.

M.E.P.

A80-34125 **The influence of the federal council on the formulation of the 'Regulation on general conditions for the supply of electricity for tariff customers' and the 'Second regulation on altering of the federal electricity tariff structure' - Attempt at a critical assessment (Zum Einfluss des Bundesrates auf die Fassung der 'Verordnung über Allgemeine Bedingungen für die Elektrizitätsversorgung von Tarifkunden /AVBEltV/' und der 'Zweiten Verordnung zur Anderung der Bundestarifordnung Elektrizität' - Versuch einer kritischen Würdigung).** B. D. Sanders (Hannover-Braunschweigische Stromversorgungs-AG, Hanover, West Germany). *Energiewirtschaftliche Tagesfragen*, vol. 30, Apr. 1980, p. 286-298. 16 refs. In German.

A80-34600 **The trace element chemistry of coal during combustion and the emissions from coal-fired plants.** R. D. Smith (Battelle Pacific Northwest Laboratories, Richland, Wash.). *Progress in Energy and Combustion Science*, vol. 6, no. 1, 1980, p. 53-119. 155 refs.

A80-35649 **Trace element inputs from a coal burning power plant to adjacent terrestrial and aquatic environments.** D. W. Evans, J. G. Wiener (Georgia, University, Aiken, S.C.), and J. H. Horton. *Air Pollution Control Association, Journal*, vol. 30, May

1980, p. 567-573. 25 refs. U.S. Environmental Protection Agency Contract No. IAG-D5-B681; Contract No. EY-76-C-09-0819.

A80-35740 # **Wind energy from a utility planning perspective.** N. G. Butler (Bonneville Power Administration, Portland, Ore.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 305-310.

A method of potential wind generation assessment is presented which has the objective of extracting the maximum amount of energy per year at the lowest cost. The method consists in examining existing regional data, estimating the annual average wind power, estimating the annual energy production of different sizes of wind turbines by using the 'Harder curve', and the total number of turbines per site. The estimated output per wind turbine and the total number of turbines per site combine to produce an estimate of the wind field energy production potential, once the extent of the wind field has been determined. The cost of energy is estimated from the standard cost of energy equation. V.L.

A80-35878 **Application of combustion technology for NO/x/ emissions reduction on petroleum process heaters.** S. C. Hunter and W. A. Carter (KVB, Inc., Tustin, Calif.). *AIChE Symposium Series,* vol. 75, no. 188, 1979, p. 14-26. 12 refs.

Seven petroleum refinery process heaters were tested to evaluate the feasibility of combustion system adjustments as a means of pollutant emissions reduction. Adjustments evaluated included fuel heat content variation, load variation, adjustment of excess air, burner air register adjustments, and removal of burners from service. Most refinery heaters use natural draft burners and the five units tested of that type showed less flexibility for combustion system adjustments compared with mechanical draft heaters and boilers. The largest NO(x) reduction obtained while firing refinery gas was about 20% and some heaters showed no response. There were significant effects of fuel heat content and load changes that used further investigation. Two mechanical draft single-burner heaters were tested. Reduction of excess air reduced NO(x) on gas fuel but had no effect on NO(x) when firing No. 6 oil. One mechanical draft unit that had air preheat produced significantly higher NO(x) emissions than did the other heaters. (Author)

A80-35879 **Investigation of first- and second-stage variables on control of NOx emissions using staged combustion in a pulverized coal wall-fired furnace.** R. A. Brown, H. B. Mason (Acurex Corp., Mountain View, Calif.), D. W. Pershing, and J. O. L. Wendt (Arizona, University, Tucson, Ariz.). *AIChE Symposium Series,* vol. 75, no. 188, 1979, p. 27-47. 33 refs.

A80-35880 **Process alternatives for stack gas desulfurization with H2S regeneration to produce sulfur.** G. T. Rochelle (Texas, University, Austin, Tex.) and C. J. King (California, University, Berkeley, Calif.). *AIChE Symposium Series,* vol. 75, no. 188, 1979, p. 48-61. 39 refs.

New and existing process alternatives are reviewed for stack-gas desulfurization by aqueous, buffered scrubbing with H2S regeneration to produce elemental sulfur. The existing commercial processes include the citrate and phosphate processes, which use a single regeneration loop. Analysis of the reaction kinetics and stoichiometry indicates that the rate of H2S regeneration is probably controlled by liquid-phase mass transfer resistance. Liquid circulation through the air flotation cells and main reactor could be greatly reduced by recycling scrubber solution after partial reaction with H2S. Such a double-loop process could also provide a capability for intermediate storage of solution between scrubbing and regeneration. A number of alternative buffer systems are considered which could provide less expensive alternatives for purging sulfates and chlorides. (Author)

A80-35890 **Particulate sulfur and trace metal emissions from oil fired power plants.** R. L. Bennett and K. T. Knapp (U.S. Environmental Protection Agency, Research Triangle Park, N.C.). *AIChE Symposium Series,* vol. 75, no. 188, 1979, p. 174-180.

Particulate emissions from five oil-fired electric utility power plants have been chemically characterized. One plant was studied on two separate field tests while consuming different fuels: Venezuelian and Middle East oil. Emission samples were collected for a variety of plant operating parameters including power load, levels of excess oxygen, sulfur content of fuel, trace metal (principally vanadium and nickel) concentrations of fuel, and use of fuel additives. Elemental emission concentrations were determined by wavelength dispersive X-ray fluorescence (XRF) measurement of particulate samples collected on a variety of filter substrates. The relative merits and limitations of each type of filter are discussed. Particle size distribution of the chemical elements in the emissions were determined by XRF analyses of samples collected by cascade impactors. (Author)

A80-35897 **Planning air quality control systems for power generation.** P. N. Cheremisinoff (New Jersey Institute of Technology, Newark, N.J.) and R. A. Salib (Ebasco Services, Inc., New York, N.Y.). *AIChE Symposium Series,* vol. 75, no. 188, 1979, p. 274-283.

The paper covers the examination of the step-by-step procedures required for optimization of air quality control systems (AQCSs) as applied to a 500-MW unit sample case scheduled to go on line in early 1980. A historical review of the power industry's thinking is presented whenever applicable. The steps of the AQCS optimization procedures are identified. An optimization technique based on large-scale fuel and ash analyses is presented, and its potential savings for industry is discussed. S.D.

A80-36053 **Oil from shale - The potential, the problems, and a plan for development.** A. E. Lewis (California, University, Livermore, Calif.). *Energy* (UK), vol. 5, Apr. 1980, p. 373-387. 23 refs. Contract No. W-7405-eng-48.

A unitized management and development of the government-owned oil shale in Colorado is expected to make it technically and economically practical to obtain very large production rates of shale oil from this source. The paper discusses the resource potential, impediments to development of resource, technology for development of government land and government organization and policy required for development. Important differences exist in the nature of the oil-shale resource held by the government and that held by private companies. These differences are crucial both in estimating production costs and incentives necessary for production and for defining applicable technology. It is proposed that a single federal authority, Piceance Basin Authority, be given the responsibility and authority for developing this government resource under a legislative charter from the Congress. S.D.

A80-36419 **Cloud-active nuclei from coal-fired electric power plants and their interactions with clouds.** P. V. Hobbs, J. L. Stith, and L. F. Radke (Washington, University, Seattle, Wash.). *Journal of Applied Meteorology,* vol. 19, Apr. 1980, p. 439-451. 14 refs. NSF Grant No. ENV-75-19701.

A80-36476 **Chemical characteristics of oil refinery plumes in Los Angeles.** F. P. Parungo, R. F. Pueschel, and D. I. Wellman (NOAA, Atmospheric Physics and Chemistry Laboratory, Boulder, Colo.). *Atmospheric Environment,* vol. 14, no. 5, 1980, p. 509-522. 14 refs. Research supported by the U.S. Environmental Protection Agency.

Airborne in situ measurements of gases (NO, NO2, SO2, O3) and aerosol size distributions have been made in the vicinity of oil refineries in southern Los Angeles. Filter and impactor samples have been collected for post-flight chemical particle analyses using the BaCl2 and Nitron reaction spot techniques, and X-ray energy spectrometry. It was found that the refinery operations increase the number concentration of aerosols in the size range between 0.05 micron and 23.5 microns particle radius. Sulfate and nitrate particles have been identified as oxidation productions of SO2 and NOx, respectively. Sulfate particles have been found with a mode of less than 0.1 micron diameter, whereas inorganic nitrates dominate the mode between 1 and 10 microns. The strong affinity for water of the nitrates strongly affects visibility, cloud formation and the cloud drop size spectrum.

(Author)

A80-36477 **Air quality measurements in the coal fired power plant environment of Colstrip, Montana.** J. D. Ludwick, D. B. Weber, K. B. Olsen, and S. R. Garcia (Battelle Pacific Northwest Laboratories, Richland, Wash.). *Atmospheric Environment,* vol. 14, no. 5, 1980, p. 523-532. 18 refs. U.S. Environmental Protection Agency Contract No. IAG-D7-0473.

A80-36550 **Energy prices (Les prix de l'énergie).** L. Gouni (Electricité de France, Paris, France). *Revue de l'Energie,* vol. 31, Apr. 1980, p. 185-195. In French.

Numerous studies exist concerning energy prices and more specially, concerning price perspectives for the end of the 20th Century. This article deals with oil price futurology as little as possible and concentrates on trying to draw conclusions from the history of the past three decades. It includes: several remarks about price and cost concepts which enable the author to emphasize ambiguities in this field, observations about prices as seen from the consumer's angle, observations about costs and prices as seen from the energy supplier's angle, and observations concerning the notion of energy reference prices.

A80-36976 **Scientific Workshop on the Automobile: Energy Conservation and Atmospheric Pollution, Paris, France, December 6, 7, 1979, Complete Proceedings (Journées Scientifiques sur l'Automobile: Economies d'Energie et Pollution Atmosphérique, Paris, France, December 6, 7, 1979, Compte Rendu Integral).** Workshop sponsored by the Association pour la Prévention de la Pollution Atmosphérique, Ministère de l'Environnement et du Cadre de Vie, Ministère de la Santé, Ministère de l'Industrie, and Ministère des Transports. *Pollution Atmosphérique,* vol. 22, Jan.-Mar. 1980. 208 p. In French.

Papers are presented on the biological effects, physical chemistry, and characterization of automobile-produced air pollutants and the effects of energy conservation and traffic control measures on automobile pollution levels. Specific topics include the physical chemistry of automobile pollutants, the fine analysis of polynuclear aromatic hydrocarbons, the detection of toxic and carcinogenic effects of pollutant compounds and mixtures, and the effects of automobile pollution on vegetation. Attention is also given to the Bordeaux automatic traffic control system, diesel engine optimization with respect to pollution and noise, fuel conservation objectives in the transportation sector, electric vehicle development, a casinghead-gas-fueled urban bus, and the development of three-way catalytic converters.

A.L.W.

A80-37331 # **Impacts of fossil fuel use on environment and climate.** W. Bach (Münster, Universität, Münster, West Germany). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt,.1979, p. 4.1-4.23. 53 refs.

This paper reviews the physical impacts of fossil fuel use on the environment and climate system. Such an analysis involves the assessment of the future world fossil fuel resources and their relative share in a future global energy mix. The specific environmental impacts are shown for conventional and unconventional coal, oil and gas production and combustion. The impact on climate is demonstrated for the release of heat, particles and CO2. Results of temperature change due to CO2-increase are shown for a low (30TW) and a high (50TW) energy supply scenario. It is noted that the perception of the general impacts of fossil fuel use on the environment is not very high, whereas the specific impact of increasing CO2 on climate is presently perceived as the greatest risk. Uncertainties in the CO2-impact assessment make it, however,

pollution monitoring and alert network currently being set up are indicated, and planned systematic studies are presented. A.L.W.

A80-37332 # **Production of synthetic hydrocarbon fuel, environmental aspects and comparison to hydrogen production from water.** W. Peschka (Deutsche Forschungs- und Versuchsantstalt für Luft- und Raumfahrt, Institut für technische Physik, Stuttgart, West Germany). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979. , Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979, p. 5.1-5.14. 8 refs.

The paper compares the environmental pollution of different fuels. This is significant due to increasing pollution with NO(x), CO, and hydrocarbons. The release of carbon dioxide may be a crucial problem, and the consumption of fossil fuels and carbon-free fuels such as hydrogen may provide a solution. It is expected that the air industry will use kerosene in the future and poor quality crude oil due to increased prices; the alternative sources such as oil shale and coal will require large amounts of hydrogen and energy, and fuels made from synthetic crude oils will have a higher nitrogen content contributing to pollution. Liquid hydrogen will produce none of the carbon-related pollutants, and will be the most environmentally acceptable fuel. It is concluded that whether hydrogen fuel will be utilized for clean energy will be determined by the air industry because of its energy consumption, and it represents an essential link in the production-consumption chain.

A80-37351 **Consumer experience with electric vehicles.** M. A. Kocis (New York State, Dept. of Transportation, Planning and Research Bureau, Albany, N.Y.). *Journal of Advanced Transportation,* vol. 14, Spring 1980, p. 13-22. 5 refs. Research sponsored by the New York State Department of Transportation.

The results of a study intended to show how present electric vehicle owners use their vehicles, what problems are encountered, and the prospects for repurchase, are presented. Aspects covered include vehicle descriptions, comparison with internal combustion engine vehicles, and an overall rating. It is concluded that user's experience shows that electric vehicles can replace internal combustion engine vehicles in many situations. Finally, owner acceptance of the electric vehicle concept has relied on energy, environmental and economic considerations, yet these owners feel that longer range, faster speeds, and reasonable costs are important factors for future purchases decisions and for further acceptability.

A80-37353 **Transportation energy contingencies - A status report on public response and government roles.** D. T. Hartgen (New York State, Dept. of Transportation, Albany, N.Y.). *Journal of Advanced Transportation,* vol. 14, Spring 1980, p. 47-72. 31 refs.

Recent work at NYSDOT to develop transportation energy contingency plans for dealing with energy crises such as experienced in 1973-74 and 1979, is summarized. On the basis of recent household data from New York, these two recent crises are described and compared with respect to shortfall, price rises and public response. In both cases shortfalls of 11-13% and price rises of 30-35% were found. In general, it is reported, public responses were similar, focusing on driving slower and cuts in discretionary shop travel, however the 1979 crisis also showed major savings in vacation related actions and purchases of fuel-efficient cars. It is concluded that clearer government roles and responsibilities for contingency actions, coupled with current contingency plan development by local government and recent establishment of state conservation targets, should mean greater effectiveness in dealing with these events and hence generally less impact than in the past.

A80-37618 **Technical aspects of lime/limestone scrubbers for coal-fired power plants. I - Process chemistry and scrubber systems.** H. T. Karlsson and H. S. Rosenberg (Battelle Columbus Laboratories, Columbus, Ohio). *Air Pollution Control Association Journal,* vol. 30, June 1980, p. 710-714. 9 refs.

A80-37680 Silicon carbide-tungsten heat pipes for high-temperature service. L. B. Lundberg (California, University, Los Alamos, N. Mex.). *(American Chemical Society and Chemical Society of Japan, Chemical Congress, Honolulu, Hawaii, Apr. 1-6, 1979.) I & EC - Industrial and Engineering Chemistry, Product Research and Development*, vol. 19, June 1980, p. 241-244. 8 refs.

Silicon carbide is being considered for use as the structural material in liquid metal heat pipes to be used in high-temperature, waste-heat recovery from plants operating with fossil fuels. In order to protect the SiC from attack by the sodium or lithium metal working fluid, the SiC must be coated internally with tungsten. Experiments have been performed to determine the rate of reaction (layer growth) between SiC and tungsten in a vacuum over the temperature range 1875 to 2075 K. This reaction rate is similar to that observed for the tungsten-carbon reaction forming W2C. The reaction layer developed from the SiC-W reaction consists of two phases, W5Si3 and W2C. Based on the observed reaction rate, it is estimated that for heat pipe operating lifetimes of 20 years and tungsten coating thickness of 0.25 mm, the practical steady operating temperature limit is about 1575 K. (Author)

A80-37691 Fuel - A system problem of major proportions. W. T. Hardaker (Air Transport Association of America, Washington, D.C.). In: Air Traffic Control Association, Annual Fall Conference, 24th, Atlantic City, N.J., October 15-19, 1979, Proceedings. Washington, D.C., Air Traffic Control Association, Inc., 1979, p. 10-14.

In the present paper, some substantial achievements of the airlines in reducing fuel consumption by computer-aided flight planning, purchase of more efficient aircraft and engines, and better utilization of aircraft are reviewed, and means of addressing the challenge to use the available fuel more efficiently are examined. These include optimum utilization of airports, maximum use of established fuel-conservation descent procedures and existing gate-hold procedures, mimization of circuitous tourings and of the adverse effects of airspace reservations, improved information on expected arrival delays to the pilot - enabling him to save fuel by reducing speed, and implementation of the Wake Vortex Advisory System, to mention only a few of the ATC actions that can be taken. V.P.

A80-37984 California State energy efficient State Office Building. B. S. Setty (Benham-Blair and Affiliates, Inc., Falls Church, Va.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 1029-1055.

Advanced energy technology, utilizing concentrated solar collectors and ice storage system was employed to achieve the lowest energy consumption and lowest life cycle cost. The paper will discuss the functions of the concentrating collectors and its integration with ice storage systems as follows: (1) utilization of concentrating solar collectors passive systems in order to save nonrenewable sources of energy; (2) modes and tracking mechanism of the concentrated solar collectors; (3) concentrating collector system interaction with high temperature storage system; (4) conversion of solar energy into ice, its implications, and its interaction with the ice storage system; and (5) system's flexibilility to provide solar heat at maximum efficiency. (Author)

A80-37989 Use of renewable fuels in the rural development of India. G. C. Pandey (Jawaharlal Nehru University, New Delhi, India). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 1119-1131.

An analysis is made of the possible application of renewable energy sources for domestic use, especially in rural areas in tropical and semitropical countries, using available technology. Attention is given to the use of solar cookers and to biogas technology, by which a savings of firewood as well as oil and oil products, such as synthetic fertilizers, can be realized. The actual implementation of such energy sources is discussed, and factors are taken into account. J.P.B.

A80-38017 French solar energy program and its application for international cooperation. M. J. Pheline (Délégation aux Energies Nouvelles, Paris, France). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 1937-1949.

A large-scale solar energy development program is now underway in France which includes: thermal conversion and its applications for space heating, thermodynamic conversion and power production, direct conversion by photocells, bioconversion, and various applications, such as cooking, desalination, and solar communications. Consideration is also given to various cooperative actions with other countries in solar energy research and applications. It is predicted that by 1985 solar and geothermal energy will contribute 1 to 2 percent of the total primary energy consumption in France. V.L.

A80-38018 An assessment of need for developing and implementing technical and skilled worker training for the solar energy industry. C. G. Orsak, R. Barnstone, Y. Jani, H. Gibson, and J. Morehouse (Navarro College, Corsicana, Tex.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 1976-2002.

A research project has been carried out by Navarro College for the Department of Energy with the objective of determining the national need for manpower trained in solar energy technology. The project had three basic tasks: to conduct a survey of solar heating and cooling systems, review existing consumer demand studies to forecast manpower requirements, and conduct a skills study to determine the types of curriculum required. The analysis shows that there will be at least 2.4 million solar units installed by 1985. Accordingly, by that year there must be a minimum of 25,000 skilled workers in the solar field; one fifth of these must be trained at the technician level. To meet the demands for solar workers, 80 schools, each graduating 50 solar technicians per year will be needed between 1978 and 1985. V.L.

A80-38210 Heat pumps for heating, cooling, and energy recovery 1976-1990 (Wärmepumpen für Heizung, Kühlung und Energierückgewinnung 1976-1990). R. Rudolph, G. Purper, R. Frische, F. Grüning, H. Jansen, I. Paul, and C. Rode (Battelle-Institut, Frankfurt am Main, West Germany). Cologne, Verlag TÜV Rheinland GmbH, 1979. 192 p. 46 refs. In German. $14.66.

The present status and future possibilities of heat pumps are surveyed. Attention is given to technology, noting that electric compression heat pumps are the most developed. Systems discussed include monovalent and bivalent electro-heat pumps with heat sources such as water, ground, ambient air, and solar energy. It is shown that the emphasis of development is on the improvement of individual components such as the working medium, the condensor, and heat exchanger. Also examined are costs and economy, as well as the market potential for heat pumps. Further, an assessment is made of how heat pumps will affect the ecology, governmental policy, the economy, and society. M.E.P.

A80-38303 Energy and environmental politics in the 80's (Energie- und Umweltpolitik in den 80er Jahren). G. Weiser (Ministerium für Ernährung, Landwirtschaft und Umwelt, Stuttgart, West Germany). *(Arbeitsgemeinschaft Regionaler Energieversorgungs-Unternehmen, Jahrestagung, Stuttgart, West Germany, Apr. 29, 1980.) Energiewirtschaftliche Tagesfragen*, vol. 30, May 1980, p. 323-327. In German.

Factors involved in determining energy and environmental policy in the FRG are surveyed. Attention is given to the goals of the energy policy in Baden-Württemberg: (1) to assure the supply of energy for all consumers over the long term and under the most

favorable conditions, (2) attaining an economical and rational use of energy, and (3) protecting the environment while meeting the demand for energy. A detailed description is given of the strategy of the program which includes the following measures: (a) reduction of dependence on oil, (b) increased energy conservation by consumers, (c) accelerated development of regenerative energy sources, (d) expansion of natural gas and long distance heating supply, (e) encouraging rational energy generation and usage, and (f) increased usage of coal and nuclear energy.
M.E.P.

A80-38304 **Topical questions of energy economics (Aktuelle Fragen der Energiewirtschaft).** G. Hecker (Arbeitsgemeinschaft regionaler Energieversorgungs-Unternehmen; ELEKTROMARK kommunales Elektrizitätswerk Mark AG, Hagen, West Germany). *(Arbeitsgemeinschaft Regionaler Energieversorgungs-Unternehmen, Jahrestagung, Stuttgart, West Germany, Apr. 29, 1980.) Energiewirtschaftliche Tagesfragen*, vol. 30, May 1980, p. 333-336. In German.

A survey is made of the factors affecting the economics of energy in the FRG. Attention is given to the fact that the development of the power distribution in the FRG during 1978-79 was greater than the economic growth rate. Also examined is the need for rational and economic energy utilization, which involves a rational integration of electricity, gas, and utilization of long distance heating on the basis of power-heat-coupling and industrial waste heat. Consideration is also given to the problem that new techniques such as coal gasification and coal liquefaction will increase the demand beyond what can be met. In addition, the need for more nuclear power is stressed.
M.E.P.

A80-38366 **Practical application of flue gas de-NO/x/ system using honey-comb type catalyst.** M. Yamamoto, J. Miyake, T. Sengoku, T. Shiomi (Mitsubishi Heavy Industries, Ltd., Tokyo, Japan), S. Minagawa (Mitsubishi Heavy Industries, Ltd., Hiroshima Shipyard and Engine Works, Hiroshima, Japan), N. Yokoyama (Mitsubishi Heavy Industries, Ltd., Hiroshima Technical Institute, Hiroshima, Japan), and T. Miyagawa (Mitsubishi Heavy Industries, Ltd., Nagasaki Shipyard and Engine Works, Nagasaki, Japan). *Mitsubishi Heavy Industries Technical Review*, vol. 17, Feb. 1980, p. 11-18.

A system based on a honeycomb type catalyst has been developed for removing NO(x) from flue gases emitted from heavy-oil or coal-fired boilers. This paper reviews the design of the system and describes its performance during two years of operation at the Sodegaura Refinery.
B.J.

A80-38905 * # **Potential benefits for propfan technology on derivatives of future short- to medium-range transport aircraft.** I. M. Goldsmith (Douglas Aircraft Co., Long Beach, Calif.) and J. V. Bowles (NASA, Ames Research Center, V/STOL Systems Technology Branch, Moffett Field, Calif.). *AIAA, SAE, and ASME, Joint Propulsion Conference, 16th, Hartford, Conn., June 30-July 2, 1980, AIAA Paper 80-1090.* 10 p.

It is noted that several NASA-sponsored studies have identified a substantial potential fuel savings for high subsonic speed aircraft utilizing the propfan concept compared to the equivalent technology turbofan aircraft. Attention is given to a feasibility study for propfan-powered short- to medium-haul commercial transport aircraft conducted to evaluate potential fuel savings and identify critical technology requirements using the latest propfan performance data. An analysis is made of the design and performance characteristics of a wing-mounted and two-aft-mounted derivative propfan aircraft configurations, based on a DC-9 Super 80 airframe, which are compared to the baseline turbofan design. Finally, recommendations for further research efforts are also made.
M.E.P.

A80-38983 # **Lightweight diesel aircraft engines for general aviation.** A. P. Brouwers (Teledyne Continental Motors, Muskegon, Mich.). *AIAA, SAE, and ASME, Joint Propulsion Conference, 16th, Hartford, Conn., June 30-July 2, 1980, AIAA Paper 80-1238.* 12 p.

This project reintroduces the diesel engine as an aircraft powerplant. A concept design study of two engines was conducted to define configurations and applicable advanced technologies. The information generated in the course of this study was then used to evaluate the performance of two aircraft: a six-place twin and a four-place single. The computer generated aircraft performance data show a vast improvement over current gasoline powered aircraft. Next the 186 cruise kW engine was also designed utilizing the experience gained from the concept design study. The development program of this engine is in process.

A80-39554 **Paving the way for energy-saving innovations.** D. G. Jansson and G. C. Newton, Jr. (MIT, Cambridge, Mass.). *Technology Review*, vol. 83, June-July 1980, p. 42-53.

The paper examines the Energy Related Inventions Program of DOE which aims at stimulating the innovative process to assure that energy saving products reach the marketplace and are assimilated into economy. Specifically, the program will enable the inventors to compete effectively for public or private contract support, and to form new enterprises for production of their inventions; it will also help to negotiate the commercialization of their inventions. Five inventions, including equipment for waste heat utilization for commercial cooking equipment and a wastewater aeration power control device were evaluated for viability and energy impact; the evaluation consisted of estimates of the possible energy impact, assessments of invention's business potential, barriers to commercialization, and the role of DOE support in stimulating technology. A.T.

A80-40313 **New Technology Transport for fuel critical economy.** P. A. Hudak (Boeing Co., Seattle, Wash.) and K. A. B. Macdonald (Boeing Commercial Airplane Co., Seattle, Wash.). In: Annual Reliability and Maintainability Symposium, San Francisco, Calif., January 22-24, 1980, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1980, p. 101-105.

The design objective of the New Technology Transport (NTT) which will have fly-by-wire, power-by-wire, digital data bus communication honeycomb primary structure, electric engine start, and will require no auxiliary unit is described. The impact of OPEC on the wholesale price index and airline economic parameters are discussed, and NTT studies to reduce operating costs by fuel efficiency improvement including the use of a high bypass turbofan, active boundary layer control, and high turbine inlet temperature are examined. Reducing crew and maintenance costs are considered, noting that structural corrosion and fatigue maintenance costs will be diminished by the use of a honeycomb primary structure in the fuselage, wing, and empennage. Finally, the elimination of the auxiliary power unit maintenance and fuel cost, and the reduced electronic/electric maintenance costs are noted.
A.T.

A80-40344 **Common Cause Failures - A dilemma in perspective.** A. M. Smith (General Electric Co., Sunnyvale, Calif.) and I. A. Watson (U.K. Atomic Energy Authority, Lancs., England). In: Annual Reliability and Maintainability Symposium, San Francisco, Calif., January 22-24, 1980, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1980, p. 332-339. 31 refs.

This paper identifies the broad spectrum of Common Cause Failure (CCF) definitions used by various authors. These definitions, as applied to real aircraft and nuclear reactor failure events, lead to a divergence of interpretation and a resultant confusion that obscures meaningful progression in CCF analysis. A new definition is proposed, explained, and tested against the examples. Technical as well as Administrative Practices are cited as ways to control or eliminate the product defects that lead to CCF.
(Author)

A80-40349 **A Boolean approach to common cause analysis.** R. B. Worrell and D. W. Stack (Sandia Laboratories, Albuquerque, N. Mex.). In: Annual Reliability and Maintainability Symposium, San Francisco, Calif., January 22-24, 1980, Proceedings.

New York, Institute of Electrical and Electronics Engineers, Inc., 1980, p. 363-366. 14 refs.

It is shown that a transformation of variables can be used to achieve qualitative common cause analysis. Transformation equations that relate cause events to the primary events of a fault tree are described, and the substitutions that change the minimal cut set equation for the top event of the fault tree from a function of primary events to a function of cause events are explained. Examples are presented which show that different kinds of common cause analysis are accomplished by simple modifications of the transformation equations. (Author)

A80-40751 **Liquid fuel supplies.** H. Perry. *International Journal of Energy Research,* vol. 4, Apr.-June 1980, p. 103-107. 6 refs.

This paper presents an overview of United States and world petroleum, natural gas, and natural gas liquids presumed recoverable but as yet undiscovered resources and suggests that the depletion of these fuels may not occur as quickly as frequently predicted. The paper points out that the construction of a synthetic fuels industry will be very costly and will provide only a small amount of increased energy independence. The fear is expressed that haste in accepting a specific synfuels process on the basis of present technology may serve to forestall the development of a better technology. The paper suggests that we construct relatively few plants now each using a different technology in order to gain better understanding of the various technologies, more information on costs and the essential but as yet unknown information on environmental and socioeconomic effects of large scale plants. (Author)

A80-40759 **Environmental concerns for coal synfuel commercialization.** F. E. Witmer (U.S. Department of Energy, Environmental Control Technology Div., Washington, D.C.). *International Journal of Energy Research,* vol. 4, Apr.-June 1980, p. 185-195. 8 refs.

The control of multimedia environmental impacts (air, land, water) for commercial U.S. coal synfuel facilities is briefly discussed, based on process design data and environmental standards. While environmental control technology appears to be adequate, there is a critical need for confirmatory data from large-scale operating plants. Worker exposure to fugitive emissions and the disposal of solid waste are of special concern. The major environmental impediments to the commercialization of existing coal synfuel technology are time delays, facility size limitations, and 'non-acceptance' by the impacted community. (Author)

A80-40825 **Synthetic fuels from coal: Overview and assessment.** L. L. Anderson (Utah, University, Salt Lake City, Utah) and D. A. Tillman (Washington, University, Seattle, Wash.). New York, Wiley-Interscience, 1979. 170 p. 154 refs. $16.95.

The book contains a critical analysis of today's synthetic fuels option from the point of view of both user and producer. The principles of coal conversion and the history of synthetic fuel production are reviewed. Specific fuel types (low, medium, and high Btu gases, heavy and light liquids) and such synthetic fuels as petrochemical feedstocks are considered. Economic and environmental costs associated with synthetic fuel production are examined. V.T.

A80-40935 **A global and long-range picture of energy developments.** W. Häfele (International Institute for Applied Systems Analysis, Laxenburg, Austria). *Science,* vol. 209, July 4, 1980, p. 174-182. 22 refs.

An analysis of the balance between energy supply and demand for the next 50 years has been made for seven major world regions for two scenarios: one in which world energy consumption increases from today's 8.2 terawatt/yr to 22 TW/yr and the other where the increase is to 35 TW/yr. Factors considered with regard to energy demand include population growth, economic growth and technological progress, and energy sources such as oil, coal, nuclear and solar power are discussed. It is shown that time will be the limiting constraint in adapting the energy supply infrastructure to changing resource availability, and that resources will be available but a strong shift to low-grade fossil fuels such as shale oil and tar sands will be required. J.P.B.

A80-40944 # **The energy problem - Its effect on aircraft design. IV - The unforecastable future.** W. Tye. *Aircraft Engineering,* vol. 52, June 1980, p. 2-4.

Future supplies of energy for aviation and their affect on aircraft design are considered. Attention is given to proven and ultimately recoverable reserves of oil and gas and to the use of coal for fuel oil. Also discussed are advanced aircraft concepts, including laminar flow and the associated requirements of the porous surfaced wing and the suction system. In addition, the use of liquid hydrogen and of multibladed turbo-propellers with large blade chords, small thickness and high tip speeds, efficient up to a Mach number of 0.8, is considered. J.P.B.

A80-40945 # **Fuel economy in the airlines.** T. Ford. *Aircraft Engineering,* vol. 52, June 1980, p. 5-8.

Fuel savings during flight procedures are examined with regard to takeoff, climb optimization and automatic flight management using autopilot and autothrottle systems. The importance of the leading edge to the flow characteristics is also considered, along with engine design, development and maintenance. Research into terminal area capacity and efficiency, the improvement of approach and landing capability in adverse weather and the reduction of noise impact through operating procedures is discussed. In addition, the improvement of aircraft fuel efficiency by recovering deterioration losses and by incorporating drag reduction/engine fuel saving modifications is considered. J.P.B.

A80-40965 **Equitable performance comparison and economic evaluation of active and passive solar energy systems.** M. S. Drew and R. B. G. Selvage (S-Matrix Enterprises, Ltd., Richmond, British Columbia, Canada). *Energy* (U.K.), no. 5, May 1980, p. 407-415. 5 refs. Research supported by the British Columbia Ministry of Education, Science and Technology.

An evaluation of active and passive solar energy systems is made which assigns to both systems an equal energy demand. Active systems with baseline energy requirements equivalent to those of passive systems are identified by making a careful accounting of what passive solar energy properly belongs in the building load. This analysis allows an equitable economic comparison between the two alternative design solutions to the problem of maximizing life cycle savings for a system which supplies heat to a structure with specified floor area and heating load per unit floor area. (Author)

A80-41469 # **High temperature heat pipes for waste heat recovery.** M. A. Merrigan and E. S. Keddy (California, University, Los Alamos, N. Mex.). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 15th, Snowmass, Colo., July 14-16, 1980, Paper 80-1505.* 8 p. 5 refs. Research sponsored by the U.S. Department of Energy.

Operation of heat pipes in air at temperatures above 1200 K has been accomplished using SiC as a shell material and a chemical vapor deposit (CVD) tungsten inner liner for protection of the ceramic from the sodium working fluid. The CVD tungsten has been used as a distribution wick for the gravity-assisted heat pipe through structure, achieved by control of the metal vapor deposition rate. Wick performance has been demonstrated in tests at approximately 2 kW through-put with a 19-mm-i.d. SiC heat pipe. Operation of ceramic heat pipes in repeated start cycle tests has demonstrated their ability to withstand temperature rise rates of greater than 1.2 K/s. (Author)

A80-41472 * # **A high performance cocurrent-flow heat pipe for heat recovery applications.** E. W. Saaski and J. C. Hartl (Sigma Research, Inc., Richland, Wash.). *American Institute of Aeronautics* *and Astronautics, Thermophysics Conference, 15th, Snowmass, Colo., July 14-16, 1980, Paper 80-1508*. 9 p. 24 refs. NASA-supported research.

By the introduction of a plate-and-tube separator assembly into a heat pipe vapor core, it has been demonstrated that axial transport capacity in reflux mode can be improved by up to a factor of 10. This improvement is largely the result of eliminating the counter-current shear that commonly limits reflux heat pipe axial capacity. With benzene, axial heat fluxes up to 1800 W/sq cm were obtained in the temperature range 40 to 80 C, while heat flux densities up to 3000 W/sq cm were obtained with R-11 over the temperature range 40 to 80 C. These very high axial capacities compare favorably with liquid metal limits; the sonic limit for liquid sodium, for example, is 3000 W/sq cm at 657 C. Computational models developed for these cocurrent flow heat pipes agreed with experimental data within + or - 25%.

(Author)

A80-41488 # **Determination of the extinction coefficient of glass fiber insulation.** T. J. Love and A. Saboonchi (Oklahoma, University, Norman, Okla.). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 15th, Snowmass, Colo., July 14-16, 1980, Paper 80-1528*. 4 p.

In case of radiative equilibrium the transport of thermal radiation depends only on the extinction coefficient for both scattering and homogeneous media. A method of determination of the extinction coefficient for light density glass fiber insulation is presented with values of the measurement for a typical domestic glass fiber insulation.

(Author)

A80-41506 * # **Fuel conservation through active control of rotor clearances.** R. S. Beitler, A. A. Saunders, and R. P. Wanger (General Electric Co., Aircraft Engine Group, Evendale, Ohio). *AIAA, SAE, and ASME, Joint Propulsion Conference, 16th, Hartford, Conn., June 30-July 2, 1980, AIAA Paper 80-1087*. 8 p. Contract No. NAS3-20643.

Under the NASA-sponsored Energy Efficient Engine (EEE) Project, technology is being developed which will significantly reduce the fuel consumption of turbofan engines for subsonic transport aircraft. One technology concept being pursued is active control of rotor tip clearances. Attention is given to rotor tip clearance considerations and an overview of preliminary study results as well as the General Electric EEE clearance control approach is presented. Finally, potential fuel savings with active control of rotor clearances for a typical EEE mission are predicted.

M.E.P.

A80-41558 **Respirable aerosols from fluidized bed coal combustion. I - Sampling methodology for an 18-inch experimental fluidized bed coal combustor.** G. J. Newton, R. L. Carpenter, H.-C. Yeh, and E. R. Peele (Lovelace Biomedical and Environmental Research Institute, Albuquerque, N. Mex.). *Environmental Science and Technology*, vol. 14, July 1980, p. 849-853. 11 refs. Contract No. EY-76-C-04-1013.

Methods and equipment used to characterize respirable aerosol samples from the exhaust system of an experimental 18-inch ID atmospheric pressure fluidized bed coal combustor are presented. Sampling is performed by the extraction of a small sample of the effluent aerosols at four separate locations within the exhaust system by a probe moving at a velocity 1.2 times greater than the average velocity of the highly turbulent duct flow, followed by the dilution of the sample and its piping to a chamber from which samples could be obtained under milder conditions. Equipment includes 3-ft long, 0.5-in. OD stainless steel sampling probes, a radically injected diluter designed to reduce thermophoretic losses, a Tenax gas chromatography sampling system, and a sampling chamber serving to screen out particles with aerodynamic diameters greater than 10 microns and containing various sampling instruments. The apparatus has been found to be effective in sampling aerosols resulting from the fluidized bed combustion of Montana Rosebud subbituminous coal, Texas lignite, Western Kentucky high-sulfur bituminous coal and Paraho oil shale.

A.L.W.

A80-41559 **Respirable aerosols from fluidized bed coal combustion. II - Physical characteristics of fly ash.** R. L. Carpenter, G. J. Newton, S. J. Rothenberg, and P. B. DeNee (Lovelace Biomedical and Environmental Research Institute, Albuquerque, N. Mex.). *Environmental Science and Technology*, vol. 14, July 1980, p. 854-859. 26 refs. Contract No. EY-76-C-04-1013.

The respirable fraction of the exhaust aerosol produced by an experimental 18-in. atmospheric pressure fluidized bed coal combustor was sampled to assess the potential inhalation hazard associated with this technology. Aerosol sampling instrumentation and the basis for its choice are described. Respirable fly ash aerosol parameters at four locations in the exhaust cleanup system are reported, as is the penetration of system cleanup devices by the respirable aerosol. Particle morphology was examined by transmission and scanning electron microscopy. The specific surface area of the fly ash was determined as was the adsorption and desorption half-time of water vapor. These data were determined for fly ash particles obtained when the combustor was operated using a western low-sulfur subbituminous coal, an eastern high-sulfur bituminous coal, lignite, lignite refuse, and Paraho oil shale. The data show that the fly ash escaping the fluidized bed exhaust cleanup system has a mass median aerodynamic diameter on the order of 2 microns and consists of unfused particles having high specific surface areas.

A80-41571 # **Thermochemistry of seed and slag vaporization and condensation in coal-fired MHD.** P. E. Blackburn and C. E. Johnson (Argonne National Laboratory, Argonne, Ill.). *American Institute of Aeronautics and Astronautics, Fluid and Plasma Dynamics Conference, 13th, Snowmass, Colo., July 14-16, 1980, Paper 80-1344*. 6 p. Research sponsored by the U.S. Department of Energy.

A computer code has been developed that calculates equilibrium compositions of the gas and condensed phases in the coal-fired MHD system. The code, MHD80, is based on the laws of mass action, conservation of mass, and, for the condensate, an assumed ideal solution of stable compounds in two immiscible phases. Potassium activities predicted with the code agree with measurements at NBS on synthetic slags and at Argonne on UTSI slag. The code has been used to determine condensation temperatures, loss of potassium to slag, conditions for removal of sulfur as potassium sulfate, and the chemical form of trace impurities.

Energiewirtschaftliche Tagesfragen*, vol. 30, June 1980, p. 386, 388, 390, 392, 394. In German.

A80-41842 **Alabama Electric Cooperative flue gas desulfurization operating and maintenance experience.** C. A. Johnson (Peabody Process Systems, Inc., Stamford, Conn.) and R. Hutcheson (Alabama Electric Cooperative, Inc., Leroy, Ala.). *Air Pollution Control Association, Journal*, vol. 30, July 1980, p. 744-748.

The design factors contributing to the exceptionally good operating and maintainence performance of limestone flue gas desulfurization systems for two 225-MW coal-fired generators are discussed, and the experience obtained is examined in detail. Attention is given to the spray tower absorber, mist eliminator chemistry control by use of hydroclones, simplicity of design, absorber liner material selection and installation, and the adaptability of the design to actual operating conditions. The actual performance of the systems with respect to start-up (push-button), SO2 removal and limestone utilization (high efficiency and utilization), power and manpower requirements (both low) and availability (up to 97%) is reviewed, and problems with the ball mill system, the dampers, instrumentation and the slurry transfer line are indicated. A.L.W.

A80-41849 **Technical aspects of lime/limestone scrubbers for coal-fired power plants. II - Instrumentation and technology.** H. T. Karlsson and H. S. Rosenberg (Battelle Columbus Laboratories, Columbus, Ohio). *Air Pollution Control Association, Journal,* vol. 30, July 1980, p. 822-826. 8 refs.

Instrumentation and particulate removal and sludge disposal technology for lime/limestone scrubbers for coal-fired power plants is discussed. Consideration is given to means for gas flow determination, SO2 sampling, slurry concentration, mist concentration/distribution and pH monitoring and SO2 monitoring for process control purposes. Particulate removal by electrostatic precipitators and/or wet scrubbing and means of removing the mist formed when the flue gas passes through SO2 absorber units are considered, and methods for flue gas reheating following scrubbing and operational aspects of dampers and fans are indicated. Finally, the treatment and disposal of the sludge collected are discussed, and it is concluded that although safe and trouble-free equipment for vital component systems is not available, great progress towards this end has been made. A.L.W.

A80-42158 # **Continuously variable ratio transmissions for single-shaft gas turbines.** H. J. Förster (Daimler-Benz AG, Stuttgart, West Germany). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-21.* 7 p. Members, $1.50; nonmembers, $3.00.

The single-shaft gas turbine was combined with various CVR transmissions. Of the three variants studied in detail - purely hydrostatic transmission, hydrostatic transmission with internal power splitting, and hydrodynamic transmission with variable pitch converter - the latter gives the best transmission efficiency. However, comparison with the two-shaft gas turbine shows quite clearly that in practically all cases a large part of the gain in efficiency achieved by increasing the process temperature to 1623 K is absorbed by the losses from the CVR transmissions. Because of the great significance attached today to fuel consumption, the combination of single-shaft gas turbine with CVR transmission - on the basis of these investigations - cannot be recommended. This statement would even apply if it was to be proved that the simple design of the single-shaft gas turbine alone permitted the use of ceramic material and thus the higher process temperatures. This is because the conditions along the traction resistance line for level ground have a much greater effect on everyday fuel consumption than the efficiency ratings at full load. The latter only has an effect during acceleration or when steep gradients are being negotiated. (Author)

A80-42159 # **The Perbury transmission.** F. G. Perry (Perbury Engineering, Ltd., Whitehead, Northern Ireland). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-22.* 6 p. Members, $1.50; nonmembers, $3.00.

The paper presents an overview of the Perbury transmission system principles, background, development status and applications. Future development areas covering traction fluids, rolling component fatigue life, regime gearing arrangements and production packaging are discussed noting that whatever the form of prime mover, large improvements in vehicle fuel economy are possible with correct engine management. A80-42190 * # **An analytical study of nitrogen oxides and carbon monoxide emissions in hydrocarbon combustion with added nitrogen - Preliminary results.** D. A. Bittker (NASA, Lewis Research Center, Cleveland, Ohio). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-60.* 11 p. 19 refs. Members, $1.50; nonmembers, $3.00.

The influence of ground-based gas turbine combustor operating conditions and fuel-bound nitrogen (FBN) found in coal-derived liquid fuels on the formation of nitrogen oxides and carbon monoxide is investigated. Analytical predictions of NOx and CO concentrations are obtained for a two-stage, adiabatic, perfectly-stirred reactor operating on a propane-air mixture, with primary equivalence ratios from 0.5 to 1.7, secondary equivalence ratios of 0.5 or 0.7, primary stage residence times from 12 to 20 msec, secondary stage residence times of 1, 2 and 3 msec and fuel nitrogen contents of 0.5, 1.0 and 2.0 wt %. Minimum nitrogen oxide but maximum carbon monoxide formation is obtained at primary zone equivalence ratios between 1.4 and 1.5, with percentage conversion of FBN to NOx decreasing with increased fuel nitrogen content. Additional secondary dilution is observed to reduce final pollutant concentrations, with NOx concentration independent of secondary residence time and CO decreasing with secondary residence time; primary zone residence time is not observed to affect final NOx and CO concentrations significantly. Finally, comparison of computed results with experimental values shows a good semiquantitative agreement. A.L.W.

A80-42225 # **Fuel-flexible combined cycles for utility power and cogeneration.** P. B. Roberts, T. E. Duffy (Solar Turbines International, San Diego, Calif.), and H. Schreiber (Electric Power Research Institute, Palo Alto, Calif.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-101.* 14 p. Members, $1.50; nonmembers, $3.00. Research supported by the Electric Power Research Institute.

Two combustion turbine combined cycle power plants have been studied for performance and operating economics. Both power plants are in the sizing range that will be suitable for small utility application and use less than 106 GJ/hr (100 million Btu/hr). The first power plant is based on the Solar Turbines International (STI) Mars industrial gas turbine. The combined gas turbine/steam cycle is direct fired with No. 2 diesel fuel. A total installed cost for the system is estimated to be within the band 545 to 660 $/kW. The second power plant is based on STI's Centaur industrial gas turbine. The combined gas turbine/steam cycle is indirectly fired with solid fuel although it is intended that the installation can be initially fired with a liquid fuel. (Author)

Members, $1.50; nonmembers, $3.00. Contract No. ET-78-C-01-3179.

A80-42254 **Design study for a fuel efficient turbofan engine.** R. C. Kingcombe and S. W. Dunning (National Gas Turbine Establishment, Farnborough, Hants., England). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-141.* 9 p. 8 refs. Members, $1.50; nonmembers, $3.00.

An engine design study is presented in which the target is a 15 percent reduction in installed specific fuel consumption over the large engines currently in service while still meeting anticipated noise and emissions regulations. The fuel saving is achieved with a low specific thrust (bypass ratio 10) and a high overall cycle pressure ratio (42 at cruise). A three-shaft design is proposed, employing highly loaded components in order to reduce the number of turbomachinery stages and hence keep down cost and weight. It is argued that this approach is the one most compatible with projected technological advances. The engine configuration is given and the key features explained, highlighting areas where further research would be of particular advantage. Finally, the predicted engine performance is given, together with an estimate of the savings in direct operating cost. (Author)

A80-42255 * # **The Energy Efficient Engine /E3/ - Advancing the state of the art.** W. B. Gardner and D. E. Gray (United Technologies Corp., Pratt and Whitney Aircraft Group, East Hartford, Conn.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-142.* 11 p. 7 refs. Members, $1.50; nonmembers, $3.00. NASA-sponsored research.

The NASA-sponsored Energy Efficient Engine (E3) Program, intended to develop and demonstrate the technology for reducing fuel consumption in future environmentally acceptable turbofan engines, is presented. The development of the flight propulsion system design is outlined and the resulting preliminary design is presented. Component design and subcomponent supporting technology verification work in progress is discussed, with attention given to fabrication development, the transition duct, mixer design, the fan, the high-pressure compressor, the combustor, and the high-pressure turbine. It is noted that the detailed design of the core components is essentially complete and fabrication of the hardware has begun, with the program on schedule toward testing in 1982. A.L.W.

A80-42258 * # **Results from tests on a high work transonic turbine for an energy efficient engine.** D. E. Crow, H. Welna, I. D. Singer (United Technologies Corp., Pratt and Whitney Aircraft Group, East Hartford, Conn.), and M. R. Vanco (NASA, Lewis Research Center, Cleveland, Ohio). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-146.* 9 p. Members, $1.50; nonmembers, $3.00. Contract No. NAS3-20646.

The experimental results of the evaluation of two high work, transonic, single-stage turbines investigated under the Energy Efficient Engine (E3) Program are presented. The objective of the E3 program is to provide an advanced technology base for a new generation of fuel-conservative turbofan engines. A single-stage turbine required fewer cooled airfoils, a reduced number of leakage paths and no interstage seals. These advanced energy efficient engines require high engine pressure ratios resulting in high expansion ratio, transonic, turbine designs which must have high aerodynamic efficiency. The goal of the turbine program is to develop a high pressure turbine that is compatible with the overall engine design and has an uncooled efficiency of 90.8 percent. (Author)

A80-42273 # **Industrial AFB-fired gas turbine systems with topping combustors.** C. L. Marksberry and B. C. Lindahl (FluiDyne Engineering Corp., Minneapolis, Minn.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-163.* 12 p. 5 refs. Members, $1.50; nonmembers, $3.00.

An Atmospheric Fluidized Bed (AFB) combustor providing thermal input to gas turbines is a promising near-term means of decreasing national premium fuel consumption. In an AFB many solid fuels, including marginal fuels such as anthracite culm, bituminous gob, high sulfur coals, lignite, and petroleum coke, can be used effectively providing both very low emission levels and acceptable return-on-investment. This paper discusses the state of AFB/gas turbine cogeneration technology with reference to typical industrial plant applications. Design considerations and design limits for both the AFB heat exchangers and the topping combustor are discussed and compared. An example based on plant process data and commercially available components is also presented. Both the heat exchangers and the combustors are viewed with reference to state-of-the-art technology. (Author)

A80-42282 # **Evaluation method for closed cycle gas turbines in cogeneration applications.** H. C. Daudet and S. W. Trimble (AiResearch Manufacturing Company of Arizona, Phoenix, Ariz.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-176.* 14 p. 11 refs. Members, $1.50; nonmembers, $3.00. Contract No. EF-77-C-01-2611.

The utilization of coal-fired closed cycle gas turbine/atmospheric fluidized bed (CCGT/AFB) electrical power generating plants for cogeneration was investigated. Both industrial process and district heating and cooling applications in the 10- to 50-MWe range were considered. An evaluation procedure was developed in which cogeneration plant capital, operating, maintenance, and financing costs are compared with the cost of providing equivalent services by traditional methods. Computer optimized conceptual designs of the CCGT/AFB plants were prepared, and performance and capital costs were estimated. A broad spectrum of applications including towns, military bases, universities, and industrial processes was surveyed. This paper presents the general evaluation procedure, typical plant designs, and the evaluation of two applications. (Author)

A80-42450 **Prospects for energy responsive urban planning and design.** A. Bowen (Miami, University, Coral Gables, Fla.). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 555-585. 8 refs.

Effective energy utilization through appropriate urban planning and design is discussed. Climate-derived urban patterns are considered in terms of the effects on building volume for dry as well as humid conditions in hot, temperate and cold regions. Emphasis is placed on the use of appropriate energies, including ambient and conventional, in a cold climate where a hemispherical building constructed from concrete is recommended; a temperate climate requiring 'A' frame construction with north/south elevation sloped to latitudinal response, and a hot-dry climate with a building shaped like a hollow doughnut cambered outward to prevent year-round heat gain through the walls. Also considered are solar geometry, wind patterns and computer programs available as aids in urban design and planning. J.P.B.

A80-42451 **Regional planning strategies for hybrid energy optimization.** A. Bowen (Miami, University, Coral Gables, Fla.). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 587-628.

A review is presented of available fuels and energy sources with regional planning strategies for hybrid energy optimization. The fuels include coal, crops, nuclear sources, geothermal, hydraulic power, and solar; energy sources are classified as genotypes which are easily applied at scaled levels within a defined region, and phenotypes which are modifications of regional sources to suit any site within a district. Regional energy genotypes include renewable ambient energies such as solar, wind, and geothermal, and nonrenewable energies exemplified by coal, natural gas, oil, and waste heat; phenotypes use the appropriate genotype energy for its most suitable use in its available or modified version as determined by site constraints, wind barriers, and precipitation. The regional ambient energy patterns in the US are summarized in terms of solar radiation, humidity, and comfort indicators, noting the effects of climate manipulation through landscape treatments. A.T.

A80-42925 # **A utility company's view of energy from waste.** T. E. Gieruszczak (Consumers' Gas Co., Toronto, Canada). *CanInfo Communications, Energy from Waste Seminar: A Decade of Development, Toronto, Canada, Nov. 21, 22, 1979, Paper.* 25 p.

Energy supplies and conservation are discussed, particularly with regard to the situation in Canada, and attention is given to the natural gas surplus and the need to import oil. Emphasis is placed on alternative energy sources including peat, lignite, tidal power from the Bay of Fundy, the thermochemical gasification of biomass, gasohol and a combination wind turbine-diesel generator. Near-term solutions to the energy crisis are considered such as conservation, systems cogenerating power and heat, and energy from solid waste: examples of incineration systems with major heat recovery operations are presented. J.P.B.

A80-42926 # **Role of the public utility in developing energy from waste.** R. E. Waters and R. J. Walters (Ontario Hydro, Toronto, Canada). *CanInfo Communications, Energy from Waste Seminar: A Decade of Development, Toronto, Canada, Nov. 21, 22, 1979, Paper.* 11 p.

Energy from waste products is discussed along with the efficient use of resources and in particular, the utilization of heat. Emphasis is placed on burning garbage produced in cities in steam-raising incinerators and district heating, as well as the high load densities required. Also considered are process steam applications, such as in forest products industries, waste heat, and the temperature of condenser cooling water discharges. Present projects with regard to refuse burning and the heat supply from thermal stations are also examined. J.P.B.

A80-42927 # **Energy recovery in the sludge treatment process at Toronto's main treatment plant.** N. J. Perkins (Gore and Storrie, Ltd., Toronto, Canada). *CanInfo Communications, Energy from Waste Seminar: A Decade of Development, Toronto, Canada, Nov. 21, 22, 1979, Paper.* 9 p.

A80-43304 * # **Aerodynamic design optimization of a fuel efficient high-performance, single-engine, business airplane.** B. J. Holmes (NASA, Langley Research Center, Hampton, Va.). *American Institute of Aeronautics and Astronautics, Aircraft Systems Meeting, Anaheim, Calif., Aug. 4-6, 1980, Paper 80-1846.* 13 p.

A design study has been conducted to optimize a single-engine airplane for a high-performance cruise mission. The mission analyzed included a cruise speed of about 300 knots, a cruise range of about 1300 nautical miles, and a six-passenger payload (5340 N (1200 lb)). The purpose of the study is to investigate the combinations of wing design, engine, and operating altitude required for the mission. The results show that these mission performance characteristics can be achieved with fuel efficiencies competitive with present-day high-performance, single- and twin-engine, business airplanes. It is noted that relaxation of the present Federal Aviation Regulation, Part 23, stall-speed requirement for single-engine airplanes facilitates the optimization of the airplane for fuel efficiency. (Author)

A80-43305 # **Fuel efficiency of small aircraft.** B. H. Carson (U.S. Naval Academy, Annapolis, Md.). *American Institute of Aeronautics and Astronautics, Aircraft Systems Meeting, Anaheim, Calif., Aug. 4-6, 1980, Paper 80-1847.* 9 p. 10 refs.

There is a basic mismatch between the amount of power installed in small propeller-driven aircraft and that required for efficient cruising, which results from climb performance requirements. It is shown in this paper that there is a way of using excess power for most efficient cruise, the resulting airspeed coming closest to the Gabrielli-von Karman limit line of vehicular performance. A survey of 111 light aircraft was conducted, and it is found that many are operated at this optimum, while many more are not. A figure of merit is developed that measures cruise performance. Rationale is presented that is directly applicable to design for cruise efficiency. (Author)

A80-43341 # **Solar and geothermal Rankine cycle engines can convert petroleum industry waste heat into electrical power.** R. E. Barber (Barber-Nichols Engineering Co., Arvada, Colo.). *American Society of Mechanical Engineers, Energy Technology Conference and Exhibition, New Orleans, La., Feb. 3-7, 1980, Paper 80-Pet-27.* 6 p. 5 refs. Members, $1.50; nonmembers, $3.00.

Development work presently being carried on for solar and geothermal applications is applicable to utilize the waste heat from petroleum processes in the less than 700 F range. Much waste heat is presently being recovered by process modifications. This paper shows the efficiency expected and the estimated equipment cost of Rankine engines as a function of waste heat temperature and some examples of solar and geothermal Rankine engines that might be applicable to accomplish this energy savings. (Author)

A80-43741 **Development of a NO/x/-free combustion system.** M. Sadakata, T. Furusawa, D. Kunii (Tokyo, University, Tokyo, Japan), M. Imagawa (Tanabe Kakoki Co., Ltd., Japan), and M. Nawada (Hitachi, Ltd., Tokyo, Japan). *Energy Developments in Japan*, vol. 2, Apr. 1980, p. 355-373.

The development of a NO(x)-free combustion-heating system realizing both pollution control and energy savings is described. An experiment was carried out by using a small model plant. The system consists of a combustion furnace and a new-type multifunctional heat exchanger. The heat exchanger is a rotary continuous type designed for soot collection and for catalytic combustion of CO and H2 as well as for preheating combustion air. V.T.

A80-43828 **Energy analysis of wave and tidal power.** R. Harrison (Sunderland Polytechnic, Sunderland, England), K. G. Smith (South Australia Institute of Technology, Whyalla, Australia), and J. S. Varley (IPC Science and Technology Press, Ltd., Guildford, Surrey, England). *IEE Proceedings, Part A - Physical Science, Measurement and Instrumentation, Management and Education, Reviews*, vol. 127, pt. A, no. 5, June 1980, p. 274-278. 12 refs.

Energy requirements for building wave- and tidal-power systems are estimated and the relationship between energy requirements and extraction efficiency is examined for wavepower systems. It is found that a point of maximum net output is reached, beyond which further increases in extraction efficiency result in decreased net energy. In this manner, the energy analysis identifies a limit on the energy which could, in principle, be extracted by a wave-energy system. Finally, it is noted that although similar limits could be identified for other types of energy sources, the tidal power analysis is confined to a brief comparison of energy inputs and outputs. M.E.P.

A80-43829 **Economic and operational implications of a complex of wind-driven generators on a power system.** E. D. Farmer (Central Electricity Generating Board, Central Electricity Research Laboratory, Leatherhead, Surrey, England), V. G. Newman, and P. H. Ashmole (Central Electricity Generating Board, Planning Dept., London, England). *IEE Proceedings, Part A - Physical Science, Measurement and Instrumentation, Management and Education, Reviews*, vol. 127, pt. A, no. 5, June 1980, p. 289-295. 8 refs.

An assessment is presented of the technical and economic implications of integrating a sizeable complex of aerogenerators into a power system. An important economic and operational factor is the variable and uncertain nature of the wind. However, it is shown that the effects of the more rapid fluctuations are mitigated by the incoherency of different machine outputs; a diversity factor is defined in terms of the spacing of an array of machines and the turbulence length scale. In contrast, the slower variations require a significant enhancement of the operational reserve capacity without addition of dedicated storage in order to accommodate wind-power penetration up to 20% of maximum demand. The increased uncertainty of the residual generation affects the economics of utilization of pumped-storage and gas-turbines as standby plant. The results of an analysis of a year's data, pertaining to demand and wind speed at 4 well separated sites, are presented. (Author)

DESIGN STUDY: A 186 kW LIGHTWEIGHT DIESEL AIRCRAFT ENGINE Final Report
Alex P. Brouwers Apr. 1980 24 p
(Contract NAS3-20830)
(NASA-CR-3261) Avail: NTIS HC A02/MF A01 CSCL 21E

The design of an aircraft engine capable of developing 186 kW shaft power at a 7620 m altitude is described. The 186 kW design takes into account expected new developments in aircraft designs resulting in a reassessment of the power requirements at the cruise mode operation. Based on the results of this analysis a three phase technology development program is projected resulting in production dates of 1985, 1992, and 2000.

DEVELOPMENT OF COMBUSTION DATA TO UTILIZE LOW-Btu GASES AS INDUSTRIAL PROCESS FUELS. PROJECT 61004 SPECIAL REPORT NO. 8: BOILER BURNER
R. T. Waibel and E. S. Fleming May 1979 40 p refs
(Contract EX-76-C-01-2489)
(FE-2489-45) Avail: NTIS HC A03/MF A01

Data were gathered to determine the performance of a boiler burner with a gun-type fuel injector when retrofit with three low-Btu gases, the performance of natural gas was used as a base line for comparison. The burner was fired on the IGT pilot-scale test furnace, simulating one burner in a multiburner array of an industrial boiler. In order to fire the low-Btu gases at the 3.0 million Btu/hr rate and upstream pressure of 30 psia used for natural gas, the fuel injector was modified by increasing the sizes of the fuel orifices to permit delivery of the required fuel volume at sonic velocity. With the appropriate fuel injector, all the low-Btu fuels exhibited stable flames at fuel enthalpy inputs of 3.0 million Btu/hr. All the low-Btu fuel gases had longer flame lengths than natural gas, although not long enough to create flame impingement problems. The thermal efficiencies of the low-Btu gases ranged from 29.5 percent for Koppers-Totzek oxygen to 26 percent for Winkler air compared with 32 percent for natural gas.

GRAIN MOTOR FUEL ALCOHOL TECHNICAL AND ECONOMIC ASSESSMENT STUDY
Jun. 1979 368 p refs
(Contract EJ-78-C-01-6639)
(HCP/J6639-01) Avail: NTIS HC A16/MF A01

The technical and economical feasibility for production of motor fuel alcohol from a plant with a capacity of 50 million US gallons per year is evaluated. Included are a detailed process design using proven technology, a complete budget estimate of the plant investment including working capital, a detailed analysis of the annual operating cost using corn as the primary feedstock, and a complete financial analysis which establishes the alcohol selling price required to net to the investor a 15 percent discounted cash flow (interest rate or return). Other considerations for production of motor fuel alcohol are evaluated and discussed, namely: excursions on plant capacities; excursions on feedstock material; sensitivity analyses on financial parameters; and substitution of corn stover for coal as the fuel source. An assessment and commmentary on the agricultural, technological, and economic impact of a major gasohol program in the US are also given.

WATER AVAILABILITY FOR ENERGY IN 1985 AND 1990
Jerome E. Dobson and Alf D. Shepherd Oct. 1979 108 p refs
(Contract W-7405-eng-26)
(ORNL/TN-6777) Avail: NTIS HC A06/MF A01

The effects of the National Energy Plan (NEP) on water for energy demands in 1985 and 1990 are examined. Estimates of total consumption are compared with estimates of critical monthly surface-water supply, derived from streamflow and reservoir use data, in each WRC Aggregated Subarea in the conterminous United States. It is concluded that water availability will not inhibit implementation of the NEP because its conservation goals actually retard the growth of water for energy demands in most basins compared with what might be expected without the NEP. However, the results of this assessment and previous corroborative water for energy analyses show that, with or without the NEP, energy development will cause additional water availability problems on already stressed streams and reservoirs throughout much of the western United States, southern Florida, the Ohio River Basin, and the highly urbanized areas of the Eastern Seaboard.

DISPERSED STORAGE AND GENERATION CASE STUDIES
Khosrow Bahrami, John A. Stallkamp, and Amy Walton 15 Mar. 1980 187 p refs
(Contracts NAS7-100; DE-AI01-79ET-29026)
(NASA-CR-162996; JPL-Pub-79-98) Avail: NTIS HC A09/MF A01 CSCL 10A

Three installations utilizing separate dispersed storage and generation (DSG) technologies were investigated. Each of the systems is described in costs and control. Selected institutional and environmental issues are discussed, including life cycle costs. No unresolved technical, environmental, or institutional problems were encountered in the installations. The wind and solar photovoltaic DSG were installed for test purposes, and appear to be presently uneconomical. However, a number of factors are decreasing the cost of DSG relative to conventional alternatives, and an increased DSG penetration level may be expected in the future. R.E.S.

ENERGY CONSERVATION VIA HEAT TRANSFER ENHANCEMENT Quarterly Progress Report, 1 Jan. - 31 Mar. 1979
A. E. Bergles, G. H. Junkhan, and R. L. Webb Jun. 1979 48 p refs
(Contract ET-78-S-02-4649)
(COO-4649-5) Avail: NTIS HC A03/MF A01

The theory and practice of heat transfer enhancement are discussed. A technical literature file and manufacturers' file are reported and the initial patent technology information file is evaluated. Application studies on enhancement of waste heat recuperators and laminar internal flow heat transfer are described and data for the heat transfer and friction characteristics of internally finned tubes is discussed. Natural convection from rough surfaces is assessed. Major effort was directed toward planning of the Research Workshop on Energy Conservation Through Enhanced Heat Transfer. The Workshop, scheduled for May 24 and May 25, 1979 in Chicago, will be co-sponsored by NSF. DOE

END-USE MATCHING OF SOLAR ENERGY SYSTEMS
F. Kreith, D. Kearney, and A. Bejan (Colo. Univ., Boulder) 1979 25 p refs Presented at the 2d Law of Thermodyn. Workshop, Washington, D.C., 14-16 Aug. 1979
(Contract EG-77-C-01-4042)
(SERI/TP-34-325) Avail: NTIS HC A02/MF A01

The choice among available energy sources for a given task requires technical and economic tradeoffs on the part of the individual investor. From the national perspective, however, the effectiveness with which available energy sources are utilized may well become an overriding consideration. End-use matching is a procedure for introducing solar energy into the national energy infrastructure. The result of end-use matching is an identification of the most cost-effective combination of process energy needs, solar collector technology, geographic location, and economics by matching currently available solar system hardware with particular industrial processes and their locations. End-use matching methodology is discussed and first and second law thermodynamics analyses applied to a solar system producing process steam are illustrated. DOE

COMMUNICATION STRATEGY TO COMMERCIALIZE PASSIVE SOLAR ENERGY
D. R. Wolcott (Intern. Business Serv., Inc., Washington, D.C.) and F. F. Shoemaker 1979 6 p refs Presented at the Natl. Passive Solar Energy Conf., Kansas City, Mo., 3-5 Oct. 1979
(Contract EG-77-C-01-4042)
(SERI/TP-69-412; CONF-791022-10) Avail: NTIS HC A02/MF A01

Although certain technical and economic issues remain to be clarified, passive solar market development is increasingly dependent upon communications such as information dissemination, education, training and promotional activities. Target audiences are identified as both recipients, and disseminators of passive solar communications. Form and quality of information are discussed in terms of the stages of an innovation adoption decision-making process. Several communication-related barriers which impede the commercialization of passive solar are discussed and general information and education response are suggested. A statement of precepts which should guide passive solar communication programs is also included. DOE

LOW-LEVEL AIRBORNE MONITORING TECHNIQUES UTILIZED IN A FIELD MEASUREMENT PROGRAM AT OPERATING PRESSURIZED WATER REACTORS
D. W. Akers, N. K. Bihl, S. W. Duce, J. W. Tkachyk, and B. G. Motes 1979 14 p Presented at the 23rd Conf. on Anal. Chem. in Energy Technol., Gatlinburg, Tenn., 9 Oct. 1979
(Contract EY-76-C-07-1570)
(CONF-791049-8) Avail: NTIS HC A02/MF A01

An in-plant measurement program underway at commercial nuclear power stations is described. Measurements were made of low level airborne radioactivity concentrations and release rates. A discussion of the measurement methods is given. The monitoring methods discussed include several types of radioiodine species samplers in addition to an atmospheric C-14 and tritium sampler. Each method is individually evaluated with emphasis upon: system description, observed detection limits, sample preparation, analysis, problems encountered in field use, and appropriate usage in a nuclear power plant ventilation system. DOE

NATIONAL IMPACTS ON VISUAL AIR QUALITY FROM A FUTURE ENERGY SCENARIO
D. Nochumson, M. Wecksung, and G. Gurule 1979 11 p refs Presented at ACPA Conf. on Visibility, Denver, 26 Nov. 1979
(Contract W-7405-eng-36)
(LA-UR-79-3214; CONF-791139-1) Avail: NTIS HC A02/MF A01

A methodology was developed to evaluate impacts on atmospheric visual air quality for nonurban areas caused by

regional haze. Estimated values of median visual range for 39 nonurban ambient air quality monitoring sites were shown to have a high correlation with observed values. A decline in median visual range is projected in regions of the west and the Gulf Coast where there is a substantial growth in the combustion of sulfur containing fossil fuels--coal in particular. The projected decline in median visual range in mandatory Class One Federal areas, particularly in the Western US, may confict with Congress's goal of protecting these areas against visibility impairment. Regulations for defining visibility impairment remain to be defined. The meeting of the emission limitations of the state implementation plans is projected to significantly improve the low visibilities experienced in the Eastern US, particularly in the Ohio Valley and the surrounding region.

CRITERIA FOR ASSESSMENT OF ENVIRONMENTAL POLLUTANTS FROM COAL CLEANING PROCESSES Final Report, Sep. 1976 - Apr. 1979
R. A. Ewing, B. W. Cornaby, P. VanVoris, J. C. Zuck, and G. E. Raines 1979 202 p refs
(Contract EPA-68-02-2163)
(PB80-102791; EPA-600/7-79-140) Avail: NTIS HC A10/MF A01 CSCL 06F

The development of criteria for assessing environmental pollutants associated with coal cleaning processes is described. The major criterion for ranking the importance of any pollutant is the relationship between its expected environmental concentration and the maximum concentration which presents no long-term hazard to humans or biota. Environmental concentrations depend on emission rates and the effects of physical transport and dispersion.

ASSESSMENT OF THE POTENTIAL OF HYBRID VEHICLES: SUMMARY
F. T. Surber et al 15 Mar. 1980 70 p refs
(Contracts NAS7-100; EM-78-I-01-4290; JPL Proj. 5030-345)
(NASA-CR-163059; JPL-Pub-80-13) Avail: NTIS HC A04/MF A01 CSCL 13F

The potential of hybrid vehicles as a replacement of the conventional gasoline or diesel fueled internal combustion engine vehicle within the next 20 to 30 years, was assessed. Hybrid vehicle designs and applications which are technically and economically viable were studied to determine if reductions in petroleum usage were large enough to warrant major expenditures of research and development funds. Critical technical areas where research and development can be most usefully concentrated were indentified.

BATTERY-POWERED, DIFFERENTIAL INFRARED ABSORPTION SENSOR FOR METHANE, ETHANE, AND OTHER HYDROCARBONS
G. E. Bingham, C. H. Gillespie, and J. H. McQuaid 8 Oct. 1979 21 p refs Presented at the Gas Res. Inst. Symp. on Methane Detection and Measurement, Chicago, 27 Aug. 1979
(Contract W-7405-eng-48; Grant NSF DEB-77-16327)
(UCRL-83317; CONF-790887-1) Avail: NTIS HC A02/MF A01

The performance goals, design considerations and physical details of the miniature infrared absorption sensor developed for the liquefied natural gas spill safety program are presented. The sensor is lightweight, battery-powered, portable, self-contained, and able to interface readily to large array data systems. Essentially a precision infrared differential spectrometer capable of operating over the full range of gas concentrations expected in the spill diffusion tests, the sensor is expected to cost less than $7000 per unit. The present design of this open-cell fast response sensor allows it to measure two components, but it can be modified to measure additional components at a reduced sampling frequency. To minimize temperature effects and power consumption, the sensor has a single source, single detectors design which includes a rotating chopper-filter wheel. A CMOS microprocessor interfaced with a arithmetic chip is used to linearize sensor output and correct for component interference. DOE

THE EFFECT OF CATALYST LENGTH AND DOWNSTREAM REACTOR DISTANCE ON CATALYTIC COMBUSTOR PERFORMANCE
David Anderson 1980 24 p refs Presented at the 4th Workshop on Catalytic Combust., Cincinnati, 14-15 May 1980; sponsored by EPA
(Contract EC-77-A-31-1040)
(NASA-TM-81475; DOE/NASA/1040-80/14; E-409) Avail: NTIS HC A02/MF A01 CSCL 10B

A study was made to determine the effects on catalytic combustor performance which resulted from independently varying the length of a catalytic reactor and the length available for gas-phase reactions downstream of the catalyst. Monolithic combustion catalysts from three manufacturers were tested in a combustion test rig with no. 2 diesel fuel. Catalytic reactor lengths of 2.5 and 5.4 cm, and downstream gas-phase reaction distances of 7.3, 12.4, 17.5, and 22.5 cm were evaluated. Measurements of carbon monoxide, unburned hydrocarbons, nitrogen oxides, and pressure drop were made. The catalytic-reactor pressure drop was less than 1 percent of the upstream total pressure for all test configurations and test conditions. Nitrogen oxides and unburned hydrocarbons emissions were less than 0.25 g NO2/kg fuel and 0.6 g HC/kg fuel, respectively. The minimum operating temperature (defined as the adiabatic combustion temperature required to obtain carbon monoxide emissions below a reference level of 13.6 g CO/kg fuel) ranged from 1230 K to 1500 K for the various conditions and configurations tested. The minimum operating temperature decreased with increasing total (catalytic-reactor-plus-downstream-gas-phase-reactor-zone) residence time but was independent of the relative times spent in each region when the catalytic-reactor residence time was greater than or equal to 1.4 ms. R.E.S.

SUMMARY AND EVALUATION OF THE PARAMETRIC STUDY OF POTENTIAL EARLY COMMERCIAL MHD POWER PLANTS (PSPEC)
Peter J. Staigner and John M. Abbott 1980 11 p refs Presented at the 7th Intern. Conf. on Magnetohydrodyn. Elec. Generation, Cambridge, Mass., 16-20 Jun. 1980, sponsored by the Symp on the Eng. Aspects of Magnetohydrodynam., Inc.
(Contract EF-77-A-31-2674)
(NASA-TM-81497; DOE/NASA/2674-80/9; E-434) Avail: NTIS HC A02/MF A01 CSCL 10B

Two parallel contracted studies were conducted. Each contractor investigated three base cases and parametric variations about these base cases. Each contractor concluded that two of the base cases (a plant using separate firing of an advanced high temperature regenerative air heater with fuel from an advanced coal gasifier and a plant using an intermediate temperature metallic recuperative heat exchanger to heat oxygen enriched combustion air) were comparable in both performance and cost of electricity. The contractors differed in the level of their cost estimates with the capital cost estimates for the MHD topping cycle and the magnet subsystem in particular accounting for a significant part of the difference. The impact of the study on the decision to pursue a course which leads to an oxygen enriched plant as the first commercial MHD plant is described. R.E.S.

CONVERSION SYSTEM OVERVIEW ASSESSMENT. VOLUME 2: SOLAR-WIND HYBRID SYSTEMS
T. S. Jayadev, J. Henderson, and C. Bingham Aug. 1979 34 p refs
(Contract EG-77-C-01-4042)
(SERI/TR-35-078-Vol-2) Avail: NTIS HC A03/MF A01

Solar-wind hybrid systems are discussed. It is shown that there are large areas in the United States where solar and wind resources are comparable in magnitude and there are diurnal and seasonal complementarities which offer the potential for cost-effective hybrid systems. There are also distinct engineering features of the two conversion technologies. Electric power generation from wind is straightforward and cost-effective, whereas solar thermal conversion to generate heat is more cost-effective than to generate electricity. Examples of hybrid systems utilizing these features on total energy application are presented. DOE

ELECTRICITY FROM REFUSE
M. White 1979 51 p refs
(NZERDC-44; ISSN-0110-1692) Avail: NTIS
HC A04/MF A01

The conversion of refuse to electricity for Auckland involves the combustion of refuse directly or as a refuse-derived fuel to release heat energy, which in turn is converted to high-pressure steam for driving steam turbogenerators. Domestic/commercial collected refuse, privately deposited domestic refuse and industrial/commercial refuse are used. Only those technologies are considered that have been basically proven by commercial operation and systems designed to make use, whenever possible, of existing plant and equipment. The following options are examined for close technical and economic assessment: mass burning in sloping grate boiler plant, semi-suspension combustion boiler plant, supplementary firing of a refuse-derived fuel and refuse-fueled power station using semi-suspension combustion boiler plant. Extensive data are compiled on: refuse from the Auckland urban area; design of systems; environmental and technical aspects. DOE

RESIDENTIAL PASSIVE SOLAR SYSTEMS: REGIONAL SENSITIVITY TO SYSTEM PERFORMANCE COSTS, AND ALTERNATIVE PRICES
C. Kirschner, S. Ben-David, and F. Roach 1979 32 p Presented at the 2nd Miami Intern. Conf. on Alternatives Energy Sources, Miami Beach, Fla., 10-13 Dec. 1979
(Contract W-7405-eng-36)
(LA-UR-79-3390; CONF-791204-12) Avail: NTIS
HC A03/MF A01

The economic potential of two passive space heating configurations were analyzed. These were a masonary thermal storage wall (trombe) and a direct gain system - both with night insulation. A standard tract home design for each of the two passive systems was used throughout the analysis to allow interregional comparisons. The economic performance of these two systems was evaluated on a regional basis (223 locations) throughout the United States. A sensitive analysis was conducted on two conventional energy types (electricity and natural gas) to determine the impact of alternative fuel price escalation rates and solar costs upon feasibility of the two solar systems. Cost goals for solar system prices were established under one set of future fuel prices and stated economic conditions. DOE

N80-23820# Los Alamos Scientific Lab., N. Mex.
PRELIMINARY DEFINITION AND CHARACTERIZATIONS OF SOLAR INDUSTRIAL PROCESS HEAT TECHNOLOGY AND MANUFACTURING PLANT FOR THE YEAR 2000
Richard T. Meyer and Ted Prythero 1979 7 p Presented at the Solar Ind. Process Heat Conf., Oakland, Calif., 31 Oct. - 2 Nov. 1979
(Contract W-7405-eng-36)

(LA-UR-79-2812; CONF-791024-4) Avail: NTIS HC A02/MF A01

The findings and projections of this preliminary definition and characterization of a solar industrial process heat technology and manufacturing plant for the year 2000 indicate that the technology and the manufacturing would be significantly more sophisticated and expanded than exists in the solar industry today. The solar process heat technology is defined to be a parabolic trough collector system and to utilize a combustion of the more advanced materials and components under current development. The manufacturing operations are projected to include glass-making, silvering, electroplating and plastic-forming, which, while standard industrial procedures, will be additions to or expansions of existing solar manufacturing plants. These integrated operations for the year 2000 solar facility will introduce important environmental residuals which will need to be managed and controlled to satisfy local, state, and federal environmental standards. REGIONAL APPLICATION OF FOSSIL ENERGY TECHNOLOGIES: AN ANALYTICAL APPROACH Final Report
W. Rebello, D. Canete, H. Phipps, and R. Smith Sep. 1979 312 p refs
(Contract EX-76-C-01-2442)
(DOE/ET-2442-1) Avail: NTIS HC A14/MF A01

Energy supply/demand profiles are presented for the 50 states and the nine US census regions using 1974 statistics. These profiles include quality and type of energy reserves, annual primary resource production, and consumption by end-use sector. A method for use by energy planners in assessing the effects of policy decision on energy profiles was developed. A series of energy indices was derived for each census region. The indices are defined to include the effect of consumption of relatively scarce fuels (oil and gas) versus plentiful fuels (coal). A number of fossil energy technologies under development are described. The potential impact of the maturation of these technologies on each census region's energy posture is discussed in conjunction with any regional constraints that may exist. Finally, a number of sample what if scenarios are discussed and the impact of fossil fuel replacements on national, regional, and sector energy consumption quantitatively is assessed. DOE

ENVIRONMENTAL DATA FOR SITES IN THE NATIONAL SOLAR DATA NETWORK
May 1979 266 p
(Contract EG-77-C-01-4049)
(Solar/0010-79/05) Avail: NTIS HC A12/MF A01

A major goal of the National Solar Heating and Cooling Demonstration Program is to collect and analyze data which will be used to determine the thermal performance of selected solar energy systems. To meet the goals and objectives of the Demonstration Program, the National Solar Data Network was developed. The network consists of sensors which measure key performance parameters at a selected site, a site data acquistion system, telephone transmission circuits and a central data processing system which collects data and performs the computations required for system performance analysis. The output of the National Solar Data Network is a monthly performance report which defines the energy contribution of the solar energy system and resultant fossil fuel savings. The performance data for homes throughout the US is included. DOE

FEDERAL REPUBLIC OF GERMANY: ESTIMATES OF FUTURE ENERGY/GDP RELATIONSHIPS
R. Bruce Williamson and Edward L. Allen Dec. 1979 64 p refs
(Contracts EY-76-C-05-0033; DE-AC05-76OR-00033)
(ORAU/IEA(M)-79-22) Avail: NTIS HC A04/MF A01

Postwar trends in the West German economy, demography, and energy use were analyzed. The base year is 1976, and projections are made up to the year 2000 for gross domestic product (GDP) and sectoral energy demand. West Germany's 2.8 percent average annual GDP growth rate for the 1970s contrasts sharply with the 5.4 percent rate achieved in the 1960s. Future GDP growth is projected to level off at 2.9 percent a year on the average between now and 2000. This projection places German economic growth below that of Japan, Canada, and France but ahead of that projected for Italy and the United Kingdom. The relationship between West Germany energy demand and economic growth was stable in the postwar period. In 1976, total energy consumption stood at 9.8 quads and is projected to increase to 12.7 quads in 2000, an average annual 1.1 percent increase. The E/GDP ratio is expected to improve substantially by the year 2000, with the residential sector leading the way in energy efficiency. DOE

DIRECT REGIONAL ENERGY/ECONOMIC MODELING (DREEM) DESIGN Final Report
P. [illegible] Hall and C. J. Pleatsikas Oct. 1979 146 p refs
(Contract EI-78-C-01-6345)
(DOE/EIA/6345-1) Avail: NTIS HC A07/MF A01

The use of regional and multiregional economic models for estimating the indirect and induced impacts of Federally-mandated energy policies was investigated. Alternative types of energy policies that can impact regional economics and the available analytical frameworks for measuring the magnitudes and spatial extents of these impacts were examined. The models capabilities for addressing various energy policy issues are summarized. Then the applicability of the model in specified contexts is demonstrated by developing appropriate input data for three scenarios. These scenarios concern the multi-state impacts of alternative coal mining development decisions, multi-regional impacts of macroeconomic change, and the comprehensive effects of an alternative national energy supply trajectory. UNITED KINGDOM: ESTIMATES OF FUTURE ENERGY/GDP RELATIONSHIP
J. C. Gehman and Edward L. Allen Dec. 1979 106 p refs
(Contracts EY-76-C-05-0033; DE-AC05-76OR-00033)
(ORAU/IEA(M)-79-25) Avail: NTIS HC A06/MF A01

The UK economy is expected to grow in real terms due, for the most part, to advances in productivity. With productivity increasing, but at a declining rate, real GDP is projected at 50 percent above the 1976 level. The historical shift from goods production to services is expected to continue, but at a slower pace; by the year 2000 service output is expected to reach 55 percent of GDP. In the transport sector the historical shift toward the passenger car is expected to saturate at about 70 percent of total ton-miles, while the shift toward truck freight is expected to continue and reach 70 percent of total ton-miles. Goods production is expected to stagnate and could fall to 33 percent of GDP by 2000. Historically, E/GDP has fallen steadily in the United Kingdom due almost exclusively to industrial conservation (investment in new and more efficient plant and equipment). Conservation should spread to all other sectors of the economy as a result of government policy. The E/GDP ratio is expected to fall by another 28 percent by the year 2000. This implies total energy consumption of 8.7 quads. DOE

N80-23849# Oak Ridge Associated Universities, Tenn. Inst. for Energy Analysis.
CANADA: ESTIMATES OF FUTURE ENERGY/GNP RELATIONSHIPS
E. L. Allen, James A. Edmonds, and R. Bruce Williamson Dec. 1979 61 p refs
(Contracts EY-76-C-05-0033; DE-AC05-76OR-00033)
(ORAU/IEA(M)-79-24) Avail: NTIS HC A04/MF A01

The Canadian economy expanded at an annual rate of 4.6 percent in the 1970s (GNP growth), second only to the remarkable record of Japan. In the future, Canadian economic development is expected to fall below past rates of achievement, primarily because of declining numbers of new entrants in the labor force. However, other factors affecting growth remain favorable. Canada, in particular, is virtually self-sufficient in energy. Government policy is to carry out a vigorous program of

conservation, and to parallel this effort with domestic energy price increases which will move up to world levels over the next few years. As to economic growth, GNP expansion is expected to remain well above 3 percent a year for the balance of this century. Energy consumption is expected to grow from 7.51 Btu x 10 to the 15th power (quads) in 1976 to 13.3 quads by 2000. This means that energy growth, as a consequence of determined conservation, is expected to be about half as rapid as economic growth to 1990.

SERIES SOLAR HEAT PUMP AND ENERGY CONSERVATION
Edward A. Kush 1979 24 p refs Presented at the 2nd Intern. Conf. on Alternative Energy Sources, Miami Beach, Fla., 10-13 Dec. 1979
(Contract EY-76-C-02-0016)
(BNL-27012; CONF-791204-13) Avail: NTIS HC A02/MF A01

An overview is given of the series solar heat pump concepts and the reasons why it can serve an important role in energy convservation in space heating. These are highlighted by elevated coefficients of performance (COP's) and the use of low temperature potentially inexpensive solar collectors. The characteristics required of the subsystems and integrated system are detailed. Particular emphasis is given to the performance of the heat pump itself at high temperature source conditions corresponding to those of solar input, and recent laboratory results which demonstrate very high COP's using practical components are shown. The reasons why the high COP's are a necessary but not sufficient condition for competitive overall system performance are detailed and methods for applying the high COP's to an effective solar assisted heat pump system are discussed. Ongoing development work in the field is summarized.

THE CHEMICAL TRANSFORMATION OF SULFUR DIOXIDE TO SULFATE IN THE PLUME OF THE COAL-BURNING KEYSTONE POWER PLANT Ph.D. Thesis
Allen Conrad Dittenhoefer 1979 137 p
Avail: Univ. Microfilms Order No. 8010048

Measurements of the oxidation rate of sulfur dioxide to sulfate particles were made in the plume of the coal-fired Keystone power plant using instrumented aircraft. Aerosol number concentrations in nine distinct size intervals spanning the range 0.01-2.0 micrometer diameter were obtained using a condensation nucleus counter, an optical particle counter, and an electrical aerosol analyzer. These measurements were combined with cascade impactor sampling and quantitative sulfate analysis of individual plume and background particles using a transmission electron microscope to determine the mass concentration of sulfate at various positions in and out of the plume. From cross sectional plume mappings of the horizontal and vertical concentration profiles of SO2 and sulfate mass it was possible to calculate the SO2 conversion rate in the plume. It was found that although plume sulfate particle size distributions were highly dependent on both ambient relative humidity and solar radiative flux, relative humidity was the predominant parameter governing the SO2 transformation rate within the initial one to two hours of plume transport.

ENVIRONMENTAL DEVELOPMENT PLAN: GEOTHERMAL ENERGY SYSTEMS
Aug. 1979 77 p refs
(DOE/EDP-0036) Avail: NTIS HC A05/MF A01

All current and planned activities of the DOE Geothermal Energy Systems Program are covered. Major elements of this program include exploration of resources, confirmation of reservoirs, development of energy extraction systems, demonstration of utilization systems, identification and removal of institutional barriers, and a loan guaranty program. Environmental concerns and requirements for resolution of these concerns are discussed in detail. In terms of immediate need and importance in getting power online, the emission of H2S is the most important concern and the demonstration of an effective abatement system is the most significant requirement. Other significant concerns are the management or disposal of spent geothermal fluids, the potential of land subsidence, questions of water availability for heat rejection systems, land use conflicts, and socio-economic and cultural problems. The requirements to appropriately research and mitigate these and other concerns in time to permit orderly and timely development of geothermal energy systems are presented.

POTENTIAL AIR QUALITY IMPACT OF GEOTHERMAL POWER PRODUCTION IN THE IMPERIAL VALLEY
P. H. Gudiksen, D. L. Ermak, K. C. Lamson, M. C. Axelrod, and R. A. Nyholm Oct. 1979 42 p refs
(Contract W-7405-eng-48)
(UCRL-52797) Avail: NTIS HC A03/MF A01

A regional assessment of the potential impact on air quality of developing the Imperial Valley's geothermal resources for power production is presented. A network of six stations was installed to characterize the air quality and atmospheric transport properties for the valley before development. These measured the ambient air concentrations of H2S, SO2, O3, NO, NO/x, CO2, Hg, Rn, and particulates. The geothermal fluids were analyzed chemically to estimate potential emission rates from future power plants. Using these data and advanced air quality modeling led to the prediction of the potential valley-wide impact of a 3000 MW development scenario. The impact analysis reveals that H2S is the principal gaseous pollutant of concern. The ambient H2S concentrations that would result from generating 3000 MW without emission controls exceed the California air quality standard (30 ppb) at least 1% of the time for an area in the northern part of the valley that is roughly 1500 sq km in size. (Contract EPA-68-02-2198)
(PB80-126980; EPA-600/7-79-231-A) Avail: NTIS HC A12/MF A01 CSCL 13B

Existing and proposed environmental standards are synopsized as a guide for evaluating the efficiency of available and developing technology for controlling liquid, gaseous, and solid wastes from coal conversion processes. Within the U.S., the Federal (including EPA) standards and guidelines for air, water, and solid wastes were gathered together with standards for 22 states (selected for their potential in installing coal conversion facilities) and two regional commissions. Because environmental effects can cross national borders, standards and guidelines for Mexico, the Dominion of Canada, two Canadian provinces, and the international Joint Commission of U.S. and Canada were synopsized and added to the U.S. standards. All standards and guidelines are compared; from them the most stringent standards are summarized. GRA

ELECTRIC AND HYBRID VEHICLES IN THE URBAN FUTURE
Margaret K. Singh and Martin J. Bernard, III 1979 11 p refs
Presented at the 2nd Intern. Conf. on Energy Use Management, Los Angeles, 22-26 Oct. 1979
(Contract W-31-109-eng-38)
(CONF-791009-23) Avail: NTIS HC A02/MF A01

Basic electric and hybrid vehicle (EHV) information is outlined for transportation energy planners and engineers. Topics covered include: (1) the market potential for EHVs (trucks, buses, and automobiles) based on the work of several research groups and on expected technological characteristics of EHVs; (2) an assessment of the impact of EHVs on the urban structure and transport systems as well as urban environmental systems; and (3) current programs designed to accelerate the utilization of EHVs. In the assessment, 61 types of vehicles are characterized and set in five distinct market scenarios. It is concluded that the potential for significant EHV markets by the year 2000 is high and an overall net benefit to urban areas will result. DOE

SURVEY OF ORGANIC ELECTROLYTIC PROCESSES Final Report
T. R. Beck, R. T. Ruggeri, R. C. Alkirk (Illinois Univ., Urbana), M. A. Stadherr (Illinois Univ., Urbana), and N. L. Weinberg Nov. 1979 272 p refs
(Contract W-31-109-eng-38)
(ANL/OEPM-79-5) Avail: NTIS HC A12/MF A01

The commercial status of electroorganic processes and whether there would be significant possible energy savings by introduction of electroorganic processes to replace conventional chemical processes for production of certain large-tonnage organic chemicals were determined. A list was compiled of the 220 organic chemicals that were produced at greater than 10,000 tons per year in 1975 in the United States. Search of the Swann and of the Fichter Bibliographies of electroorganic literature yielded references on 95 of these compounds. By application of selection rules to obtain promising candidates, nine chemicals with diverse electrochemical processes were chosen for detailed process energy calculations. Parallel calculations were made for presently-used commercial chemical routes to these products. Two of the nine electrochemical processes, adiponitrile and methyl ethyl ketone, had energy savings in comparison to the corresponding chemical processes. DOE

CARBOHYDRATE CROPS AS A RENEWABLE RESOURCE FOR FUELS PRODUCTION. VOLUME 2: IDENTIFICATION OF KEY POLICY ISSUES, ALTERNATIVES, AND IMPLICATIONS RELATING ENERGY FROM BIOMASS
D. A. Scantland, T. A. McClure, and E. S. Lipinsky 30 May 1979 75 p refs
(Contract W-7405-eng-92)
(BMI-2031-Vol-2) Avail: NTIS HC A04/MF A01

Significant quantities of ethanol from carbohydrate crops could be produced from the equivalent number of dollars currently diverted and expected to be spent under the Food and Agriculture Act of 1977; however the the production of ethanol from sugar crops or corn would mean that significant changes in the prices of agricultural products could be expected (all other things being equal). In the initial development of ethanol fuels, ethanol from corn appears to be the least expensive as compared to sugarcane, sugar beets, and sweet sorghum. This is primarily because of high by-product credits. The crop with the greatest long term potential is sweet sorghum. Various policy incentive programs will continue to be directed towards stimulating biomass energy production. Four policy incentive programs are described. DOE

ENVIRONMENTAL AND INSTITUTIONAL CONSIDERATIONS IN THE DEVELOPMENT AND IMPLEMENTATION OF BIOMASS ENERGY TECHNOLOGIES
Charlotte Schwab Sep. 1979 46 p refs

(Contract EG-77-C-01-4042)
(SERI/TR-62-264) Avail: NTIS HC A03/MF A01

The photosynthetic energy stored in plant and organic waste materials in the United States amounts to approximately 40% of the nation's total energy consumption. The conversion of the biomass energy source, in the form of biomass residues and wastes, can create problems. Environmental impacts may be significant, and legal responses to these impacts are a key determinant to the widespread adoption of biomass technologies. The major legal areas which will impact on biomass energy conversion include (1) the effect of existing state and federal legislation; (2) the role of regulatory agencies in the development of biomass energy; (3) governmental incentives to biomass development; and (4) legal issues surrounding the functioning of the technologies themselves. Emphasis is placed on the near-term technologies whose environmental impacts and institutional limitations are more readily identified. If biomass energy is to begin to achieve its apparently great potential, these questions must receive immediate attention.

(NASA-CR-159765; GE79ET0102; DOE/NASA/0031-80/1) Avail: NTIS HC A08/MF A01 CSCL 10B

Large savings can be made in industry by cogenerating electric power and process heat in single energy conversion systems rather than separately in utility plants and in process boilers. About fifty industrial processes from the largest energy consuming sectors were used as a basis for matching a similar number of energy conversion systems that are considered as candidates which can be made available by the 1985 to 2000 time period. The sectors considered included food, textiles, lumber, paper, chemicals, petroleum, glass, and primary metals. The energy conversion systems included steam and gas turbines, diesels, thermionics, stirling, closed-cycle and steam injected gas turbines, and fuel cells. Fuels considered were coal, both coal and petroleum-based residual and distillate liquid fuels, and low Btu gas obtained through the on-site gasification of coal. An attempt was made to use consistent assumptions and a consistent set of ground rules for determining performance and cost in individual plants and on a national level. It was found that: (1) atmospheric and pressurized fluidized bed steam turbine systems were the most attractive of the direct coal-fired systems; and (2) open-cycle gas turbines with heat recovery steam generators and combined-cycles with NO(x) emission reduction and moderately increased firing temperatures were the most attractive of the coal-derived liquid-fired systems.

HEAT-PUMP-CENTERED INTEGRATED COMMUNITY ENERGY SYSTEMS Final Report
Nov. 1979 214 p refs Supersedes ANL/ICES-TM-31 Prepared for Argonne National Lab., Ill.
(Contract W-31-109-eng-38)
(ANL/CNSV-TM-18; ANL/ICES-TM-31) Avail: NTIS HC A10/MF A01

A Heat Pump Centered-Integrated Community Energy System (HP-ICES) concept was explored and developed that is based on use of privately owned ice-making heat pumps in each building or complex within a community. These heat pumps will provide all of the space heating, space cooling and domestic hot water needs. All of the community input energy required is provided by electrical power, thereby eliminating a community's dependence on gas or oil supplies. The heat pumps will operate in both air and water source modes, deriving performance advantages of both. The possible forms of an HP-ICES system, the technical and economic limitations, environmental impacts and other factors are discussed from a general viewpoint. The concept is applied to a specific planned community and its performance and economic features are examined in detail. It is concluded that the HP-ICES concept is technically viable, but that its economical desirability as compared with conventional heat pump systems is hampered by much higher initial costs, and that the economic feasibility of HP-ICES systems will depend on future fuel source costs and supply and on electric power rates. (EMD-80-11) Avail: NTIS HC A04/MF A01

According to this GAO analysis, the Federal Government is not making a sufficient commitment to curbing its energy use. Its program to conserve energy is in disarray. Although the Congress and the President have enacted and issued legislative and executive guidance, a comprehensive and aggressive energy conservation program for the Federal sector has not been developed. The Department of Energy's efforts have been minimal and Federal agencies have resisted Energy's attempts to establish a meaningful program. The Federal Government - the Nation's largest consumer of energy needs a comprehensive, centrally directed program to curb energy use. Recommendations to the Congress, The President, and the Department of Energy to establish such a program are presented. DOE

HEAT-PUMP-CENTERED INTEGRATED COMMUNITY ENERGY SYSTEMS Final Report
Nov. 1979 69 p refs
(Contract W-31-109-eng-38)
(ANL/CNSV-TM-20) Avail: NTIS HC A04/MF A01

Heat-pump-centered integrated community energy systems (HP-ICES) are energy systems for communities which provide heating, cooling and/or other thermal energy services through the use of heat pumps. Since heat pumps primarily transfer energy from existing and otherwise probably unused sources, rather than convert it from electrical or chemical to thermal form, HP-ICES offer significant potential for energy savings. Secondary benefits of HP-ICES include reduction of adverse environmental effects as compared to conventional systems, reliable production of services in contrast to the increasingly frequent utility curtailments and interruptions, and delivery of services to consumers at costs lower than those for conventional systems (including acquisition, operation, and maintenance costs). The objective of this multiphase project is development and demonstration of HP-ICES concepts leading to one or more operational systems by the end of 1984. The results of the system development phase of the HP-ICES Project are reported. Information is presented on: central heat pump and distributed heat pump ICES; potential application; waste heat availability; system performance and economics; environmental impacts; site requirements; component testing requirements; mathematical analysis of heat balance and cost relations; and performance and economic analyses of HP-ICES located near Seattle, Washington and San Antonio, Texas. DOE

GEORGETOWN UNIVERSITY GENERIC INTEGRATED COMMUNITY ENERGY SYSTEM GU ICES DEMONSTRATION PROJECT. MODIFIED WORK MANAGEMENT PLAN Final Report
Apr. 1979 330 p refs
(Contract EC-77-C-02-4488)
(COO-4488-2) Avail: NTIS HC A14/MF A01

This Phase 2 Modified Work Management Plan reflects the change from a Coal Using ICES to a Generic ICES Program. Book 2 deals with an energy audit conducted at the campus in the fall of 1978 to establish a gross baseline from which to measure and evaluate the contributions of selected alternative energy subsystems both from an energy and cost standpoint. Book 1 proceeds from a discussion of an ICES through an explanation of the scope of effort in each phase expanded into detailed task descriptions by phase together with schedules, PERT and GANTT charts, milestones and levels of effort by task for the Feasibility Analysis, and schedules for the overall program. A description of examples of alternative subsystems to be considered is also included. A detailed Management Plan for the conduct of the effort by General Electric completes the plan. Appendices related to cogeneration, life cycle costing, GE energy subsystems, the GU Master Energy Plan, and typical regulatory processes to be encountered are included. Book 2 treats the Energy Audit under the three committed task areas of System Description, Analysis and Survey, and Criteria for Energy Usage. The five major energy systems utilized at Georgetown are considered: electrical, chilled water, steam, gas and fuel oil, and city water. A top level analysis yields significant results and recommendations for further action with respect to a detailed measurements program, particularly of steam and electric power usage, over a one year period. FRANCE: ESTIMATES OF FUTURE ENERGY/GDP RELATIONSHIPS
Edward L. Allen Dec. 1979 67 p refs
(Contracts EY-76-C-05-0033; DE-AC05-76OR-00033)
(ORAU/IEA-79-23(M)) Avail: NTIS HC A04/MF A01

Compared with other OECD nations, France's postwar economic growth has been above average. Gross domestic product (GDP) grew at an annual rate of 4.1% in the 1970s. A high rate of new investment (fixed, nonresidential investment) was achieved during these years to bolster productivity gains. Since France depends primarily on imports for its energy supplies, energy use has become relatively efficient. Government policy emphasizes energy saving in all sectors: the E/GDP ratio increased only slightly to 1973 and thereafter fell sharply. As to the future, economic growth, as measured by GDP, is expected to moderate over the balance of this century, to a level of 2.8% annually by the 1995-2000 period. Labor force growth will decline because of decreased domestic fertility and the more restrictive immigration policy. In addition, the length of the workweek, which has remained relatively high, is expected to follow the declining trend already evident in other OECD countries. DOE

PROSPECTS FOR USING IMPROVED CLIMATE INFORMATION TO BETTER MANAGE ENERGY SYSTEMS
William J. Quirk and John E. Moriarty (Federal Energy Regulatory Commission, Washington, D.C.) Jan. 1980 12 p refs Presented at the Intern. Workshop on Energy/Climate Interactions, Munster, W. Germany, 3-7 Mar. 1980

(Contract W-7405-eng-48)
(UCRL-83813; CONF-800309-2) Avail: NTIS
HC A02/MF A01

The impacts that climate anomalies have had on energy systems in the United States, and the resulting impacts on society are described. It is pointed out that better use of climate information could alleviate some of the adverse consequences of these anomalies. The possibility of international cooperation in using climate information to avoid potentially worsening conditions during a global energy shortage is also examined. DOE

Dec. 1979 283 p refs Supersedes ANL/ICES-TM-30
(Contract W-31-109-eng-38)
(ANL/CNSV-TM-25; ANL/ICES-TM-30) Avail: NTIS
HC A13/MF A01

The heat-pump-centered integrated community energy system supplies district heating and cooling using heat pumps and a thermal energy storage which is provided by nature in underground porous formations filled with water, i.e., aquifers. The proposed system was analyzed as demonstration projects for a downtown portion of Louisville, Kentucky, and a section of Fort Rucker, Alabama. The downtown Louisville demonstration project is tied directly to major buildings while the Fort Rucker demonstration project is tied to a dispersed subdivision of homes. The Louisville project shows a payback of approximately 3 y, while Fort Rucker is approximately 30 y. The primary difference is that at Fort Rucker new heat pumps are charged to the system. In Louisville, either new construction requiring heating and cooling systems or existing chillers are utilized. DOE

ENERGY AVAILABILITIES FOR STATE AND LOCAL DEVELOPMENT: 1975 DATA VOLUME
J. B. Mills, P. L. Rice, and D. P. Vogt Jan. 1980 285 p
(Contract W-7405-eng-26)
(ORNL/TM-6951) Avail: NTIS HC A13/MF A01

The supply, demand, and net imports of seven fuel types of four final consuming sectors for Bureau of Economic Analysis Areas (BEAs), states, census regions, and the nation in 1975 are presented. The data are formatted to present regional energy availability from primary extraction as well as from regional transformation processes. Extensive tables depict energy balances between availability and use for each specific fuel. A consistent base of historic and projected energy information is presented within a standard format. Such a framework should aid regional policy makers in their consideration of regional-growth issues that may be influenced by the regional energy system. For analysis of specific regions, however, this basic data should be supplemented by additional information which only the local policy analyst can bring to bear in his assessment of the energy conditions that characterize his region. JAPAN: ESTIMATES OF FUTURE ENERGY/GNP RELATIONSHIPS IN ENERGY USE
J. A. Edmonds and Edward L. Allen Dec. 1979 95 p refs
(Contract EY-76-C-05-0033)
(ORAU/IEA-79-21(M)) Avail: NTIS HC A05/MF A01

As a consequence of continued rapid economic expansion, Japan's energy consumption is projected to more than double between 1976 and 2000. At the same time GNP is projected to triple, accompanied by lowering of the Japanese energy/GNP ratio by 30%. Industrial and transportation sector energy efficiency gains are expected to lead the way, with residential and commercial sector consumption growing almost abreast with GNP. The delayed home appliance revolution is expected to offset much of the gains from slow population growth. On the other hand, the Japanese automobile population explosion is expected to proliferate more energy-efficient automobiles throughout the economy, rapidly raising overall fleet performance. A significant shift toward water transport of freight also improves the overall performance of the transport sector. DOE

NATIONAL ENERGY PLAN 2, MAY 1979. APPENDIX A: WORLD OIL PRICES
1979 65 p refs
(DOE/TIC-10203-App-A) Avail: NTIS HC A04/MF A01

The detailed assumptions and projections used to develop the Second National Energy Plan (NEP-2) world oil price cases are presented in three major sections. The first section presents assumptions about potential world demand and production of oil, assuming constant real future world oil prices. Included is a discussion of alternative theories of OPEC behavior. The second section presents world oil price paths generated by mathematical models of world oil supply and demand. The models calculate oil prices that act through price elasticities to change the assumed constant-price oil demand and supply conditions to achieve a balanced oil market. The final section synthesizes the various model projections into the range of world oil price cases used in NEP-2 and reports major conclusions resulting from the world oil price analysis. DOE

ENERGY PERFORMANCE STANDARDS FOR NEW BUILDINGS: ECONOMIC ANALYSIS
Jan. 1980 402 p
(DOE/CS-0129) Avail: NTIS HC A18/MF A01

The major economic impacts of the implementations of the standards on affected groups were assessed and the effectiveness of the standards as an investment in energy conservation was evaluated. The methodology used to evaluate the standards for the various building types and perspectives is described. The net economic effect of changes in building cost and energy use are discussed for three categories of buildings: single family residential, commercial and multifamily residential, and mobile homes. Forecasts of energy savings and national costs and benefits both with and without implementation of the standards are presented. The effects of changes in energy consumption and construction of new buildings on the national economy, including such factors as national income, investment, employment, and balance of trade are assessed. PROJECTED ANNUAL RESOURCE REQUIREMENTS AT THE NATIONAL AND REGIONAL LEVEL FOR THE DEPARTMENT OF COMMERCE ENERGY FORECAST 1985 AND 2000
Andrea L. Watson and Ralph G. J. Zimmerman Mar. 1979 205 p Sponsored by Dept. of Commerce
(PB80-126956) Avail: NTIS HC A10/MF A01 CSCL 10A

An analysis is presented of the national and regional resource requirements (capital, material, manpower, etc.) associated with future energy development in the U.S. The analysis, using Bechtels Energy Supply Planning Model (ESPM) indicates projected cumulative capital requirements of $1.6 trillion (January 1978 dollars) during the 1977 - 2000 forecast period. The largest requirements by energy sector are for electric power generation facilities (53%) coal-fired plants in particular. Although the U.S. is projected to become more and more dependent upon western energy resources, both capital and labor requirements are projected to move from Western to Eastern regions - by the year 2000 - again primarily because of electrical generation requirements. ENVIRONMENTAL CONTROL TECHNOLOGY FOR THE FLASH HYDROPYROLYSIS OF COAL Progress Report, 1 Apr. - 31 Dec. 1978
Feb. 1979 81 p refs
(Contract EY-76-C-02-0016)
(BNL-50983; PR-3) Avail: NTIS HC A05/MF A01

Based on experimental results and analytical studies, preliminary environmental and economic assessments of a conceptual, industrial scale FHP-Refinery Complex were made. Three cases were considered, one for the production of pipeline gas, the second for the production of liquid hydrocarbons such as motor gasoline and liquid prepared gas LPG, and the third for the production of both liquid and gaseous effluents for each case gaseous products. Solid, liquid and gaseous products. Solid, liquid and gaseous effluents for each case were evaluated, and required effluent treatment facilities and potential problem areas identified. Thermal efficiency range from 50% to 72%, depending upon the mode of operation of the Complex, and investment costs from 834 to 936 million dollars. The installed cost of environmental equipment is estimated at about 5% of total plant investment for all three cases. DOE

ENVIRONMENTAL CONSEQUENCES OF ATMOSPHERIC KRYPTON-85 Final Report, 1 Jan. 1977 - 30 Sep. 1979
W. L. Boeck 1979 17 p refs
(Contract EE-77-S-02-4364)
(COO-4364-2) Avail: NTIS HC A02/MF A01

Krypton-85 is a radioactive inert gas produced during normal operations of the nuclear fuel cycle. The quantities of krypton-85, that will be produced in the next century, are sufficient, if released to alter the electrical state of the atmosphere. The principal hypothesis is that an anthropogenic alteration of the electric state of the atmosphere could alter other meterological phenomena and lead to significant environmental impacts. The goal was to explore some areas of basic science related to the evaluation of that hypothesis. The approach was primarily theoretical. The following topics were addressed: a first approximation model to estimate the effects of krypton-85 on the electrical state of the atmosphere; an analysis of the pathways between krypton-85 production and the atmosphere; an analytical model for fair weather atmospheric electricity; and a dipole model for atmospheric electricity. The results will provide a framework on which detailed models can be built. The results should provide better understanding of some topics in atmospheric electricity. DOE

ENVIRONMENTAL CONTROL TECHNOLOGY FOR ATMOSPHÈRIC CARBON DIOXIDE
Meyer Steinberg and Anthony S. Albanese 1980 31 p refs Presented at the Intern. Workshop on the Energy/Climate Interactions, Munster, West Germany, 3-7 Mar. 1980
(Contract EY-76-C-02-0016)
(BNL-27164; CONF-800309-1) Avail: NTIS HC A03/MF A01

The impact of fossil fuel use in the United States on worldwide CO2 emissions and the impact of increased coal utilization on CO2 emission rates are assessed. The aspects of CO2 control are discussed as well as the available CO2 control points (CO2 removal sites). Two control scenarios are evaluated, one based on the absorption of CO2 contained in power plant flue gas by seawater; the other, based on absorption of CO2 by (mono ethanol amine-MEA). Captured CO2 is injected into the deep ocean in both cases. The analyses indicate that capture and disposal by seawater is energetically not feasible, whereas capture and disposal using MEA is a possibility. However, the economic penalties of CO2 control are significant. The use of nonfossil energy sources, such as hydroelectric, nuclear or solar energy is considered as an alternative for limiting and controlling CO2 emissions resulting from fossil energy usage. DOE

DESIGN OF A MONITORING PROGRAM FOR ASH POND EFFLUENTS Final Report, May 1975 - Apr. 1979
F. A. Miller, III, T. V. J. Chu, and R. J. Ruane Nov. 1979 207 p refs Sponsored by EPA
(PB80-128457; PRS-41; EPA-600/7-79-236) Avail: NTIS HC A10/MF A01 CSCL 13B

A procedure is described for designing an effective monitoring program for fossil-fueled power plant ash pond effluents. Factors

that influence effluent characteristics and are important in designing such a monitoring program were determined following a review of plant operating characteristics and ash pond effluent characteristics of TVA's fossil-fueled power plant system. A statistical procedure for determining the sampling frequency of chemical characteristics in ash pond effluents precision are described: method 1 involves selecting a precision value to estimate the population mean within a given percentage; method 2 involves calculating a precision value by subtracting an estimate of the population mean from either the ash pond effluent limitation established by EPA or a desirable water quality criterion. Method 2 gives the number of samples required to show that the effluent is in compliance with the effluent limitation or below the water quality criteria. The method chosen to compute the precision depends on the purpose of the monitoring program. The procedure was demonstrated for two TVA ash pond systems.

ENGINE COMPONENT IMPROVEMENT: PERFORMANCE IMPROVEMENT, JT9D-7 3.8 AR FAN Progress Report, Jan. 1978 - Feb. 1979
W. O. Gaffin 12 Jun. 1980 57 p ref
(Contract NAS3-20630)
(NASA-CR-159806; PWA-5515-114) Avail: NTIS HC A04/MF A01 CSCL 21E

A redesigned, fuel efficient fan for the JT9D-7 engine was tested. Tests were conducted to determine the effect of the 3.8 AR fan on performance, stability, operational characteristics, and noise of the JT9D-7 engine relative to the current 4.6 AR Bill-of-Material fan. The 3.8 AR fan provides increased fan efficiency due to a more advanced blade airfoil with increased chord, eliminating one part span shroud and reducing the number of fan blades and fan exit guide vanes. Engine testing at simulated cruise conditions demonstrated the predicted 1.3 percent improvement in specific fuel consumption with the redesigned 3.8 AR fan. Flight testing and sea level stand engine testing demonstrated exhaust gas temperature margins, fan and low pressure compressor stability, operational suitability, and noise levels comparable to the Bill-of-Material fan.

ENVIRONMENTAL CONTROL TECHNOLOGY FOR BIOMASS FLASH PYROLYSIS
J. B. L. Harkness, R. D. Doctor (Science Applications, Inc.), and W. H. Seward (Mittelhauser Corp.) 1980 32 p refs Presented at the Energy from Biomass and Wastes Conf., Orlando, Fla., 21 Jan. 1980
(Contract W-31-109-eng-38)
(CONF-800129-2) Avail: NTIS HC A03/MF A01

The effluent emission and control technologies for a dual fluid-bed pyrolysis unit is characterized. The system produces a raw products gas that is passed through a catalytic liquefaction system to produce a fuel comparable to no. 2 fuel oil. A program that will survey several biomass systems to standardize the sampling techniques, prioritize standard analyses and develop a data base so that environmental issues later may be addressed before they limit or impede the commercialization of biomass gasification and pyrolysis technologies was conducted. Emissions were related to both the current and anticipated emissions standards to generate material balances and set design parameters for effluent treatment systems. This permits an estimate to be made of the capital and operating costs associated with these technologies.

Data and information in the area of advanced energy conversion systems for industrial congeneration applications in the 1985-2000 time period was studied. Six current and thirty-one advanced energy conversion systems were defined and combined with appropriate balance-of-plant equipment. Twenty-six industrial processes were selected from among the high energy consuming industries to serve as a framework for the study. Each conversion system was analyzed as a cogenerator with each industrial plant. Fuel consumption, costs, and environmental intrusion were evaluated and compared to corresponding traditional values. Various cogeneration strategies were analyzed and both topping and bottoming (using industrial by-product heat) applications were included. The advanced energy conversion technologies indicated reduced fuel consumption, costs, and emissions. Typically fuel energy savings of 10 to 25 percent were predicted compared to traditional on-site furnaces and utility electricity. With the variety of industrial requirements, each advanced technology had attractive applications. Overall, fuel cells indicated the greatest fuel energy savings and emission reductions. Gas turbines and combined cycles indicated high overall annual cost savings. Steam turbines and gas turbines produced high estimated returns. In some applications, diesels were most efficient. The advanced technologies used coal-derived fuels, or coal with advanced fluid bed combustion or on-site gasification systems. R.E.S.

COGENERATION TECHNOLOGY ALTERNATIVES STUDY. VOLUME 6: COMPUTER DATA Final Report
Jan. 1980 535 p
(Contracts DEN3-30; EC-77-A-31-1062)
(NASA-CR-159764; DOE/NASA/0030-80/6;
UTC-FCR-1333-Vol-6) Avail: NTIS HC A22/MF A01 CSCL 10A

The potential technical capabilities of energy conversion systems in the 1985 - 2000 time period were defined with emphasis on systems using coal, coal-derived fuels or alternate fuels. Industrial process data developed for the large energy consuming industries serve as a framework for the cogeneration applications. Ground rules for the study were established and other necessary equipment (balance-of-plant) was defined. This combination of technical information, energy conversion system data ground rules, industrial process information and balance-of-plant characteristics was analyzed to evaluate energy consumption, capital and operating costs and emissions. Data in the form of computer printouts developed for 3000 energy conversion system-industrial process combinations are presented. R.E.S.

ITALY: ESTIMATES OF FUTURE ENERGY/GDP RELATIONSHIPS
C. Davison and Edward L. Allen Dec. 1979 61 p refs
(Contract EY-76-C-05-0033)
(ORAU/IEA(M)-79-20 Avail: NTIS HC A04/MF A01

The Italian economy has experienced very rapid growth since World War II, accompanied by a sharp increase in the consumption of energy, the growth of which has been more rapid than the development of the economy. For the period 1960-76, energy consumption grew an average of 6.7% annually, compared with an annual growth rate of 4.6% for gross domestic product. The ratio of energy use per unit of GNP increased in every year from the early 1960s until the oil price rise in 1973 and after a brief pause then began to rise again. By 1975, when the E/GDP ratios of other industrialized OECD countries were hitting record lows, Italy's ratio was at an all-time high. This increasing E/GDP ratio was largely the result of Italy's very rapid industrial expansion and its attempt to catch up with the stage of industrial maturity already achieved in other developed countries. It is anticipated that the E/GDP ratio will decline in the future as Italy's industrial expansion slows down. Increased efficiencies will flow from the application of new technologies and replacement of old plants. Pressure from higher oil prices and structural changes in Italian society also will dampen the E/GDP ratio, as it has in other industrialized countries. GDP growth will slacken as the fertility rate continues its downward trend and the average workweek falls. It is that by the year 2000 gross energy consumption in Italy will total 6.7 quads, or about 25% above the 1976 level, and that the E/GDP index (1976 = 100) will decline to about 79, with the residential and industrial sectors accounting for almost all of the decline. BENEFICIAL USE OF REJECTED HEAT FROM ELECTRIC POWER PLANTS Final Summary Report
Robert W. Porter Aug. 1979 17 p refs
(Contract EC-77-S-02-4531)
(COO-4531-9) Avail: NTIS HC A02/MF A01

The in situ beneficial uses of rejected heat from steam-electric power plants are evaluated. Applications, which include direct discharge into a municipal water supply, interaction with wastewater treatment, and open field irrigation, were examined. In each case, a thermal and economic systems analysis was performed and operational, legal, and other problems were assessed. In the case of the municipal water supply, the savings in cost of closed-cycle cooling and water-heater energy appear to offset operational problems in the water supply and may be sufficient to justify public acceptance. A number of more advanced wastewater treatment processes would benefit from dilution with a portion of condenser discharge. The treated mixture would serve as makeup for a smaller modified closed cycle cooling system and the balance would constitute a water product. Unfortunately, open-field irrigation does not seem feasible due to the large land areas required. DOE

EVALUATION OF RESIDENTIAL BUILDING ENERGY PERFORMANCE STANDARDS
Mark D. Levine, David B. Goldstein, Arthur H. Lokmanhekim, and Arthur H. Rosenfeld Dec. 1979 37 p refs Presented at Conf. on Thermal Performance of the Exterior Envelopes of Buildings, Orlando, Fla., 3-5 Dec. 1979
(Contract W-7405-eng-48)
(LBL-9816; CONF-791233-2) Avail: NTIS HC A03/MF A01

The development and analysis of energy performance standards for residential buildings in the United States is described. The approach involves an assessment of the economic costs and benefits of alternative standards and provides quantitative estimates of the reduction of energy use resulting from the implementation of standards. The sensitivities of building energy use to design parameters of buildings - including size, orientation, aspect ratio, basement type, window area, and construction material - are assessed. The DOE-2 building energy utilization analysis program was used to evaluate the heating and cooling loads of residential buildings. Residential buildings were simulated in ten weather climates using hourly weather data with a variety of energy conservation measures. DOE

SITE AND BUILDING ENERGY-CONSERVATION STUDY: SURVEY OF BUILDING 251, DIAGNOSTIC CHEMISTRY
Oct. 1979 68 p
(Contract W-7405-eng-48)
(UCRL-15190) Avail: NTIS HC A04/MF A01

An energy-conservation study of Building 251, Diagnostic Chemistry, at Lawrence Livermore Laboratory was performed.

The survey of Building 251 was based on a review of the design drawings, an on-site inspection of the 30,500 sq ft building, and discussions with the building manager and various operating personnel. Data were collected regarding the number of people occupying the building, operating schedules, and the energy loads imposed by installed and temporary equipment. The heating, ventilating, and air conditioning systems were investigated. The building energy systems were simulated using the DOE-1 energy program. A base year energy consumption run was made, together with simulation of the building's performance assuming installation of each of nine energy conservation opportunities (ECO's) identified. A summary of the energy savings that would result from implementation of the ECO's is presented. DOE

INTERNATIONAL ANALYSIS OF RESIDENTIAL ENERGY USE AND CONSERVATION

Lee Schipper Oct. 1979 28 p refs Presented at Intern. Conf. on Energy Use Management, Los Angeles, 22 Oct. 1979
(Contract W-7405-eng-48)
(LBL-9383; CONF-791009-27) Avail: NTIS HC A03/MF A01

Data were collected and are being analyzed on residential energy use from Canada, Japan, UK, West Germany, France, Italy, and Sweden. Preliminary inspection indicates that much of the variation of energy use depends on structural of lifestyle factors such as incomes, house or appliance size, hot water, and indoor temperature habits. There appears to exist a wide range of energy intensities within each narrow end use category, each of these ranges suggest that there are interesting prospects for energy conservation in any one country based on technologies or ideas common elsewhere DOE

PHOTOVOLTAIC ENERGY SYSTEMS: PROGRAM SUMMARY

Jan. 1980 466 p refs
(DOE/CS-0146) Avail: NTIS HC A20/MF A01

The DOE Photovoltaic Energy Systems Program is designed to expand as rapidly as possible the commercial use of photovoltaic systems through a program of research, process development in support of the manufacturing industry, tests and applications, and general support of market development. The objective of the Photovoltaic Energy Systems Program is to reduce system costs to a competitive level in both distributed and centralized grid-connected applications. The program is also examining the technical, institutional, legal, environmental and social issues involved in fostering widespread adoption of photovoltaic energy systems. Activities of the program are divided into the following subprograms: advanced research and development; technology development; systems engineering and standards; test and applications; commercialization; and planning, assessment, and integration. Summary sheets for each of the contractors in this program are presented. The summaries include project title, contractor, contract number, funding, principal investigator, and a brief description of the contract. DOE

RELIABILITY, ENERGY AND COST EFFECTS OF WIND INTEGRATION WITH CONVENTIONAL ELECTRICAL GENERATING SYSTEMS

W. A. Buehring, K. A. Hub, C. C. Huber, J. C. Vankuiken, and J. G. Gros (DOE, Washington, D.C.) 1979 14 p refs Presented at the 2nd Miami Intern. Conf. on Alternative Energy Sources, Miami Beach, Fla., 10-13 Dec. 1979
(Contract W-31-109-eng-38)
(CONF-791204-32) Avail: NTIS HC A02/MF A01

The importance of system integration analysis in evaluating the effects of wind powered generation on an electrical utility system was studied. For the assumed utility and wind conditions it was shown that an intermittent energy source such as wind can contribute to overall system reliability. Since reliability indices are the primary criteria for utility expansion planning, it should be possible to reduce conventional capacity installations in response to the reliability improvements associated with wind generation. With both energy and reliability benefits it appears that there is a reasonable potential for wind generators to be competitive, in limited penetrations, with conventional capacity. DOE

OPTIMIZATION OF SOLAR ASSISTED HEAT PUMP SYSTEMS VIA A SIMPLE ANALYTIC APPROACH

John W. Andrews 1980 6 p refs Presented at the 2d Ann. Systems Simulation and Econ. Anal. Conf., San Diego, Calif., 23-25 Jan. 1980
(Contract EY-76-C-02-0016)
(BNL-27316; CONF-800101-17) Avail: NTIS HC A02/MF A01

An analytic method for calculating the optimum operating temperature of the collector/storage subsystem in a solar assisted heat pump is presented. A tradeoff exists between rising heat pump coefficient of performance and falling collector efficiency as this temperature is increased, resulting in an optimum temperature whose value increases with increasing efficiency of the auxiliary energy source. Electric resistance is shown to be a poor backup to such systems. A number of options for thermally coupling the system to the ground are analyzed and compared. DOE

PROPOSED ENERGY PERFORMANCE STANDARDS FOR NEW BUILDINGS: STANDARD BUILDING OPERATING CONDITIONS

Nov. 1979 79 p
(DOE/CS-0118) Avail: NTIS HC A05/MF A01

The process of developing energy budget levels for new commercial buildings, in conjunction with the energy-performance standards for new buildings, includes the use of energy-analysis computer programs. These programs are used to estimate the design energy requirements of randomly selected commercial buildings. The input to these programs includes a set of data known as the Standard Building Operating Conditions (SBOC). These SBOC consist of temperatures, human-occupancy densities and profiles, lightning-usage profiles, and the like. They describe typical conditions under which a commercial or multifamily residential building would operate during the course of a day. The standardization of the building operating conditions is described. Alternative ways that SBOC may be applied in a regulatory compliance context are discussed as well as the advantages and disadvantages of each alternative. The implications of the standardization of operating conditions are examined. DOE

N80-25902# Department of Energy, Washington, D. C. Office of Buildings and Community Systems.

PROPOSED ENERGY-PERFORMANCE STANDARDS FOR NEW BUILDINGS: PASSIVE AND ACTIVE SOLAR HEATING ANALYSIS

Nov. 1979 70 p
(DOE/CS-0117) Avail: NTIS HC A04/MF A01

The use of passive and active solar thermal heating technologies was analyzed in order to develop standards for new buildings.

Maximum permissible levels of annual building design energy consumption were established for different building types in various climates. Besides reducing the use of depletable energy, the standards are intended to achieve maximum practicable increases in the use of nondepletable sources of energy. Cost and energy savings estimates were developed for optimally-sized passive solar systems corresponding to the prototype house characteristics represented by each point on the conservation cost/performance curves (from previous studies). An analysis was performed for each of the ten (Atlanta, Burbank, Chicago, Fresno, Ft. Worth, Houston, Minneapolis, Phoenix, Portland, and Washington) representative cities in the conservation study analysis. The key elements of the methodology were: thermal performance estimation, optimum system size determination, and sensitivity analysis.

ENVIRONMENTAL ASSESSMENTS OF ALTERNATIVE ENERGY STRATEGIES IN THE UNITED STATES
Stephen W. Ballou and Arthur Katz (DOE, Washington, D.C.) 1979 18 p refs Presented at the Intern. Inst. for Appl. Systems Analysis, Vienna, 5-9 Nov. 1979
(Contract W-31-109-eng-38)
(CONF-791172-1) Avail: NTIS HC A02/MF A01

The evaluation of the regional impacts of future energy development is discussed. The impacts described for 1990 are based on a national energy projection (scenario) that assumes medium energy demand and fuel supply through 1990, but does not incorporate the policies of the 1978 National Energy Act. County level patterns for utility, industry and mining activities for 1990 are developed from the federal region totals. Energy sources addressed are coal, nuclear, oil, oil shale, gas, geothermal, hydroelectric, and solar. The impact of these county-level patterns of utility, industry, and mining activities on the air, water, and land resources of the country and on the socioeconomic and health and safety aspects of the nation's welfare are analyzed.

METHODS FOR ANALYZING INORGANIC COMPOUNDS IN PARTICLES EMITTED FROM STATIONARY SOURCES Interim Report, Jan. 1977 - Jul. 1978
William M. Henry Sep. 1979 130 p refs
(Contract EPA-68-02-2296)
(PB80-141781) Avail: NTIS HC A07/MF A01 CSCL 14B

Methods to identify and measure inorganic compounds in particulate emissions which emanate from sources using or processing fossil fuels were developed. Large masses, 20 to 100 grams of field samples were collected representative of a range of both coal and oil-fired fly ashes, and the selected methodology development efforts were evaluated on these field samples as well as synthesized samples. Fourier transform infrared spectroscopy, X-ray diffraction, and chemical phase separations and analyses are the methods which have provided the most definitive identification of inorganic compounds. The structural findings by these methods are complemented by complete cation-anion chemical determinations. GRA

FLUE GAS DESULFURIZATION BY THE MODIFIED CITRATE PROCESS: REPORT OF INVESTIGATIONS
R. H. Lien, D. A. Martin, and W. I. Nissen 1979 24 p refs
(PB80-134836; BM-RI-8403) Avail: NTIS HC A02/MF A01 CSCL 13B

A flue gas desulfurization process was developed. The process known as the citrate process, involves absorption of sulfur dioxide (SO2) in a buffered solution of citric acid. As an adjunct to the citrate process, bench scale research shows that SO2-loaded citrate or glycolate solutions can be regenerated by countercurrent contact with steam (stripping) in packed towers. Stripping steam requirements were determined for treatment of 0.25, .50, 1.0, and 2.0% SO2 waste gases. Steam requirements decreased with increasing SO2 concentrations in the simulated waste gases. GRA

THE USE OF pH AND CHLORIDE ELECTRODES FOR THE AUTOMATIC CONTROL OF FLUE GAS DESULFURIZATION SYSTEMS Final Report, Sep. 1978 - Jul. 1979
Clinton Ung, Toby Accian, and Ray Maddalone Nov. 1979 80 p ref
(Contract EPA-68-02-2165)
(PB80-138464; EPA-600/2-79-202) Avail: NTIS HC A05/MF A01 CSCL 13B

The applicability of chloride and pH electordes in automated control systems was investigated via a survey of chloride and pH electrodes in different flue gas desulfurization (FGD) systems and an evaluation of an industrial pH electrodes system. The survey showed that chloride ion measurements were necessary only where high chloride values correspond with FGD unit corrosion and when chloride values were used at correction factors in ph calculations. Chloride ion measurements are unnecessary for most of the surveyed companies. All survey companies use pH measurement to control scaling or to attain optimum performance in FGD units. The most common pH electrode problem was residue buildup (scaling) around the electrode, caused by the use of non-self-cleaning (standard) pH electrodes. The performance of self-cleaning and standard industrial pH electrodes was evaluated. GRA

CLIMATE PROGRAM PLAN, VOLUME 1
Jan. 1980 90 p refs 2 Vol.
(Contract W-7405-eng-48)
(DOE/EV-0062/1) Avail: NTIS HC A05/MF A01

The perceived and potential effects of energy technologies on climate that merit assessment are discussed along with the need for research on the prediction of weather and climate variations and assessment of their effects on power production. The need for assessing the cycles and budgets of the entire range of substances emitted in power production by the many technologies now in use is emphasized. To provide the basis for assessing the impacts of these emissions, specialized, mission-oriented research to improve understanding of processes that determine how these emissions are transported, transformed, and scavenged in the atmosphere, and of the natural processes that can be affected by energy activities are suggested. This latter category includes potential modification of surface properties caused, for example, by large arrays of solar collectors, extensive biomass production and wind power modification of the boundary layer. DOE

IMPACT OF ADVANCED GROUP RAPID TRANSIT TECHNOLOGY
Jan. 1980 68 p
(PB80-153323; OTA-T-106; LC-80-600001) Avail: NTIS HC A04/MF A01 CSCL 13B

This assessment of advanced group rapid transit (AGRT) was made in response to a request of the House Committee on Appropriations to evaluate the need for this technology and its relationship to national mass transportation goals. Increases in traffic congestion, petroleum shortages, and decreasing mobility for the transit-dependent reflect a growing need for more efficient and effective transportation options. The need for further advances in automated guideway transit (AGT) technology, are examined and their potential impacts on various stakeholder groups are evaluated. GRA

N80-26441# Little (Arthur D.), Inc., Cambridge, Mass.
SURVEY OF POTENTIAL PROCESSES FOR THE MANUFACTURING OF ALUMINUM
Dec. 1979 84 p refs
(Contract W-31-109-eng-38)
(ANL/OEPM-79-4) Avail: NTIS HC A05/MF A01

Alternative processes to the Hall-Heroult cell for the production of primary aluminum direct carbothermic reduction of alumina are considered: reduction of bauxite to an aluminum silicon alloy; the subchloride process; the disproportionation of aluminum sulphide; the production through a nitride intermediate; and electrolysis of aluminum chloride aluminum sulphide and aluminum nitride; and plating from nonaqueous solvents. Energy consumption requirements for these techniques are compared with current Hall-Heroult technology and with projected improved technology - particularly titanium diboride cathodes and permanent anodes. The major conclusion is that the only alternative technology at present is the Alcoa chloride electrolysis process but that sulphide and nitride electrolytic processes offer potential advantages in the future. With the exception of thermal reduction to an aluminum - silicon alloy, none of the carbothermic processes is competitive because they require electric furnaces. Significant improvements in energy consumption could be achieved with titanium diboride cathodes in the Hall-Heroult cell. DOE

ARCHITECTS AND ENGINEERS GUIDE TO ENERGY CONSERVATION IN EXISTING BUILDINGS
1 Feb. 1980 468 p
(DOE/CS-0132) Avail: NTIS HC A20/MF A01

A field-tested approach to identifying, analyzing, and recommending action on the wide range of opportunities and options available to reduce energy use in most existing buildings is offered. Besides a review of the principles of energy use and conservation, the manual provides a step-by-step methodology for assessing and improving the year-round energy performance of buildings, as well as a series of forms, charts, and nomographs designed

to enhance and simplify the work of those architects and engineers whose practice includes the analysis and modification of existing buildings to reduce both fuel consumption and operating costs.

SITE AND BUILDING ENERGY-CONSERVATION STUDY: SURVEY OF BUILDING 435, MFE RESEARCH
Oct. 1979 70 p Prepared in cooperation with Consultants Computation Bureau, Oakland, Calif. Prepared for Calif. Univ., Livermore; Lawrence Livermore Lab.
(Contract W-7405-eng-48)
(UCRL-15198; REPT-79-72-RE) Avail: NTIS HC A04/MF A01

Review of the design drawings, an on-site inspection of the 49,700-sq ft building, and discussions with the building manager and various operating personnel are discussed. Data were collected regarding the number of people occupying the building, operating schedules, and the energy loads imposed by installed and temporary equipment. The heating, ventilating, and air conditioning systems were investigated. The building energy systems were simulated using the DOE-1 energy program. A base-year energy consumption run was made, together with simulations of the building's performance assuming installation of each of eleven energy-conservation opportunities (ECO's) identified. A summary of the energy savings that would results from implementation of the ECO's is given.

STATE OPTIONS IN LIGHTING: EFFICIENCY STANDARDS FOR EXISTING PUBLIC BUILDINGS
Frank Meeker Jun. 1979 51 p refs
(Contract EM-78-C-01-5255)
(DOE/CS-5255/2) Avail: NTIS HC A04/MF A01

Requirements and options for state lighting efficiency standards for existing public buildings under the Energy Policy and Conservation Act are discussed. It is recommended that states adopt a requirement that owners of all public buildings submit reports of lighting energy audits and estimates of energy savings from modifications to comply with substantive standards. It is further recommended that while filing of reports should be mandatory, substantive compliance, at least initially, need not be. It is recommended that exemptions from the standards be limited to small buildings and that variances under a mandatory standard be available only when an applicant can show insufficient capital to make required modifications, even though they would soon pay for themselves in reduced operating costs. It is suggested that a lighting standard of the kind recommended should substantially reduce wasted energy in lighting, be simple enough to be easily understood and applied, be technically and economically reasonable, and allow for needed exemptions without loopholes.

CLASSIFICATION AND EVALUATION OF ELECTRIC MOTORS AND PUMPS
Feb. 1980 251 p refs
(Contract W-31-109-eng-38)
(DOE/CS-0147) Avail: NTIS HC A12/MF A01

Classification and evaluation of electric motors and pumps are discussed. The industrial, transportation, commercial, agricultural, and municipal sectors of the US economy are studied. The range of electric motors included all ac and dc integral and fractional hp units equalling or exceeding 1/6 hp. However, units of less than 1/6 hp and those in use in other than the previously defined sectors were treated to ensure completeness. Pump equipment covered included the wide range of fluid handling equipment powered by all energy forms. The range of sizes analyzed correlated with those for motors, roughly 1/6 to 20,000 shaft hp. An analysis task called for developing scenarios for the policy options based on labeling and standards, evaluating barriers to their implementation, and then evaluating probable results.

GEOTHERMAL DIRECT HEAT USE: MARKET POTENTIAL/PENETRATION ANALYSIS FOR FEDERAL REGION 9
William Powell, ed. and Kenneth Tang, ed. May 1980 337 p
(Contract NAS7-100)
(NASA-CR-163267; JPL-Pub-80-41) Avail: NTIS HC A15/MF A01 CSCL 10B

A preliminary study was made of the potential for geothermal direct heat use in Arizona, California, Hawaii, and Nevada (Federal Region 9). An analysis was made of each state to: (1) define the resource, based on the latest available data; (2) assess the potential market growth for geothermal energy; and (3) estimate the market penetration, projected to 2020. Findings of the study include the following: (1) Potentially economical hydrothermal resources exist in all four states of the Region; however, the resource data base is largely incomplete, particularly for low to moderate temperature resources. (2) In terms of beneficial heat, the total hydrothermal resource identified so far for the four states is on the order of 43 Quads, including an estimated 34 Quads of high temperature resources which are suitable for direct as well as electrical applications. (3) In California, Hawaii, and Nevada, the industrial market sector has somewhat greater potential for penetration than the residential/commercial sector. In Arizona, however, the situation is reversed, due to the collocation of two major metropolitan areas (Phoenix and Tucson) with potential geothermal resources.

COMPARISON OF COSTS FOR AUTOMOBILE ENERGY CONSERVATION VS SYNTHETIC FUEL PRODUCTION
Richard Gorman and Kenneth L. Heitner 1980 32 p refs Presented at the 5th Symp. on Automotive Propulsion Systems, Dearborn, Mich., 14 Apr. 1980
(Contract AC01-79PE-70151)
(CONF-800419-1) Avail: NTIS HC A03/MF A01

The analysis suggests that there are a large number of potential technical options for reducing energy consumption in automobiles. Furthermore, the cost to the user of purchasing these conservation options is less than the discounted cost of purchasing the additional fuel required if the conservation option is not chosen. There is a significant cost savings even if fuel costs remain at current levels. These savings would increase if fuel prices continue to rise or if more costly than synthetic fuels, at least for another 15 to 20 years. Cost effective conservation could enable new vehicles to reach 40 to 50 mpg corporate average fuel economy by the year 2000. It is clear that the potential for making these changes exists, but better data are needed to evaluate many of these options and to ensure the development and implementation of those that are desirable. MECHANISMS AND RATES OF FORMATION OF SULFUR AEROSOLS IN POWER PLANT PLUMES

R. F. Pueschel and Y. Mamane (Technion - Israel Inst. of Tech.) *In* WMO The Long-Range Transport of Pollutants and its Relation to Gen. Circulation Including Stratospheric/Tropospheric Exchange Processes 1979 p 141-148 refs

Avail: NTIS HC A19/MF A01

Aerosol size distributions, aerosol elemental composition, and the concentrations of fine particles and trace gases at three typical locales in order to explore the potential effects on the environment of coal-fired power plant operations. The three cases are the plume proper of a 2150 megawatt power plant burning low sulfur coal, the atmosphere outside but close to the plume, and the atmosphere of a region hundreds of miles away from any industrial operation. The aerosol dynamics, discussed in terms of the lumped mode heterodisperse coagulation model show that the formation rates of condensation nuclei are similar for the power plant plume and the rural atmosphere. However, the rural aerosol is of natural origin and is dominated by organic particles, whereas the plume aerosol consists of siliceous spheres mixed with sulfate particles. The aerosol dynamics further show that the accumulation mode at around 0.1 micron radius is the most persistent feature of the atmospheric aerosol with turnover times of weeks to months. The particle concentration and modal radius of this mode is larger in the plume and its immediate vicinity than it is in the rural atmosphere. The data also show a significant increase in aerosol concentration in the plume at the coarse particle mode of radii larger than 1 micron. However, rapid settling of these relatively large particles results in turnover times of only hours. M.G.

ENVIRONMENTAL CONTROL TECHNOLOGY FOR ATMOSPHERIC CARBON DIOXIDE Final Report

Anthony S. Albanese and Meyer Steinberg Sep. 1979 58 p refs
(Contracts EY-76-C-02-0016; DE-AC02-76CH-00016)
(BNL-51116) Avail: NTIS HC A04/MF A01

The impact of fossil fuel use in the United States on worldwide CO2 emissions and the impact of increased coal utilization on CO2 emission rates are assessed. The aspects of CO2 control are discussed as well as the available CO2 control points (CO2 removal sites). The primary factor affecting the practicability of a CO2 control system is the energy required by the control system. Of the three potential CO2 control points, removal from the stacks of fossil fuel power plants appears to require the least amount of energy. Estimates of the energy required to capture and recover CO2 from coal-fired power plant stacks by various processes are presented. Although capture and recovery of CO2 is an important consideration in the overall scheme of CO2 control, disposal or reuse of recovered CO2 may be the weakest link in the CO2 control chain. Of the several options considered, deep ocean storage appears to be the most promising. Two control scenarios are evaluated, one based on the absorption of CO2 contained in power plant flue gas by seawater; the other, based on absorption of CO2 by monoethanolamine (MEA). Captured CO2 is injected into the deep ocean in both cases. Analysis indicate that capture and disposal by seawater is not feasible, whereas capture and disposal using MEA is a possibility. However, the economic penalties of CO2 control are significant; for example, at a CO2 removal efficiency of 50%, it is estimated that the power generation efficiency of a conventional coal fired power plant would be reduced from 34 to about 25%. The cost of power generation would be expected to double. For 90% CO2 removal, power generation efficiency is reduced to between 15 and 6% and the cost of power generation increases by a factor of from 4 to 7. DOE

ENERGY-EFFICIENT PROCUREMENT IN STATE AND LOCAL GOVERNMENTS
Joe W. Russell, Jr. Jul. 1979 70 p refs
(Contract EM-78-C-01-5255)
(DOE/CS-5255/1) Avail: NTIS HC A04/MF A01

State and local governments have been slow in preparing and implementing plans for energy conservation with resepect to the development of energy efficient standards and policies. This lack of compliance with the Energy Policy and Conservation Act is due to a lack of reliable information on many energy-consuming products, a resistance to change on the part of purchasing officials to their superiors, and reluctance in the tax revolt era to spend money in order to save money and energy as well. To overcome these obstacles, states and localities should consider mandating energy-efficient procurement pratices through either executive orders or legislation. In addition, states and localities should consider adopting institutional arrangements, such as centralized purchasing and joint or cooperative purchasing that will facilitate energy-efficient procurement. Life cycle costs should be considered as bid evaluation criterion. To further state and local efforts in this area, the federal government should provide technical and financial assistance to an organization of purchasing officials to establish an information clearinghouse. PERFORMANCE, EMISSIONS, AND PHYSICAL CHARACTERISTICS OF A ROTATING COMBUSTION AIRCRAFT ENGINE, SUPPLEMENT A
R. K. Lamping, I. Manning, D. Myers, and B. Tjoa May 1980 74 p
(Contract NAS3-20808)
(NASA-CR-135119; CW-WR-76-028.3) Avail: NTIS HC A04/MF A01 CSCL 21E

Testing was conducted using the basic RC2-75 engine, to which several modifications were incorporated which were designed to reduce the hydrocarbon emissions and reduce the specific fuel consumption. The modifications included close-in surface gap spark plugs, increased compression ratio rotors, and provisions for utilizing either side or peripheral intake ports, or a combination of the two if required. The proposed EPA emissions requirements were met using the normal peripheral porting. The specific fuel economy demonstrated for the modified RC2-75 was 283 g/kW-hr at 75% power and 101 brake mean effective pressure (BMEP) and 272.5 g/kW-hr at 75% power and 111 BMEP. The latter would result from rating the engine for takeoff at 285 hp and 5500 rpm, instead of 6000 rpm. E.D.K.

CF6-6D ENGINE PERFORMANCE DETERIORATION
Ray H. Wulf, W. H. Kramer, J. E. Pass, and J. J. Smith Jan. 1980 286 p refs
(Contract NAS3-20631)
(NASA-CR-159786; R80AEG218) Avail: NTIS HC A13/MF A01 CSCL 21E

Cruise cockpit recordings and test cell performance data in conjunction with hardware inspection data from airline overhaul shops were analyzed to define the extent and magnitude of performance deterioration of the General Electric CF6-6D model engine. These studies successfully isolated short-term deterioration from the longer term, and defined areas where a significant reduction in aircraft energy requirements for the 1980's can be realized. Unrestored losses which remain after engine refurbishment represent over 70% of the loss at engine shop visit. Sixty-three percent of the unrestored losses are cost-effective to restore which could reduce fuel consumed by CF6-6D engines in 1980 by 10.9 million gallons Author

FEASIBILITY STUDY OF AILERON AND SPOILER CONTROL SYSTEMS FOR LARGE HORIZONTAL AXIS WIND TURBINES Final Report
W. H. Wentz, Jr., M. H. Snyder, and J. T. Calhoun May 1980 69 p refs
(Grant NsG-3277; Contract EX-76-I-01-1028)
(NASA-CR-159856; DOE/NASA/3277-1; WER-10) Avail: NTIS HC A04/MF A01 CSCL 10A

The feasibility of using aileron or spoiler controls as alternates to pitch control for large horizontal axis wind turbines was studied. The NASA Mod-0 100 kw machine was used as the basis for the study. Specific performance studies were conducted for 20% chord ailerons over the outboard 30% span, and for 10% chord spoilers over the same portion of the span. Both control systems utilized control deflections up to 60 deg. Results of the study show that either ailerons or spoilers can provide the control necessary to limit turbine power in high wind conditions. The aileron system, as designed, provides overspeed protection at hurricane wind speeds, low wind speed starting torque of

778 N-m (574 ft. lb) at 3.6 m/sec. and a 1.3 to 1.5% increase in annual energy compared to a fixed pitch rotor. The aileron control system preliminary design study includes aileron loads analysis and the design of a failsafe flyweight actuator for overspeed protection in the event of a hydraulic system failure.

IMPACT OF PROPULSION SYSTEM R AND D ON ELECTRIC VEHICLE PERFORMANCE AND COST
Harvey J. Schwartz and Andrew L. Gordan 22 May 1980 16 p refs Presented at 3d Intern. Electric Vehicle Exposition and Conf., St. Louis, 20-22 May 1980
(Contract EC-77-A-31-1044)
(NASA-TM-81548; DOE/NASA/1044-9; E-504) Avail: NTIS HC A02/MF A01 CSCL 10B

The efficiency, weight, and manufacturing cost of the propulsion subsystem (motor, motor controller, transmission, and differential, but excluding the battery) are major factors in the purchase price and cost of ownership of a traffic-compatible electric vehicle. The relative impact of each was studied, and the conclusions reached are that propulsion system technology advances can result in a major reduction of the sticker price of an electric vehicle and a smaller, but significant, reduction in overall cost of ownership.

US ENERGY ASSISTANCE TO DEVELOPING COUNTRIES: CLARIFICATION AND COORDINATION NEEDED Report to the Congress
28 Mar. 1980 72 p
(PB80-162720; ID-80-7) Avail: NTIS HC A04/MF A01 CSCL 05D

An assessment of U.S. energy assistance to developing countries is given. Primary Federal agencies involved include the Departments of State and Energy, the International Development Cooperation Agency, and the Agency for International Development. Energy assistance activities could be improved with the establishment of comprehensive U.S. policy, clarification of the roles and relationships of the agencies, and better coordination among involved agencies and international organizations. SMALL PASSENGER CAR TRANSMISSION TEST-CHEVROLET 200 TRANSMISSION Final Report
M. P. Bujold Mar. 1980 381 p
(Contracts DEN3-124; EC-77-A-31-1044)
(NASA-CR-159835; DOE/NASA/0124-1; ERC-L18-79168) Avail: NTIS HC A17/MF A01 CSCL 13F

The small passenger car transmission was tested to supply electric vehicle manufacturers with technical information regarding the performance of commercially available transmissions which would enable them to design a more energy efficient vehicle. With this information the manufacturers could estimate vehicle driving range as well as speed and torque requirements for specific road load performance characteristics. A 1979 Chevrolet Model 200 automatic transmission was tested per a passenger car automatic transmission test code (SAE J651b) which required drive performance, coast performance, and no load test conditions. The transmission attained maximum efficiencies in the mid-eighty percent range for both drive performance tests and coast performance tests. Torque, speed and efficiency curves map the complete performance characteristics for Chevrolet Model 200 transmission.

SOLAR ENERGY

Includes solar collectors, solar cells, solar heating and cooling systems, and solar generators.

A80-32856 # **Solar central receiver hybrid - A cost effective future power alternative.** D. G. Beshore, C. N. Bolton, and J. E. Montague (Martin Marietta Aerospace, Denver, Colo.). *American Institute of Aeronautics and Astronautics, International Meeting and Technical Display on Global Technology 2000, Baltimore, Md., May 6-8, 1980, Paper 80-0841*. 8 p. 5 refs.

System analyses and conceptual designs of solar central receiver hybrid concepts using molten salt (60% NaNO3, 40% KNO3 by weight) and fossil fired nonsolar energy sources (coal, oil, or gas) have been performed. Analyses have developed plant configurations with various solar energy storage capacities and fossil fuels. Economic analyses support the final configuration selection based on minimization of the cost of energy produced from the plant. A 500 MWe commercial plant size installed for a 1990 initial year of operation is competitive with new coal, oil, and nuclear power generation sources. This hybrid plant will save an estimated 5 million barrels of oil per year. (Author)

A80-32867 # **An experimental evaluation of thermosiphon solar water heaters with closed loop freeze protection.** J. Bogart (Utah, University, Salt Lake City, Utah). *American Institute of Aeronautics and Astronautics, International Meeting and Technical Display on Global Technology 2000, Baltimore, Md., May 6-8, 1980. Paper 80-0869*. 11 p. 8 refs. NSF-supported research.

The purpose of this research was to examine the performances of two thermosiphon hot water heaters. One system ran a 50-50 ethylene glycol-water solution through a flat plate type collector and a copper coil heat exchanger placed inside the storage tank. The other system is conventional and ran the storage tank water through the collector with open pipes into and out of the storage tank (i.e. no heat exchanger). Obviously the heat exchanger system will perform less efficiently because of higher fluid viscosity and losses in the heat exchanger. But because this system will not freeze, it could be used in winter and doesn't need draining to prevent pipe freezing. The research centered on determining the exact extent of the decrease in efficiency of this type of system from the more conventional type of system. The results showed that the system with the heat exchanger performed, on the average, 9% less efficiently than the system without the heat exchanger. This figure is acceptable and such an ethylene glycol system is recommended for use in winter or when there is a possibility of freezing on cool nights from radiation losses. (Author)

A80-32933 **A thin-film polycrystalline photoelectrochemical cell with 8% solar conversion efficiency.** G. Hodes (Weizmann Institute of Science, Rehovot, Israel). *Nature*, vol. 285, May 1, 1980, p. 29, 30. 6 refs.

A thin-film polycrystalline CdSe(0.65)Te(0.35)/polysulfide-based photoelectrochemical solar cell with an energy conversion efficiency of up to 8% is presented. Cell electrodes were prepared by painting a slurry of sintered CdSe(0.65)Te(0.35) powder onto a Ti substrate and then annealing in an inert atmosphere and etching by various means. Solar efficiencies of the electrodes immersed in an aqueous electrolyte 1 M in KOH, Na2S and S with a counter electrode of sulfide brass gauze of up to 5% were obtained following a HCl:HNO3 etch, up to 5.5% following etching in dilute aqueous CrO3 and up to 8.0% following photoetching and K2CrO4 treatment. The spectral response of the anode in polysulfide solution exhibits a short-wavelength cutoff due to electrolyte absorption, a flat plateau region, and a fairly sharp long-wavelength cut-off indicating an effective band gap of about 1.45 eV, similar to that of CdTe. Output stability has been found to decrease with increasing output current, remaining stable for more than 21 h at a current of 20 mA/sq cm. A.L.W.

A80-33184 **Solar industrial process heat.** S. L. Sargent, B. H. Glenn, and D. W. Kearney (Solar Energy Research Institute, Golden, Colo.). *Environmental Science and Technology*, vol. 14, May 1980, p. 518-522.

The article reports on the Solar IPH (industrial process heat) Conference organized for the DOE's Agricultural and Industrial Systems Branch, which provided a forum for interaction between researchers and potential users of solar IPH systems. In addition, the status of existing IPH products was examined, and the technical readiness and expected future developments of solar IPH systems and components was reviewed. Attention is given to solar IPH field tests results, typical operating temperatures of solar IPH technologies, and market considerations. M.E.P.

A80-33401 **Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volumes 1, 2 & 3.** Congress sponsored by the International Solar Energy Society. Edited by K. W. Boer (Delaware, University, Newark, Del.) and B. H. Glenn (Solar Energy Research Institute, Golden, Colo.). Elmsford, N.Y., Pergamon Press, Inc., 1979. Vol. 1, 981 p.; vol. 2, 768 p.; vol. 3, 612 p. Price of three volumes, $275.

Papers are presented on such topics as solar agriculture, fuels from biomass, photochemical and thermochemical processes, solar heating and cooling of buildings, solar air heaters, low temperature collectors, concentrator collector performance, linear concentrators, nonimaging optics, solar heat storage, open cycle cooling, solar/heat pump systems, and solar domestic water heaters. Also considered are solar ponds, industrial process heat, high temperature storage, design methods for solar thermal systems, concentrating optics, advanced receivers, controls for solar systems, solar energy in developing countries, passive systems, materials and innovative systems, and greenhouses and solariums. Photovoltaics is considered in detail. B.J.

A80-33402 **Nitrogen fertilizer production by solar energy.** R. W. Treharne, D. R. Moles, M. R. Bruce, C. K. McKibben (Charles F. Kettering Research Laboratory, Yellow Springs, Ohio), and B. K. Rein (Nebraska, University, Lincoln, Neb.). In: Sun II, Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2-5. 7 refs. Research supported by the Rockefeller Foundation; Contract No. EY-76-C-02-4094.

A prototype system designed to produce nitrogen fertilizer on a farm using solar power has been developed for field testing. The system consumes only air, water, limestone and electrical power in the production of nitrogen fertilizer and is designed to be powered by a solar photovoltaic array. In the basic chemical process of the system, the nitrogen and oxygen in air are combined to produce nitrogen oxide by means of an electric arc driven by the solar array. The nitrogen oxides then are reacted with water and limestone to produce calcium nitrate fertilizer to be fed to crop land via a solar-powered irrigation system. (Author)

A80-33403 **Development and evaluation of a multiple use solar energy system for agriculture.** M. A. Hellickson, W. H. Peterson, and L. R. Verma (South Dakota State University, Brookings, S. Dak.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 6-9.

Solar energy has been shown to be a technically feasible alternative for crop drying and agricultural space heating applications, but economics, engineering and optimization are preventing widespread application of this alternative energy resource. Research in the Department of Agricultural Engineering at South Dakota State University has led to a solar energy intensifier system that appears to have excellent potential for solving these problems. The system incorporates the low temperature rise and continuous air flow characteristics of crop drying and agricultural space heating applications with the economic advantages of a large area solar reflector to achieve significant system cost reductions and simplifications. (Author)

A80-33404 **The application of existing solar energy collecting equipment in agriculture, horticulture and fishculture.** F. Vogt (Central London, Polytechnic, London, England). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 10-14. 15 refs.

A80-33405 **Computer simulation for optimization of solar energy storage and utilization for crop drying in Ohio.** R. N. Misra and H. M. Keener (Ohio Agricultural Research and Development Center, Wooster, Ohio). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 20-24. Research supported by the U.S. Department of Energy and U.S. Science and Education Administration.

A80-33408 **High intensity mass algae culture requirements and limitations.** G. L. Mauldin (New Mexico Solar Energy Institute, Las Cruces, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 41-45. 18 refs.

The design of algae culture units intended to maximize the growth of algae in sunlight is discussed, considering CO2 and oxygen supply, culture depth, temperature control, and cell suspension density. Emphasis is placed on photosynthesis, photorespiration, the partial processes involved, rates of oxygenation of ribulose-1.5-bisphosphate, and the net quantities of ATP and NADPH which may be utilized from a given quantity of light with regard to C4 and C3 plants. It is shown that maximum efficiencies of solar energy conversion to chemical potential energy in biomass can only be achieved when the photon flux density is the rate-limiting factor, which requires that the O2 and CO2 concentrations at the carboxylation site must be maintained such that the carboxylase reaction is proceeding near maximum rate, and the oxygenase activity is completely or nearly completely inhibited. J.P.B.

A80-33421 **Association of chlorophyll with surfactants on a particle surface.** G. R. Seely (Charles F. Kettering Research Laboratory, Yellow Springs, Ohio). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 112-116. 11 refs.

The proposed model system for the imitation of photosynthesis employs polyethylene particles swollen to about four times their dry volume with a low molecular weight diluent, such as undecane. Spectra of chlorophyll absorbed to these particles are characteristic of the surfactant adsorbed with it; the pigment remains strongly fluorescent at relatively high surface coverages. Chlorophyll adsorption data are presented for various concentrations of N,N-dimethylmyristamide, a non-ionic surfactant. V.L.

A80-33423 **Chemical heat pumps using a slurry of metal salt ammoniates in an inert solvent.** W. E. Wentworth, D. W. Johnston (Houston, University, Houston, Tex.), and W. M. Raldow (Kungl. Tekniska Hogskolan, Stockholm, Sweden). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 122-125. 6 refs. Contract No. N68305-77-C-0043.

The decomposition of metal salt complexes can be used in chemical heat pump reactions for solar heating and cooling. It is shown that the decomposition of CaCl2.8NH3 and SrCl2.8NH3 can be carried out effectively as a slurry or suspension in an inert solvent. The reaction rates are increased by an order of magnitude and the reactions appear to be more complete. Three solvents were considered and the results showed that the nature of the solvent is important. (Author)

A80-33425 **Feasibility of a large scale solar power generation system suitable for the arid and semi-arid zones.** D. P. Rao, S. V. Babu, and V. S. Rao (Indian Institute of Technology, Kanpur, India). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 130-134.

A80-33426 **Heat and mass transfer analysis of a chemical converter/heat exchanger for the SO2/SO3 distributed solar energy collection system.** C. H. Li and E. W. Schmidt (Rocket Research Co., Redmond, Wash.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 135-139. 8 refs. Contract No. N00173-78-C-0272.

Three different designs of chemical converter-heat exchangers, as applied to a SO2/SO3 distributed solar energy collection system, were studied. All three designs comprise spiral passages wound around a cylindrical cavity into which the sunlight is focused. The innermost passage serves as the chemical converter, while the remaining outer passages serve as the heat exchanger. Detailed mathematical models are developed to predict and compare the steady-state performances of the chemical converter-heat exchangers. The results of the models indicate that significant mass transfer resistance exists between the fluid and the catalyst wall coating. They also indicate that the reverse reaction of SO2 recombining with O2 could be important near the exit of the chemical converter. Unfortunately this effect has been neglected in the existing kinetic data. (Author)

A80-33427 **Solar energy collection using the reversible ammonia dissociation reaction.** J. H. Wright and T. G. Lenz (Colorado State University, Fort Collins, Colo.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 140-144. 8 refs.

An experimental program has been developed to verify the predicted performance of a solar-thermochemical receiver utilizing ammonia as the working fluid in a closed-loop energy collection and transport system. Specifically, a 10 kW(th) NH3 dissociation reactor-heat exchanger assembly has been designed. It consists of 43 catalyst filled tubes mounted around the perimeter of a one foot diameter cavity. A counter-flow heat exchanger wraps around the assembly to transfer the sensible heat from the exiting dissociated gas mixture to the incoming ammonia. In addition, a single-tube experiment has been designed to simulate a single tube of the 10 kW(th) reactor to provide design verification information. (Author)

A80-33428 **Ammonia dissociation for solar thermochemical absorbers.** O. M. Williams and P. O. Carden (Australian National University, Canberra, Australia). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 145-148. 5 refs.

A high pressure ammonia dissociator has been tested for solar thermochemical absorber operation. High thermal energy storage efficiencies are obtained when the dissociation reaction proceeds towards completion. A 90% efficient long-life cavity absorber operated at the focus of a paraboloidal concentrator can be based on nickel alloy tube technology and has potential for meeting a cost goal of 10 US dollars per square metre of collector area. The stored chemical energy is transported to a central plant where high grade heat is released during ammonia synthesis. It is shown that the maximum value of available work defined by the Gibbs' free energy change for the synthesis reaction may be approached provided the temperature profile of the synthesis reactor is suitably tailored. The sources of available work are identified in order to facilitate matching the high grade heat output to the input of a heat engine. (Author)

A80-33429 **Development of the sulfuric acid-water chemical heat pump/chemical energy storage system for solar heating and cooling.** C. C. Hiller (Sandia Laboratories, Livermore, Calif.) and E. C. Clark (Rocket Research Co., Redmond, Wash.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 149-153. 9 refs. Research supported by the U.S. Department of Energy.

A80-33430 **Moderate temperature solar thermochemical systems - An application of Diels-Alder chemistry.** T. G. Lenz and L. S. Hegedus (Colorado State University, Fort Collins, Colo.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 154-158. 17 refs.

Diels-Alder systems are investigated with regard to their thermodynamic, kinetic, and physical properties. Liquid phase Diels-Alder chemistry, with reversible catalytic reactions available over the temperature range of 100-500 C, could be useful in solar-chemical energy conversion systems. Characteristics are given for the 1, 3 cyclooctadiene-diethyl maleate-adduct system chosen on the basis of best-estimate match of the criteria used to evaluate solar thermochemical systems. A need for further laboratory research is emphasized. V.L.

A80-33431 **Solar flash pyrolysis of biomass.** M. J. Antal, Jr. (Princeton University, Princeton, N.J.), M. Rodot, C. Royere, and A. Vialaron (CNRS, Odeillo, Pyrénées-Orientales, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 159-163. 26 refs. Research supported by the Solar Thermal Test Facilities Users Association and Centre National de la Recherche Scientifique.

The use of solar heat for biomass gasification is discussed with reference to the chemistry of the process and projected economics of solar powered biomass gasification systems. Particular consideration is given to flash pyrolysis by direct solar gasification which is the most economical method of biomass gasification. The cost of the gas derived from wastes is estimated at $2.85 per MM Btu and the cost of the power tower is found to be a fraction of the overall cost of the facility. V.L.

A80-33432 **Australian programme for solar heating and cooling.** W. R. W. Read (Commonwealth Scientific and Industrial Research Organization, Div. of Mechanical Engineering, Highett, Victoria, Australia). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 168-172.

A80-33434 **Solar City - Mount Cotton.** S. V. Szokolay (Queensland, University, Brisbane, Australia). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 178-182.

The design of a solar demonstration house built for the proposed Solar City project near Brisbane is presented. The solar systems of the house include space heating and air conditioning, hot water supply (coupled to the above), swimming pool heating system, and a token amount of photovoltaic electricity generation. The main criterion of the design is the thermal efficiency of the building. Design data are given for the generator, evaporator, condenser and absorber. V.L.

A80-33435 **The Belgian solar heating R & D program.** A. Pilatte (Mons, Faculté Polytechnique, Mons, Belgium). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 183-186.

A80-33438 **Solar energy projects for heating of buildings in Germany.** F. J. Friedrich (Kernforschungsanlage Jülich GmbH, Jülich, West Germany). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 195-199.

A80-33439 **French programs of research and experimentation aiming at the development of solar energy in buildings.** M. Bellanger (Commissariat à l'Energie Solaire, Paris, France), M. Rodot (CNRS, Paris, France), and J. P. Marie (Ministère de l'Equipement, Paris, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 200-203.

A80-33440 **Industrial solar energy activity in Monaco.** J. H. Millar (Flextube, S.A., Monaco). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 210-214.

A80-33447 **Derivation of efficiency and loss factors for solar air heaters.** B. F. Parker (Kentucky, University, Lexington, Ky.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 244-248. 8 refs.

A80-33448 * **The effects of air leaks on solar air heating systems.** R. Elkin and M. Cash (NASA, Marshall Space Flight Center, Huntsville, Ala.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 249-253. 5 refs.

This paper presents the results of an investigation to determine the effects of leakages in collector and duct work on the system performance of a typical single-family residence solar air heating system. Positive (leakage out) and negative (leakage in) pressure systems were examined. Collector and duct leakage rates were varied from 10 to 30 percent of the system flow rate. Within the range of leakage rates investigated, solar contribution to heated space and domestic hot water loads was found to be reduced up to 30 percent from the no-leak system contribution with duct leakage equally divided between supply and return duct; with supply duct leakage greater than return leakage a reduction of up to 35 percent was noted. The negative pressure system exhibited a reduction in solar contribution somewhat larger than the positive pressure system for the same leakage rates. (Author)

A80-33449 **New air-heating collector design and performance.** H. Koizumi, Y. Kawada, K. Matsui, and T. Ariga (Toshiba Corp., Consumer Products Engineering Laboratory, Kawasaki, Japan). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 254-258. 5 refs.

Thermal performance data are presented for a solar collector consisting of a glass cover, a transparent plastic film, and a corrugated aluminum absorber. Outdoor tests were performed, and results were compared with those for three other collectors. Results show that, under typical operating conditions, the new collector has a 16% greater efficiency than the collector used in the first Toshiba solar house. Its light weight, easy assembly, and lower cost make it suitable for many applications. B.J.

A80-33450 **The characterization of crushed glass as a transpired air heating solar collector material.** R. K. Collier (California, University, Los Alamos, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 264-268. 3 refs. Research sponsored by the U.S. Department of Energy.

The use of crushed glass matrices as the heat-absorbing media in air heating solar collectors is investigated. An experimental program was undertaken to characterize the most likely candidate glass types and sizes by measuring pressure drops, optical extinction coefficients, and volumetric heat transfer coefficients. Bed efficiencies were also measured and found to be similar to those expected for screen matrices unless critical amounts of clear glass were used as a top layer, which results in lowered efficiency. (Author)

A80-33451 **Design and performance of a roof integrated solar air heater.** M. K. Peck and D. Proctor (Commonwealth Scientific and Industrial Research Organization, Div. of Mechanical Engineering, Highett, Victoria, Australia). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 269-273. 13 refs.

A closed-loop space heating system is presented which combines solar air heaters and a rockbed thermal store located under the floor of the house. The system heats the rooms by radiation and convection from the floor and so avoids the need for some of the ductwork and controls used in conventional solar air-heating systems. A mathematical model is proposed for the evaluation of different integrated roof collector designs and for the comparison of the predicted and the measured performance. The limited experimental data presented validate the mathematical model used to design the air heater. V.L.

A80-33452 **An experimental investigation into the effect of plate thermal capacity on the performance of solar water heating systems.** A. W. K. MacGregor (Napier College, Edinburgh, Scotland). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 278-282. Research supported by the Science Research Council of England.

A80-33453 **Experimental study on flow distribution in channels of flat-plate solar collectors using I.R. thermography.** R. Lazzarin (Padova, Università, Padua, Italy), M. Pacetti, and G. Latini (Ancona, Università, Ancona, Italy). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 283-287.

A80-33454 **Theoretical and experimental investigation of the flow in a flat plate collector.** A.-M. Dalbert-Conseil, J.-L. Peube, F. Penot, and J.-F. Robert (Poitiers, Université, Poitiers, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 288-292. 5 refs.

A80-33455 **Forced convection in solar collectors.** D. M. McEligot (Arizona, University, Tucson, Ariz.) and C. A. Bankston (California, University, Los Alamos, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 293-297. 10 refs. Research supported by the U.S. Department of Energy, University of Arizona, and NSF.

The sensitivity of the solar collector performance to the forced convective heat transfer between an absorber and coolant is studied. It is concluded that the thermal performance of water-cooled flat plate collectors is generally insensitive to the internal forced convective problem. V.T.

A80-33456 **Analysis of matrix air heaters.** D. A. Neeper (California, University, Los Alamos, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 298-301. 5 refs. Research supported by the U.S. Department of Energy.

By using a physical analogy, this paper develops an analytic expression that approximates Beckman's (1978) calculated bed efficiency. This analytic expression for bed efficiency should be useful for computation of overall collector efficiency. Furthermore, it is shown that under certain stringent assumptions the bed efficiency may be compared with the flat-plate collector parameter F(R) in order to compare the expected performance of a matrix collector with that of a flat plate. (Author)

A80-33457 **Thermal performance of compounds used to improve heat transfer in solar collectors.** S. A. Mumma (Arizona State University, Tempe, Ariz.) and D. G. Hansen (Tennessee Valley Authority, Knoxville, Tenn.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 307-311.

The thermal conductances of potential thermal conducting materials for the improvement of heat exchange between the absorber plate and the heat transfer fluid in solar collectors are measured. Thermal conductances of the Thermon heat transfer cements T-802, T-85 and E-1, the Devcon plastic steels A and SF, bronze putty R, plastic aluminum F, lead putty L and stainless steel putty ST, Wakefield thermal conducting paste and Pelco colloidal silver paste were determined from the heat flux through two copper bars joined by the heat transfer material. Conductances are found to range between 1063.5 and 3836.1 W/sq m per C, and to represent an order of magnitude improvement over the lack of a conducting material. Calculations for specific absorber designs show 13-77% increases in total useful collector gain brought about by the use of the material found to have the highest conductance, Thermon T-802. A.L.W.

A80-33458 **Heat transfer through collector glass covers.** K.-E. Hassan (Centre for Solar Energy Studies, Tripoli, Libya). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 312-316. 7 refs.

Analysis is carried out for radiant exchange between two parallel isothermal plates of infinite dimensions separated by a number of transparent absorbing surfaces, taking into consideration the conductance between the surfaces involved. An extension of the so-called 'radiosity method' is used and the problem is expressed as a system of algebraic equations. In the absence of conductance, these equations are linear and could be put in a more convenient dimensionless form. The solution for the special case of solar collector covers made of a number of transparent (usually glass) plates is solved and compared with the results in the literature. A solution is also given for the temperature distribution within a thick plate subjected to radiation and conductance. (Author)

A80-33459 **Three dimensional ray tracing through concentric tubular elements using vector methods.** S. H. Janke (Montana State University, Bozeman, Mont.) and R. F. Boehm (Utah, University, Salt Lake City, Utah). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 317-321.

Using vector methods, a three dimensional ray trace is developed for a direct ray incident upon a tubular element of circular cross section. This ray approaches the element in a plane not perpendicular to the long axis, but rather in a plane always parallel to that axis. Relations are developed for the various angles of incidence and refraction as the ray is partially transmitted and/or internally reflected, for its in-glass path length, and for the minimum distance from the fraction passed to the interior cavity and the long axis. The results are useful in determining a transmittance absorptance product for such an element with concentric absorber of circular section. (Author)

A80-33460 **Cylindrical glass tubes for flat plate collector covers.** W. M. Worek and Z. Lavan (Illinois Institute of Technology, Chicago, Ill.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 322-326.

A80-33461 **The effect of pressure on the performance of cylindrical solar collectors.** W. M. Worek and Z. Lavan (Illinois Institute of Technology, Chicago, Ill.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 327-330.

The combined effect of vacuum and a selective absorbing surface is extensively used in high temperature solar collectors. In the analysis of such collectors it is usually assumed that radiation is the primary mode of heat loss and that all other modes of heat transfer can be neglected. The present work is concerned with the variation of collector heat loss with pressure in the annulus between the absorber and the outer glass envelope of a single Owens-Illinois Sunpak collector tube. In particular, the results show the effect of pressure on conduction heat loss and the pressure level at which conduction heat loss can be neglected. (Author)

A80-33462 **Effect of off-south orientation on optimum conditions for maximum solar energy absorbed by flat plate collector augmented by plane reflector.** I. S. Taha and S. M. Eldighidy (King Abdul Aziz University, Jeddah, Saudi Arabia). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 332-336. 9 refs.

A80-33463 **The unitary solar collector - A new approach to low-cost, flat-plate systems.** R. A. Erb (Franklin Institute, Philadelphia, Pa.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 338-341.

The unitary solar collector is a seamless, glazed, flat-plate collector panel coextruded from thermoplastic material (e.g., clear UV-stabilized and black polycarbonate for an air-heating system). The advantages of this new system include: low cost, light weight, good structural strength, capability for mass production, and design possibilities not practical with conventional systems. Prototype panels (10 cm wide) have been coextruded in polycarbonate. A small-scale test in Florida under stagnant flow conditions for over 2.5 years (reaching temperatures to 137 C) has shown that the panels withstand these severe conditions. (Author)

A80-33464 **Low cost high temperature adhesive bonded solar collectors.** R. E. Dame and J. J. Dalton (Mega Engineering, Silver Spring, Md.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 343-347. 17 refs.

A80-33465 **Integration of solar collectors in large prefabricated roof/wall sections.** D. L. Spencer (Iowa, University, Iowa City, Iowa) and R. A. Strub (Component Homes, Inc., Iowa City, Iowa). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 348-352.

A80-33466 **Testing the performance of solar collectors under standard conditions.** W. Dittes and D. R. Goettling (Stuttgart, Universität, Stuttgart, West Germany). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 355-359. 11 refs.

The paper compares standard test procedures for solar collectors as proposed by ASHRAE/NBS, BSE, DFVLR, and NASA. ASHRAE/NBS recommend outdoor tests, while BSE admits both outdoor and indoor tests. According to DFVLR and NASA, solar collectors are tested with a solar simulator. In two cases the efficiency is calculated by the quotient of the useful heat rate and the incident radiation. In the third case, the efficiency is computed using the difference of the maximum useful heat rate and the rate of heat loss divided by the incident radiation. Consideration is given to the measurement of the rate of heat loss, determination of the standard flow rate and other standard conditions, and the determination of the efficiency curve. V.L.

A80-33467 **Equations for representing the UL-dependence in collector test procedures.** E. C. Shewen and K. G. T. Hollands (Waterloo, University, Waterloo, Ontario, Canada). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 360-364. 10 refs.

Various methods of accounting for collector heat loss coefficient variability are reviewed. A new method is presented which is particularly suited to being implemented in the three-factor test procedure described by Smith and Weiss (1977). V.T.

A80-33468 **Tests of all-day collector performance.** C. D. Beach, J. C. Huggins, and J. D. Roland (Florida Solar Energy Center, Cape Canaveral, Fla.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 370-374.

As part of a program to evaluate collectors used in the national solar heating and cooling demonstration program, 23 flat-plate collectors were tested for efficiency while they operated for an entire day at a constant inlet temperature and flow rate. As many as four all-day tests were performed on some of the collectors to provide data at different operating temperatures and for various types of days. When efficiencies are referenced to ambient temperature and total available solar irradiance, in a manner analogous to the plots of ASHRAE collector efficiency data, results show a performance advantage for glass covers as compared to plastic. Results also show a wide variation in performance among collectors with selective absorber surfaces but much less variation among those with flat black coatings. While the all-day test data are easier to interpret than ASHRAE performance curves, and also simplify collector comparison, more test time is required to make a conclusive evaluation. (Author)

A80-33469 **Experimental evaluation of zero radiation heat loss testing of rear duct air-heating solar collectors.** P. P. Yaneske and I. C. Wiles (Strathclyde, University, Glasgow, Scotland). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 375-379. 5 refs. Research supported by the Glynwed Group Services.

A80-33470 **CSIRO collector test facilities.** D. Proctor and M. K. Peck (Commonwealth Scientific and Industrial Research Organization, Div. of Mechanical Engineering, Highett, Victoria, Australia). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 380-384. 13 refs.

The paper describes the collector testing facilities used by the CSIRO Division of Mechanical Engineering in Australia. It is shown that the equipment is used to obtain the absolute performance characteristics of solar collectors for research purposes, and on a 'fee for service' basis for manufacturers. The high temperature test rig and the solar simulator are described, as well as the test procedure and data reduction. M.E.P.

A80-33471 **Laboratory tests for flat plate solar collectors.** K. Kraus, E. Hahne, and J. Sohns (Stuttgart, Universität, Stuttgart, West Germany). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 385-389. 8 refs. Bundesministerium für Forschung und Technologie Contract No. ET-4045-A.

A80-33472 **Proposed method for testing of radiative cooling flat-plate collectors.** H. L. Connell and G. T. Pytlinski (New Mexico State University, Las Cruces, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 391-395. 11 refs.

A80-33473 **An evaluation of the influence of heat transfer fluid properties and flow rate on flat plate solar collector efficiency.** W. Youngblood, W. Schultz, R. Barber (Wyle Laboratories, Huntsville, Ala.), and E. R. Streed (National Bureau of Standards, Center for Building Technology, Washington, D.C.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 396-400. Contract No. EG-77-C-01-4050.

A80-33474 **Weatherability test of plastic glazing materials for collectors.** A. F. Clark (California, University, Livermore, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 401-404. Contract No. W-7405-eng-48.

Various plastics were tested by exposing them to direct sunlight (about 8 suns) and also to accelerated weathering. The plastics tested included acrylics, weatherable vinyl (PVC), polyethylene (PE), polypropylene (PP), Tedlar coated fiberglass, and Tedlar coated vinyl. Comparable exposures gave consistent degradations. Heat seals degraded rapidly, especially at the edges. Acrylics lasted for the equivalent of 20 years; weatherable PE performs adequately for about a year, weatherable PVC for two years, Tedlar coated PVC for eight years. B.J.

A80-33475 **Results of long term natural weathering effects on solar collectors under stagnation conditions.** B. Henderson, W. E. Schultz, and R. Barber (Wyle Laboratories, Huntsville, Ala.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 405-407.

A80-33476 **A method for balancing flow rates in rows of parallel collectors.** R. T. Lydon, R. P. Smith, and E. M. Barber, Jr. (Sunsearch, Inc., Guilford, Conn.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 408-412. Research supported by Enthone, Inc.

The development of a method for balancing flow rates in long rows of parallel-plumbed, liquid cooled solar collectors is described. The development effort involved computer simulations, testing and hardware development. The advantages of this method include increased thermal efficiency of long rows of solar heat collectors, ease of use, low cost, and ability to fit into internally manifolded collectors. (Author)

A80-33477 **Small-scale solar simulator for indoor testing of collector modules and materials.** D. P. Grimmer and L. Bronisz (California, University, Los Alamos, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 413-416. 6 refs. Research sponsored by the U.S. Department of Energy.

A small-scale solar simulator has been constructed for the indoor testing of collector modules and materials at LASL. The simulator design follows general construction guidelines suggested in the work of Yass and Curtis of NASA-Lewis, but modifications were necessary to insure a + or - 10% uniform flux over a 0.1 sq m area. Considerable adjustments were necessary to achieve desired performance for the testing of collector modules and materials. These adjustments and details of simulator construction, including design schematics and simulator mounting, are described. Also presented are flux maps for the twelve-lamp array. Finally, construction materials costs are discussed for this inexpensive solar simulator suitable for many testing applications. (Author)

A80-33478 **Design of an inexpensive solar simulator.** P. Krusi and R. Schmid (Sydney, University, Sydney, Australia). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 417-421. 9 refs. Research supported by the University of Sydney.

An inexpensive solar simulator (about $10,000 Australian) has been developed for an indoor solar collector test facility. The light subsystem of the simulator employs 18 compact source iodide 1000-W lamps mounted in a hexagonal pattern on a yoke. These lamps are sealed beam discharge lamps of the metal halide type, which provide good spectral match to sunlight, require no maintenance, have compact size, low cost, and a lifetime expectancy of 1000 hr. Results are presented for a single glass, selective flat-plate collector tested on the solar simulator as well as on an outdoor test rig. V.L.

A80-33479 **Prediction of long-term performance of closed-loop concentrating solar collector systems.** W. A. Ryan, S. A. Klein, and W. A. Beckman (Wisconsin, University, Madison, Wis.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 430-433. 7 refs.

A80-33480 * **Analysis and two years of testing of the vee-trough concentrator/evacuated tube solar collector.** M. K. Selcuk and A. Aghan (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 434-438. 5 refs. Contract No. E(49-26)-1024.

The paper summarizes the mathematical analysis and presents the experimental results for a vee-trough/evacuated tube collector (VTETC). Test results reported represent the performance of the VTETC based on an aperture area. The effectiveness of vee-trough reflectors is demonstrated by comparing the useful heat collected by a receiver tube with and without concentrators. V.T.

A80-33481 **Evaluation of linear concentrating collectors.** S. M. Jeter (Georgia Institute of Technology, Atlanta, Ga.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 439-443. 10 refs.

A modeling procedure particularly useful for linear concentrating collectors is presented. Thermal, hydraulic, and optical (including off-normal degradation) effects can be considered. Example evaluation of performance parameters and collector output projections are presented. (Author)

A80-33482 **A data analysis program for collector testing.** J. H. McDowell and R. B. Uselton (Northrup, Inc., Hutchins, Tex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 444-448.

A sun-collector data analysis program is presented which accurately calculates specific volume and enthalpy, collector geometry and performance. Features used in the data analysis include a multivariate stepwise regression program which may be used for statistical analysis of specified parameters. This module provides a statistical method for determining correlation between all parameters and shows the least squares fit to a line between the dependent and the independents. The program also provides the user with the ability to perform hourly or daily integration on a number of specified parameters. A collector performance predictor equation is derived using heat loss and heat collection data sets. V.L.

A80-33483 **Design and development of a paraboloidal dish solar collector for intermediate temperature service.** D. A. Kugath, G. Drenker, and A. A. Koenig (General Electric Co., King of Prussia, Pa.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 449-453.

A80-33484 **Economic analysis of a point focusing concentrating collector system.** W. E. Rogers, D. N. Borton, M. P. Rice (Rensselaer Polytechnic Institute, Troy, N.Y.), and R. J. Rogers (Power Kinetics, Inc., Troy, N.Y.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 454-458. Research supported by the U.S. Department of Energy and New York State Energy Research and Development Authority.

An analysis of a point focusing concentrating collector system is presented. A 70 kW thermal parabolic Fresnel reflector point focusing concentrating solar collector developed for the business community is described; the factors of risk, use of land, capital costs, working capital requirements, solar system performance, and solar availability are discussed. An example is given of a company requiring 760 megawatt hours of steam a year which would return energy at the cost of $9.20 per megawatt hour. A.T.

A80-33485 **Suntec/Hexcel parabolic trough.** G. G. Brucker and J. H. Davison (Suntec Systems, Inc., St. Paul, Minn.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 459-463.

The paper presents the technical data on the line-focusing collectors with single-axis tracking and the experimental tests to demonstrate the effects of collector spacing and orientation on annual energy output. Solar energy must be capable of supplying energy to the industrial process market which will require temperatures over 500 F; these can be supplied by such line-focusing collectors. The collector layout, the receiver assembly and the collector testing are discussed concluding that the physical layout is one of the most significant variables which can affect the performance of a solar collector system. A.T.

A80-33486 **Analysis of experimental test results on a high temperature receiver model.** G. Francia (Genova, Università; Ansaldo S.p.A., Genoa, Italy), A. Barutti, and R. Floris (Ansaldo S.p.A., Genoa, Italy). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 464-466.

This paper presents some of the results obtained from the experimental tests on a high-temperature receiver model within the frame of EEC Demonstration Solar Power Plant Project. The main results presented are related to the influence of an anti-radiating structure on the receiver efficiency; the validation of computer programs for calculating the solar energy density distribution on the absorbing pipes, and the definition of a philosophy for the control system of a water-steam cooled solar receiver. (Author)

A80-33487 **Environmental testing of solar reflector structures.** R. E. Allred, D. W. Miller, and B. L. Butler (Sandia Laboratories, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 472-476. 10 refs. Contract No. DE-AC04-76DP-00789.

The reflector support structure of a concentrating solar collector provides and maintains the required shape for the reflective surface; it must perform its functions to the required accuracy over a 20-30 year life cycle with a minimum of maintenance. A program to determine the aging behavior of candidate reflector support materials and processes has been conducted since 1975. Materials evaluated include laminates, sandwiches and molded structures constructed of metals, ceramics, forest products and fiber-reinforced composites. Accelerated temperature-humidity cycling data and real time exposures indicate that a variety of material constructions may eventually meet the operational and lifetime requirements. Constructions which performed well in this study include plywood, fiberglass skin and core sandwiches, melamine skin/paper core sandwiches, aluminum skin/aluminum core sandwiches, and molded structures of sheet molding compound with integral ribs. The data also indicate that designers should be particularly concerned about maintaining thermal compatibility throughout the reflector structure, producing high integrity adhesive bonds, protecting the reflective surface from corrosion and using moisture-insensitive materials. (Author)

A80-33488 **Midtemperature Solar Systems Test Facility /MSSTF/ system test results, winter season.** T. D. Harrison and W. H. McCulloch (Sandia Laboratories, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 477-481. 6 refs. Contract No. DE-AC04-76DP-00789.

A80-33489 **Theoretical and experimental study of parabolic troughs and paraboloidal dish concentrators with plane absorbers.** A. Lucifredi, E. Ravina (Genova, Università, Genoa, Italy), M. Bisagni, and P. Castellazzi (Ansaldo S.p.A., Genoa, Italy). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 482-486.

A80-33490 **Application of ASHRAE Standard 93-77 for testing concentrating collectors for the purpose of predicting all day performance.** B. D. Wood, P. J. Fiore, and C. R. Christopherson (Arizona State University, Tempe, Ariz.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 487-491. 10 refs. Research supported by the U.S. Department of Energy.

A80-33491 **Low cost, low technology 3.4x concentrating collector for industrial/agricultural applications.** A. F. Naccach (Aton Solar Manufacturing, Novato, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 492-495. 14 refs.

A80-33492 * **Low cost vee-trough evacuated tube collector module.** M. K. Selcuk (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 496-500.

A low cost solar collector capable of operating at 150-200 C is described. An evacuated tube receiver is combined with asymmetric vee-trough concentrators. Peak efficiencies of about 40% at 120 C and 30% at 180 C are expected. Predicted future collector cost is $70/sq m which yields an energy cost of $4.20/GJ at 120 C. During the development of the vee trough/evacuated tube collector both mathematical models to predict thermal and optical performance were developed and tests run to verify theory. The asymmetric vee trough concentrator increases the solar flux intensity for an average value of 2 for year-round performance. Optimized collector module has reflector angles of 55 deg/85 deg. The aperture plane is tilted to the latitude. The reflector is made of electropolished aluminum. The supporting frame is formed by bending sheet metal. Evacuated tube receivers are Pyrex, 15 cm diam and 2.4 m long. The module has 12 tubes on right and left sides altogether. Attainable operation at temperatures on the order of 150-200 C are suitable for absorption refrigeration and power generation via Rankine engines. (Author)

A80-33493 **Nonevacuated high temperature linear Fresnel lens and second stage CPC type collector with large tolerance for tracking errors.** M. Collares-Pereira (Chicago, University, Chicago, Ill.; Centro de Fisica da Materia Condensata, Lisbon, Portugal), J. O'Gallagher, A. Rabl, and R. Winston (Chicago, University, Chicago, Ill.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 501-505. 11 refs. Contract No. EY-77-S-02-2446.

The paper describes the fabrication and testing of a prototype ideal type collector, consisting of a nonimaging Fresnel lens and a secondary concentrator of the compound parabolic concentrator (CPC) type with a tubular receiver. The geometric concentration ratio is 16, which is the maximum possible concentration consistent with the requirements that (1) the collector perform properly with a fixed tilt position for the tracking axis (polar mount), and (2) the tracking be accomplished by means of a simple clock drive. The test results confirm the large acceptance angle of the design (6 deg). B.J.

A80-33494 **Development of a 3X CPC with evacuated receiver.** R. W. Ballheim (Chamberlain Manufacturing Corp., Waterloo, Iowa). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 506-510. Contract No. ET-78-C-04-4239.

This paper presents some of the considerations involved in the design and development of a 2.6X compound parabolic concentrator (CPC) with an evacuated receiver. A truncated version of a CPC trough reflector system and the General Electric Company tubular evacuated receiver have been integrated with a mass producible collector design suitable for operation at 250 to 450 F. The key criterion for optimization of the design was minimization of the cost per BTU collected annually at an operating temperature of 400 F. A ray tracing program was used in conjunction with a heat gain math model to compare the effect of collector parameters on the annual performance of the collector. The parameters studied included CPC acceptance angle, truncation height, reflector error, receiver placement error, glazing transmissivity, receiver tube transmissivity, reflector material reflectivity, and insolation diffuse/beam ratio. An optimum design is selected and performance predictions on an annual basis are presented for specified design conditions. (Author)

A80-33495 **Experimental and theoretical evaluation of a novel concentrating solar energy collection system.** A. B. Maish and J. T. Beard (Virginia, University, Charlottesville, Va.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 511-515. Research supported by the Solar Associates Co.

A new concentrating solar energy system was evaluated theoretically and experimentally at the University of Virginia Solar Test Facility. The modular, two-axis tracking collector combined an aluminized mylar reflector with a flat-plate absorber. Radiation collected from the 7-sq-m frontal area was concentrated by a factor of five, making the collector suitable for intermediate temperature applications. The thermal performance of the collector was determined theoretically on a digital computer using a nodal approach to model the heat transfer processes. Collector sensitivities to environmental parameters were calculated. An experimental testing program conducted according to the ASHRAE testing standards verified the predicted results. (Author)

A80-33496 **Optical analysis of the fixed spherical mirror/tracking linear receiver solar concentrator including statistically distributed reflector slope errors.** M. J. O'Neill (E-Systems, Inc., Energy Technology Center, Dallas, Tex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 516-520.

A80-33497 **Cylindrical 'elastical' concentrating solar collectors.** J. F. Tan, D. Langridge, C. D. Letham, and P. G. McCormick (Western Australia, University, Nedlands, Australia). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 522-525. Research supported by the Solar Energy Research Institute of Western Australia.

The paper includes a theoretical analysis of the elastical shape and gives examples of computed ray traces plotted for various rim angles. Also included is a theoretical plot of incidence factor versus concentration ratio for three different rim angles. Experimental performance figures for an elastical collector are presented for two different concentration ratios. (Author)

A80-33498 **Parabolic trough collector with thermal or photovoltaic receiver.** G. Bado, R. Floris, and G. Tomei (Ansaldo S.p.A., Genoa, Italy). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 526-530.

The paper describes a universal parabolic trough collector which is suitable to concentrate solar radiation onto both a strip of photovoltaic cells or the opening of a thermal linear cavity receiver. A supporting structure and receivers can be used at every latitude with only a few modifications of the construction layout. V.T.

A80-33499 **A unique new Fresnel lens solar concentrator.** M. J. O'Neill (E-Systems, Inc., Energy Technology Center, Dallas, Tex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 531-535.

A new Fresnel lens solar concentrator has been developed. The design of each prism in the lens has been optimized for maximal transmittance. Additionally, the new lens provides a smaller solar image and allows shorter focal lengths to be used than for prior lenses. A prototype combined photothermal/photovoltaic collector has been built and successfully tested, fully confirming the theoretical performance of the new concentrator. The paper presents the theory, configuration and performance of the new concentrator. (Author)

A80-33500 **Hybrid silicone-glass Fresnel lens as concentrator for photovoltaic applications.** E. Lorenzo and G. Sala (Madrid, Universidad Politécnica, Madrid, Spain). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 536-539. 8 refs.

A80-33501 **Applications of CPC's in solar energy - An overview.** M. Collares-Pereira, J. O'Gallagher, A. Rabl, R. Winston (Chicago, University, Chicago, Ill.), R. Cole, A. Gorski, W. McIntire, K. Reed, and W. Schertz (Argonne National Laboratory, Argonne, Ill.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 542-546. 19 refs. Contracts No. EY-76-S-02-4446; No. W-31-109-eng-38.

The principles of compound parabolic concentrators (CPC) are outlined. CPC thermal collectors with evacuated and nonevacuated receivers are discussed. Consideration is given to photovoltaic applications, second stage concentrators, and asymmetric CPCs. V.T.

A80-33502 **Incidence angle modifier and average optical efficiency of parabolic trough collectors.** H. Gaul and A. Rabl (Solar Energy Research Institute, Golden, Colo.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 547-551. 12 refs. Contract No. EG-77-C-01-4042.

A80-33503 **The geometrical vector flux and some new nonimaging concentrators.** R. Winston (Chicago, University, Chicago, Ill.) and W. T. Welford (Imperial College of Science and Technology, London, England). In: Sun II; Proceedings of the Silver Jubilee

Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 552-556. 7 refs. Research supported by the U.S. Department of Energy.

In the present paper, the geometrical vector flux - a quantity related to measures of illumination - is defined, and some of its properties are used to develop new forms of nonimaging concentrators. It is shown that the lines of flow of the geometrical vector flux form no-flux surfaces along which, under appropriate conditions, mirrors can be placed without disturbing the flux field. V.P.

A80-33504 **A stationary prism concentrator for solar cells.** D. R. Mills, J. E. Giutronich, and E. Harting (New South Wales, University, Kensington, Australia). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 561-564.

A80-33505 **Optical and thermal properties of truncated compound circular arc concentrators.** R. E. Jones, Jr. and G. C. Anderson (Lakehead University, Thunder Bay, Ontario, Canada). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 565-569. 8 refs. Research supported by the National Research Council of Canada.

An economical way to form non-focusing concentrators would be to support aluminized plastic films at the edges, and inflate them into circular cylinders. Here, the optical and thermal properties of circular arc approximations to truncated compound parabolic concentrators are investigated. Annual solar fractions for residential heating loads are found to be nearly the same for low and medium concentrations. (Author)

A80-33506 **A non-tracking inflated cylindrical solar concentrator.** J. W. Gerich (California, University, Livermore, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 570-574. 6 refs. Contract No. W-7405-eng-48.

A concentrating solar collector is being developed to produce pressurized hot water up to a temperature of 175 C. The collector structure consists mainly of an inflated thin-film plastic cylinder that is clear on the upper portion and is an aluminized reflector on the lower portion. The reflector concentrates sunlight on a receiver tube which is jacketed with a heat transfer suppressing, thin-film plastic cylinder. The first experimental collectors verified the performance modeling codes. The second generation collectors now being constructed address cost considerations and ease of fabrication, installation, and maintenance. It is found that the installed cost of the inflated concentrator is likely to be one-fifth that of parabolic trough concentrators. An experimental apparatus is built to measure the total hemispherical emittance of full size receiver tubes. Test results indicate a rather dramatic increase in the room temperature value at typical concentrator operating temperatures. (Author)

A80-33507 **The actual benefits of thermally stratified storage in a small and a medium size solar system.** C. W. J. van Koppen, J. P. S. Thomas, and W. R. Veltkamp (Eindhoven, Technische Hogeschool, Eindhoven, Netherlands). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 576-580. 5 refs.

Thermally stratified storage in solar power systems is examined, utilizing a simulation model and comparing results with previous observations made on two actual solar heating systems in the Netherlands. Although the benefits of stratification are small when the mass flow rate is large, the good agreement between the simulation and experimental results indicates that a more widespread utilization of thermally stratified storage in combination with much lower collector flow rates than usual will lead to considerable improvements in the performance of solar space heating and hot water supply systems. Experiments have also shown that the floating inlet, which is a wide, thin-walled, flexible plastic hose connected to the inlet stud for delivering the hot water from the collector at exactly the level of temperature in the storage tank, improves the stratification by a factor of 2 compared to natural stratification. J.P.B.

A80-33508 **Economical optimum TES size via marginal analysis.** W. Kahan and R. C. Estes (Singer Co., Fairfield, N.J.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 581-585. Contract No. EG-77-C-03-1467.

The paper presents an analytical derivation of the relationship between the economically optimum thermal energy storage (TES) size in a solar energy system and different parameters. These parameters are local weather persistence, solar energy collection efficiency, component costs, and energy cost. V.T.

A80-33509 **Effects of baffles on thermal stratification in themocline storage tanks.** E. I. H. Lin and W. T. Sha (Argonne National Laboratory, Argonne, Ill.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 586-590. Research sponsored by the U.S Department of Energy.

A80-33524 **Open-cycle solar air conditioner.** H. I. Robison, S. H. Houston (South Carolina University, Conway, S.C.), W. Harper (Horry-Georgetown Technical College, Conway, S.C.), J. W. Mitchell, M. J. Brandemuehl, and J. J. Jurinak (Wisconsin, University, Madison, Wis.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 667-669. Research supported by the Coastal Educational Foundation, Horry County Higher Education Commission, University of South Carolina, and Horry-Georgetown Technical College.

An open-cycle solar air conditioner is presented which uses rotary heat wheels to dehumidify the air and to recover the heat of sorption. The solar air conditioner will be used to obtain low temperature reactivation data for other combinations of sensible and latent heat wheels. This information will be used with the transient simulated computer program data to accurately simulate operation with different dessicants in various configurations. V.L.

A80-33525 **Solar operated crossflow desiccant cooling system.** V. Mei, W. Worek, B. Mathiprakasam, Z. Lavan, and D. Gidaspow (Illinois Institute of Technology, Chicago, Ill.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 671-675. Contract No. EG-77-C-03-1589.

A cross-cooled solar powered air conditioning system using silica gel is being studied. The system consists of two identical fixed bed dehumidifiers. One dehumidifies while the other is being regenerated. Cross-cooling is achieved with air flowing through rectangular channels and the process stream flows in perpendicular channels which are lined with paper-like sheets consisting of micron size silica gel particles held in a Teflon web. A prototype dehumidifier was constructed and tested and the results are compared with computer simulation predictions. A complete cooling system based on optimum COP and minimum pressure drop (for a given size) will be designed, built and tested. Preliminary calculations predict a COP of about 0.50 with 82 C regeneration temperature. Due to the low pressure drop in the channels the electric coefficient of performance (EER) is very high. (Author)

A80-33526 **Solar cooling through cycles using microporous solid adsorbents.** F. Meunier and B. Mischler (Paris XI, Université, Orsay, Essonne, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 676-680. 7 refs. Commission of the European Communities Contract No. 524-78-2-ESF.

A80-33527 **Design and operation of a liquid-desiccant type solar air conditioning system.** A. Johannsen (South African Council for Scientific and Industrial Research, National Mechanical Engineering Research Institute, Pretoria, Republic of South Africa). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 681-685. 6 refs.

The design and operation of a full-scale experimental liquid desiccant-type solar air conditioning system is discussed. The system was designed for 20 kW of peak cooling capacity and 24 kW of peak heating capacity using 52 sq m of double glazed regenerating collectors and triethylene glycol as desiccant. The COP of the entire system defined as the ratio of the plant cooling capacity to the energy reaching the collectors, varied from 25 to 33 per cent at collector temperatures between 75 and 80 C and cooling tower leaving water temperature of 25 C. (Author)

A80-33528 **Theoretical and experimental investigations of a countercurrent solar regenerator.** P. Gandhidasan (University of the West Indies, Saint Augustine, Trinidad and Tobago), V. Sriramulu, and M. C. Gupta (Indian Institute of Technology, Madras, India). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 686-690. 5 refs.

The heat and mass transfer processes occurring in a countercurrent solar regenerator are investigated theoretically. The rate of mass transfer is predicted by determining the point of flow reversal and treating the region between the solution film and the point of flow reversal as a stagnant layer through which mass transfer takes place only by diffusion. The use of approximate as well as numerical methods in solving the governing equations is discussed. Experiments using calcium chloride solution as the absorbent, and conducted for different flow rates of solution and air have yielded results in agreement with theoretical predictions. In addition, the ratio of solution to air velocity is found to be an important parameter influencing performance. J.P.B.

A80-33529 **Test results of the solar powered Rankine cycle refrigerator installed in the experimental house.** E. Nishiyama, J. Kai, M. Sugihara, K. Kashiwamura (Mitsubishi Electric Corp., Central Research Laboratory, Amagasaki, Japan), and M. Ohtsubo (Mitsubishi Electric Corp., Consumer Products Research Laboratory, Kamakura, Japan). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 691-695. Research sponsored by the Ministry of International Trade and Industry of Japan.

The paper discusses the design principles and the structure of the solar powered heating and cooling system and Rankine cycle refrigerator used for two years in an experimental house. Flat plate-type solar collectors were used; for the high temperature storage material, water was used for the first year and ammonium alum the second, and the chilled water tank used water along with sodium acetate trihydrate as the heat storage material. Design conditions of the high temperature storage unit are given, including maximum storage enthalpy of 10,500 kcal at about 94 C. Attention is given to the Rankine cycle refrigerator, utilizing a two-fluids system and a sliding vane-type expander. The performance of the collectors, heat storage units, and refrigerator was found to be almost the same as shown by laboratory tests, while revealing no signs of deterioration. J.P.B.

A80-33530 **Two stage evaporative cooling using a rockbed associated with the active clearview solar collector.** J. F. Peck, H. J. Kessler, and T. L. Thompson (Arizona, University, Tucson, Ariz.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 697-701. Research supported by the Tucson Gas and Electric Co., Arizona Solar Energy Research Commission, University of Arizona, U.S. Department of Agriculture, and ERDA.

Two-stage evaporative cooling (TSEC) is discussed, as well as the design, behavior and performance of a rockbed as the storage medium, and the use of such systems in two homes in Tucson. TSEC is attained by precooling air without humidification before further cooling by evaporation; by integrating such a system with an active hot air solar space heating system, many of the same components are useful the entire year. Attention is given to the rockbed, which is constructed similarly to a standard 1.4 m deep basement, and the movement of heat through the rockbed is examined utilizing the thermal wave concept. TSEC performed well in the hot, dry climate of the Southwest, and the large rockbed is found essentially to add a third stage to standard TSEC since it makes use of cool nighttime temperatures produced by nocturnal radiation. J.P.B.

A80-33532 **Experimental investigation on control modes for an absorption chiller of low capacity.** R. M. Lazzarin (Padova, Università, Padua, Italy) and B. Boldrin (CNR, Laboratorio per la Tecnica del Freddo, Padua, Italy). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 710-714. Research supported by the Consiglio Nazionale delle Ricerche.

Various control modes have been examined for a solar-powered absorption chiller, via an experimental study on a water-lithium bromide absorption unit of low capacity. The efficiency of ON-OFF cycling is found to decrease strongly when ON-OFF frequencies or STOP length increase. Variation of the heating fluid flow rate to the generator is more suitable, but the control range is restricted. Also possible is heating fluid temperature variation, but transient operation may penalize performance. J.P.B.

A80-33533 **Evaluation of performance enhancement of solar powered absorption chiller with an improved control strategy using the BNL-built hardware simulator.** P. C. Auh (Brookhaven National Laboratory, Upton, N.Y.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 715-719. Research sponsored by the U.S. Department of Energy.

A80-33534 **Solar powered environment control - Criteria and realization.** J. L. Lando, I. Vardi, J. M. Bourne, Y. Kimchi, J. Ben-Dror (TADIRAN Israel Electronic Industries, Ltd., Tel Aviv, Israel), and G. Grossman (Technion - Israel Institute of Technology, Haifa, Israel). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 720-724.

A 50 TR lithium bromide absorption chiller is described, which consists of two hermetically sealed steel drums, each having two heat exchangers. A computerized analytical model is discussed, which was developed to predict machine performance under different operating conditions. Very good agreement was found between the computer values and results of experiments made for more than a year on a 50 TR machine. Higher than normal heat transfer coefficients were obtained, and the machine functioned at generator temperatures as low as 59 C, and at cooling water as low as 15 C. J.P.B.

A80-33535 **Some design aspects of air cooled solar powered LiBr-H2O absorption cycle air conditioning systems.** W. W. S. Charters (Melbourne, University, Melbourne, Australia) and W. D. Chen. In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 725-728.

A80-33536 **Solar absorption cycle cooling installations in Sydney, Australia.** G. B. Smith and M. Riley (New South Wales Institute of Technology, Broadway, Australia). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 729-733.

The paper deals with two installations of widely different cooling capacity that were used to assess the suitability and economic viability of solar absorption cycle cooling in the temperate, often humid, coastal climate of Sydney. The relative performance of the collectors is discussed, and the difficulties encountered in achieving expected performance are noted. V.P.

A80-33537 **Experimental comparison between solar assisted compression and absorption heat pump.** R. Lazzarin, M. Sovrano (Padova, Università, Padua, Italy), R. Camporese, and G. Scalabrin (CNR, Laboratorio per la Tecnica del Freddo, Padua, Italy). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 734-738. 6 refs. Research supported by the Consiglio Nazionale delle Ricerche.

A80-33538 **On the use of a zeolite 13X-H2O intermittent cycle for the application to solar climatization of buildings.** F. Meunier, B. Mischler (Paris XI, Université, Orsay, Essonne, France), J. J. Guilleminot, and M. H. Simonot (Dijon, Université, Dijon, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 739-743. Commission of the European Communities Contract No. 524-78-1-ESF.

It is noted that an important problem in solar cooling is the temperature of the heat sink. It is shown that the zeolite 13X-H2O cycle allows for an air cooled heat sink. Attention is also given to the need for providing cooling of the buildings as well as hot water in summer and heating in the winter. A solution is suggested which uses an intermittent cycle in order to solve these problems. M.E.P.

A80-33539 **A direct solar-heated R22-DMF absorption refrigerator.** I. Takeshita and S. Hozumi (Matsushita Electric Industrial Co., Ltd., Moriguchi, Osaka, Japan). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 744-748.

Testing was undertaken on a solar absorption air conditioning system comprising a combined solar collector, refrigerant vapor generator and solution heat-exchanger. Fluorocarbon R22 was used as the refrigerant and n,n-dimethylformamide as the absorbent. The results show that the thermal COP of the absorption refrigerator is 0.51 - 0.53 and the system COP is 0.23 - 0.24. The cooling effect is about 1800 kcal/h for an insolation of 700 - 800 kcal/sq mh and the effective collector area of 10.6/sq m. (Author)

A80-33540 **Theoretical and experimental investigations of an intermittent solar refrigerator.** A. Venkatesh, V. Sriramulu, and M. C. Gupta (Indian Institute of Technology, Madras, India). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 749-753. 8 refs.

A80-33541 **Reducing solar costs with the Solar-Assisted-Templifier.** A. Weinstein and G. J. Van Zuiden (Westinghouse Electric Corp., Falls Church, Va.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 757-761.

The concept of a solar-assisted heat pump is based on the assumption that it is more efficient to collect solar energy at lower temperatures (40-120 F) and then boost it to the required temperature with a heat pump. The Solar-Assisted-Templifier, a series solar heat pump system capable of meeting heating loads requiring temperatures up to 220 F, is shown to reduce collector area and initial costs up to 50%, generate after-tax rates of return in excess of 8%, and reduce payback periods to less than 10 years. V.L.

A80-33542 **A design method for parallel solar-heat pump systems.** J. V. Anderson, J. W. Mitchell, and W. A. Beckman (Wisconsin, University, Madison, Wis.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 763-766. 5 refs. Research supported by the U.S. Department of Energy.

A procedure has been developed for predicting the thermal performance of a parallel solar-heat pump system for residential space and water heating. The performance of the system is calculated first using a method such as that of the f-chart (Beckman, et al., 1977). The remaining portion of the load that is met by the heat pump is determined from calculations based on the bin method for a heat pump only system. The procedure accounts for the interaction of the two systems to yield the performance of the combined system. The predicted results are compared to those from detailed simulations, and are found to agree to within 2 percent. (Author)

A80-33543 **Economics of solar-assisted heat pump heating systems for residential use.** W. F. Bessler and B.-C. Hwang (General Electric Co., Schenectady, N.Y.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 767-771. Contract No. EG-78-C-03-1719.

A80-33544 **Comparison of combined solar heat pump systems to conventional alternatives.** P. J. Hughes, J. H. Morehouse (Science Applications, Inc., McLean, Va.), and T. Swanson (Mueller Associates, Inc., Baltimore, Md.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 772-776. 20 refs. Contract No. DE-8C04-78CS-34261.

This analysis is distinguished from past studies by the method of thermal and economic comparison. Since the purpose of space conditioning equipment is to provide thermal comfort, models have been formulated to force this requirement on all systems. The thermal performance maps (fraction of the load met with free energy vs. collector area) presented herein include the effects of the comfort requirement and of parasitic energy consumption for blower and pump operation. Economic comparisons are made after sizing collectors and storage for the combined solar heat pump systems; the sizing technique establishes a thermal design point for each system. This, combined with life cycle cost analysis, allows collector cost goals to be established which, if met, would allow combined solar heat pump systems to compete with conventional alternatives. (Author)

A80-33545 **A solar operated water-Li Br absorption refrigeration machine used also as heat pump - Technical and economic analysis.** A. Cocchi, G. Raffellini (Bologna, Università, Bologna, Italy), and V. Stopponi (Industrie Merloni Fabriano, Fabriano, Italy). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 777-781. 5 refs.

A80-33546 **A comparative study of solar assisted heat pump systems for Canadian locations.** M. Chandrashekar, N. T. Le, H. F. Sullivan, and K. G. T. Hollands (Waterloo, University, Waterloo, Ontario, Canada). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 782-786. Research supported by the Canadian Electrical Association.

The feasibility of solar assisted heat pump systems for space heating and domestic hot water preheating in Canada is examined by simulating the performance of these systems on a computer using WATSUN. Simulations are carried out using meteorological data for seven representative Canadian cities, two different building types, and six types of system configurations. Results of the study show that the solar assisted heat pump systems conserve significant amounts of energy over resistance heating and heat pump systems. On the life cycle unit cost basis, solar assisted heat pump system costs are relatively insensitive to location. Liquid based dual source solar assisted heat pump systems are found to be cost effective over resistance heating (but not over an air-to-air heat pump) system at some of the locations for multiplex units. They are not cost effective for single family dwellings at the present time. (Author)

A80-33547 **Computer simulation of ground coupled storage in a series solar assisted heat pump system.** J. W. Andrews and P. D. Metz (Brookhaven National Laboratory, Upton, N.Y.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 787-791. 7 refs. Research sponsored by the U.S. Department of Energy.

A quantitative study of the effect of thermal coupling between the ground and the heat storage element of a series solar assisted heat pump system is presented. The transient simulation computer program TRNSYS is used to simulate the solar portion of this system. A program to simulate the thermal interaction of the storage element with the ground is incorporated into TRNSYS as a sub-routine. This program calculates heat flow through the ground in discrete steps over space and time. Boundary conditions are established. The ground coupled storage is driven by thermal inputs from the solar portion of the system and from the changing ambient and ground temperatures. (Author)

A80-33548 **Heat pump impact upon solar collection design and cost.** J. W. Andrews (Brookhaven National Laboratory, Upton, N.Y.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 792-796. 9 refs. Research sponsored by the U.S. Department of Energy.

Required collector area in series solar assisted heat pump systems is determined for three cities as a function of collector performance characteristics and compared with systems in which the solar-derived heat is used directly. Effect on system performance of improvements in heat pump performance is discussed. A cost vs yield analysis of several existing collectors is performed. (Author)

A80-33549 **Earth coils and geo-thermal wells used as solar energy storage devices.** J. E. Bose (Oklahoma State University, Stillwater, Okla.), C. W. Ledbetter (A.C. Service Co., Stillwater, Okla.), and J. R. Partin (Geo-Systems, Inc., Stillwater, Okla.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 797-801. 9 refs. Contract No. EM-78-S-01-4257.

A field demonstration laboratory using unprepared earth as a heat/sink storage device has been designed, constructed, and operated successfully during the 1977-78 winter, the 1978 summer, and the 1978-79 winter months. A 1,000-foot earth coil system was operated during the 1977-78 and 1978-79 winters and provided the necessary heat source for a commercial, 27,000 Btu/Hr. heat pump. The test provided base line data to determine earth coil lengths for sustained operation without solar input. A 250-foot geo-thermal well was drilled and used as a heat rejection system during the 1978 summer season and as a heat source during the 1978-79 winter season. The 250-foot well was used as a heat storage device for a 200 sq ft solar system and as the heat source for a 33,000 Btu/Hr. heat pump. The study has shown that both systems, earth coils and geo-thermal wells, provide excellent heat storage devices for solar energy since temperature drawdown which occurs over long, sustained operation can be minimized. (Author)

A80-33550 **A solar assisted heat pump experiment.** A. Cordier, A. Dreuil, and G. Gessinn (Toulouse III, Université, Toulouse, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 802-806. 6 refs.

A heat pump whose evaporator is made up of a series of solar collectors has been operating for three years at the University of Toulouse (France). A description is given of the solar collectors used, which have neither glass nor insulation, and a comparison is made between the experimental results obtained and the predictions of a mathematical model. This model is then used to study a solar heating system with heat pump whose evaporator is fed with water circulating in collectors having neither glass nor insulation. (Author)

A80-33551 **Some performance characteristics of the UNIMELB air source solar boosted heat pump system.** W. W. S. Charters (Melbourne, University, Melbourne, Australia) and C. W. Dixon. In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 807-811. 6 refs. Research supported by the Electrical Research Board and Australian Research Grants Committee.

The University of Melbourne Solar Boosted Heat Pump combines solar technology and heat pump technology in a single flat plate evaporator heat pump unit using Freon 12 as the working fluid. By collecting the solar energy incident on the unit at high effectiveness as the evaporator collector plate operates just above or below ambient temperature and adding this to the ambient air heat exchange, this unit provides a performance level about twice that of the same heat pump unit at the same operational temperature differential with the plate shaded. In addition, the outdoor flat plate evaporator is design optimized to operate using natural convection thereby eliminating the need for an outdoor fan. This provides cost savings and also ensures a quieter operation of the unit. Reverse cycle operation of the unit gives a capability for air conditioning as well as the direct heating capacity allowing better utilization of the installed equipment on an annual basis for most climate zones. (Author)

A80-33552 **Experimental performance study of a series solar heat pump.** E. A. Kush (Brookhaven National Laboratory, Upton, N.Y.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 812-816. 5 refs. Research sponsored by the U.S. Department of Energy.

The results of the tests of a residential size liquid-to-liquid heat pump assembled from off-the-shelf components are reported. The results indicate that an increased coefficient of performance is obtained at evaporating temperatures as high as 96 F by using variable compressor speed, large heat exchangers, and proper selection of expansion device. The results apply also to heat pump nonsolar sources, such as reclaim or geothermal heat. V.L.

A80-33554 **Comparison on the performance of a solar assisted heat pump and an air source heat pump in a northern climate.** D. W. Spencer, B. Murphy, J. Healey, and R. Stewart (New York, State University, Albany, N.Y.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 830-833. Research supported by the New York State Energy Research and Development Authority.

A80-33555 **Development of an effective solar fraction.** L. Palmiter (National Center for Appropriate Technology, Butte, Mont.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 843-846.

The concept of effective solar fraction is developed as a correction to the conventional solar fraction. The effective solar fraction accounts for solar system coefficient of performance, auxiliary system efficiency, area and U-value of wall replaced by the solar system. The effective solar fraction makes it possible to compare solar space heating systems of any type and is directly related to dollar and energy savings. The proposed concept is illustrated by examples. V.L.

A80-33556 **Real time identification of parameters in building models.** D. K. Hays (Solar Environmental Engineering Co., Fort Collins, Colo.), B. W. Parkinson (Rockwell International Corp., El Segundo, Calif.), and C. B. Winn (Colorado State University, Fort Collins, Colo.). In: Sun II; Proceedings of the Silver Jubilee Congress,

Atlanta, Ga., May 28-June 1, 1979. Volume 1.
Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 847-851. 5 refs.

A method for identifying various physical parameters of a building in real time has been developed. This method is directly applicable to improved control strategies for space heating and system performance evaluation. The development as well as the results of computer simulations of the identification techniques are presented. (Author)

A80-33557 **Adaptive control for a multiple tank, multiple temperature solar energy storage system.** L. F. Jesch and A. Zekios (Birmingham, University, Birmingham, England). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 852-856. 13 refs. Research supported by the Bournville Village Trust.

A closed-circuit solar water system with a microprocessor-based programmable control is presented. The system has two sets of transparent plastic collectors with a total surface area of 120 sq m, two external heat exchangers, two insulated dump tanks, three separate storage tanks, and four sets of variable flow rate pumps. The programmable control system performs logging and command functions and is capable of adapting the scanning rate and limiting values to the changing needs of the operating conditions. V.L.

A80-33558 **Mass flow considerations for solar air heating systems.** T. A. Newell, S. R. Swanson, and R. F. Boehm (Utah, University, Salt Lake City, Utah). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 857-861. 10 refs.

This paper presents the results from a computer simulation study of the mass flow rate effect in solar air collector/rock bin storage systems. The results show that there can be a fairly wide range of mass flow rates in a solar air heating system over which the system's performance does not vary significantly. Two aspects of a solar air heating system are shown to contribute to the system's performance insensitivity to mass flow rate. The implications of a solar air heating system's mass flow rate has a direct impact on the economic and design considerations of the system. (Author)

A80-33559 **Solar heating systems in Scandinavian climate - Reality or daydreams.** V. Girdo (Kungl. Tekniska Hogskolan, Stockholm, Sweden). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 863-867.

The paper considers solar heating system in the Scandinavian climate, covering the energy requirements for buildings and the efficiency of solar radiation in Sweden. It is expected to save up to 0-0.5 TWh/yr up to 1985 and about 8-12 TWh/yr up to 1995, with the total energy consumption for Swedish buildings of about 170 TWh gross/yr. The heat from local solar heating systems should cost 0.07-0.09 S/kWh with 100% of self-sufficiency. This may mean that the costs for solar heating systems will be at least double the costs of conventional heating systems. A.T.

A80-33560 **A survey of existing solar system simulation methods.** P. L. Versteegen (Science Applications, Inc., McLean, Va.) and D. E. Cassel (Mueller Associates, Inc., Baltimore, Md.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 869-873. Contract No. DE-8C04-78CS-34261.

A survey was made of various analysis methods that exist for the design and study of solar heating and cooling systems, both for buildings and agricultural and industrial process applications. The survey includes analysis techniques for both active and passive solar systems. The survey is divided in two categories of methods: the computer methods that require a large-scale or mini-computer, and hand methods under which is listed everything else. The various methods were analyzed and their capabilities and characteristics displayed in a series of tables. (Author)

A80-33561 **Solar heating simulation - Accuracy and precision of a model using daily data.** A. E. McGarity (Swarthmore College, Swarthmore, Pa.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 879-883. 6 refs.

A80-33562 **The layout of solar hot water systems, using statistical meteo- and heat demand data.** P. Kesselring and A. Duppenthaler (Zürich Eidgenössische Technische Hochschule, Würenlingen, Switzerland). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 884-888.

A80-33563 **Simulation of the FSEC solar cooling system.** H. Klee (Central Florida, University, Orlando, Fla.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 889-893.

A TRNSYS simulation of the Florida Solar Energy Center solar cooling system was developed. The simulation is site specific incorporating all appropriate building thermal characteristics, system control logic and one month's measured weather data at the center. A simulation summary provides complete information about solar fraction, average collector efficiency, average room temperature, etc., in order to evaluate system performance. (Author)

A80-33564 **User perspectives of selected solar energy system design tools.** T. T. Lewis, G. P. Toomey, and T. L. Webster (PRC Energy Analysis Co., McLean, Va.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 895-899.

The paper presents solar energy system sizing methods which are classified by levels of complexity into four groups: (1) handbook calculation methods, (2) hand-held calculator methods, (3) simplified computer program methods, and (4) detailed computer program methods. The handbook and calculator methods should be used for preliminary sizing and initial estimates. The simplified and detailed computer methods are suitable for final design and parametric studies provided they are applied to the standard systems on which the program methodology is based. All methods are sensitive to user load inputs. V.L.

A80-33565 **Study of the nonlinear dynamics of a flat-plate collector.** A. J. De Ron (Eindhoven, Technische Hogeschool, Eindhoven, Netherlands). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 900-904. 5 refs.

For the design and control of a solar collector, knowledge of its nonlinear dynamics may be very important. It is demonstrated that simulations using a complete nonlinear model confirm the tentative conclusions obtained by analysis of a linearized model. The study results in a hybrid collector model: linear for insolation changes, nonlinear for flow changes. The influence of the wind speed and ambient temperature are ignored because these are small compared with the influences caused by the insolation and the flow. It is concluded that the transient effect, as defined in the literature, is almost only a nonzero effect for flow variations. (Author)

A80-33566 **The Saskatchewan Conservation House - A year of performance data.** R. W. Besant, R. S. Dumont, and G. J. Schoenau (Saskatchewan, University, Saskatoon, Canada). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 907-911. 5 refs.

The Saskatchewan Conservation House, completed in 1977, is a residence designed to provide 100% solar space heating in a cold climate. Heating is primarily by passive solar gain and internal heat generation from normal electricity usage and from people. The performance of the house is reviewed over the period starting from January 1978 to the present date. V.P.

A80-33567 **Honeywell General Offices concentrating collector system - Installation and operation.** R. C. Gee (Solar Energy Research Institute, Golden, Colo.) and P. D. Kruger (Honeywell Energy Resources Center, Minneapolis, Minn.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 912-915.

The paper describes a solar energy system for Honeywell's General Offices in Minneapolis, Minn. Consideration is given to solar cooling, heating, solar domestic hot water, and thermal storage. System installation and operation problems are discussed. V.T.

A80-33568 **A manufactured solar home.** M. P. Scofield, A. S. Lau, K. H. Liebelt (Idaho National Engineering Laboratory, Idaho Falls, Idaho), and N. R. Shinn (Boise Cascade Corp., Boise, Idaho). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 916-918.

The paper deals with an active solar heating and cooling system installed in two nearly identical solar houses. The system uses simple air collectors, rock storage, and a heat exchanger to preheat hot water. Summer cooling is provided by blowing cool night air through the rock bed and then circulating house air through the cool rocks. V.P.

A80-33569 **Report on five years of operating experience with four pioneer school heating experiments.** L. O. Herwig and E. Doering (U.S. Department of Energy, Solar Energy Div., Washington, D.C.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1 Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 919-923.

The four 'proof-of-concept' school heating experiments undertaken in 1974 are chronicled and analyzed. It is shown that these large-scale user-oriented projects have met a wide range of general objectives, including projected system performance requirements for thermal energy production. V.P.

A80-33570 **Solar heating and cooling performance in CSU Solar House III.** D. S. Ward and H. S. Oberoi (Colorado State University, Fort Collins, Colo.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 928-932. Research supported by the U.S. Department of Energy.

A80-33571 **Comparative performance of two types of evacuated tube solar collectors in a residential heating and cooling system - A progress report.** T. M. Conway, W. S. Duff, G. O. G. Löf, and R. G. Pratt (Colorado State University, Fort Collins, Colo.). In Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 933-937. Research supported by the U.S. Department of Energy.

A80-33572 **The operation results of the Yazaki Experimental Solar House One and the Ishibashi Solar House.** T. Ishibashi (Yazaki Shigen Co., Ltd., Hamamatsu, Shizuoka, Japan). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 938-942.

A80-33573 **Solar heating and hot water supply system of Fuji Electric Solar House.** M. Nishio and S. Sugiura (Fuji Electric Co., Ltd., Yokosuka, Kanagawa, Japan). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 948-952.

A80-33574 **Analysis of solar water heating systems.** W. E. Buckles, S. A. Klein, and J. A. Duffie (Wisconsin, University, Madison, Wis.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 959-963. 8 refs.

Several different types of solar domestic water heating systems have appeared on the market during the past few years. The paper presents a study of the comparative performance of four common types of solar domestic water heating systems: (1) single tank/external heat exchanger; (2) double tank/external heat exchanger; (3) single tank/internal heat exchanger; and (4) double tank/internal heat exchanger. The purpose of this study is to determine the applicability of the F-chart method to the design of the various types of solar water heating systems now available. A simulation approach is chosen to investigate the thermal performance of the four types of representative systems. It is shown that the F-chart method, as modified to account for auxiliary energy losses, can be used to provide estimates of the long-term average performance of all four systems, even though it was derived for the two tank/external heat exchanger system. S.D.

A80-33575 **Design and evaluation of solar installation workshops and the HUD solar DHW installation guidelines.** P. Hollander and M. O'Neill (Franklin Research Center, Philadelphia, Pa.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 964-966.

A80-33576 **Performance vs prediction for four classes of solar hot water systems.** J. G. Bergman (Delaware, University, Newark, Del.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 967-971.

The paper reports on a project whose major goal was to assess the performance of four actual solar heat water systems and to do so in a manner which would permit meaningful comparisons with F-chart (or similar) predictions for long-term behavior. To accomplish this objective, the actual daily performance of each system is successfully characterized using multiple regression techniques, and these performances are then extrapolated for comparison with the values predicted by the F-chart. A schematic which outlines the methodology is given. The methodology is rather a tool whereby daily measured performance can be interpreted and extrapolated to yield estimates for average long-term solar fraction. This methodology also permits one to quickly assess the effects of system modifications on long-term performance. S.D.

A80-33577 **Experimental system performance and comparison with computer predictions for six solar domestic hot water systems.** A. H. Fanney and S. T. Liu (National Bureau of Standards, Thermal Solar Group, Washington, D.C.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 972-976. Research sponsored by the U.S. Department of Energy.

The paper considers the experimental system performance of six solar domestic hot water systems and compares it with computer predictions. Three computer programs, F-chart, SOLCOST, and TRNSYS, are utilized for the design of solar space heating and domestic hot water systems; the accuracy of their predictions must be verified with experimental data, and this paper describes the test facility and the experimental results and compares them with the computer predictions for the first eight months of the operation. A.T.

A80-33578 **The thermal performance of solar water heaters in the UK.** J. L. J. Rosenfeld (Shell Research, Ltd., Thornton Research Centre, Chester, England). In: Sun II; Proceedings of the

Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 977-981. 5 refs.

As a contribution to the preparation of a code of practice by the British Standards Institution technical committee on solar water heaters, the long-term thermal performance of domestic solar water heaters has been estimated, using a computer program developed at Thornton Research Centre. This model is described, and results are presented showing the effect on thermal performance of varying some system parameters. The results are consistent with those obtained by others using models incorporating different kinds of approximations, and with the scant experimental data. (Author)

A80-33579 **Mean monthly performance of solar water heaters with natural circulation.** M. Daneshyar (University of Technology, Isfahan, Iran). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 983-987. 7 refs. Research supported by the Ministry of Science and Higher Education of Iran.

The predictions of the transient performance of a natural circulation solar water heater obtained by a theoretical method have been compared with experimental data. The comparisons have shown that transient and final system temperatures can be predicted with an accuracy of about 10%. The prediction method has, therefore, been used in order to study the mean monthly performance of a natural circulation solar water heater with no drawoff at a particular location, and the predicted instantaneous values of the mean storage tank temperatures and collection efficiencies for a mean day of each month are presented and discussed. (Author)

A80-33580 **Solar plus waste heat recovery hybrid water heating system.** E. T. Pitkin (Connecticut, University, Storrs, Conn.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 988-992.

The potential of combining heat recovery from waste water with a solar hot water system is examined via computer simulation. The simulation program is first verified by comparison with data from a real solar water heater. It is then used to show that approximately one third of domestic water heat can be obtained from waste hot water. (Author)

A80-33581 **Design of the solar water heater system for TVA's Memphis Initiative.** T. M. Carney (Tennessee Valley Authority; Tennessee, University, Chattanooga, Tenn.) and F. R. Robertson (Tennessee Valley Authority, Knoxville, Tenn.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 993-997.

The design constraints imposed on solar water heaters by requiring off-peak electrical auxiliary power are described. A two-tank system satisfying these constraints is proposed, and components are sized using the FCHART simulation and a life cycle return criterion. Experimental confirmation of the off-peak auxiliary performance is included. The system resulting from this study is being used in TVA's Memphis Initiative. (Author)

A80-33582 **Membrane stratified solar ponds.** J. R. Hull (Iowa State University of Science and Technology; U.S. Department of Energy, Ames Laboratory, Ames, Iowa). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1000-1004. 12 refs. Research supported by the Iowa State University of Science and Technology and U.S. Department of Energy.

The membrane stratified solar pond is a body of liquid utilizing closely spaced transparent membranes to quench convective heat transfer in the top part of the pond. Several suitable pond liquids and membrane materials are discussed. Conditions for suppression of convection are described for several membrane geometries, and radiation transmission is discussed for the horizontal sheet configuration. Thermal behavior is similar to that of salt gradient solar ponds, but much deeper heat storage layers are feasible. In some cases aquaculture farming may be suitable in the storage layer. (Author)

A80-33583 **Construction and initial operation of the Miamisburg salt-gradient solar pond.** R. S. Bryant (Miamisburg City, Parks and Recreation Dept., Miamisburg, Ohio), R. P. Bowser, and L. J. Wittenberg (Monsanto Research Corp., Miamisburg, Ohio). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1005-1009. 10 refs. Contract No. DE-AC04-76DP-00053.

The construction and operation of the largest salt-gradient solar pond is examined. The pond is 2020 sq m in area and was installed for $35/sq m. A new technique was successfully demonstrated for the formation of the gradient zone in which fresh water was injected horizontally below the surface of the concentrated salt solution; without any useful heat removed, the storage layer water of 18.5% NaCl reached a temperature of 51.1 C and a minimum temperature of 28.4 C. The projected heat cost is 2.5 cents/kW-hr based on amortization of 10% per year. A.T.

A80-33584 **Control of gradient zone boundaries.** C. E. Nielsen (Ohio State University, Columbus, Ohio). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1010-1014. 9 refs. Research supported by the Ohio State University and U.S. Department of Energy.

The role of zone boundaries in salinity gradient solar pods is reviewed and the factors influencing boundary equilibrium are discussed. It is pointed out that the equilibrium positions of boundaries can be substantially changed without loss of internal gradient zone stability. Such changes are brought about by modifying the salinity profile through the use of liquid injection and transfer procedures adapted from earlier injection experiments. Given a well-defined process combining diffusion and liquid injection or transfer, the equilibrium salinity profile is readily calculated. A continuous liquid injection procedure is described that modifies the salinity profile and changes the salinity gradient at zone boundaries. It is shown qualitatively that injection produces the expected gradient modification. S.D.

A80-33585 **Salt concentration gradient solar ponds - Modeling and optimization.** T. S. Jayadev and J. Henderson (Solar Energy Research Institute, Golden, Colo.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1015-1019.

The paper discusses a computer simulation program, SOLPOND, for predicting the thermal performance of salinity gradient solar ponds. Finite element techniques are used to model pond thermal performance, and the program is structured to perform discrete time solutions. This program is used for several illustrative examples. Simulation results highlight pond sensitivity to seasonal load profile, storage layer depth, and optical transmission through the salt solution. Thermal losses through the pond edges are evaluated for several pond sizes and found to be significant for ponds as large as 100 m. A simple economical optimization technique to maximize delivered energy per capital cost is also presented. S.D.

A80-33586 **The development and demonstration of a solar pond for heating greenhouses.** T. H. Short, P. C. Badger, and W. L. Roller (U.S. Department of Agriculture, Ohio Agricultural Research and Development Center, Wooster, Ohio). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1021-1025. 9 refs.

The paper describes a solar pond for demonstrating space heating of a commercial greenhouse. Another greenhouse of the same size and shape was heated with natural gas and compared with the solar-pond-greenhouse system. The solar pond was tested and modified to improve its efficiency and a polystyrene-pellet nighttime insulation is being developed for large greenhouses. This new combination is projected to provide all the greenhouse heat by passive and active solar technology, but some solar operational problems still exist. A.T.

A80-33587 The physics of a saturated $\mathrm{Na_2O.2B_2O_3.10H_2O}$ non-convecting solar pond. T. L. Ochs and J. O. Bradley (Nevada, University, Boulder City, Nev.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1026-1028.

A80-33588 The application of shallow solar ponds for industrial process heat - Case histories. A. B. Casamajor (California, University, Livermore, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1029-1032. 5 refs. Contract No. W-7405-eng-48.

The shallow-solar-pond collector system developed by the Lawrence Livermore Laboratory is approaching commercialization. Three prototype or demonstration projects, Sohio Petroleum Company, Sweet Sue Kitchens, and Fort Benning, are described. A critique of each project points out the significant factors that affect the individual projects and shallow-solar-pond technology in general. Particular attention is drawn to problems encountered and solutions proposed. Finally, possible marketing organization and strategies are discussed. (Author)

A80-33589 Solar energy system with heat pump augmentation for industrial process heat - An update. H. F. Schuler, D. F. Rost, and G. Ameduri (General Extrusions, Inc., Youngstown, Ohio). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1034-1036.

In September, 1977, General Extrusions completed installation of a solar energy system with heat pump augmentation to furnish power for a cleaning tank in their aluminum anodizing line. The array was 100 modules (304 sq m) of their Model LTC-367 Solar Collector and the heat pump was a Westinghouse Templifier TBP060. During the last 261 days the solar system has been operated 83 days supplying energy to the process. 31 days of potential operation were missed as the plant operated on a five day a week schedule much of the time. A mini-computer-based energy monitor system is under construction for this solar system and will give detailed operational results as well as automatic control. (Author)

A80-33590 Operation of an industrial solar drying system. E. J. Carnegie, P. W. Niles, and W. B. Stine (California Polytechnic State University, San Luis Obispo, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1037-1041. 6 refs. Contract No. EY-76-C-05-5123.

The paper describes a solar hot air raisin and prune drying system in Fresno, Calif. The solar heating system consists of 1951 sq m of solar collectors, a 396 sq m rock storage facility, and a heat recovery unit. The operation of this system is described, and the actual operation is compared on a day-to-day basis to a computer simulation program used in the analysis and design of this project. It was concluded that this system will produce more energy then required to build it, and will pay back its cost within 11 to 17 years. A.T.

A80-33591 Application of solar energy to food industry - A distillery. F. Moisan (CNRS, Paris, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1042-1045.

The use of concentration collectors will permit to produce steam for various industrial processes, especially in the food industry. A project, presently developed in France, is applied to a distillery; 5000 sq m of collecting area will save 360 tons of fuel per year; the cost of collectors, if they are mass produced, will permit the competitivity of solar heat versus fuel at middle term. (Author)

A80-33592 A prototype of solar linear concentrators plant installed to supply industrial heat. O. A. Barra, E. P. Carratelli (Calabria, Università, Arcavacata, Italy), and A. Barutti (Ansaldo Dim/Isol, Cornigliano, Italy). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1046-1050. 9 refs. Research sponsored by the Birra Peroni Italian Factories.

A 50 sq m solar linear concentrator plant with cavity boilers has been realized in a brewery to evaluate the applicability of using solar energy to supply industrial process heat in the 120-300 C range. The aims of this plant include the experimental testing of a mathematical computer model to obtain a general computer code simulating the heat and mass transfer phenomena in the plant, measuring the plant and cavity boiler photothermal conversion efficiency, and solving the problems arising from the joining of the solar plant with the preexisting brewery water-steam network. Linear parabolic concentrators which track the sun were used, having mirrors with an 0.86 reflectivity; the plant is used to overheat pressurized water before entering the traditional boilers for vaporization. Preliminary experimental results indicate that thermal losses from the Cu pipes are strongly dependent on atmospheric conditions, necessitating the soldering of the pyrex glass and the Al-Fe boiler envelope. J.P.B.

A80-33593 Solar energy for kilning malt. C. C. Smith (Colorado State University, Fort Collins, Colo.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1051-1055. Research supported by the Fleischmann Malting Co.

A technical and economic feasibility study was conducted at Colorado State University on the use of solar energy for kilning malt. The study showed that an economic optimum results when the kiln cycle peak demand coincides with the maximum solar output. Therefore the objective of the system design study was to maximize the use of solar supplied heat by scheduling kilning operations with regard to the diurnal solar period. (Author)

A80-33594 Solar heat generation for industrial process heating applications. W. R. W. Read (Commonwealth Scientific and Industrial Research Organization, Div. of Mechanical Engineering, Highett, Victoria, Australia). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1056-1060.

The use of solar energy for industrial applications is discussed, including characteristics of industrial systems, design approaches, and the results of two demonstration programs. A solar energy system consisting of 94 sq m of double-glazed collectors mounted in a series-parallel arrangement and connected by a heat transfer loop to a 20 cu m storage tank was used for can warming at a soft drink manufacturing plant. Data taken over an 18-month period show collector efficiency of 32% and utilization efficiency of 72%. A second system of 178 sq m of double- and single-glazed collector units were used to provide some of the heat for beer pasteurizing. Data for the four months of January to April, 1979, indicate monthly solar energy utilization efficiencies of 75%, 66%, 63%, and 53%. It is concluded from these programs that solar heat generating systems can be successfully integrated with suitable industrial process heating applications. J.P.B.

A80-33595 * The Point-Focusing Thermal and Electric Applications Project - A progress report. A. T. Marriott (California

Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2.
Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1062-1066. 9 refs. Research supported by the U.S. Department of Energy.

The paper discusses the Point-Focusing Thermal and Electric Applications Project which encompasses three primary activities: (1) applications analysis and development, in which potential markets for small power systems (less than 10 MWe) are identified and characterized in order to provide requirements for design and information for activities relating to market development; (2) systems engineering and development, for analyses that will define the most appropriate small power system designs based on specific user requirements; and (3) experiment implementation and test, which deals with the design and placement of engineering experiments in various applications environments in order to test the readiness of the selected technology in an operational setting. Progress to date and/or key results are discussed throughout the text. S.D.

A80-33596 **Small solar plants for electricity supply.** J.-P. Durand and L. Pirot (Société d'Etudes Thermiques et d'Energie Solaire, Montargis, Loiret, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1067-1071.

By describing the solar project for Diakhao in Senegal, Western Africa, this paper introduces the present stage of technology developed by SOFRETES. Taking in account the environment of remote areas of this part of the world and the technology based on practical applications, a low temperature solar thermal conversion technology is used including flat plate collectors, hot water, thermal storage and Rankine cycle thermal loop. This paper describes the demand for electricity of a small African community (Diakhao) and the solar technology selected to satisfy this demand. Components and their integration in the system are described. Factory tests are planned to take place at the end of this year. The Diakhao solar plant will be under operation in 1980. (Author)

A80-33597 **The International Energy Agency Small Solar Power Plants Project.** A. C. Kalt (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Cologne, West Germany). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1077-1081.

The SSPS Project (Small Solar Power Systems Project) includes the design and erection of two solar power plants of different technical concepts, on the same site, with a view toward evaluating and comparing the relative economic viability of such plants. One plant is a distributed collector system and the other a central receiver system. Objectives and design goals of the SSPS Project are presented, followed by a discussion of basic technical specifications and of technical design baseline. The two plants are to be built on a common site near Almeria, southern Spain. S.D.

A80-33598 **Performance and cost optimisation of small solar power stations.** J. E. Feustel (Maschinenfabrik Augsburg-Nürnberg AG, Munich, West Germany). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1082-1086.

Small solar farm power systems using parabolic trough collectors and power conversion systems following the Rankine principle are discussed. Overall system efficiency is considered in terms of the selection of optimum operational temperature, storage size, and design day; it is noted that collector field efficiency drops with increasing temperature, while power conversion efficiency increases with higher temperature. Attention is also given to optical, thermal, and transmission losses with regard to the collector field, and a two stage screw expander in the 100 kW range is described with regard to the prime mover cycle. The planning and realization of a number of solar farm projects in the 50-500 kW range, as well as the development of a combined solar power-diesel power station are also discussed. J.P.B.

A80-33599 **30/50 kWE solar thermal power plant of the distributed type.** R. Koehne (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für technische Physik, Stuttgart, West Germany) and M. Kraft (M.A.N.-Neue Technologie, Munich, West Germany). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1087-1089.

A joint project between M.A.N., Germany and AUXINI, Spain is presented which describes a small solar thermal power plant of the distributed type delivering a maximum electric power output of 30 kW and 50 kW resp. if a storage is used additionally to the collector field. The plant built up at Getafe near Madrid, Spain, consists presently of a first collector field with parabolic trough collectors mounted rigidly on a platform which is tracked azimuthally. Collector system efficiencies have been measured and are compared with theoretically predicted values from a transient simulation model. Different temperature spreads and inlet temperatures (between 60 . . . 240 C) are investigated and some results of the measured collector system efficiencies regarding also the influence of dust covers on the glass mirrors are given. (Author)

A80-33600 **The Ansaldo 35 kW solar power system.** G. Bado, G. Tomei (Ansaldo S.p.A., Genoa, Italy), T. Angelino, M. Gaia, and E. Macchi (Milano, Politecnico, Milan, Italy). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1090-1094.

The conceptual design of a 35 kW solar power system based on the use of linear concentrating collectors is presented. Each collector module consists of two parabolic troughs capable of both elevational and azimuthal alignment. The thermal engine of the system is an organic fluid (perfluorocarbon) multistage turbine prime mover with an efficiency of 25% at 300 C collectors' cooling loop exit temperature. The system is designed for stand alone and for grid-connected operation and, if requested, for the combined generation of power and heat. (Author)

A80-33601 **Research and development on solar energy for electric and mechanical power generation.** R. Almanza, J. Garibay, S. López, F. Muñoz, and R. Zárate (Universidad Nacional Autónoma de México, Mexico City, Mexico). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1095-1099. 8 refs.

A review of the development of solar energy for electric and mechanical power generation is presented. The first thermal mechanical conversion system under study is a device of 1/2 kW made of focusing collectors which follows the sun during the day. The system consisting of 24 sq m of collectors uses steam as a working fluid, and it is connected to a piston engine. A new system has been started to generate 35 kW which will consist of about 1000 sq m of parabolic collectors with an absorption tube of Cr(x)O(y). A.T.

A80-33602 **Small solar thermal power plants.** G. Prast (Philips Gloeilampenfabrieken, Philips Research Laboratories, Eindhoven, Netherlands). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1100-1104.

The most important use of small solar thermal power plants is expected to be in the rural areas of developing countries, where power for irrigation is an essential need. A solar power plant of a few kW capacity needed for this purpose must have a very high reliability, as for such units hardly any service will be available. An attempt is being made to develop a solar thermal power plant which attains pertinent requirements. The discussion focuses on a short description of the system, the collector system, the Sterling engine, and the latent heat storage system. It is shown that it is possible to construct small solar thermal power systems by collecting heat with focusing collectors, storing the heat for short periods in a latent heat storage, and transforming the heat with a free-piston Sterling engine. S.D.

A80-33603 **Midtemperature Solar Thermal Systems Design Handbook - Parabolic troughs.** R. W. Harrigan (Sandia Laboratories, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1106-1110.

This paper outlines ongoing efforts at Sandia Laboratories (SLA) to develop a Solar Thermal System's Design Handbook. The handbook deals, at this time, only with parabolic trough collector systems operating up to 315 C (600 F). While useful to anyone doing solar thermal design involving parabolic troughs, the handbook application is primarily aimed at commercial Architectural and Engineering firms. Publication of the handbook is anticipated for the Fall 1979. Updating of the handbook is expected to occur continuously as the rapidly developing solar technology matures. (Author)

A80-33604 **Solar thermal-electric power plant with distributed collectors 100 to 1000 kWe.** G. Mordchelles-Regnier, G. Dahan, and J.-L. Boy-Marcotte (Société Bertin et Cie., Plaisir, Yvelines, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1111-1115.

The design parameters for a medium-sized (100-1000 kWe) concentrating collector solar thermal power station intended to provide energy with little maintenance and at competitive costs in remote regions are discussed. Consideration is given to the selection of operating temperature, type and degree of solar energy concentration, and thermal engine and organic working fluid, and to system optimization. The parabolic cylindrical collectors with mobile aluminum mirrors rotating around stationary receiver tubes and the Rankine-cycle turbine engines selected for the system are presented. A measured net energy conversion efficiency of 10 percent for the system is noted, and possible industrial applications of the system in the production and recovery of heat are indicated. A.L.W.

A80-33605 **Solar thermal electric power in the range of medium size units - The French programme 'THEK'.** G. Peri, J. Desautel, B. Imbert, M. Audibert, R. Pasquetti, J. P. Battistelli (Aix-Marseille I, Université, Marseille, France), J. Deflandre, and J. P. Traisnel (CNRS, Paris, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1121-1124.

The French THEK program of solar energy utilization is concerned with the design of small heliopower units utilizing the parabolic dish and modular helio-to-thermal converters. The study, design, realization, and experimentation of two full-scale prototype modules using segmented parabolic dishes are discussed. These modules incorporated three types of exchangers differing in shape (semi-cavity and flat), tubing, and material (copper and iron), and two concentration ratios (170 and 230) were tested. Attention is given to the installation of a thermal loop, an automatic system of regulation, and exchanger, and a steam generator. The effects of optical and thermal losses on efficiency are noted, and the use of a better glass for the mirrors and a higher concentration ratio to improve efficiency are considered. S.D.

A80-33606 **A solar thermal-electric experimental plant.** M. Rubeck and W. D. Beverly (Boeing Engineering and Construction Co., Seattle, Wash.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1125-1129.

One approach to generating electricity from solar energy is to employ an open Brayton-cycle in a central receiver type solar thermal-electric power plant. A nine-month study was conducted to develop a conceptual design and definition of an open Brayton-cycle experimental plant of about 1.5 MW electrical output. The paper deals with the assumptions, analyses, and results of the conceptual design effort. The solar plant is assumed to be composed of four subsystems: (1) the collector (or heliostat) subsystem; (2) the receiver subsystem; (3) the electrical power generation subsystem; and (4) the master control subsystem. Attention is given to the parametric analyses and design studies which led to this plant configuration. S.D.

A80-33607 **A self supporting solar power system for an isolated community.** M. J. Bignon (CETHEL, Paris, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1130-1133.

The paper describes a 500 kW self-supporting combined solar-thermal power production system suited to the needs of an isolated community. Attention is given to the solar receiver, the condensing steam turbine chosen for maintenance and operating reasons, and the mirror field comprised of 120 to 150 or more heliostats with a reflecting area of about 54 sq m each. The tracking system is made by computed coordinates, and each heliostat has its own microprocessor to control the position. The dry condenser used for the power production system is considered, as well as the conventional Diesel engine with a generator when power is required for startup, or when the storage is low. Emphasis is placed on economic factors. J.P.B.

A80-33608 **The solar ten megawatt pilot plant.** R. W. Hallet, Jr. and R. L. Gervais (McDonnell Douglas Astronautics Co., Huntington Beach, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1137-1140.

The paper describes the system requirements, characteristics, and operating modes of a 10-megawatt solar thermal central receiver pilot plant located in the Mojave desert. The system can be characterized as a surrounded field configuration with radial stagger heliostat layout, capable of generating 10 MWe net directly from insolation, and 7 MWe net from thermal storage. Attention is given to system control utilizing computers, and the capability to orient the reflective surface such that the mirrors can be stowed vertical or inverted, and open-loop control. Requirements for the receiver subsystem are presented, including maximum incident power of about 47 MWt and maximum flux level of 0.31 MWt/sq m. The therma storage subsystem is described, considering the central storage unit, thermal charging loop, and heat-extraction loop. Also discussed is the electrical power generating subsystem which consists of a nominal 12.5 MWe (gross) turbine-generator set, and includes an in-line demineralizer and polisher. J.P.B.

A80-33609 **Thermal fatigue analysis of the Department of Energy Barstow Pilot Plant.** J. F. Jones (Sandia Laboratories, Livermore, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1141-1145. 6 refs. Contract No. DE-AC04-76DP-00789.

This paper discusses two types of thermal fatigue which might occur in the Department of Energy Barstow Pilot Plant: fatigue due to oscillations of the point of departure from nucleate boiling (DNB) in the once-through boiler and fatigue due to the daily cycling of the plant. The results of the two fatigue calculations indicate that the Barstow Pilot Plant should not have a serious fatigue problem from either DNB oscillations or daily cycling, although the design life does not greatly exceed the desired 30 years. In addition, the possible mitigating effects of tube bending are considered, but it is found that little improvement in fatigue life can be expected from this source. (Author)

A80-33610 **Sodium cooled solar central receiver power station.** T. L. Johnson, L. E. Glasgow, W. B. Thomson, and A. Z. Frangos (Rockwell International Corp., Energy Systems Group, Canoga Park, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1146-1150. Contract No. EG-77-C-03-1483.

A study of a sodium system central receiver-type solar thermal power plant is presented. The sodium system central receiver plant is similar to the water/steam system to be built in Barstow; however, liquid sodium is heated in the receiver at the top of the tower instead of water, and steam is generated at the ground level using sodium-to-water heat exchangers. The economic analysis shows that these plants with storage duration of about 13-hr capability have a busbar energy cost comparable to or less than that for new fossil-fueled electric generating plants. A.T.

A80-33611 **A solar-fossil hybrid power system using a combined cycle.** E. Y. Lam (Bechtel National, Inc., San Francisco, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1151-1155. Contract No. DE-AC03-78ET-21050.

This paper describes a solar central receiver hybrid power system concept which uses a gas turbine/heat recovery steam generator/steam turbine combined cycle to generate electricity from both solar and fossil fuel energy. The concept description dwells primarily on a near term 100 MWe (net) system that utilizes a state-of-the-art combined cycle with a gas turbine inlet temperature of 1093 C (2000 F). This system is implementable in the 1985 time frame. An advanced system that uses an inlet temperature of 1316 C (2400 F) is also described. Performance comparisons of these two systems are given. Major advantages of the system concept as well as its technical issues are highlighted. (Author)

A80-33612 **Assessment of solar hybrid repowering for electric utilities.** D. J. Groves, Jr., J. D. Maddox (Public Service Company of New Mexico, Albuquerque, N.M.), W. R. Lang (Stearns-Roger Engineering Co., Denver, Colo.), and W. G. Parker (Westinghouse Electric Corp., Pittsburgh, Pa.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1156-1160. Research supported by the Electric Power Research Institute, Western Energy Supply and Transmission Associates, Arizona Power Authority, Public Service Company of Oklahoma, San Diego Gas and Electric Co., and Tucumcari Power and Light; Contract No. EG-77-C-03-1608.

An assessment of the solar hybrid repowering concept for electric utility application is presented. The concept consists of locating solar hardware connected to existing gas-fueled and oil-fueled electric generation units to displace the fossil fuel used during daylight hours. The market potential was established by a survey of utilities in the southwestern U.S.; a cost benefit analysis indicates that the solar hybrid repowering concept can be attractive for utility applications when compared with conventional electric power generation. A conceptual design was prepared for a 50% solar repowering based on the central receiver concept designed for a 10-MWe pilot plant. A.T.

A80-33613 **Economic implications of a low cost heliostat design.** C. R. Easton and J. B. Blackmon (McDonnell Douglas Astronautics Co., Huntington Beach, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1161-1165.

Design and costs of a prototype heliostat for the Central Receiver Solar Thermal Power System are presented and comparisons made with commonly manufactured items. Central receiver thermal energy costs are shown to be competitive with fossil fuels. (Author)

A80-33614 **Utility problems of central tower solar plant in Italy.** D. Borgese and G. Cefaratti (Ente Nazionale per l'Energia Elettrica, Milan, Italy). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1167-1171.

A80-33615 **Economic analysis of the STEPS in Japan.** T. Tani, S. Sawata, T. Tanaka, M. Kamimoto, K. Sakuta, N. Ezawa, and T. Horigome (Ministry of International Trade and Industry, Electrotechnical Laboratory, Tokyo, Japan). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1172-1176. 6 refs.

The simulation program was developed for the estimation of optimum electrical energy cost of STEPS (Solar Thermal Electric Power System) in Japan using hourly normal solar flux data, various collector area, storage capacities, turbine inlet temperatures and cost model. In Japan, the minimum electrical energy costs of the distributed system and the tower heliostat system were estimated from viewpoints of the collector area, storage capacities and electric capacities. (Author)

A80-33616 **The cost and value of washing heliostats.** E. D. Eason (Sandia Laboratories, Livermore, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1177-1180. 6 refs. Contract No. DE-AC04-76DP-00789.

An equation is derived for the washing frequency that minimizes cost per unit energy for solar collectors of any type. Central receiver heliostats of two designs are used in an example, and the results for Albuquerque soiling rates show that washing 15-30 times per year is worthwhile. The optimal frequency is directly or inversely proportional to the square root of the relevant parameters, but it is not sensitive to number of collectors or plant size. The frequency for minimum cost per unit energy corresponds to the strategy of washing whenever the value of the extra energy from cleaner mirrors will pay for the cost of the wash. (Author)

A80-33617 **Physical and chemical properties of phase change materials for application in solar tower and solar farm plants.** D. Heine, F. Heess, and M. Groll (Stuttgart, Universität, Stuttgart, West Germany). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1187-1191. 7 refs.

Latent heat storage materials for use in the temperature ranges 200 to 450 C and 700 to 900 C are investigated with reference to their corrosion resistance against container materials and thermodynamic stability. The mass loss and corrosion rate for the materials applicable in the range 200-450 C differ considerably from each other. The material combinations for 700-900 C have no significant differences in their corrosion rates and are classified as corrosion resistant. The storage media for the temperature range 700-900 C, MgCl2, NaCl, and KF, have been found thermally stable; no changes have been observed within the first 30 cycles. V.L.

A80-33618 **Solar design by the 'Cosine Hour' method.** U. Bossel (Solentec GmbH, Adelebsen, West Germany). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1195-1198. 6 refs.

A new approach is suggested for the prediction of the solar energy received by surfaces of arbitrary tilt and orientation. The method is based on the 'Cosine Hour' integral. This geometric parameter measures the time-equivalent of solar exposure in units of hours of perpendicular insolation. For any surface and day the number of Cosine Hours becomes directly proportional to the amount of energy received under ideal weather conditions. For partially cloudy skies the 'Cosine Hour' method yields excellent answers when a 3-modal insolation model is used. Surface orientations can be easily optimized with respect to energy collection by inspection methods when the Cosine Hour Tables (Bossel, 1979) are used. (Author)

A80-33619 **Survey of simplified design methodologies for solar heating and cooling systems.** P. J. Hughes and P. L. Versteegen (Science Applications, Inc., McLean, Va.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1199-1202. 25 refs. Contract No. DE-8C04-78CS-34261.

This paper reviews the approaches that have been taken in developing simplified design procedures for assessing the performance of solar heating and cooling systems. The term 'simplified' is indicative of a calculational process that involves simple hand computational tools, such as tables, graphs, equations, and a hand-held calculator. Many methods have been proposed in the literature applicable to the analysis of heating and hot-water systems. Few methods have been proposed for the analysis of cooling systems, passive systems, and photovoltaic systems. Furthermore, few of the methods have been tested extensively against experimental data. This paper provides insight to the basic, underlying assumptions of the proposed methods so that the reader better understands the applicability of each to the performance prediction of various systems. (Author)

A80-33620 **A simplified solar cooling design method for closed-loop liquid systems.** D. K. Anand, R. B. Abarcar, and R. W. Allen (Maryland, University, College Park, Md.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1203-1207. 8 refs. Contract No. EY-76-S-05-4976.

The paper examines a simplified solar cooling design method for closed loop liquid systems. At the present state-of-the-art, solar cooling system performance can only be predicted by a detailed computer simulation. A simulation program (SHASP) has been used in solar cooling systems analysis; however, since not all designers have access to computers that can handle detailed simulation, an alternative is presented in a simplified cooling design method derived from the correlation of detailed simulation results. One such correlation is the cooling fraction chart which can be used to predict solar heating contribution to within 5% of the actual SHASP result. A.T.

A80-33621 * **Performance analysis for collector-side reflector systems.** P. N. Espy (NASA, Marshall Space Flight Center, Huntsville, Ala.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1208-1212. 10 refs.

The F-Chart method of solar collector performance evaluation is extended to a flat-plate collector system augmented with planar side reflectors. The modified F-Chart evaluations show that the augmentation of the collector has approximately the effect of increasing the collector area by 60%, and the energy supplied by the collector better matches the load. The installed reflector cost of about 10% of the collector cost is shown to be well justified. V.L.

A80-33622 **Cooling system parameter analysis.** P. S. Bremner, D. S. Ward, and G. O. G. Lof (Colorado State University, Fort Collins, Colo.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1213-1217. Research supported by the U.S. Department of Energy.

CSU Solar House III operated with a solar cooling system during the summer of 1978. Research was conducted by simulating the solar house and by using analysis results to quantify the piping losses. The goal is the development of design techniques for system parameters such as piping losses. Preliminary results of the research on cooling system parameters are presented. The indications are that these parameter effects can be characterized and accounted for. Proper design of system parameters is an important part of the overall performance. S.D.

A80-33623 * **Thermic diode performance characteristics and design manual.** D. E. Bernard (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.) and S. Buckley (MIT, Cambridge, Mass.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1218-1222. 5 refs. Contract No. EG-77-S-02-4383.

Thermic diode solar panels are a passive method of space and hot water heating using the thermosyphon principle. Simplified methods of sizing and performing economic analyses of solar heating systems had until now been limited to passive systems. A mathematical model of the thermic diode including its high level of stratification has been constructed allowing its performance characteristics to be studied. Further analysis resulted in a thermic diode design manual based on the f-chart method. (Author)

A80-33624 **Optimization of the combined structural components of large-power solar central receiver systems.** V. Dunder (Sandia Laboratories, Livermore, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1224-1228. 5 refs. Research supported by the U.S. Department of Energy.

A80-33625 **An optimization procedure for solar thermal electric power plant design.** W. M. Bohon and S. L. Levy (Black and Veatch Consulting Engineers, Kansas City, Mo.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1229-1232.

The design of a solar thermal electric power plant to produce electricity at the least cost involves a great number of performance/cost evaluations. A sound engineering approach to this optimization task is through suboptimization, e.g., maximize the performance (energy output) of each plant design considered and then select the best design via differential cost estimates (minimize cost of electricity). A procedure is presented for designing a solar thermal electric power plant such that plant performance is maximized. (Author)

A80-33626 **DELSOL - A code for central receiver performance and optimization calculations.** T. A. Dellin and M. J. Fish (Sandia Laboratories, Livermore, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1233-1237. 6 refs. Contract No. DE-AC04-76DP-00789.

DELSOL is a quick and accurate computer program for calculating the field performance, field layout and optimal system design for solar central receiver plants. The code consists of a detailed model of the optical performance, a simpler model of the non-optical performance, and algorithms for field layout and finding the best system design. The latter two features are coupled to a cost model of central receiver components and an economic model for calculating energy costs. The code can handle flat, focused and/or canted heliostats and external cylindrical, multi-aperture cavity, and flat plate receivers. The program optimizes the tower height, receiver size, and field layout as a function of power level. (Author)

A80-33627 **The cost/performance of large central receiver power systems as a function of heliostat design parameters.** M. J. Fish and T. A. Dellin (Sandia Laboratories, Livermore, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May

28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1238-1242. 8 refs. Contract No. DE-AC04-76DP-00789.

The heliostat field comprises the largest expense as a subsystem of a solar central receiver power plant. Potential cost reductions might be achieved by either total redesigns or subcomponent substitution in existing designs. This paper discusses the value of changing any of several design specifications in the current baseline glass/metal heliostat. Results are quantified in terms of the breakeven cost, i.e., the cost of a new design which will yield the same total system energy cost as the baseline system. Changes in pointing accuracy, surface quality, mirror reflectivity, canting and focusing strategy, and heliostat size are evaluated. (Author)

A80-33628 An investigation of optimum heliostat spacings for the sub-tower region of a solar power plant. M. D. Walzel (Houston, University, Houston, Tex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1243-1247. Contract No. EG-77-C-04-3974.

An investigation of optimum heliostat spacings for the subtower region of a solar power plant is presented. This information is obtained from a cellular structure of the heliostat field which has a representative at the center of each cell; finding an optimum solution for the inner cells adjacent to the tower can become a problem, along with mechanical limits when solutions require heliostats to be placed closer than allowed. The annual performance, shading, and blocking losses are compared in the hexagonal close-packed arrays oriented along a north-south and an east-west direction. A.T.

A80-33629 Theoretical consideration on solar concentrations by central receiver systems. T. Sakurai. In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga. May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1248-1252.

Solar concentrations by central receiver systems have been calculated theoretically assuming that plane heliostat-mirrors, sufficiently small in dimension, cover a circular field without clearance. For the solar radiation incident normal to the heliostat-field, the volume- as well as area-concentration were found to be maximum when the radius of heliostat-field was nearly the same as the height of receiver. The optimum radius showed a slight increase with increasing obliquity of incident radiation. The decrease of concentration with increasing mirror-dimension was estimated by a convenient method. The effect of the geometry of composite mirror on the concentration was discussed also. (Author)

A80-33630 Optical analysis of paraboloidal concentrators with secondary reflectors. A. J. McDanal (E-Systems, Inc., Dallas, Tex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1256-1260.

The paper presents the results of an optical performance analysis of a paraboloidal solar concentrator for a family of secondary reflectors. Solar-thermal-electric power systems are under development which require flux concentration ratios on the order of 2000 or greater to achieve the high temperature for efficient heat engine operation. The optically-perfect parabolic dish concentrators produce high concentration ratios, but require the bulky receiver/heat engine at the focal point of the parabola; the optically perfect paraboloidal concentrator with an optimized secondary reflector yields a concentration ratio of 9200 and has an advantage of the receiver/heat engine located at the vertex of the paraboloid. A.T.

A80-33631 • Optical analysis of Cassegrainian concentrator systems. A. H. Bass, Jr., G. L. Schrenk (Pennsylvania, University, Philadelphia, Pa.), P. T. Y. Poon, and S. N. Higgins (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1261-1265. 6 refs. Research sponsored by the U.S. Department of Energy.

Cone optics procedures have been developed to treat optical systems employing multiple reflectors. The objective of the procedures is to develop efficient techniques to treat multiple reflections of cones when the secondary reflecting surface is curved - in fact, curved differently in different directions. The particular optical system under consideration is the Cassegrainian Concentrator System - a system consisting of a paraboloidal primary reflector and a confocal hyperboloidal secondary reflector. Multiple reflection cone optics methodology as well as preliminary results for the flux distributions and intercept factors based on it are presented in this paper. It is shown that neglecting local curvature effects of the secondary reflector, i.e. even in the differential solid angle within the sun's cone, may overestimate the peak of the flux distribution at the receiver aperture by a factor of two or more. (Author)

A80-33632 A numerical approach to the flux density integral for reflected sunlight. F. W. Lipps (Houston, University, Houston, Tex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1266-1270. Contract No. EG-77-C-04-3974.

A numerical approach to the flux density integral for reflected sunlight is proposed, assuming isotropic Gaussian guidance errors. The flux density integral reduces to several iterated single integrals which are precalculated and stored in a table for interpolation. The LBL solar telescope data are fed into a convolution integral representing the guidance errors and at this point Aureole effects can be switched on or off. A vector of convoluted solar data is input to another integration which gives the table of normalized flux contributions. The tabular values are shown to depend on the position of the flux point with respect to an edge of the heliostat as seen in the image plane. L.M.

A80-33633 A study on mirror fields for tower type solar power plants. G. Francia (Genova, Università, Genoa, Italy). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1271-1275.

The paper discusses the use in solar power plants of double curvature mirrors (DCMs), which are capable of rotating about their normal so that the minimum mirror curvature remains on the sun-mirror-receiver plane. DCMs are proposed as a replacement for paraboloid sectors, since the paraboloid changes with the apparent motion of the sun. Attention is given to the movement of DCMs, and the possibility of commanding the rotation of the mirror around its normal by mechanical or electrical means. Also discussed are caustics and image enlargement, and a comparison of DCMs with spherical mirrors is presented. J.P.B.

A80-33634 Analytical and experimental determination of radiation and temperature distributions inside solar receivers. D. Blay and C. Haziza (CNRS, Laboratoire d'Energétique Solaire, Poitiers, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1276-1280. 5 refs.

A80-33635 Conceptual design of a solar-heated-air receiver coupled to a Brayton or Stirling engine. N. I. Hamilton and P. O. Jarvinen (MIT, Lexington, Mass.) In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1281-1285. Research sponsored by the U.S. Department of Energy.

A80-33636 Unfolding concentrator slope errors from reflected-beam measurements. F. Biggs, C. N. Vittitoe, and D. L. King (Sandia Laboratories, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1286-1288. Contract No. DE-AC04-76DP-00789.

A measured flux-density pattern in the reflected beam of a heliostat is analyzed to unfold the distribution of surface slope errors for a heliostat reflecting surface. It is found that two-dimensional effects in this error distribution are within the resolution of the measurements. (Author)

A80-33637 **Helios and reconcentrators.** C. N. Vittitoe, F. Biggs, L. K. Mathews, and L. O. Seamons (Sandia Laboratories, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1289-1293. Contract No. AT(29-1)-789.

Computer predictions for solar energy collection are compared with image data produced by 23 heliostats and with data from a single facet. Two-dimensional surface slope errors and reflectance properties necessary to explain the single-facet results are outlined. V.T.

A80-33638 **Design and performance characteristics of compound parabolic concentrators with evacuated and with non-evacuated receivers.** M. Collares-Pereira, J. O'Gallagher, A. Rabl, R. Winston (Chicago, University, Chicago, Ill.), R. Cole, W. McIntire, K. Reed, and W. Schertz (Argonne National Laboratory, Argonne, Ill.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1295-1299. 12 refs. Contracts No. EY-76-S-02-2446; No. W-31-109-eng-38.

A80-33639 **Process steam generation by a facetted, non-imaging solar concentrator.** U. Ortabasi, J. A. Atienza, K. G. Soderstrom, A. M. Lopez, L. M. Ozakcay (Center for Energy and Environment Research, Mayagues, P.R.), and R. Winston (Chicago, University, Chicago, Ill.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1300-1303. Research supported by the Bacardi Corp., Center for Energy and Environment Research, and University of Chicago.

A modular non-imaging trough collector for the generation of process steam in a tropical environment has been designed and built. The concentrator design has the desirable features of low cost and light weight. Transportation and installation costs are reduced by its modular aspect. The most innovative feature of this concentrator is that the mirror surface consists of long and narrow planar facets sealed inside low cost glass tubes. The absorber for this collector is also a new design. (Author)

A80-33640 **Specular reflectance properties of solar mirrors as a function of incident angle.** D. N. Glidden (Albuquerque Academy, Albuquerque, N. Mex.) and R. B. Pettit (Sandia Laboratories, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1304-1308. 8 refs. Contract No. DE-AC04-76DP-00789.

The specular reflectance properties of several solar mirror materials have been measured as a function of wavelength, polarization and incident angle. Results for a 3-mm thick, silvered float glass mirror and an aluminized acrylic stretched film are presented. For the silvered glass mirror, measured specular and hemispherical reflectance properties are in excellent agreement with reflectance values calculated from a multiple beam reflectance model. At 65 deg from normal, the average solar reflectance is decreased only about 4% from the value at normal incidence. For the aluminized acrylic mirror, measured specular reflectance values at 15 mrad are in agreement with hemispherical reflectance values, while calculated reflectance values are as much as 2% high for one polarization. The average solar reflectance decreases only 2% at an incident angle of 65 deg from normal, while the width of the specular beam increases slightly with incident angle. (Author)

A80-33641 **A computational alignment method for paraboloidal collectors.** B. Edwards (Australian National University, Canberra, Australia). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1309-1313. 6 refs.

The proposed alignment method for solar collectors requires no adjustments and relies only on measurements. The method consists in the determination of the calibration constants, i.e., the positions of the zero points and axis direction. The mathematical description of the process is given and implementation details are presented. The accuracy of the system is determined as a function of the system variables. For error ratios of 1.0, the computation for each alignment is estimated at $0.10. V.L.

A80-33642 **Identification of alignment and tracking errors in the open loop, time based heliostat system of the 400 kw Advanced Components Test Facility.** H. L. Teague, C. T. Brown, C. J. Swafford, and G. C. Lewis (Georgia Institute of Technology, Atlanta, Ga.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1315-1318.

A80-33643 **Collector deflections due to wind gusts and control scheme design.** B. Edwards (Australian National University, Canberra, Australia). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1319-1323. 7 refs.

The paper considers the relationship between the spectrum of collector deflections due to winds and the composition of the guidance system controlling the collector. It is shown that the interface between these two factors is the required rigidity of the collector, noting that it is important that the collector is not over- or under-designed in this respect. The average sun following error is presented as a function of collector rigidity and guidance and control system type. Further, the required collector rigidity is also presented as a function of average sun following error and guidance and control system type. It is concluded that the contents of the work are applicable to both direct tracking collectors and heliostats. M.E.P.

A80-33644 **A simple technique for measuring slope or surface error of a concentrator.** J. Sanchez and W. Saylor (General Electric Co., Space Div., Valley Forge, Pa.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1324-1327.

A technique is developed for measuring both sag and slope error of a concentrator. The test method uses a helium-neon laser as a light source, and two sheets of transparent acrylic, which, when suspended vertically and weighted, define parallel planes. The laser is aligned so that its beam is perpendicular to the two planes. This can be checked by seeing that the laser light which is reflected by the two sheets is directed straight back and onto the laser. The concentrator is then placed so that a hypothetical normal to the bottom of the collector is parallel to the direction of the incident laser light. In other words, if the laser is simulating light from the sun, the concentrator is aligned to face the laser as it would normally be aligned to face incident solar radiation. With the positioning of test pieces completed, one can begin measurements and analysis. This method offers two distinct advantages: the procedure is simple and does not require elaborate test equipment, and the method permits one to simultaneously determine both cumulative sag and actual slope error. S.D.

A80-33645 **How to measure the optical quality of focusing solar collectors without laser ray tracing.** P. Bendt, H. Gaul, and A. Rabl (Solar Energy Research Institute, Golden, Colo.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1328-1332. 12 refs.

A novel alternative to the laser ray trace technique is proposed. The new method does not require any equipment beyond what is

used for measuring collector efficiency. The question arises whether instantaneous efficiency measurements can somehow be used to determine sigma(optical), the rms angular beam spread caused by optical imperfections. It is shown that this can indeed be accomplished by misaligning the collector slightly away from the sun and measuring the efficiency for several values of the misalignment angle. The optical error sigma(optical) is then extracted by finding the theoretical curve which best fits these misalignment data. Thus, the determination of sigma(optical) could become part of the standard test procedures for concentrating solar collectors. The theory underlying this method is described, and test results for a parabolic trough collector with cylindrical receiver are presented. The data obtained with this collector point to an acceptable accuracy (within + or -10%) of this method.
S.D.

A80-33646 **Practical method for including material scattering effects in determining the amount of intercepted sunlight in solar concentrators.** R. B. Pettit, C. N. Vittitoe, and F. Biggs (Sandia Laboratories, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1333-1337. 10 refs. Contract No. DE-AC04-76DP-00789.

A80-33647 **Effects of outdoor exposure on the solar reflectance properties of silvered glass mirrors.** J. M. Freese (Sandia Laboratories, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1340-1344. 5 refs. Contract No. DE-AC04-76DP-00789.

As solar energy grows in importance, a basic understanding of how environmental factors affect the performance of solar collectors becomes necessary. To this end, the present work studied the specular reflectance properties of silvered glass heliostat mirrors during a 15-month period of exposure to outdoor weather conditions. Initial experiments were designed to obtain a broad, general understanding of the effects of dust accumulation and weather conditions on glass mirror reflectivity. A systematic cleaning procedure was used to determine whether the long-term reflectance losses could be predicted from shorter cleaning cycle results. S.D.

A80-33648 **Thermodynamic trade-offs for gas cooled high temperature solar tower receivers.** F. D. Heidt and W. Schwarzott (Dornier System GmbH, Friedrichshafen, West Germany). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1346-1349.

With regard to power generation by means of central solar tower plants, receiver configuration is analyzed, considering the radiative exchange between the isothermal receiver wall area and the aperture area where the solar power enters the receiver. Attention is given to the dependence of receiver efficiency on geometry, operational data, and thermooptical constants. Also considered are the optimum size of the aperture area and optimized gas temperatures for cavity/Brayton cycle systems. A comparison between external and cavity receivers indicates that, for infrared emittance of 0.60 and cavity ratio of 0.10, flux densities greater than 400 kW/sq m and temperatures lower than 900 deg C should be handled by cavity receivers.
J.P.B.

A80-33649 **Advanced solar receiver development.** P. O. Jarvinen (MIT, Lexington, Mass.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1350-1354. Research sponsored by the U.S. Department of Energy.

Ceramic receivers for advanced solar Brayton and advanced solar tirling thermal power systems are considered which utilize impingement jet cooled silicon carbide ceramic dome heat exchanger modules in conjunction with a cavity receiver geometry to heat a ressurized gaseous heat transfer fluid to temperatures in the range om 1800 to 2400 F. Conceptual designs of single and multiple-me ceramic cavity receivers are presented and analyzed and a combined analytical and experimental program to develop a high temperature seal for the ceramic dome module is reported. (Author)

A80-33650 **Theoretical study of gas heated in a porous material subjected to a concentrated solar radiation.** G. Olalde (CNRS, Laboratoire d'Energétique Solaire, Odeillo, Pyrénées-Orientales, France), J. L. Peube (CNRS, Laboratoire d'Energétique Solaire, Poitiers, France), and M. Daguenet (Perpignan, Centre Universitaire, Perpignan, Pyrénées-Orientales, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1355-1358. 6 refs.

The high-temperature heating of gases is considered theoretically and experimentally. A homogeneous solid material and a gas which is transparent to the radiation are studied under steady-state conditions and with constant physical properties, while the radiative fluxes are assumed to be uniform on the front surface of a porous medium. A system of dimensionless equations comprising one order-4 differential equation and one order-2 differential equation, with constant coefficients, is applied to the theoretical analysis of gas circulating both in the direction and in the opposite direction of the heat flow. Profiles of dimensionless solid and gas temperatures as a function of dimensionless distance are determined. Results from experiments using a cylindrical porous material bed of 70 mm O.D. and 75 mm length are presented graphically.

A80-33651 **Catalyzed thermal conversion of SO3 to SO2+O2 for solar thermal power.** A. D. Baranyi, C. J. Stournaras, M. K. Murthy (Ontario Research Foundation, Mississauga, Canada), and T. A. Chubb (U.S. Navy, Naval Research Laboratory, Washington, D.C.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1359-1361.

As part of the Solchem concept of chemical transfer of solar energy from collectors to a central receiver, a new cordierite ceramic converter-heat exchanger has been developed for the thermal conversion of SO3 to SO2+O2. The ceramic converter-heat exchanger has good mechanical strength at high temperatures, low thermal expansion, low porosity and good resistance to attack by SO3 and SO2. Conversion of SO3 to SO2+O2 has been demonstrated in straight pieces of the ceramic converter-heat exchanger with platinum catalyst at temperatures from 800 to 1000 C. Conversion of SO3 at 1000 C approaches 95% (maximum theoretical efficiency).

A80-33652 **A new solar thermal receiver utilizing small particles.** A. J. Hunt (California, University, Berkeley, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1362-1366. 8 refs. Contract No. W-4705-eng-48.

A new type of solar thermal receiver is developed which utilizes the dispersion of very small particles suspended in a gas to absorb the radiant energy from concentrated sunlight. An open Brayton-cycle heat engine utilizing a small particle heat exchange receiver operates by injecting a very small mass of submicron carbon particles into the compressed gas stream before it enters the receiver. The operating temperature of the particle-gas mixture is determined by the vaporization rate of the carbon allotrope used to make the particles. Plant efficiencies in excess of 40% appear feasible without the use of cooling towers or bottoming cycles. Several methods of producing the particles are considered. Carbon is selected because of its optical, chemical and physical properties. The concept has been demonstrated in the laboratory.

A80-33653 **Study and realisation of a high temperature air cooled solar receiver.** B. D'Utruy, D. Blay, and F. Ortiz (CNRS, Laboratoire d'Energétique Solaire, Poitiers, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1367-1370.

An elementary solar panel is developed to warm up air up to 800 C in view of further application of Brayton cycle associated to air turbine. A honey comb cell profile is retained to absorb the radiant energy in small cavities and to warm up the air by forced convection. A theoretical approach is made to evaluate the metal temperature of the panel (40 x 60 cm) under steady state conditions. Theoretical values are compared to experimental data obtained on a test set up with 72 kw quartz lamps. (Author)

A80-33654 **Users group for central receiver testing.** F. B. Smith (STTF Users Association, Albuquerque, N. Mex.) and A. F. Hildebrandt (Houston, University, Houston, Tex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1372-1376. 13 refs.

The paper considers the solar thermal test facilities Users Association (UA), which acts as the point of contact for users of such facilities, and which solicits and reviews proposals and makes recommendations to DOE regarding their utilization. Solar facilities with which the UA is involved are briefly described, including the Sandia central receiver test facility in Albuquerque, and the Georgia Tech 400-kW thermal central tower facility in Atlanta. The types of high-temperature solar experiments of interest to the UA include steam and hot gases for process heat and chemical transmission, in which high-temperature solar energy is used to split a compound over a catalyst into two or more higher-energy gaseous components. In addition, potential solar chemicals and fuels applications are discussed, such as converting biomass and coal or lignite into usable gases or liquid fuels, as well as the production of hydrogen via a water-splitting reaction, of carbon monoxide via solar coal gasfication, and of ammonia and nitrogen fertilizer. J.P.B.

A80-33655 **Testing procedures and test results for the EPRI/Boeing gas-cooled receiver tested in the Central Receiver Solar Thermal Test Facility.** J. Gintz, R. Zentner (Boeing Engineering and Construction, Seattle, Wash.), B. Marshall, and L. Matthews (Sandia Laboratories, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1377-1381. 5 refs.

A80-33656 **Testing of the 10-MWe pilot plant solar central receiver.** G. C. Coleman (McDonnell Douglas Astronautics Co., Huntington Beach, Calif.) and J. F. Friefeld (Rockwell International Corp., Rocketdyne Div., Canoga Park, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1382-1386.

Insolation testing conducted at the Central Receiver Test Facility (CRTF) in New Mexico to validate the design of the pilot plant receiver panel and controls is discussed. Thermodynamic performance of the receiver is investigated, as well as pilot plant preheater panel performance, panel lateral heat flux gradients, and receiver surface-coating performance and durability. The description of the pilot plant receiver includes panel subassemblies, water manifold, backup structure, and individual tubular panel assemblies, as well as CRTF test receiver panel and flow components. Testing confirmed satisfactory preheater operation, panel expansion heliostat control, and feedwater temperature, pressure, and flow control. Proper functioning of the master control and data computer systems, receiver controller logic and the facility heat rejection system was also demonstrated. In addition, derated steam conditions of 660 degrees F and 1515 psia have been achieved and maintained during normal insolation periods. J.P.B.

A80-33657 **One-quarter MWt air cycle receiver test at the Advanced Component Thermal Test Facility at Georgia Institute of Technology.** A. Poirier, S. Davis, D. Ross, T. Nussdorfer (Sanders Associates, Inc., Nashua, N.H.), T. Brown, C. Seminario, and H. Teague (Georgia Institute of Technology, Atlanta, Ga.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1387-1389. Contract No. EG-77-C-03-1555.

A80-33658 **Stability of plasma-sprayed coatings tested at White Sands Solar Facility.** J. M. Schreyer, C. R. Schmitt (Oak Ridge National Laboratory, Oak Ridge, Tenn.), R. A. Hays, and D. Farwell (U.S. Army, White Sands Missile Range, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1390-1394. Contract No. W-7405-eng-26.

Plasma-sprayed coatings on steel plates were tested at the White Sands Solar Facility at temperatures from 200 C to 1000 C. Analysis of the specimens before and after testing showed erbium dodecaboride (ErB12), yttrium hexaboride (YB6), titanium diboride (TiB2), and chromium oxide (Cr2O3) to be stable above 600 C. A heat balance on the water-cooled specimens of these coatings showed 73% to 97% heat recovery efficiency. (Author)

A80-33659 **Treatment of molybdenite ore with laboratory scale solar furnaces.** J. P. Coutures, G. Benezech, R. Renard (CNRS, Laboratoire des Ultra-Réfractaires, Odeillo, Pyrénées-Orientales, France), and S. R. Skaggs (California, University, Los Alamos, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1395-1399. Research supported by the Centre National de la Recherche Scientifique.

A80-33660 **Evaluation of hardware and software requirements for the Advanced Components Test Facility real time data collection system - Experiences from two solar experiments.** C. E. Seminario and B. C. Skelton (Georgia Institute of Technology, Atlanta, Ga.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1401-1405.

A80-33661 **Mini-computer-based energy monitor system.** H. F. Schuler, D. F. Rost, and G. Ameduri (General Extrusions, Inc., Youngstown, Ohio). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1408-1410.

A mini-computer-based energy monitor system is under development for the solar industrial process heat system at General Extrusions, Youngstown, Ohio. The design goals are low cost, reasonable accuracy, control capability, coherent presentation of results, and sufficient hardware and software understanding to allow customization to this application as well as demonstrating the generic capabilities for energy monitor systems for Ohio industries. The major components are from the Heath Company, Benton Harbor, Michigan, because they offer a wide range of components specifically designed to work together and excellent hardware and software documentation. The temperature and flow sensors have not yet been specified. The work is supported by the Ohio Department of Energy. (Author)

A80-33662 **A pin programmable controller for research systems.** T. N. Bechtel, S. Karaki, G. D. Murphy (Colorado State University, Fort Collins, Colo.), and P. R. Armstrong (Altas Corp., Santa Cruz, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga. May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1411-1415. Research supported by the U.S. Department of Energy and Colorado State University.

A pin programmable logic array based controller has been designed and assembled specifically to accommodate the control needs of a solar heating and cooling research and development facility. The controller is suitable for systems covering a wide range of configurations and operating strategies and facilitates control changes with a diode pin programmable logic array. This logic element allows the user to establish the desired relationship between inputs (usually temperatures) and outputs (system components) according to control criteria by insertion of diode pins into the appropriate location of the logic array board. A prototype has been installed and used in the experimental parallel heat pump, solar air heating and cooling system of CSU Solar House II during the 1978-1979 heating season. Experience has confirmed operation of the control unit according to design specifications. (Author)

A80-33663 **The development of an Ambient Temperature Observer/Predictor /ATOP/ for use with solar heating systems.** D. K. Hays (Solar Environmental Engineering Co., Fort Collins, Colo.), B. W. Parkinson (Rockwell International Corp., El Segundo, Calif.), and C. B. Winn (Colorado State University, Fort Collins, Colo.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1416-1420.

There has been a considerable amount of interest in the use of off-peak storage devices and/or heat pumps with solar heating systems. The control of such devices can lead to significant savings in fuel use if the future values of the ambient temperature are accurately predicted. Both a methodology and hardware for implementation of the methodology have been developed for accurately predicting ambient temperatures for up to 24 hours in advance. This system is referred to as the ATOP system, an acronym for Ambient Temperature Observer/Predictor. The methodology and applications are described in this paper. Also presented are some prediction results which are directly applicable to improved control of off-peak storage devices. (Author)

A80-33664 **Optimal and sub-optimal control strategies and sensitivity study for solar liquid collector systems.** A. Orbach, R. Fischl, P. R. Herczfeld, and S. Konyk, Jr. (Drexel University, Philadelphia, Pa.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1421-1425. 13 refs. Contract No. E-8-77-5-02-4512.

This paper is concerned with the control of liquid flow in the collector loop for solar heating application. The purpose of the paper is three fold: First a dynamic model which accurately reflects the dynamic behavior of the solar collector is given. Second, an optimal and suboptimal control strategy which maximizes the net usable energy is obtained using this dynamic model. Third, the implementation of the suboptimal policy via a thermostat on/off controller is investigated. Specifically, criteria are given for the selection of the control set points. (Author)

A80-33665 **Control systems for interfacing solar agricultural dryers with other energy sources.** J. H. Schlag, A. P. Sheppard, W. E. Baird (Georgia Institute of Technology, Atlanta, Ga.), and J. M. Wood (Southern Solar Energy Center, Atlanta, Ga.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1426-1428.

A80-33666 **The design and development of programs to optimize the control, monitoring and functional analysis of the U of L solar research center.** N. Schmitt, W. T. Jones, and T. M. Murray, Jr. (Louisville, University, Louisville, Ky.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1430-1434. 8 refs.

A80-33667 **Measurements of performance and efficiency of solar energy systems.** J. M. Suter and P. Kesselring (Zürich, Eidgenössische Technische Hochschule, Wurenlingen, Switzerland). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1435-1439. Research supported by the Swiss National Energy Research Foundation.

Measurements on different types of solar energy systems throughout Switzerland have been made in order to detect principal layout defects, evaluate the actual potential of the technology, and provide recommendations for architects and engineers. In particular, the control device and its interaction with various components are to be examined in detail, and the collectors are considered as an integrated part of the system. Attention is given to a microprocessor controlled, modular data acquisition unit comprised of 16 analog and 6 digital input channels and 15 recorded output quantities, which is used to determine the efficiencies of the collector, space heating boiler, and overall system, as well as storage losses and overall system energy balance. Results indicate that the most important reason for poor overall system efficiency is due to the design of the system itself: there are large storage losses and badly designed hydraulic loops, and the importance of heat storage measurement is often underestimated. J.P.B.

A80-33668 **Development of a portable reflectometer for field measurements of the specular reflectance of solar mirrors.** J. M. Freese (Sandia Laboratories, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1440-1444. Contract No. DE-AC04-76DP-00789.

A80-33669 **Performance data from reduced levels of instrumentation in solar heated and/or cooled buildings.** C. J. Packard (Alternative Energy Resources, Inc., El Paso, Tex.), R. L. San Martin (U.S. Department of Energy, Washington, D.C.), and D. Fenton (New Mexico State University, Las Cruces, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1445-1449.

A methodology of instrumentation system design is developed which supports multiple levels of hardware complexity and associated cost, while allowing valid performance comparisons to be made between solar buildings employing different levels of instrumentation. The key to the successful design of any instrumentation system is a systems analysis approach. A tool useful in this approach is the energy flow map. A case study of the New Mexico Department of Agriculture Building is presented which illustrates the use of the methodology. S.D.

A80-33671 **Monitoring solar heated houses in the European community - Procedures, results and future activities.** D. M. Lush (Ove Arup Partnership, London, England). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1453-1457. 9 refs. Commission of the European Communities Contracts No. 509-78-2; No. 642-78-7.

The evaluation of solar heating systems in domestic premises is covered, for a wide range of climatic conditions, varying building standards and different occupancy patterns. The strategies for obtaining the necessary information are defined. The theoretical and practical requirements of monitored projects which have already been examined are discussed, together with some alternatives for possible future projects. (Author)

A80-33673 **Characteristics of rural energy demand and major barriers and tasks and implementation of potentially viable solar technologies.** J. Gururaja (Department of Science and Technology, New Delhi, India) and A. Ramachandran (HABITAT, Nairobi, Kenya). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1466-1470.

A80-33674 **Solar energy in Africa: Survey of needs and activities - Potential applications of small solar energy systems.** J. L. Sloop, M. H. Watt (PRC Energy Analysis Co., McLean, Va.), and J. J. Gordon (Mitre Corp., Metrek Div., McLean, Va.). In: Sun II;

Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1471-1474. 10 refs.

A80-33676 **Prospects for solar cooling applications in Nigeria.** B. A. Ajakaiye (Ife, University, Ile-Ife, Nigeria). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1481-1484.

A80-33678 **A solar-powered irrigation system for Bakel, Senegal.** J. Keiser, P. Dustin (Thermo Electron Corp., Waltham, Mass.), J. P. Durand, and L. Pirot (Société d'Etudes Thermiques et d'Energie Solaire, Montargis, Loiret, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1492-1495.

A80-33679 **A free cylinder Stirling engine solar powered water pump.** W. T. Beale (Sunpower, Inc., Athens, Ohio). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1496-1500. 7 refs.

This paper describes a free cylinder Stirling engine expressly designed for use as a solar water pump. The pumping action takes place as a result of the reciprocating motion of the cylinder of the sealed free piston engine, this cylinder motion being used to directly drive a reciprocating water pump. A 250 watt unit is described, comprised of a free cylinder engine, a faceted focusing collector containing many small mirrors, an equitorial mount, clock drive, tracker and tensioned cable pump. Expected cost of a complete system delivering 250 watts to the water (25 liter-meters/sec) is about $500 in large scale production. (Author)

A80-33680 **Operational experience of a 3.0 kW solar powered water pump.** C. Macciò, G. Tomei (Ansaldo S.p.A., Genoa, Italy), G. Angelino, M. Gaia, and E. Macchi (Milano, Politecnico, Milan, Italy). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1501-1505.

During the Spring of 1978 a solar powered pumping system has been put in operation on the roof of an office building at Ansaldo, for demonstration and experimental purpose. In the paper, the plant design and operation is described, and the obtained results on the performance of the organic Rankine cycle engine, having a single stage turbine as the expander, are presented. (Author)

A80-33681 **Rotary expander for a solar thermo-mechanical conversion system.** R. Chicurel (Universidad Nacional Autonoma de Mexico, Mexico City, Mexico). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1507-1510. 7 refs.

The third and latest version of a rotary steam engine under development at the Engineering Institute of the National Autonomous University of Mexico is described. The working chamber is bounded by four oval-shaped rotors and two side cover plates. The rotors rotate at the same constant speed and in the same direction. Two impulses occur per revolution. The engine's displacement is 208 cu cm and the expansion ratio is 4.15. It will form part of a solar powered Rankine system operating with water as working fluid. The design output is 2 kW of mechanical power. If tests prove satisfactory, a larger engine will be built for a scaled-up system producing 35 kW. (Author)

A80-33682 **A 500 gallons per day hybrid desalination plant using wind/solar energy.** E. Lumsdaine and I. Tag (New Mexico Solar Energy Institute, Las Cruces, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1512-1516.

An analysis of a modular wind/solar distillation plant is presented. The design is based on a constant year-round demand of 500 gallons per day. In arid areas where wind power is available, cost analysis shows that the hybrid system is economically feasible compared with electricity which could only be generated from a conventional source such as a diesel engine. Solar stills are of the basin type while the wind energy conversion system is a horizontal axis type. The selection of the type of wind machine (whether constant speed or variable speed) depends on the meteorological conditions and the frequency of water demand. (Author)

A80-33683 **A regional comparative analysis of residential passive solar systems - Thermal storage walls and direct gain.** F. Roach (California, University, Los Alamos, N. Mex.) and S. Ben-David (New Mexico, University, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1521-1525. 12 refs.

A80-33684 **A simple procedure for assessing thermal comfort in passive solar heated buildings.** W. O. Wray (California, University, Los Alamos, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1530-1534. Research sponsored by the U.S. Department of Energy.

The Fanger thermal comfort equation is linearized and used to develop a procedure for assessing thermal comfort levels in passive solar heated buildings. In order to relate comfort levels in non-uniform environments to uniform conditions, a new thermal index called the 'equivalent uniform temperature' is introduced. (Author)

A80-33685 **Thermopond applicability to climate and structure.** H. R. Hay (Skytherm Processes and Engineering, Los Angeles, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1535-1539. 5 refs. Research supported by the U.S. Department of Energy.

Collection, storage, dissipation and transfer of heat from Thermoponds with movable insulation have newly recognized potentials for solar heating, for replacing air conditioners, and for lessening peak power demand. The state-of-the-art for Skytherm natural heating and cooling of residential and commercial buildings is presented; fire protection and sound control are additional assets. Designs for high seismic, wind, and Thermopond loads are adapted in several illustrated architectural and structural forms. (Author)

A80-33686 **The characterization of the performance of passive solar heating systems.** A. M. Clausing and B. L. Drolen (Illinois, University, Urbana, Ill.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1540-1544. 8 refs.

The proposed method of thermal performance evaluation of passive solar heating systems employs three dimensionless performance indicators: efficiency, effectiveness, and comfort index. These indicators are used to quantify the thermal performance characteristics of direct gain and storage wall systems. Typical ranges are presented for key parameters in order to facilitate system design. Explicit analytical solutions are found for three- and four-node models which provide performance bounds for passive solar systems. It is concluded that the method is useful in sizing designs, analyzing the effect of system parameters, such as nighttime insulation, and evaluating the relative performance of various designs. V.L.

A80-33687 **An experimental approach for studying direct solar gain optics of model interiors.** J. F. McClelland, R. Fuchs, and R. N. Kniseley (Iowa State University of Science and Technology, Ames, Iowa). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2.

Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1620-1624. Research supported by the Consiglio Nazionale delle Ricerche.

A numerical method for the geometric location of the shadows produced by a building on a vertical or horizontal surface is developed. The method also determines the area of the shadows and especially the 'shadow factor', defined as the area of that part of the shadow which intersects a unit rectangle, suitably selected on the surface. In view of its application to several problems (urban planning, correction of thermic load tables), the dependence of the 'shadow factor' upon some parameters is studied. The results for particular cases are presented. (Author)

A80-33688 **Physical modeling of buildings.** K.-E. Hassan (Centre for Solar Energy Studies, Tripoli, Libya), G. M. Zaki, and A. A. El-Shibani (Alfateh University, Tripoli, Libya). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1551-1555. 11 refs.

The present paper treats the problem of simulating the thermal behavior of a building by a scale model. It takes into consideration insolation on and into the building, and the energy that may be removed by a solar device. The similarity groups that control modeling are deduced from the governing mathematical relations. The effect of each of these groups is studied in some detail. (Author)

A80-33689 **Hybrid active-passive designs - Synergy or conflict.** J. D. Balcomb, J. C. Hedstrom, and R. D. McFarland (California, University, Los Alamos, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1556-1560. 5 refs. Research sponsored by the U.S. Department of Energy.

Hybrid combinations of active and passive solar heating systems are analyzed using hour-by-hour simulation analysis for a combined space heating and domestic hot water load in Albuquerque and Madison. Various mixes of passive and active solar collection area are studied. The passive system is a Trombe wall design and the active system uses liquid heating collectors. (Author)

A80-33691 **Utilization of natural/passive energy systems in a University Office/Teaching Laboratory Building.** R. J. Martin (Everett, Zeigel, Tumpes and Hand, Boulder, Colo.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1565-1568.

A80-33692 **Economic aspects of passive solar remodeling in existing buildings.** J. L. Mickelson, Jr. and M. M. Sizemore (Sizemore/CRS, Atlanta, Ga.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1569-1573.

A80-33693 **Preliminary winter comparison results of four passive test cells in Omaha, Nebraska.** B. Chen, J. Maloney, J. Thorp, K. Pedersen, W. Holmes, C. Sedlacek, R. Sash, and E. Hollingsworth (Nebraska, University, Omaha, Neb.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1583-1587.

Four test cells incorporating various passive solar energy techniques have undergone testing since the end of December 1978. The purpose of this research is to evaluate the suitability of passive solar energy to the midwestern winter climate and to compare the performance of the direct gain with the Trombe wall type of passive system. In order to accomplish these goals, the predicted computer performance studies are being corroborated by test cells. (Author)

A80-33694 **Performance of passive test units during the 1978-79 heating season.** T. Wheeling, B. Wadsworth, and L. Palmiter (National Center for Appropriate Technology, Butte, Mont.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1589-1593.

Several passive solar test units have been monitored at the National Center for Appropriate Technology since January, 1978. The design, intrumentation, and performance of the direct gain and Trombe wall cells, during the 1978-79 heating season, are discussed. A continuous sequence of hourly measurements, including incident radiation, air temperatures, and thermal storage temperatures has been recorded for the six month period, November 1978 through April 1979. These measurements have been used for the validation of a simple computer simulation model developed at NCAT. (Author)

A80-33695 **Performance analysis of a natural convection collector system.** J. Cook (Arizona State University, Tempe, Ariz.) and S. Morris. In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1594-1598.

A 100% passive heated solar house in the mountains of Arizona, utilizing a full-scale, natural convection collector system with a rock bed storage, has been extensively monitored. An intensive examination of a one-day cycle, as well as a continuous six-day sequence, graphic analyses, plus numerical calculations and evaluation are presented. The results show efficiencies ranging between 30.5% and 43.3% during the demanding period of December 20 to 28. Documentation illustrates the parameters and advantages of such passive solar collector systems with isolated thermal storage. Recommendations and conclusions are made for final adjustments to this system and for the design of future convective systems. (Author)

A80-33696 **Measured performance of a passive solar residence in Bozeman, Montana.** C. W. Fowlkes (Fowlkes Engineering, Bozeman, Mont.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1600-1604. 5 refs.

This paper summarizes the thermal performance of a passive solar house. Hourly data taken over a three month period during one of the coldest winters on record showed that the solar system was providing 65% of the heating load. The average house temperature was 19 C and the average daily variation was 6.4 C. A low-cost data acquisition system utilizing a Radio Shack TRS-80 computer was developed for this project. (Author)

A80-33697 **A new and simple method for estimating the monthly and yearly performance of passive solar systems.** R. O. Warrington, R. E. Stotts, R. L. Mussulman, and W. R. Martindale (Montana State University, Bozeman, Mont.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1606-1609. 6 refs. Research supported by the Montana State University.

A80-33698 **Monthly average daily insolation on overhang shaded windows.** R. E. Jones, Jr. (Colorado, University, Colorado Springs, Colo.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1610-1614. 8 refs.

A method is presented for calculation of the monthly average daily insolation on windows of arbitrary azimuth shaded by overhangs of effectively infinite lateral extent. The method considers beam, diffuse and reflected radiation and is based on an extension to a totally arbitrary orientation of the methods of Liu and Jordan (1961) and of Klein (1977) for estimating the radiation on tilted surfaces. This extension also allows the determination of daily insolation on skylights and windows having orientations away from the equator. (Author)

A80-33699 **A procedure for determining solar heat gain factors for south-facing vertical surfaces on average days.** G. L. Powell and J. I. Yellott (Arizona State University, Tempe, Ariz.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1615-1619. 15 refs.

A80-33700 **Determination of the shadows area induced on horizontal and vertical surfaces anyway oriented.** A. Calarco and M. De Luca (Istituto Universitario Statale di Architettura, Reggio Calabria, Italy). In: Sun II; Proceedings of the Silver Jubilee Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1546-1550. 7 refs. Research supported by the U.S. Department of Energy.

An experimental approach is discussed for measuring the effective solar absorptivity and related optical properties of direct gain interiors. Measurements can be made on a zone or total interior basis using easily constructed models. The study covers characterization requirements, experimental methods, measurement theory, and preliminary experimental results. The data that can be acquired through this approach will be of use in the economical integration of direct gain solar collection with a wide variety of building interiors. (Author)

A80-33703 **An application of phase change materials in passive solar systems.** S. Faunce, J. Sliwkowski, and S. Guceri (Delaware, University, Wilmington, Del.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1637-1641. Research supported by the U.S. Department of Energy, Baltimore Gas and Electric Co., and Pennsylvania Power and Light Co.

A modular, hybrid passive solar energy collection and storage unit which is based on energy storage in phase-change materials has been developed for use in a passive solar heating system. The unit, termed the Thermal Wall Panel, is essentially a flat-plate solar collector mounted in the south-facing wall of a structure which uses the phase-change material Na2SO4(10H2O) as an energy storage medium. Results of tests of a 24-sq ft panel during March indicate that the unit can capture and deliver as heat up to 45% of incident solar energy, and supply up to 56% of the heating requirements for a typical 1800 sq ft house in the mid-Atlantic region if coupled with direct solar gain for daytime heating. A computer model developed for the thermal Wall Panel has been found to be in good agreement with experimental measurements. Cost estimates have shown that the system can be installed at an incremental cost of $6 to $8 per sq ft and have a simple payback period of seven to nine years. It is recommended that full-scale testing of the system be initiated as a further step in its commercialization. A.L.W.

A80-33704 **Analytical and economic evaluation of heat pipe augmented passive solar heating systems.** J. M. Corliss and G. H. Stickford (Battelle Memorial Institute, Columbus, Ohio). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1642-1646. Contract No. DE-SA04-77AL-04222.

A80-33705 **Dual desiccant-bed dehumidifier with solar-heated regeneration.** F. Moore, J. Cantrell, and G. Willeke (Miami University, Oxford, Ohio). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1647-1650. 10 refs. Research supported by the Miami University.

A80-33708 **Solar-cladding - Insulation plus insolation.** A. W. K. MacGregor (Napier College of Commerce and Technology, Edinburgh, Scotland). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1665-1668.

This is an investigation into the possibilities of applying translucent insulation material to the outside surface of existing solid walled buildings, so that the basic heat loss is reduced and, unlike conventional opaque insulation, the solar gain through the wall is increased. Theoretical analysis and experimental work both indicate that the potential energy savings per unit area are of the same order as for solar water heating systems - but with costs at least an order of magnitude less. The main area of application is likely to be in high latitude, maritime regions where overheating is not a problem. (Author)

A80-33709 **Hybrid passive for motel guest rooms.** R. Wright, L. Dieckmann, R. Selby, and S. Wright (Hawkweed Group, Ltd., Chicago, Ill.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1669-1673.

A 19,000 square foot solar-heated motel at Osseo, Wisconsin, contains twenty guest rooms, three shops, banquet facilities, restaurant and lobby. An appropriate integral system was selected for each area of the building based upon occupancy profile. Systems used include mass walls at guest rooms, direct gain at shops and site-built flat plate air type collectors at public spaces. This paper describes the various systems, the design process and construction methods. (Author)

A80-33710 **Retrofit sun room thermal performance based on the typical meteorological year weather data.** F. C. Wessling, E. L. Harley, P. J. Roache, W. C. Marrable, and B. C. Litz (New Mexico, University, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1684-1688. 6 refs.

A80-33711 **Design and initial performance of the solarium-assisted dormitory at the White Mountain School, Littleton, N.H.** A. O. Converse, M. Hall-Martindale (Dartmouth College, Hanover, N.H.), and C. S. White (Banwell, White and Arnold, Architects, Hanover, N.H.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1689-1693. Contract No. EG-77-6-04-4139.

A80-33712 **European progress in photovoltaic development.** R. J. van Overstraeten (Leuven, Katholieke Universiteit, Louvain, Belgium). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1721-1724.

Photovoltaic industrial production and research and development activities in Europe are reviewed. Consideration is given to materials, cells, and small power systems. System studies are also outlined. V.T.

A80-33713 **A 100 kW peak photovoltaic power system for the Natural Bridges National Monument.** E. F. Lyon (MIT, Lexington, Mass.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1732-1736. Research sponsored by the U.S. Department of Energy.

The implementation of a 100-kW peak photovoltaic power system for the Natural Bridges National Monument in southeastern Utah is considered. The site, PV power system, and its operation are described. V.T.

A80-33714 **The Ramón Areces concentration photovoltaic array.** G. Sala, G. L. Araújo, A. Luque, J. M. Ruíz, A. Coello, E. Lorenzo, F. Chenlo, J. Sanz, and A. Alonso (Madrid, Universidad Politécnica, Madrid, Spain). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p.

1737-1741. 10 refs. Research supported by the Ramón Areces Foundation.

The project of the 1.8-kW Ramón Areces concentrating photovoltaic array is described, and the results obtained are presented. The objectives of this project are to identify the relevant subjects for research, to determine the real costs of concentrated photovoltaic generators, to evaluate their efficiency and operation modes along the year, and to test the reliability of their active and passive components. The operating characteristics of the array along the year are calculated using measured parameters of the fabricated cells. S.D.

A80-33715 **Autonomous solar-powered beacon for air navigation use.** D. Lamant and D. Pero (Instituto Universitario de Tecnología, Caracas, Venezuela). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1746-1748.

Radio-aid equipment for air navigation, used in Venezuela, is described along with its characteristics and locations. The feasibility of installing solar-powered radio-aid beacons to improve the present network is discussed. V.T.

A80-33716 **A 20 kW photovoltaic flat panel power system in El Paso, Texas.** B. Blevins, R. Hsiao, A. Masud, H. Zwibel (New Mexico Solar Energy Institute, Las Cruces, N. Mex.), J. Brown (El Paso Electric Co., El Paso, Tex.), J. Morrison (Fouts, Langford, Gomez and Moore, El Paso, Tex.), L. Golucke (Golucke Consulting, El Paso, Tex.), and P. Locke (Photon Power, El Paso, Tex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1749-1753. Contract No. ET-78-C-04-5402.

Two designs for a 20-kW photovoltaic power system utilizing cadmium and silicon modules are described. Consideration is given to photovoltaic modules and system and economic tradeoffs. V.T.

A80-33717 **Photovoltaic module performance and degradation at various MIT/LL test sites.** S. E. Forman (MIT, Lexington, Mass.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1759-1763. Research sponsored by the U.S. Department of Energy.

The report summarizes the performance of a 25-kW photovoltaic module array. The physical and electrical changes which have occurred due to weathering and soil accumulation since system turn-on are discussed. V.T.

A80-33718 **The photovoltaic effect, its present understanding and remaining mysteries.** K. W. Boer (Delaware, University; SES, Inc., Newark, Del.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1766-1770. 26 refs. Research supported by the U.S. Department of Energy.

The paper presents an analysis of the photovoltaic effect. Current-voltage characteristics, high-field effects, heterojunction, and junction or interface recombination are discussed. It is noted that several factors need more work and clarification. V.T.

A80-33719 **A fabrication process for Cu2S-CdS thin film solar cells.** W. H. Bloss, W. Arndt, G. Bilger, G. H. Hewig, F. Pfisterer, and H.-W. Schock (Stuttgart, Universität, Stuttgart, West Germany). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1773-1776. 10 refs. Bundesministerium für Forschung und Technologie Contract No. ET-4045; European Economic Community Contract No. 428-78-EsD.

A fabrication process for Cu2S-CdS thin film solar cells was developed and is described in detail. The Cu2S-CdS heterojunction is produced using the Clevite process. Sheet glass is used as substrate and encapsulation. On the back contact, a CdS layer is evaporated, whereas the Cu2S-layer is produced topotaxially in a dipping process. The front contact is produced using silk screening and etching techniques. On a 7 x 7 sq cm large area substrate glass, encapsulated thin film solar cells with a Cu2S area of 42 sq cm are produced, which show conversion efficiencies of 7.3%. (Author)

A80-33720 **Advances in the development of low-cost, high performance cadmium-sulfide based thin-film solar cells.** A. M. Barnett, J. D. Meakin, and A. Rothwarf (Delaware, University, Newark, Del.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1777-1781. 13 refs. Contract No. EG-77-C-03-1576.

The paper describes the techniques utilized to analyze losses, and the improved designs and production technologies of thin-film polycrystalline CdS/Cu2S solar cells, that resulted in systematic increases in energy conversion efficiencies from 7.8 to 8.55 and 9.15%. Analytical and experimental results are presented. V.T.

A80-33721 **Design and performance of silicon solar cells under concentrated sunlight.** H. T. Weaver and R. D. Nasby (Sandia Laboratories, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1782-1785. 10 refs. Research supported by the U.S. Department of Energy.

The paper examines theoretically two concentrator solar cell designs: a baseline /n(+)-p/, and a back-surface-field /p(+)-n-n(+)/ cell. Results of these analyses are compared with experimental data from cells fabricated at several facilities. Agreement between calculations and observations is within 10%; this is somewhat surprising in view of the simplicity of the model of the high-doped regions. Projected maximum efficiencies for both cell designs occur near 25 suns concentration for the assumed 0.02-omega series resistance. Current fabrication techniques have produced, on a best-effort basis, efficiencies of about 18.5% for both designs. S.D.

A80-33722 **MIS solar cells on crystalline, polycrystal, and thin film silicon.** S. L. Hyland, J. K. Kim, A. E. Delahoy (Rutgers University, Piscataway, N.J.), W. A. Anderson, and K. Rajkanan (New York, State University, Buffalo, N.Y.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1786-1789.

The performance characteristics of MIS solar cells using single crystal, polycrystalline, ribbon and thin film silicon are investigated. Overall cell efficiencies, open-circuit voltages, short-circuit current densities and diffusion lengths were measured for chromium-silicon oxide-silicon cells fabricated on single crystal substrates and the less costly polycrystalline, ribbon, edge-defined film-fed growth and electron-beam deposited silicon. Results reveal cell efficiency to be lower in cells fabricated from the less costly substrates, due to lower short-circuit currents arising from recombination near crystal defects and decreased open-circuit voltage attributed to surface defects. It is concluded that the use of MIS semiconductor solar cells based on silicon, with efficiencies up to 12%, represents progress in attaining photovoltaics costing less than 50 cents/W. A.L.W.

A80-33723 **Photovoltaic concentrator design comparison.** M. Edenburn, E. Boes, and B. Shafer (Sandia Laboratories, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1793-1796. Research supported by the U.S. Department of Energy.

In the past few years a variety of different designs for photovoltaic concentrators have been proposed. This paper provides a comparison of some of these designs. The comparison is given both in terms of descriptive design features, such as geometric concentration ratio or type of optics used, and in terms of design quality expressed in terms of component efficiencies, array material costs, and $/W. The selection of concentrator array designs for inclusion in this comparison was based primarily on the degree of development of the designs and the desire for a representative variety. (Author)

A80-33724 **The performance of silicon solar cells under concentrated sunlight.** C. E. Backus, B. C. Chambers, T. T. Rule, and R. W. Sanderson (Arizona State University, Tempe, Ariz.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1798-1802. 6 refs. Research supported by the U.S. Department of Energy.

Silicon solar cells especially designed for concentration systems are now available with efficiencies of 18-19% under illumination levels of 30-300 suns at temperatures at 28 C. These efficiencies decrease approximately linearly with temperature. The temperature coefficient decreases slightly at increased concentration levels. (Author)

A80-33725 **Analytical evaluation of a solar thermophotovoltaic /TPV/ converter.** M. W. Edenburn (Sandia Laboratories, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1803-1807. Contract No. AT(29-1)-789.

This parametric analysis of a thermophotovoltaic (TPV) converter considers emitter temperature, cell reflectance to radiation with energy below the cell's bandgap energy, and concentration ratio requirements. The concentration ratio is rigorously considered to determine its influence on converter performance. Important conclusions are that an emitter temperature of 2000 K is optimal; a cell reflectance value of 0.98 is required for below-bandgap irradiation; a secondary concentrator must be used with a parabolic-dish primary; and a mirror quality resulting in a 4-mrad reflected-beam dispersion is required for a 24% conversion efficiency. (Author)

A80-33726 * **Reduction of intensity variations on a photovoltaic array with compound parabolic concentrators.** P. Greenman, J. O'Gallagher, R. Winston (Chicago, University, Chicago, Ill.), and E. Costogue (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1808-1812. 5 refs. Contract No. JPL-954563.

The reduction of nonuniformities in the intensity distribution of light focused on a photovoltaic array by a compound parabolic concentrator is investigated. The introduction of small distortions into the surfaces of the reflector in order to diffuse the incident collimated light to fill the angular acceptance of the concentrator is calculated by means of ray tracing to decrease the irradiance nonuniformity at the cost of a lowered effective concentration of the concentrator. Measurements of the intensity distribution on a scale test model in terrestrial sunlight with corrugated aluminized mylar reflectors are shown to be in good agreement with the ray tracing results. A two-stage concentrator consisting of a focusing primary and a nonimaging secondary is also shown to result in a fairly uniform intensity distribution except in the case of a 4-deg incidence angle, which may be corrected by the introduction of distortions into one or both concentration stages. A.L.W.

A80-33727 **Quasi-static concentrated array with double side illuminated solar cells.** A. Luque, J. M. Ruiz, A. Cuevas, J. Eguren, J. Sangrador, G. Sala, J. M. Gómez Agost, and J. del Alamo (Madrid, Universidad Politécnica, Madrid, Spain). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1813-1817. 16 refs.

Double side illuminated (DSI) cells placed in proper quasi-static concentrators allow for double theoretical gain than that of conventional cells. A concentrator prototype is presented which provides double side illumination with a practical gain of 8 and an acceptance (half gain) angle of plus or minus 11 deg. This concentrator also provides cooling for the cells so that they can operate at 10 C over the ambient under an irradiance of 90 mW/sq cm and wind velocity of 1 m/sec. Three types of DSI cells are being developed. Practical efficiencies of 15.5 percent have been practically demonstrated. (Author)

A80-33728 **Development of 1pKW photovoltaic module with concentration.** S. Pizzini (Montedison Sistemi S.p.A., Istituto Ricerche, Novara, Italy), M. Giuffrida, P. Zani (Ansaldo S.p.A., Genoa, Italy), G. Scarpi, G. Dionisio (Officine Galileo, Florence, Italy), M. Conti, and A. Modelli (SGS-ATES Componenti Elettronici S.p.A., Milan, Italy). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1818-1821. Research supported by the Consiglio Nazionale delle Recerche and European Community.

A 1-pKW concentration photovoltaic array with silicon cells, afocal lenses and passive cooling has been designed and developed. The concentrator consists of a mounting frame, whose tracking mode is altazimuthal and ten individual modules. The selected concentration ratio is 50. The afocal lenses provide an optimum flux distribution on the plane of the cell, reduce the incidence of chromatic aberration and tolerate partial shadowing without affecting the illumination profile. The cells have an n/p(+) structure, a Ti-Pd-Ag front metallization pattern, an Al-Cr-Ni-Au back metallization and a silicon nitride AR layer. They display efficiencies in excess of 16%. The tracking system consists of two independent motors for zenithal and azimuthal motion which are driven by two control units: the azimuthal movement has a constant speed basis plus a superimposed increment derived by the sun sensor. The zenithal movement is completely controlled via a suitable operational amplifier and a comparator, by the sun sensor. (Author)

A80-33729 **A novel mildly concentrating photovoltaic/thermal total energy system.** S. J. Strong (Solar Design Associates, Canton, Mass.), A. J. Manelas (Solectro-Thermo, Inc., Dracut, Mass.), and F. K. Manasse (New Hampshire, University, Durham, N.H.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 2. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1822-1824.

A mildly concentrating cone collector photovoltaic/thermal energy system concept is discussed. The module design, installation, and performance of the system are considered. V.T.

A80-33730 **The DOE photovoltaic concentrator project.** D. G. Schueler, E. C. Boes, B. D. Shafer, and J. F. McDowell (Sandia Laboratories, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1826-1829. Research supported by the U.S. Department of Energy.

Three major task areas of a photovoltaic concentrator project are described. The technology development activities in each of these areas include design, analysis, prototype and hardware development, evaluation, and production cost analysis V.T

A80-33731 **Design and analysis of a solar cell concentrating system using a flux redistributor.** J. E. Wennstrom (Idaho Power Co., Boise, Idaho) and R. E. Warner (Idaho, University, Moscow, Idaho). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1835-1839. Research supported by the University of Idaho, Washington Water Power Co., and Idaho Power Co.

A concentrating system which focused sunlight on an actively cooled array of silicon solar cells was built and tested. A concentration ratio of 11.7 was provided by a parabolic cylinder with a secondary mirror arrangement near the focal line to redistribute the solar flux. Relationships between optical, electrical, and thermal efficiencies are presented for two mounting positions. Solar cell voltage-current characteristics and the effects of pointing error on cell output power were examined. Test results show the flux redistributor has an equivalent reflectance of .75, but it provides convection suppression, a 1.0 intercept factor, flux uniformity across the cell surface, and insensitivity to tracking or mirror surface errors. The cells produced .05 W/sq cm with a photovoltaic efficiency of 6.5% and a system efficiency of 4.1% for the conversion of direct beam sunlight to electricity at a cell temperature of 64 C. (Author)

A80-33732 **Effects of encapsulation on the optical and thermal response of solar cells used in concentrated-flux systems.** V. E. Wood, R. P. Kenan, and G. B. Gaines (Battelle Columbus Laboratories, Columbus, Ohio). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1840-1843. 8 refs. Research supported by the U.S. Department of Energy.

Solar-cell encapsulation for environmental protection affects cells' electrical output and operating temperature. Such effects are particularly significant in concentrator systems requiring high-technology cells and operating above ambient temperature. We have made an initial calculation of effects of encapsulation on optical, thermal, and electrical behavior of low-resistivity solar cells with Fresnel-lens concentrators. Our objectives were to determine flux absorbed, power produced, and steady-state temperature distribution; to determine how these quantities changed on encapsulation; to look for beneficial design modifications. Parameters varied included antireflection-coating thickness, ambient temperature, and heat transfer coefficients. Absorbed heat was assumed dissipated by free convection and radiation. Two representative incident solar spectra were considered. Optical, thermal, and electrical analyses were necessarily carried out in an interdependent way. Encapsulation causes unavoidable power reduction which must be balanced against expected service-life improvements. Steady-state cell temperature increases resulting from encapsulation are small. A80-33733 **Status of the photovoltaic systems definition project.** K. L. Biringer, G. J. Jones, D. R. Smith, and H. N. Post (Sandia Laboratories, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1846-1850. 14 refs. Research supported by the U.S. Department of Energy.

The paper deals with a photovoltaic systems definition project which is an integral part of the U.S. DOE's National Photovoltaic Conversion Program. Two areas of project responsibility are considered: systems analysis and subsystem technology development. V.T.

A80-33734 **Connection losses in photovoltaic arrays.** A. Luque, E. Lorenzo, and J. M. Ruiz (Madrid, Universidad Politécnica, Madrid, Spain). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1851-1855. Research supported by the Fundacion Ramón Areces.

The shortcircuit current, opencircuit voltage and connection losses of arrays of solar cells, either for normal or concentrated sunlight are analyzed under either series or parallel connection. The parameters of the individual cells are considered as random variables. The main conclusion reached is that the shortcircuit current of the cells connected in series must be carefully monitored in order to avoid any excessive losses. The losses in parallel arrays are small except in some cases in which the cell parameters suffer from an extreme dispersion. (Author)

A80-33735 **Photovoltaic array reliability project.** N. W. Patapoff (Southern California Edison, Rosemead, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1861-1864.

Southern California Edison, a southwestern electric utility, has installed a 2.2 KW (peak) flat plate photovoltaic array at its General Office in Rosemead, California, a suburb of Los Angeles. The array has given an indication of the reliability and operating characteristics of commercial panels. Results since initial operation in April 1978 have been encouraging. There have been no complete electrical failures, though there has been a significant number of visual degradations. These visual degradations are, for the time being, apparently cosmetic, because no difference was evident between I-V curves taken in June 1978 and April 1979. This project is a first step in the hardware portion of a two-pronged Edison program to examine P/V and its potential to supply energy. (Author)

A80-33736 **Evaluation of combined photovoltaic/thermal collectors.** S. D. Hendrie (MIT, Lexington, Mass.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1865-1869. Research supported by the U.S. Department of Energy.

The thermal and electric performance of an air and a liquid-type combined photovoltaic/thermal solar collector has been evaluated, yielding close correlation with theoretical results. Maximum thermal efficiencies of 45.2% and 40% for the liquid and air collectors without electric power production respectively decreased to 40.4% and 32.9% when electrical power was produced. Maximum electrical efficiencies of 6.8% were measured. (Author)

A80-33737 **Optimization of photovoltaic/thermal collector heat pump systems.** M. C. Russell and E. C. Kern, Jr. (MIT, Lexington, Mass.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1870-1874. Research supported by the U.S. Department of Energy.

Combined photovoltaic/thermal (PV/T) collectors convert insolation directly to both electrical and thermal energy. These collectors are potentially less costly and have smaller space requirements than equivalent separate collectors operating to satisfy residential heating, cooling, hot water and electric power demands. TRNSYS simulation of PV/T collector-heat pump systems for residences in New York and Fort Worth climates, and analysis of the technical and economic results are discussed. The parallel heat pump configuration with 40 square meters of PV/T collectors was found to be the least-cost system option for the New York residence. (Author)

A80-33738 **What is black chrome.** P. M. Driver (Western Australia, University, Nedlands, Australia). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1887-1891. 51 refs.

The paper studies the composition and structure of black chrome coatings and the interrelationship of these parameters together with deposition methods including electrodeposition, chemical vapor, and sputter deposition. Chromium particles and chromium dendrites in a dielectric matrix, and an amorphous structure of chromium and its compounds, are considered. It is concluded that black chromes are still poorly characterized due to their varying structures and limited thin film analysis techniques. A.T.

A80-33739 **Thermal degradation of a black chrome solar selective absorber coating - Short term.** C. M. Lampert (California, University, Berkeley, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1892-1896. 9 refs. Contract No. W-7405-eng-48.

The energy absorption properties and chemical microstructure of CHROM-ONYX were investigated using electron microscopy and X-ray diffraction techniques. Different temperatures for short annealing times were used to evaluate this coating's temperature resistance along with possible degradation mechanisms for stagnation situations. Each sample was characteristically similar, with air acting to mildly accelerate optical degradation at higher temperatures.

Below 300-400 C black chrome exhibited a structural transformation precipitating Cr2O3. Above 500 C this phase grew, while chromium was depleted. For practical purposes black chrome optically degraded between 500-600 C during short exposure times. (Author)

A80-33740 **Thermal aging characteristics of electrodeposited black chrome solar coatings.** R. B. Pettit and R. R. Sowell (Sandia Laboratories, Albuquerque, N. Mex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1897-1901. 7 refs. Contract No. DE-AC04-76DP-00789.

A80-33741 **Improvement of optical reflectance of homogeneous interference film for solar absorber by texture control.** J. Ohno, Y. Shindoh, J. Oka, and H. Okada (Nippon Steel Corp., Fundamental Research Laboratories, Kawasaki, Japan). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1902-1906.

A80-33742 **Production and properties of selective surfaces coated onto glass tubes by a magnetron sputtering system.** G. L. Harding, B. Window, C. Horwitz, A. R. Collins, and D. R. McKenzie (Sidney, University, Sidney, Australia). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1912-1916. 11 refs. Research supported by the University of Sidney.

A cylindrical magnetron sputter coater has been constructed for deposition of selective absorbing surfaces onto batches of 1.5 m long glass tubes. A selective surface consisting of reactively sputtered mixed iron chromium and nickel carbides overlayed on sputtered copper on glass has been used to evaluate the properties of the coater. Absorptances, emittances and ageing properties of selective surfaces produced by the coater are discussed. (Author)

A80-33743 **Selective electrodeposited chromium black coatings - Optical properties, selectivity model.** J. Lafait, S. Berthier, and J.-M. Behaghel (Paris VI, Université, Paris, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1922-1925. 6 refs.

A80-33744 **Photoacoustic determination of absorptance and emittance of solar selective coatings.** S. I. Yun (Busan National University, Busan, South Korea). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1926-1930. 24 refs.

A new approach to the study of radiation characteristics of solar selective coatings is reported. When chopped light impinges on a solid in an enclosed cell, an acoustic signal is produced and detected by a sensitive microphone. This photoacoustic effect is the basis of the new approach. This paper reports the design and performance characteristics of a photoacoustic spectrometer suitable for recording absorptance and emittance spectra of the solar selective coatings. The dependence of photoacoustic signal on various experimental parameters is explored and some of its usefulness and limitations of the photoacoustic spectrometry in determining absorptance and emittance of the prepared sample has been made. For comparison, both absorptance spectra obtained by photoacoustic technique and conventional Gier-Dunkle reflectometer are reported. A calibration procedure for the photoacoustically determined absorptance and emittance is also discussed. (Author)

A80-33745 **Radiative selectivity and the oxidation of stainless steels.** V. C. Sharma (Benin, University, Benin City, Nigeria) and M. G. Hutchins (University College, Cardiff, Wales). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1940-1944. 14 refs. Research supported by the Science Research Council.

A comparison of spectrally selective surfaces formed by both chemical and thermal oxidation of 300 series stainless steels has been made. The optical properties, solar absorptance and thermal emittance, have been measured and the compositions and growth of the surface oxides have been studied using Auger electron spectroscopy. A dark blue, chemically-oxidized surface was found to have the most favorable combination of radiative properties, though further development to produce higher solar absorptance is needed for both chemically and thermally produced surfaces. (Author)

A80-33746 **Absorptance and emittance measurements of AlPbS and Zh dust selective surfaces.** B. K. Gupta, F. K. Tewari, R. Thangaraj, S. S. Mathur, and O. P. Agnihotri (Indian Institute of Technology, New Delhi, India). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1945-1949. 7 refs.

Measurements of the visible absorptance and infrared emittance of the low-cost potential solar energy absorbers Al-PbS and coated zinc dust are presented. Selective absorption surfaces were obtained by the spraying of solutions of PbS in various concentrations of lead acetate and thiourea in water onto Al-coated surfaces and the electroless deposition of CuO, CuS and CuS + PbS coatings onto zinc dust to form a selective black paint which is applied onto metal sheets. PbS coatings produced in a solution with a 1:3 ratio of lead acetate to thiourea are found to exhibit the best absorptivity (0.93), with an emissivity of 0.21. The coated metal dust surfaces are observed also to have high absorptivities (around 0.95) but with relatively higher emissivities (0.42-0.51), which are attributed to the uncontrollable amount of black coating deposited on the metal particles. A.L.W.

A80-33747 **Ion implanted materials as selective absorbers for photothermal solar energy conversion.** G. Chassagne, A. Delmas, and M. Treilleux (Lyon I, Université, Villeurbanne, Rhône, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1950-1954.

Composite materials are produced by implantation at room temperature of alkali metal ions, K(plus), Li(plus), Na(plus), in magnesium oxide single crystals. Thermal treatment precipitates metal aggregates in implantation zone. These precipitates are observed by electron microscopy. The optical properties of these composite materials, principally MgO:Na, are studied with consideration given to their applicability as selective solar energy absorbers. (Author)

A80-33748 **Nickel pigmented anodic aluminium oxide for selective absorption of solar energy.** C. G. Granqvist (Chalmers Tekniska Hogskola, Goteborg, Sweden), O. Hunderi (Norges Tekniske Hogskole, Trondheim, Norway), and A. Andersson (Granges Aluminium, Finspang, Sweden). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1955-1959. 29 refs.

A80-33749 **Studies of directly absorbing fluids for mid-temperature solar thermal applications.** A. R. Burke, D. E. Etter, C. J. Wiedenheft, and L. J. Wittenberg (Monsanto Research Corp., Miamisburg, Ohio). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 1960-1964. 7 refs. Contract No. DE-AC04-76DP-00053.

Thermal, photochemical, and optical absorptivity studies at elevated temperatures were initiated on various heat transfer fluids containing chromophoric materials. The solar absorption efficiency of the fluids and chromophores were calculated at ambient and elevated temperatures. Density, viscosity, and heat capacity measurements for specific solutions were also determined. Eight chromophoric solutions have been identified, thus far, for further study as candidates for directly absorbing fluids for use up to 100 C. (Author)

A80-33751 **Comparison of costs for solar derived electrical sources with diesel generators in remote locations.** F. K. Manasse (New Hampshire, University, Durham, N.H.) and R. L. Borofsky (AETA Corp., Dover, N.H.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2102-2106. 11 refs.

This paper looks specifically at three alternative sources for generating power in remote regions of the world. These include diesel electric, photovoltaic and solar thermal electric devices. Fuel cost, and more specifically, transportation costs of that fuel, dramatically change which device will be most cost effective under specific conditions. In areas where fuel is readily available, diesel appears to be the best alternative financially. Even today, however, solar thermal generators appear to make sense in a number of realistic scenarios, especially those involving LDCs. Photovoltaics do not seem to be competitive at this time, but technical advances may in fact change this in the future. These comparisons are all represented graphically and numerically in the body of this paper. (Author)

A80-33752 **The economics of solar hot water heating in multifamily units.** H. B. Zien (Zien Mechanical Contractors, Milwaukee, Wis.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3.
Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2107-2110.

A80-33754 **Analysis of solar energy conversion processes - Systems economic impact of thermochemical storage efficiencies.** J. J. Iannucci and J. D. Fish (Sandia Laboratories, Livermore, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2116-2120. 13 refs. Contract No. DE-AC04-76DP-00789.

Chemical storage is the only mode now under consideration for solar thermal electric plants which might satisfy the concept of inexpensive, easily transportable, long duration, ambient temperature storage. The predicted thermal-to-chemical-to-thermal efficiencies for the most prominent of the candidate reactions, however, have been disappointingly low. These low efficiencies are shown to be natural outgrowths from fundamental thermodynamic and engineering principles. Close analogies are drawn between the efficiency of thermal to electric conversion and the efficiency of chemical energy storage processes. (Author)

A80-33755 **Cost and performance evaluation of passive solar systems.** R. Gorman, K. L. Heitner, K. H. Mehta, A. B. Molander, P. S. Moritz, and C. J. Thomas (TRW Energy Systems Group, McLean, Va.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2132-2136.

The paper deals with a computer program developed for rapid design of optimum passive solar systems with thermal storage walls. The program performs the combined functions of selecting the optimum glazing-reflector-insulation-storage configuration in each climate, correctly sizing the thermal storage wall configuration, and calculating the economics and fuel savings for the optimal installations. V.T.

A80-33757 **The effect of an auxiliary load management strategy on solar system performance.** T. Newell, S. Swanson, and R. Boehm (Utah, University, Salt Lake City, Utah). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2143-2147. 7 refs. Research supported by the Utah Power and Light Co.

Electric utilities typically have peaking problems caused by seasonal and time-of-day variations in demand. This report presents the results of an analysis performed to determine whether solar systems could be used for electric utility load management. A straight-forward strategy was devised that consisted of adding heat energy to the solar system heat storage during off-peak (night time) hours, bringing the sensible heat storage up to a controlled temperature level. This strategy was then investigated by means of a detailed computer simulation of system performance, using Salt Lake City weather data. The elevated storage temperature due to the load management led to a reduction in the solar system performance, which was compensated by a shift of the utility load to off-peak times. The tradeoff looks quite favorable as a large shift to off-peak energy usage is accompanied by only a small reduction in solar system performance. (Author)

A80-33758 **A benefit-cost analysis of the impact upon an existing utility of a solar electric experimental facility.** D. A. Murry (Stone and Webster Management Consultants, Inc., Washington, D.C.) and R. Zumwalt (C.H. Guernsey and Co., Oklahoma City, Okla.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3.
Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2148-2151.

The paper deals with a project designed to assess the potential benefits and costs for the New Mexico Electric Service Company (NMESC) resulting from the interconnection of various solar electric plant systems. Eight solar electric configurations, each with and without storage, are considered at two separate sites. The impact of a solar R&D facility on the NMESC will depend on the specific type, size and location of plant selected, and on the treatment of the incremental benefits/costs as to whether or not such effects are passed onto rate payers or stockholders. S.D.

A80-33759 **Prediction of global solar electricity market, in connection with geographical distribution of decentralized and centralized electrical demand up to year 2025.** M. J. Claverie and A. P. Dupas (CNRS, Paris, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2152-2156. 15 refs.

The potential production of solar power plants in the year 2025 is calculated, assuming moderate growth of energy demand and rather fast economic development. Population distribution and the fraction of energy consumption used for the generation of electricity in each world region are taken into account in predicting the future demands for centralized as well as decentralized electrical energy. Future solar power plant production is discussed, considering latitude and the expected costs of power plant investment and fuel. It is concluded that there will be a market of 1000 GW from solar power plants in 2025, producing 2500 Twh/year, that is, 5% of global electricity demand, supplying 17-28% of the earth's population. J.P.B.

A80-33761 **Application of circumsolar measurements to concentrating collectors.** D. F. Grether, D. Evans, A. Hunt, and M. Wahlig (California, University, Berkeley, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2193-2197. Contract No. W-7405-eng-48.

A systematic measurement program is being carried out to assess the effects of circumsolar radiation (the solar aureole) on the performance of solar conversion systems using concentrating collectors. Four instrument systems have been constructed and are providing detailed intensity vs. angle profiles of the solar and circumsolar (out to 3 deg from the center of the sun) as well as other solar measurements. The instruments are briefly described. Results are presented of the average effect of the circumsolar radiation on the solar energy available to an idealized point focusing system. Results are also presented for an analysis of two specific Central Receiver designs. (Author)

A80-33763 **The simulation of partially and fully tracking flat plate collectors in northern latitudes.** J. R. Simonson (City University, London, England). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2214-2218. Research supported by Hall Thermotank.

A computer programme was written to calculate the incident energy available on the surface of a flat plate collector, using hourly measured radiation data for horizontal surfaces at Kew. An optimum annual incidence of 1004 kWh/sq m was calculated for a collector of 31 deg slope, pointing due south with normal ground reflectance. In partial tracking the collector followed the sun's azimuth angle, the slope being fixed. Increases were achieved with partial and full tracking, the small additional increase with full tracking being due to the relatively large amounts of diffuse radiation. (Author)

A80-33764 **The measurement of solar irradiance on a tilted surface.** B. Justin (Pilkington Brothers, Ltd., Lathom, Lanc., England), D. B. Pye, and J. L. J. Rosenfeld (Shell Research, Ltd., Chester, Middx., England). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2219-2221.

The measurement of solar irradiance on a tilted plane has been compared using two methods. The irradiance was calculated from the measured total and diffuse irradiance in the horizontal plane assuming an isotropic sky and compared with that measured in the tilted plane. Differences were observed which depended on how the tilted solarimeter was mounted. It is concluded that provided errors of about 5% can be tolerated, the irradiance on a tilted surface may be estimated from measurements with horizontally placed instruments, assuming sky isotropy. If a tilted instrument is used, it is important to ensure adequate radiation shielding and ventilation around the back of the instrument. (Author)

A80-33766 **Markov chains to solar energy storage calculations.** R. O. Fernández (R. Fernández y Asociados, Buenos Aires, Argentina) and M. V. García (Comisión Nacional de Investigaciones Espaciales, San Miguel, Argentina). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2227-2231.

The statistic theory of Markov chains has been used to make probabilistic predictions of sequences of variable length of cloudy days starting in a typical day. The calculations were made in Buenos Aires and La Plata, for thirty years of observations of cloudiness based on data of bright sunshine distributed in four intervals. The probabilities of various sequences of different length, and the corresponding storage capacities for different thermics loads have been determined. (Author)

A80-33782 **General formulation of the current-voltage characteristic of a p-n heterojunction solar cell.** S. J. Fonash (Pennsylvania State University, University Park, Pa.). *Journal of Applied Physics,* vol. 51, Apr. 1980, p. 2115-2118. 12 refs.

A derived current-voltage (I-V) characteristic for p-n heterojunction solar cells of the form window/absorber is obtained. The development lends itself to a simple, diagrammatical interpretation of the step-by-step collection of the photocurrent flowing out of the base of the absorber. The resulting general I-V characteristic under illumination is in a form useful for the design of these devices and for the interpretation of their performance. (Author)

A80-33785 **Reverse current-voltage characteristics of indium tin oxide/silicon solar cells under illumination.** P. Smith, R. Singh, and J. DuBow (Colorado State University, Fort Collins, Colo.). *Journal of Applied Physics,* vol. 51, Apr. 1980, p. 2164-2166. 10 refs. Contract No. XS-9-8232-1.

Recently, Rodriquez and co-workers (1979) reported anomalous photocurrent in reverse-biased tin oxide/silicon solar cells. The present authors have observed no anomalous photocurrent in indium tin oxide/silicon semiconductor-insulator-semiconductor (SIS) solar cells. In this paper, a possible explanation of why the authors of the above referred paper have observed anomalous photocurrent in tin oxide/silicon solar cells whereas no such effect has been observed in the indium tin oxide/silicon SIS solar cells of the present authors has been offered. (Author)

A80-33786 **Sputtered indium-tin oxide/cadmium telluride junctions and cadmium telluride surfaces.** F. G. Courreges, A. L. Fahrenbruch, and R. H. Bube (Stanford University, Stanford, Calif.). *Journal of Applied Physics,* vol. 51, Apr. 1980, p. 2175-2183. 23 refs. Research supported by the U.S. Department of Energy.

The properties of indium-tin oxide (ITO)/CdTe junction solar cells prepared by RF sputtering of ITO on P-doped CdTe single-crystal substrates have been investigated through measurements of the electrical and photovoltaic properties of ITO/CdTe and In/CdTe junctions, and of electron beam induced currents in ITO/CdTe junctions. In addition, surface properties of CdTe related to the sputtering process were investigated as a function of sputter etching and thermal oxidation using the techniques of surface photovoltage and photoluminescence. ITO/CdTe cells prepared by this sputtering method consist of an n(+)-ITO/n-CdTe/p-CdTe buried homojunction with about a 1-micron-thick n-type CdTe layer formed by heating of the surface of the CdTe during sputtering. Solar efficiencies up to 8% have been observed with an open-circuit voltage of 0.82 V and a short-circuit current density of 14.5 mA/sq cm. The chief degradation mechanism involves a decrease in open-circuit voltage with a transformation of the buried homojunction structure to an actual ITO/CdTe heterojunction. (Author)

A80-33805 **Wide-angle lenses and image collapsing subreflectors for nontracking solar collectors.** C. J. Sletten, F. S. Holt, and S. B. Herskovitz (Solar Energy Technology, Inc., Bedford, Mass.). *Applied Optics,* vol. 19, May 1, 1980, p. 1439-1453. 7 refs. Contract No. DE-FG04-77CS-34163.

This paper presents new optical methods for the design of nontracking solar energy concentrators with acceptance angles of 60 deg in the elevation (altitude) plane and plus or minus 50 deg in azimuth sectors. A two-point corrected cylindrical stepped prism lens (SPL) with 30.48-cm aperture height and F/D approximately equal to 1, which focuses well over the acceptance interval, has been designed and constructed. Image collapsing subreflector (ICS) surfaces are synthesized that reflect the incident illumination refracted by the lens onto a small fixed absorbing area or shelf 7.6 cm wide resulting in near maximum theoretical concentration ratios for these broad acceptance angles. Nearly 100% of the incident optical rays intercept the absorber shelf. The wide-angle and image collapsing optical properties were confirmed by laser and solar experiments. Rooftop thermal tests on a 30.5 x 30.5-cm collector section using selectively absorbing tubes with water as circulant were conducted that indicate aperture efficiencies of 60% could be expected on large area collectors based on this design. (Author)

A80-33852 **n-type molybdenum-diselenide-based liquid-junction solar cells - A nonaqueous electrolyte system employing the chlorine/chloride couple.** L. F. Schneemeyer, M. S. Wrighton (MIT, Cambridge, Mass.), A. Stacy, and M. J. Sienko (Cornell University, Ithaca, N.Y.). *Applied Physics Letters,* vol. 36, Apr. 15, 1980, p. 701-703. 10 refs. Research supported by the Massachusetts Institute of Technology, U.S. Navy, and U. S. Air Force.

The paper demonstrates that single-crystal, n-type MoSe2 can be used as a stable photoanode in an electrochemical cell using a nonaqueous solution of Cl2/Cl/-/ as the redox active material. The MoSe2 is qualitatively better than MoS2 which has a larger band gap, and both materials are stable in a nonaqueous solution, while both photocorrode in aqueous Cl/-/ solutions. The stable Cl2/Cl/-/ system show that a transparent, reversible, non-O2-sensitive redox couple can be useful in n-type semiconductor-based liquid-junction cells using a direct band gap material with optimum solar response. A.T.

A80-33854 # Improved model of In2O3/SnO2-SiO/x/-nSi solar cells (Uluchshennaia model' solnechnykh preobrazovatelei na osnove struktury In2O3/SnO2-SiO/x/-nSi). A. I. Malik, V. B. Baraniuk, and V. A. Manasson (Akademiia Nauk Ukrainskoi SSR, Institut Prikladnykh Problem Mekhaniki i Matematiki, Chernovtsy, Ukrainian SSR). *Geliotekhnika,* no. 1, 1980, p. 3, 4. In Russian.

A80-33855 # Analysis of heat losses and ways to improve the efficiency of solar-array thermoelectric generators (Analiz teplovykh poter' i nekotorye puti povysheniia effektivnosti panel'nykh solnechnykh termoelektrogeneratorov /STEG/). I. I. Kokhova, Iu. N. Malevskii, and A. I. Tsvetkov (Gosudarstvennyi Nauchno-Issledovatel'skii Energeticheskii Institut, Moscow, USSR). *Geliotekhnika,* no. 1, 1980, p. 5-11. 9 refs. In Russian.

Ways to improve the efficiency of solar thermoelectric generators by reducing heat losses are discussed. Different heat transfer conditions are examined: single and double layer glass coatings, selective coatings on the collector, ordinary and vacuum-type heat insulation, and air and water cooling. B.J.

A80-33856 # Calculation of the angular error of a solar cylindrical concentrator made from sheet material (Raschet uglovoi pogreshnosti solnechnogo tsilindricheskogo kontsentratora iz listovogo materiala). M. A. Markman, L. M. Simanovskii, and O. P. Zakharova (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Istochnikov Toka, Moscow, USSR). *Geliotekhnika,* no. 1, 1980, p. 15-18. In Russian.

A80-33857 # Geometric and kinematic characteristics of solar-tower heliostats (Geometricheskie i kinematicheskie kharakteristiki geliostatov SES bashennogo tipa). R. R. Aparisi, D. I. Tepliakov, and B. G. Khantsis (Gosudarstvennyi Nauchno-Issledovatel'skii Energeticheskii Institut, Moscow, USSR). *Geliotekhnika,* no. 1, 1980, p. 19-25. 5 refs. In Russian.

Equations for the geometric and kinematic characteristics of solar-tower heliostats are obtained and used for the direct calculation (based on the method of angular coordinate determination) of the positions of typical heliostats. Velocities of the azimuth and zenith rotations of heliostats are determined. B.J.

A80-33858 # The electronic aberrogram recorder (Elektronnyi registrator aberrogramm). R. A. Zakhidov (Akademiia Nauk Uzbekskoi SSR, Tsentral'noe Proektno-Konstruktorskoe Tekhnologicheskoe Biuro Nauchnogo Priborostroeniia, Uzbek SSR). *Geliotekhnika,* no. 1, 1980, p. 26-29. In Russian.

The electronic aberrogram recorder (EAR) is an optoelectronic device designed for monitoring the operation of solar concentrators. The device is used to record the point of incidence of light beams reflected by the concentrator; this is accomplished by the transformation of incidence-point coordinates into voltages, that can be viewed on an oscillograph or plotted. Particular attention is given to an EAR system which uses a photodiode array as the photosensitive surface. B.J.

A80-33859 # Investigation of light-absorbing coatings obtained by the combined condensation of metal and dielectric vapors (Issledovanie svetopogloshchaiushchikh pokrytii, poluchennykh sovmestnoi kondensatsiei parov metalla i dielektrika). U. Kh. Gaziev, Sh. A. Faiziev, V. V. Li, and V. S. Trukhov (Akademiia Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR). *Geliotekhnika,* no. 1, 1980, p. 30-32. 6 refs. In Russian.

The paper examines metal/dielectric light-absorbing coatings (for use on solar collectors) prepared by thermal vapor deposition in high vacuum. Results on spectral reflectance were obtained for the following materials (in the dielectric to metal concentration ratio range from 3:1 to 1:3): SiO2-Ni, CeO2-Ni, and SiO2-Cr. The study showed that the light-absorbing properties of the coatings are stable to temperatures of 400 C. B.J.

A80-33860 # Test results on solar turbogenerators (Nekotorye rezul'taty ispytanii solnechnogo turbogeneratora). A. K. Alimov, L. M. Drabkin, G. Ia. Umarov, and P. U. Khatamov (Vsesoiuznyi Zaochnyi Institut Inzhenerov Zheleznodorozhnogo Transporta, Moscow, USSR; Akademiia Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR). *Geliotekhnika,* no. 1, 1980, p. 36-38. In Russian.

The dynamic characteristics of a full-scale solar turbogenerator were obtained for a direct solar radiation power of 650 W/sq m, a maximum collector-wall temperature of 423 C, and an air flowrate of 0.03 kg/sec. Specifically, attention was given to the dependence of the number of rotations on the temperature of the working fluid, and to transient temperatures in the generator. B.J.

A80-33861 # The use of solar energy storage for heating and cooling applications (K ispol'zovaniiu akkumuliatorov solnechnoi energii dlia teplo- i khladosnabzheniia). A. Davletov, A. A. Petrova, and F. A. Guseinova (Akademiia Nauk Turkmenskoi SSR, Fiziko-Tekhnicheskii Institut, Ashkhabad, Turkmen SSR). *Geliotekhnika,* no. 1, 1980, p. 39-43. In Russian.

The paper examines the development of solar heat storage systems for the heating and cooling of houses in desert regions (the Turkmenian SSR is considered as an example). The choice of heat storage materials is considered (the advantages of paraffin are emphasized), and the thermodynamic properties of the materials are examined. B.J.

A80-33862 # Choice of cycle parameters for solar Freon air conditioning equipment of ejector type (Vybor raschetnykh parametrov tsikla gelioezhektornoi Freonovoi kholodil'noi mashiny /GEFKhM/). S. Z. Zhadan and N. A. Shchetinina (Odesskii Tekhnologicheskii Institut Kholodil'noi Promyshlennosti, Odessa, Ukrainian SSR). *Geliotekhnika,* no. 1, 1980, p. 44-47. In Russian.

A method for calculating the cycle parameters of a solar air conditioning system of ejector type is described; calculations are made for solar radiation conditions typical of Odessa in July. A combined analysis of the efficiencies of the solar and cooling parts of the system is used to determine the optimal temperature of the working fluid. B.J.

A80-33863 # Development of a combined solar heating/heat pump system for conditions typical of the Crimea (Razrabotka kombinirovannoi sistemy solnechnogo teplosnabzheniia s teplovym nasosom v usloviiakh Kryma). S. I. Smirnov and A. S. Troshin (Gosudarstvennyi Nauchno-Issledovatel'skii Energeticheskii Institut, Moscow, USSR). *Geliotekhnika,* no. 1, 1980, p. 75-80. 9 refs. In Russian.

The feasibility of developing solar-assisted heat pump systems for Crimean conditions is examined. Particular consideration is given to a solar heating system with flat-plate collectors and a compression-type heat pump; a diagram of the system is provided and the basic parameters are examined. B.J.

A80-33864 Dynamic modelling and verification of a flat-plate solar collector. A. J. de Ron (Eindhoven, Technische Hogeschool, Eindhoven, Netherlands). *Solar Energy,* vol. 24, no. 2, 1980, p. 117-128. 14 refs.

In the modelling of flat-plate solar collectors the dynamic effects have often been neglected. But because the solar collector is inherently exposed to variable weather conditions, its dynamics may be important to the design and control. It is demonstrated that it is not necessary to ignore the dependence of the various temperatures on the location in the direction of flow (which is often done to avoid complications) provided the model is developed in the frequency domain. The linearised model has been verified in the frequency domain by means of a least squares estimator. The verification was performed with a part of a full-size collector, as has been applied in some solar houses, and an artificial sun. It is concluded from the results of the verification that the developed model describes the collector dynamics quite satisfactorily. The differences between the theoretical and estimated heat resistances was about 10 per cent. The verification and estimation procedure proved to be a useful tool for comparing various collectors because the collector has to be fitted with only two temperature sensors. It is shown that the simple models discussed in the literature give responses which are not representative of the collector's dynamics. For well-designed collectors a simplified model is derived. Finally, some desirable sampling rates are given. (Author)

A80-33867 **Optimization of stationary nonimaging reflectors for tubular evacuated receivers aligned north-south.** W. R. McIntire (Argonne National Laboratory, Argonne, Ill.). *Solar Energy,* vol. 24, no. 2, 1980, p. 169-175. 7 refs. Contract No. W-31-109-eng-38.

Design optimization of solar collectors for tubular evacuated receivers aligned north-south is discussed, with attention given to the choice of acceptance angles and truncation parameters. Considerations involved in this choice include the effects of reflection losses, reflector-receiver alignment errors, variation of selective surface absorptance with angle of incidence on the receiver, and losses through the gap between the receiver and the reflector. Wide-acceptance-angle reflectors are found to enhance the performance of tubular evacuated receivers, and the performance of collectors using these reflectors is not a sensitive function of acceptance angle in the range near 60 deg. The reflectors' wide acceptance angles and ideal nonimaging optics allow manufacturing tolerances without requiring that the concentrator be designed for undersize receivers. L.M.

A80-33869 **Thermosyphon circulation in solar collectors.** G. L. Morrison (New South Wales, University, Kensington, Australia) and D. B. J. Ranatunga (National Engineering Research and Development Centre, Solar Energy Div., Colombo, Sri Lanka). *Solar Energy,* vol. 24, no. 2, 1980, p. 191-198. 13 refs.

Theoretical predictions of flow rate in thermosyphon solar collectors are compared with experimental measurements obtained using a laser Doppler anemometer. Modifications to the usual method of analysis are proposed to improve the accuracy of the predictions, and the results are compared with flow rate predictions and measurements in other investigations. (Author)

A80-33871 **Optimization of flat-plate collector-flat mirror systems.** D. C. Larson (Drexel University, Philadelphia, Pa.). *Solar Energy,* vol. 24, no. 2, 1980, p. 203-207. 9 refs. Research supported by the U.S. Department of Energy.

Solar collection capabilities of a flat-plate collector with a flat specular mirror are analyzed in order to determine the optimal geometries and tilting strategies of the collector and mirror for a variety of solar energy applications. Maximum enhancement factors and associated tilt angles for year-round collection are graphically determined as a function of the mirror length relative to the panel length (L), and it is found that for mirror lengths ranging from one to two times the panel length the panel should be tilted phi + 15 deg (where phi is the latitude angle) from the horizontal and the front mirror tilt from the horizontal should increase from 55 - phi for L = 1 to 65 - phi for L = 2. L.M.

A80-33872 **Fluid circulation control in conventional and heat pipe planar solar collectors.** H. F. W. de Vries, W. Kamminga, and J. C. Francken (Groningen, Rijksuniversiteit, Groningen, Netherlands). *Solar Energy,* vol. 24, no. 2, 1980, p. 209-213.

The efficiencies of a planar heat pipe solar collector and a conventional flat plate solar collector are compared with respect to the transient behavior during periods in which the absorber temperature becomes lower than the storage temperature. A simple mathematical model is used and equations for the oscillating insolation of the sinusoidal and square wave types are obtained in order to investigate the impact of the pump on/off switch and the diode resistance on the collector efficiencies for different oscillating periods. It is found that the performance of the heat pipe collector used without fluid circulation control is as good as that of a conventional collector used with control; hence, the control unit can be omitted in the heat pipe collector. However, then a manual or automatic cut-off is required during the night. L.M.

A80-34561 **A water-trickle type solar collector with a massive concrete slab for heat storage and radiation /TMU solar system I/.** N. Ito, K. Matsuda (Tokyo Metropolitan University, Tokyo, Japan), A. Ishii (Kyushu Institute of Design, Kyushu, Japan), and H. Osawa (Ministry of Construction, Building Research Institute, Japan). *(Solar Energy,* vol. 4, no. 2, 1978, p. 5-10.) *Energy Developments in Japan,* vol. 2, Jan. 1980, p. 253-263. Translation.

Experimental results are reported for a simple open type solar collector - a water trickle type collector - used in combination with a massive concrete slab for energy storage. This relatively low cost system was installed on a typical Japanese house in Yokohama City and measurements were made of the interior temperature. The system showed considerable promise for application in Japan. (Author)

A80-34598 **Solar collectors for low and intermediate temperature applications.** F. Kreith, A. Rabl (Solar Energy Research Institute, Golden, Colo.), G. O. G. Lof (Colorado State University, Fort Collins, Colo.), and R. Winston (Chicago, University, Chicago, Ill.). *Progress in Energy and Combustion Science,* vol. 6, no. 1, 1980, p. 1-34. 53 refs.

To provide a rational basis for deciding which type of low or intermediate temperature solar collector is best suited for a particular application, various flat-plate and nonfocusing solar concentrators are compared in terms of their most important general characteristics, viz. concentration, acceptance angle, sensitivity to mirror errors, size of reflector area, and thermal efficiency. This summary of low and intermediate temperature solar collectors first outlines the principles of flat-plate collectors, then discusses the performance of liquid and air flat-plate collectors from experimental and analytical standpoints, and finally presents the theory and design of low concentration type of nonimaging collectors. S.D.

A80-34637 **Photovoltaic materials.** E. A. Perez-Albuerne and Y.-S. Tyan (Eastman Kodak Co., Rochester, N.Y.). *Science,* vol. 208, May 23, 1980, p. 902-907. 38 refs.

The materials requirements of typical solid-state photovoltaic cells for the various solar cell configurations under investigation are reviewed. The operating principles of photovoltaic cells are discussed, with particular attention given to the loss mechanisms which limit the efficiency of charge generation and separation. The development and photovoltaic properties of single-crystal and polycrystalline silicon cells, gallium arsenide cells, thin film cadmium sulfide/copper sulfide cells and amorphous silicon cells are then surveyed, and other promising semiconductor materials are indicated. It is concluded that while systems characterized by ease of fabrication, high efficiency or long-term stability have been developed, further advances in materials properties and automated, large-volume, cost-effective manufacturing processes must be made in order to attain the properties necessary for large-scale application simultaneously in a single substrate. A.L.W.

A80-34778 **Selection of materials and development of processes for the fabrication of solar reflector panels.** M. R. Boyaner and H. K. Lauer (McDonnell Douglas Astronautics Co., Huntington Beach, Calif.). In: New horizons - Materials and processes for the eighties; Proceedings of the Eleventh National Conference, Boston, Mass., November 13-15, 1979. Azusa, Calif., Society for the Advancement of Material and Process Engineering, 1979, p. 424-431.

The MDAC central receiver solar thermal power system is based on the concept of multiple solar energy reflectors (solar reflector panels) directing the sun's energy on a receiver unit, where the concentrated heat from the sun is used to convert water into steam. This paper presents the trade studies and tests performed to select the core material, the back face sheet, and the adhesives and sealants used to bond and seal the reflector panels. The processes for adhesive application and panel assembly are discussed. The selected heliostat reflector panel design is a sandwich panel consisting of a styrofoam core bonded to a second surface mirror on one side, and a sheet of galvanized steel on the other side. The periphery of the panel is sealed by bonding on a galvanized steel edge member incorporating the use of a dual seal system. (Author)

A80-34779 **Solar materials R & D overview emphasizing solar thermal power systems.** B. L. Butler (Solar Energy Research Institute, Golden, Colo.). In: New horizons - Materials and processes for the eighties; Proceedings of the Eleventh National Conference, Boston, Mass., November 13-15, 1979. Azusa, Calif., Society for the Advancement of Material and Process Engineering, 1979, p. 432-436. 5 refs.

A80-34780 * **Silicon material task - Low cost solar array project /JPL/DOE/.** R. Lutwack (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). In: New horizons - Materials and processes for the eighties; Proceedings of the Eleventh National Conference, Boston, Mass., November 13-15, 1979. Azusa, Calif., Society for the Advancement of Material and Process Engineering, 1979, p. 437-440.

The paper describes the silicon material task of the low-cost solar array project, which has the objective of establishing a silicon production capability equivalent to 500 mW per year at a price less than 10 dollars/kg (1975 dollars) in 1986. The task program is divided into four phases: technical feasibility, scale-up studies (the present phase), experimental process system development units, and implementation of large-scale production plants, and it involves the development of processes for two groups of materials, that is, semiconductor grade and solar cell grade. In addition, the effects of impurities on solar cell performance are being investigated. Attention is given to problem areas of the task program, such as environmental protection, material compatibility between the reacting chemicals and materials of construction of the equipment, and waste disposal. J.P.B.

A80-34781 **Low-cost, high-performance solar selective paint coatings.** W. D. McKelvey and P. B. Zimmer (Honeywell, Inc., Avionics Div., Minneapolis, Minn.). In: New horizons - Materials and processes for the eighties; Proceedings of the Eleventh National Conference, Boston, Mass., November 13-15, 1979. Azusa, Calif., Society for the Advancement of Material and Process Engineering, 1979, p. 453-462. Research supported by the U.S. Department of Energy.

The development of low-cost, high-performance solar selective paint coatings for flat-plate collectors is described. Some of the coatings hold the promise of on-site application by unskilled personnel. The selective paints were made by optimizing coating thickness, pigment volume concentration and pigment particle size. Coatings were shown to be optically efficient with solar absorptance of 0.90 and infrared emittance of 0.10. Material cost for typical thickness-sensitive selective paint coatings was estimated at 1 cent/sq. ft. Thickness insensitive paints using binary pigment combinations were also developed providing values of solar absorptance equal to 0.90 and infrared emittance equal to 0.30. Coatings of this type are independent of either thickness or substrate surface and offer considerably wider versatility for commercial and residential applications than thickness sensitive coatings. (Author)

A80-34782 * **Glass fiber reinforced concrete for terrestrial photovoltaic arrays.** H. Maxwell (California Institute of Technology, Jet Propulsion Laboratory, Applied Mechanics Section, Pasadena, Calif.). In: New horizons - Materials and processes for the eighties; Proceedings of the Eleventh National Conference, Boston, Mass., November 13-15, 1979. Azusa, Calif., Society for the Advancement of Material and Process Engineering, 1979, p. 463-470.

The use of glass-fiber-reinforced concrete (GRC) as a low-cost structural substrate for terrestrial solar cell arrays is discussed. The properties and fabrication of glass-reinforced concrete structures are considered, and a preliminary design for a laminated solar cell assembly built on a GRC substrate is presented. A total cost for such a photovoltaic module, composed of a Korad acrylic plastic film front cover, an aluminum foil back cover, an ethylene/vinyl acetate pottant/adhesive and a cotton fabric electrical isolator in addition to the GRC substrate, of $9.42/sq m is projected, which is less than the $11.00/sq m cost goal set by the Department of Energy. Preliminary evaluations are concluded to have shown the design capabilities and cost effectiveness of GRC; however, its potential for automated mass production has yet to be evaluated. A.L.W.

A80-34841 **Solar energy utilization.** T. Michels (Londe, Parker, Michels, Inc., St. Louis, Mo.). New York, Van Nostrand Reinhold Co., 1979. 265 p. 285 refs. $18.50.

The book is presented in five chapters: energy conservation, the sun with the earth, solar energy collectors, solar energy storage, and sizing. Energy conservation is discussed with general comments and relative to specific concepts for the residential sector, walls, windows, infiltration, ceilings and attics, floors, and ventilation. Chapters 2 to 4 present the necessary background solar information so that one can understand what has been done and, generally, why. This information is required to establish an informed judgment. Chapter 5 is designed to ensure that basic, preliminary design decisions are made that facilitate design development. S.D.

A80-34847 * **Solar cell array design handbook - The principles and technology of photovoltaic energy conversion.** H. S. Rauschenbach (TRW Defense and Space Systems Group, Redondo Beach, Calif.). Research supported by NASA; Contract No. JPL-953913. New York, Van Nostrand Reinhold Co., 1980. 564 p. 433 refs. $42.50.

Photovoltaic solar cell array design and technology for ground-based and space applications are discussed from the user's point of view. Solar array systems are described, with attention given to array concepts, historical development, applications and performance, and the analysis of array characteristics, circuits, components, performance and reliability is examined. Aspects of solar cell array design considered include the design process, photovoltaic system and detailed array design, and the design of array thermal, radiation shielding and electromagnetic components. Attention is then given to the characteristics and design of the separate components of solar arrays, including the solar cells, optical elements and mechanical elements, and the fabrication, testing, environmental conditions and effects and material properties of arrays and their components are discussed. A.L.W.

A80-34999 * # **Large space structures - Fantasies and facts.** M. F. Card and W. J. Boyer (NASA, Langley Research Center, Hampton, Va.). In: Structures, Structural Dynamics, and Materials Conference, 21st, Seattle, Wash., May 12-14, 1980, Technical Papers. Part 1. New York, American Institute of Aeronautics and Astronautics, Inc., 1980, p. 101-114. 37 refs. (AIAA 80-0674)

A review of large space structures activities from 1973 to 1979 is presented. Long-range studies of space colonies, gigantic solar power stations and projected earth applications revived interest in space activities. Studies suggest opportunities for advanced antenna and platform applications. Matching low-thrust propulsion to large flexible vehicles will be a key technology. Current structures technology investigations include deployable and erectable structures and assembly techniques. Based on orbited structures experience, deployment reliability is a critical issue for deployable structures. For erectable structures, concepts for earth-fabricated and space-fabricated members have been demonstrated. (Author)

A80-35335 **Thin-film solar cells - A unified analysis of their potential.** A. M. Barnett (Delaware, University, Newark, Del.) and A. Rothwarf (Drexel University, Philadelphia, Pa.). *IEEE Transactions on Electron Devices*, vol. ED-27, Apr. 1980, p. 615-630. 43 refs.

The development and deployment of low-cost thin-film solar cells for the direct conversion of sunlight to electricity can be accelerated by the utilization of loss minimization and cost minimization methodologies. The solar cell is separated into its five constituent layers to provide a common basis for the development of these methodologies. Photovoltaic theory, materials science, and loss analysis are combined to develop the loss minimization methodology which can be used to systematically improve and optimize performance of any solar-cell material system. The techniques of the chemical process industry have been applied to achieve cost minimization. The loss- and cost-minimization methodologies have been combined into a generalized procedure for the accelerated development of all low-cost thin-film photovoltaic material systems. (Author)

A80-35336 **Characteristics of MOS solar cells built on /n-type/ In P substrates.** K. P. Pande (Rutgers University, Piscataway, N.J.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 631-634. 20 refs.

An examination is made of the electrical and photovoltaic characteristics of Au-(n-type) InP Schottky-barrier solar cells with and without a thin anodic oxide layer at the interface. Cells built on anodized surface (MOS type) exhibit a reduction of dark current by three orders of magnitude and an increase in the barrier height about (0.80 eV) by 0.30 eV, over conventional Schottky-barrier devices. Current transport in both type of cells is limited by thermionic emission of carriers and an increase in n factor from 1.02 to 1.16 is observed for MOS cells. Under illumination, MOS cells show an increase of open-circuit voltage to 0.46 V without any reduction in the short-circuit current which is obtained as 17.20 mA/sq cm. The efficiency has been found to go up from 3.45 to 6 percent for MOS cells which show an excellent spectral response, almost flat over a large portion of the visible spectrum. (Author)

A80-35337 **The preparation and properties of thin polycrystalline GaAs solar cells with grain boundary edge passivation.** K. P. Pande (Rutgers University, Piscataway, N.J.), D. H. Reep, S. K. Shastry, A. S. Weiner, J. M. Borrego, and S. K. Ghandhi (Rensselaer Polytechnic Institute, Troy, N.Y.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 635-640. 11 refs. Research supported by the Solar Energy Research Institute.

A80-35338 **Deposition and characterization of gallium arsenide films for solar cells applications.** S. S. Chu, T. L. Chu, and Y. T. Lee (Southern Methodist University, Dallas, Tex.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 640-645. 14 refs. Research supported by the Solar Energy Research Institute; Contract No. EG-77-C-01-4042.

Gallium arsenide films have been deposited on tungsten-coated graphite substrates by the reaction of gallium, hydrogen chloride, and arsine in a hydrogen flow. It has been found that the presence of hydrogen chloride in the gallium monochloride-arsenic mixture is essential in obtaining large-area gallium arsenide films with sufficiently good microstructure suitable for photovoltaic devices. Schottky-barrier and MOS structures have been prepared from n-GaAs/n(+)-GaAs films on tungsten/graphite substrates, and their electrical properties investigated. Under AM1 conditions, MOS structures of area 9 sq cm have conversion efficiencies of up to 4.4 percent (without antireflection (AR) coating, would be about 6.7 percent with proper coating), and the conversion efficiencies can be increased to 5 percent (without AR coating, would be about 7.5 percent with proper coating) by using a thin gallium arsenide-phosphide film at the surface of gallium arsenide. (Author)

A80-35339 **The design and fabrication of thin-film CdS/Cu_2S cells of 9.15-percent conversion efficiency.** J. A. Bragagnolo, A. M. Barnett, J. E. Phillips, R. B. Hall, J. D. Meakin (Delaware, University, Newark, Del.), and A. Rothwarf (Drexel University, Philadelphia, Pa.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 645-651. 25 refs.

A80-35340 **The thermal expansion shear separation /TESS/ technique for producing thin self-supporting silicon films for low-cost solar cells.** K. R. Sarma and M. J. Rice, Jr. (Motorola, Inc., Solar Energy Research and Development Dept., Phoenix, Ariz.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 651-656. 11 refs. Contract No. ET-78-C-03-2207.

A new technique - Thermal Expansion Shear Separation (TESS) is described for producing thin self-supporting polycrystalline silicon ribbons using temporary molybdenum substrates. The TESS substrates and separated silicon ribbons were characterized to determine the shear separation mechanism, limits to substrate recyclability, and the quality of the silicon ribbon for efficient solar-cell fabrication. Solar cells fabricated on the silicon ribbons separated from molybdenum substrates have exhibited AM1 conversion efficiencies of up to 11.8 percent after ribbon-to-ribbon (RTR) grain enhancement. By recycling the Mo substrate its cost contribution can be as low as $0.0074/peak watt of electricity produced. (Author)

A80-35341 **Optimization of oxide-semiconductor/base-semiconductor solar cells.** R. Singh (Colorado State University, Fort Collins, Colo.), K. Rajkanan (General Instrument Corp., Hicksville, N.Y.), D. E. Brodie, and J. H. Morgan (Waterloo, University, Waterloo, Ontario, Canada). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 656-662. 53 refs. Research supported by the Natural Sciences and Engineering Research Council of Canada.

In order to get the maximum output from an oxide-semiconductor/base-semiconductor solar cell, one has to incorporate an ultrathin insulating layer so that the resulting configuration is a semiconductor-insulator-semiconductor (SIS) diode. The performance of such SIS diodes is equivalent to a metal-insulator-semiconductor (MIS) solar cell. The key parameters in the optimization are the thickness of the insulating layer and the work function of the oxide semiconductor. Using the existing knowledge of the parameters for a number of oxide semiconductors one would conclude that ITO, ZnO, and SnO_2 are good oxides for the fabrication of SIS solar cells. Some properties of highly conducting and highly transparent ZnO films which have been fabricated are presented. These results suggest that these ZnO films should be useful for fabricating low-cost SIS solar cells. (Author)

A80-35342 **Design considerations for a-Si solar cells.** V. L. Dalal (Delaware, University, Newark, Del.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 662-670. 21 refs. Contract No. ET-79-03-23034.

The design considerations which can be used to develop high-efficiency devices from a-Si are studied. The design analysis takes full advantage of the flexibility in bandgap and other material properties offered by a-Si. Several structures, such as light-trapped cells, graded layer cells, and tandem junction a-Si/a-Si cells are analyzed in detail for collection efficiency and fill factors. It is shown that using these innovative structures, realistic conversion efficiencies exceeding 10 percent can be realized in a-Si in spite of the very low diffusion lengths about 0.1 micron. Technological considerations for achieving such structures are also discussed. (Author)

A80-35343 **Impurity gettering of polycrystalline solar cells fabricated from refined metallurgical-grade silicon.** T. Saitoh, T. Warabisako, E. Kuroda, H. Itoh, S. Matsubara, and T. Tokuyama (Hitachi, Ltd., Central Research Laboratory, Kokubunji, Tokyo, Japan). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 671-676. 19 refs. Research supported by the Ministry of International Trade and Industry.

A80-35345 **Grain boundary effects on the electrical behavior of Al-poly-Si Schottky-barrier solar cells.** C.-M. M. Wu, E. S. Yang, W. Hwang, and H. C. Card (Columbia University, New York, N.Y.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 687-692. 14 refs. NSF Grant No. ENG-78-19426; Contract No. ET-78-R-03-1876.

Schottky-barrier diodes using aluminum on p-type polycrystalline silicon have been fabricated. The contrast of the orientation of neighboring grains is observed after chemical etching of the surface. Comparing the surface morphology of the substrate with the electronic behavior of the Schottky diode, the influence of grain boundaries is identified. The experimental data indicate that recombination centers and traps are introduced, resulting in an increase in recombination current and a reduction of the effective mobility. The conduction mechanisms for the two types of diodes are clearly distinguishable both in the dark and under illumination. (Author)

A80-35346 **Theory of grain-boundary and intragrain recombination currents in polysilicon p-n-junction solar cells.** J. G. Fossum and F. A. Lindholm (Florida, University, Gainesville, Fla.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 692-700. 17 refs. Contract No. EG-77-C-01-4042.

The physics controlling recombination in polysilicon p-n-junction solar cells is described. Analytic models characterizing this recombination, whose parameters can be related directly to experiment, are developed. The analysis reveals that, in general, the description of intragrain and grain-boundary recombination in a polysilicon solar cell requires the solution of a nonlinear three-dimensional boundary-value problem. Cases of practical interest for which this problem is tractable are discussed. The analysis predicts an exp (qV/2kT) dependence (the reciprocal slope factor is exactly two) for carrier recombination at a grain boundary within the junction space-charge region of a nonilluminated, forward-biased cell. This result, and others of the analysis, are consistent with preliminary experimental data. (Author)

A80-35348 **MIS and SIS solar cells.** J. Shewchun, D. Burk, and M. B. Spitzer (Brown University, Providence, R.I.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 705-716. 32 refs.

This review paper shows that MIS (metal-insulator-semiconductor) and SIS (semiconductor-insulator-semiconductor) solar cells are basically one and the same type of device, even though they are usually regarded as being separate and are reported as such. Experimental results on the two most common systems, Al-Si(x)-pSi and ITO-SiO(x)-pSi (ITO designates indium-tin-oxide) are presented to support a model where tunnel current through the insulator or interface is the transport mechanism between the metal or oxide semiconductor (acting as a collecting grid) and the base converting semiconductor. However, the I-V characteristics of the devices are dominated by diffusion current flow in the bulk of the base converting substrate and display the usual Shockley diode equation behavior, in the absence of additional defect current mechanisms. (Author)

A80-35349 **A comparison of majority- and minority-carrier silicon MIS solar cells.** K. K. Ng (Bell Telephone Laboratories, Inc., Murray Hill, N.J.) and H. C. Card (Columbia University, New York, N.Y.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 716-724. 54 refs. Grant No. DAAG-79-C-0079; Contract No. ET-78-R-03-1876.

The photovoltaic properties of majority-carrier and minority-carrier MIS solar cells are investigated as a function of the thickness of the insulating layer. The performance of majority-carrier (Au-SiO2-nSi) and minority-carrier (Al-SiO2-pSi) structures is compared for SiO2 layers prepared under identical oxidation conditions. The short-circuit current densities are found to be suppressed by tunneling through the SiO2 layers for a thickness of 17 A or less, whereas fill factors begin to decrease at even smaller thicknesses. For the majority-carrier cells the effective AM1 conversion efficiency reaches an optimum value of 9-10% as compared to 11-12% for minority-carrier cells. V.L.

A80-35350 **Spray-deposited ITO-silicon SIS heterojunction solar cells.** A. Ashok, S. J. Fonash (Pennsylvania State University, University Park, Pa.), and P. P. Sharma (Fairchild Camera and Instrument Corp., San Jose, Calif.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 725-730. 20 refs.

A systematic study of semiconductor-insulator-semiconductor (SIS) solar cells has been undertaken on n-type silicon using spray-deposited indium-tin-oxide (ITO) for the window layer of the heterostructure. The optical and electrical characteristics of the ITO layer as well as the thickness of the I layer have been optimized. The dark I-V characteristics have also been evaluated to identify the mechanisms of barrier formation and current flow. (Author)

A80-35351 **Detailed modeling of inversion-layer solar cells.** C. E. Norman (Universidad Nacional del Centro del Perú, Huancayo, Peru) and R. E. Thomas (Carleton University, Ottawa, Canada). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 731-737. 22 refs. Research supported by the National Research Council of Canada.

Numerical modeling of inversion-layer (IL) solar cells is described. The steady-state continuity equations are solved for both electrons and holes. A novel integrated recombination technique is applied to accurately find the one-dimensional current flow. Two-dimensional resistive and grid geometry effects are modeled to predict the output current-voltage curve for the cell. Modeled results are in excellent agreement with those measured for a real cell. The model is used to investigate the operation of IL cells and to determine how their performance can be improved through process changes. Practical AM1 efficiencies up to 17 percent are predicted and a theoretical maximum efficiency of 21 percent is calculated. Many of the modeling techniques and results can be applied to other solar-cell structures. (Author)

A80-35352 **High-efficiency silicon minMIS solar cells Design and experimental results.** R. B. Godfrey (Tideland Energy Pty, Ltd., Sydney, Australia) and M. A. Green (New South Wales, University, Kensington, Australia). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 737-745. 36 refs. Research supported by the Australian Department of National Development.

Grating minority-carrier Metal-Insulator-Semiconductor (minMIS) solar cells have been fabricated on a range of Czochralski (CZ) and float-zone (FZ) substrates. The most efficient cells result when the semiconductor surface between the grating lines is inverted. To characterize the measured short-circuit current of grating cells, the concept of an effective minority-carrier collection distance is introduced. Record open-circuit voltages of 655 mV (AM0, 25 C) for 0.1-ohm cm FZ substrates have been achieved. AM1 active area efficiencies of 17.6 percent for polished substrates and 17.4 percent for texture substrates have been measured. (Author)

A80-35353 **Upper limit of thermophotovoltaic solar-energy conversion.** P. Würfel and W. Ruppel (Karlsruhe, Universität, Karlsruhe, West Germany). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 745-750. 5 refs.

The efficiency of the conversion of solar energy into electrical energy by solar cells is improved if the incident solar radiation is first absorbed by an intermediate absorber. The reemitted radiation is directed onto the solar cell. This mode of operation is known as thermophotovoltaic energy conversion. A black-body intermediate absorber is advantageous for small-bandgap solar cells. An even higher improvement is, however, achieved by a selective intermediate absorber with an absorption edge at the energy of the bandgap of the solar cell. Furthermore, if only a narrow spectral interval of radiation near the absorption edge is transmitted through a filter from the intermediate absorber to the solar cell, a maximum efficiency of 65 percent is obtained for a solar cell and absorber with a bandgap of 0.8 eV. (Author)

A80-35354 * **Updating the limit efficiency of silicon solar cells.** M. Wolf (Pennsylvania, University, Philadelphia, Pa.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 751-760. 23 refs. Contract No. JPL-KM-68903.

The limit efficiency of a silicon solar cell is investigated using an analytical approach. The analytical model is based on the solution of a transport equation for minority carriers derived from the Shockley equations. On the basis of the computations, a 'narrow-region' design approach is suggested for both the front and the back regions of the solar cell. The design relies on low effective surface-recombination velocities, a textured front surface, and an optical internally reflecting back surface. With this approach, the limit efficiency is near 25%, and the optimum cell is 50 to 150 microns thick. V.L.

A80-35355 **A study of the conversion efficiency limit of p/+/-i-n/+/ silicon solar cells in concentrated sunlight.** T. I. Chappell (IBM Thomas J. Watson Research Center, Yorktown Heights, N.Y.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 760-766. 30 refs.

The conversion efficiency limit of p(+)-i-n(+) silicon solar cells in concentrated sunlight is explored with numerical simulations of an idealized p(+)-i-n(+) cell having field-induced junctions. Conversion efficiencies greater than 30 percent are calculated for this cell operating in sunlight concentrated 1000 times. The relative importance of bulk and surface recombination in limiting the cell conversion efficiency is illustrated for operation in 1 to 1000 suns. For surface recombination velocities below 100 cm/s, it is shown that bulk recombination losses limit the cell performance rather than recombination losses occuring in the p(+) or n(+) regions. The results show that Auger recombination in the bulk region will limit ultimately the cell conversion efficiency. (Author)

A80-35356 **Unified model of fundamental limitations on the performance of silicon solar cells.** D. Redfield (RCA Laboratories, Princeton, N.J.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 766-771. 17 refs. Research supported by RCA; Contract No. DE-AC01-79ET-23108.

Previous attempts to explain the substantial discrepancy between observed and predicted efficiencies in silicon solar cells are shown to have treated inadequately two important features of typical devices: (1) in the diffused region the electric-field distribution is much wider than generally believed and the field values away from the junction are generally higher; (2) Auger processes in heavily doped regions have a more pervasive impact than has been recognized. By incorporating a suitable modification of the junction model and a consistent treatment of Auger effects into the analysis, a unified model is developed for the principal limitations on the performance of Si solar cells. This model accounts for limits to Isc and Voc arising in either the front or base region. The present analysis reinterprets the violet-cell observations of the effect of the diffusion profile and presents an alternative to the bandgap-narrowing model of the heavy-doping effect on Voc. A new method is developed for evaluating the junction saturation current in heavily doped regions of such solar cells and transistor emitters. (Author)

A80-35358 **A one-dimensional theory of high base resistivity tandem-junction solar cells in low injection.** C. Goradia. *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 777-785. 13 refs.

A one-dimensional theoretical model of the Tandem-Junction Solar Cell with high base resistivity and under low-level injection is derived. The model provides a theoretical basis for a previously published conceptual model and allows for the calculation of the spectral response and other performance parameters, namely, I(sc), V(oc), P(m), FF, and eta, under variation of one or more of the geometrical and material parameters and 1-MeV electron fluence. Sample calculation results of computer simulation of this model are presented. (Author)

A80-35359 **Physics underlying the performance of back-surface-field solar cells.** J. G. Fossum (Florida, University, Gainesville, Fla.), R. D. Nasby (Sandia Laboratories, Albuquerque, N. Mex.), and S. C. Pao (Burroughs Corp., San Diego, Calif.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 785-791. 17 refs. Research supported by the U.S. Department of Energy.

A description of the physics of back-surface-field (BSF) solar cells is presented, in which several key approximations, valid for effective BSF cells, have been used to express the results of the analysis in ways that make them useful in understanding the performance of high-efficiency BSF cells. A silicon p(+)-n-n(+) BSF solar cell, developed in conjunction with the theoretical treatment, provides experimental support for the theory. Measured current-voltage characteristics, together with the analysis, are used to describe the important physical mechanisms that control the performance of the BSF solar cell. For example, the analysis enables the determinations of the carrier lifetimes in the base region and of the effective surface recombination velocity at the low-high junction. (Author)

A80-35360 * **A study of the factors which control the efficiency of ion-implanted silicon solar cells.** E. C. Douglas and R. V. D'Aiello (RCA David Sarnoff Research Center, Princeton, N.J.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 792-802. 18 refs. Research supported by RCA; Contract No. JPL-954868.

The objective of this work was to determine experimentally the ion-implantation parameters and furnace annealing conditions required to produce high-efficiency solar cells. A comprehensive experimental study was conducted in which the optimum ion-implantation parameters were found by a systematic variation of the implant parameters followed by detailed studies of solar-cell devices. Two furnace heat-treatment techniques were found which effectively anneal the implanted layers and at the same time preserve or improve the diffusion length in the bulk silicon. Detailed characteristics of both the junction and bulk properties of solar cells fabricated over the spectrum of implant parameters are discussed. Optimized implant parameters and annealing conditions were found which allow for the fabrication of 14-15-percent (AM1) efficient solar cells. (Author)

A80-35361 * **Tailored emitter, low-resistivity, ion-implanted silicon solar cells.** J. A. Minnucci, A. R. Kirkpatrick, and K. W. Matthei (Spire Corp., Bedford, Mass.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 802-806. 8 refs. Contract No. NAS3-20823.

Open-circuit voltages as high as 0.645 V (AM0, 25 C) have been obtained by a new process developed for low-resistivity silicon. The process utilizes high-dose phosphorus implantation followed by furnace annealing and simultaneous oxide growth. The effect of the thermally grown oxide is a reduction of surface recombination velocity; the oxide also acts as a moderately efficient antireflection (AR) coating. Boron-doped, float-zone silicon with resistivities from 0.1 to 1.0 (omega)(cm) has been processed according to this sequence; results show that the highest open-circuit voltage is obtained with 0.1(omega)(cm) starting material. The effects of Auger recombination and bandgap narrowing caused by high doping concentrations in the n(+)junction region have been investigated by implanting phosphorus over a wide range of dose levels. The effects of emitter-phosphorus concentrations tailored to optimize electric fields in the emitter have also been investigated. (Author)

A80-35362 **Pulsed laser techniques for solar cell processing.** R. T. Young, R. F. Wood, J. Narayan, C. W. White, and W. H. Christie (Oak Ridge National Laboratory, Oak Ridge, Tenn.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 807-815. 23 refs. Contract No. W-7405-eng-26.

Q-switched lasers can serve as energy sources to replace conventional high-temperature furnaces in p-n junction formation in solar cells. They have been used to anneal ion-implantation damage, to produce laser-assisted dopant diffusion, and to regrow doped amorphous layers deposited on single-crystal Si substrates. It has been demonstrated that all these methods are suitable candidates for the processing of high-efficiency Si solar cells. Because they provide ultra-rapid heating and cooling of the near-surface region, these laser techniques can be used for p-n junction formation in thin-film polycrystalline material to prevent enhanced dopant diffusion along grain boundaries and for compound semiconductors, such as GaAs, to avoid the need for surface encapsulation during the annealing of ion implantation damage. Defects in the near-surface region such as the 'dead layer' produced by conventional high-temperature diffusion can be completely removed by laser irradiation. (Author)

A80-35363 **Laser processing in the preparation of silicon solar cells.** J. C. Muller, E. Fogarassy, D. Salles, R. Stuck, and P. M. Siffert (CNRS, Centre de Recherches Nucléaires de Strasbourg, Strasbourg, France). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 815-821. 31 refs.

Besides cheaper techniques of growing the starting silicon, the reduction of manufacturing costs of terrestrial solar cells needs new automated approaches for the preparation of the junction. The possibilities given by laser processing are considered for three different structures: diffused junctions, ion implanted and alloyed diodes prepared from layers of dopants just deposited on surface. (Author)

A80-35364 **Material and device considerations for cascade solar cells.** S. M. Bedair, S. B. Phatak (Research Triangle Institute, Research Triangle Park, N. C.), and J. R. Hauser (North Carolina State University, Raleigh, N.C.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 822-831. 25 refs. Research supported by the U.S. Department of Energy and U.S. Air Force.

The cascade solar cell using two or more junctions has the potential for significantly increasing the efficiency of solar cells beyond that of single-junction cells. Theoretical calculations give AM0, one sun efficiencies of 30 percent or slightly higher. Before these efficiencies can be achieved, many material and device problems must be solved. This paper discusses these major material and device problems as related to the cascade solar cell concept. Also presented are some experimental results on materials and devices which are presently being explored for use in the cascade solar cell. (Author)

A80-35365 **Cascade solar-cell design for high-temperature operation.** M. F. Lamorte and D. H. Abbott (Research Triangle Institute, Research Triangle Park, N.C.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 831-840. 16 refs. Research supported by the U.S. Department of Energy and Sandia Laboratories.

The cascade solar-cell optimization design procedure developed using computer modeling to obtain a cell design that results in maximum conversion efficiency under a given set of operating conditions has been extended. Earlier work reported optimized designs for operation at 300 K, AM0, and AM1.5. In this work, optimized designs are determined for a two-junction, monolithic, cascade solar cell for operation at eight temperatures in the range from 300 to 475 K, AM1.0, and one million cm/sec surface-recombination velocity. The device performance characteristics for each of the eight optimized designs are studied over the 300 to 600 K operating-temperature range. (Author)

A80-35366 **A new technology to fabricate high-efficiency silicon concentrator solar cells.** M. Finetti, P. Ostoja, S. Solmi, and G. Soncini (CNR, Laboratorio LAMEL, Bologna, Italy). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 841-843. 9 refs. Research supported by the Consiglio Nazionale delle Ricerche.

A new procedure to fabricate silicon concentrator solar cells based on phosphorus diffusion into the semiconductor through a thin polysilicon film is described. The polysilicon reduces the high-diffusivity tail of the conventional phosphorus-doping profile and avoids interdiffusion phenomena at the metal-semiconductor interface during sintering, thus allowing Al to be used as front grid contact. Outdoor testing of 2 x 2-sq cm solar cells computer-designed to operate at 50 suns showed conversion efficiencies higher than 17%. (Author)

A80-35367 **'Band readjustment' effect with applications to solar cells.** S.-C. Lee and G. L. Pearson (Stanford University, Stanford, Calif.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 844-850. 16 refs. NSF Grants No. DMR-76-84373; No. DMR-79-01661.

Double-layer Au-(n)AlGaAs-(n)GaAs Schottky-barrier devices were examined. The interaction of the closely space Au-AlGaAs Schottky barrier and the AlGaAs-GaAs heterojunction was found to produce a novel phenomenon termed 'band readjustment.' This effect is applied to the design of high-efficiency solar cells. Three criteria are presented by which the open-circuit voltage and the short-circuit current of the solar cells can be improved separately. Current transport through the potential barrier, located within the heterojunction depletion region, is also discussed. (Author)

A80-35368 **Barrier height enhancement in heterojunction Schottky-barrier solar cells.** H.-T. Yang, Y.-D. Shen, D. Edwall, D. L. Miller, and J. S. Harris, Jr. (Rockwell International Corp., Electronics Research Center, Thousand Oaks, Calif.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 851-856. 11 refs. Research supported by the U. S. Department of Energy.

A80-35369 * **Deep-level defects, recombination mechanisms, and their correlation to the performance of low-energy proton-irradiated AlGaAs-GaAs solar cells.** S. S. Li, W.-L. Wang, P.-W. Lai (Florida, University, Gainesville, Fla.), R. Y. Loo, G. S. Kamath, and R. C. Knechtli (Hughes Research Laboratories, Malibu, Calif.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 857-864. 19 refs. Grant No. NsG-1425.

A80-35370 # **Laser scanning of solar cells for the display of cell operating characteristics and detection of cell defects.** D. E. Sawyer (Chevron Research Co., Richmond, Calif.) and H. K. Kessler (National Bureau of Standards, Electron Devices Div., Washington, D.C.). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 864-872. 9 refs. Contract No. EA-77-A-6010.

A new optical scanning technique was developed to map solar-cell operation over the cell area and reveal several types of cell defects. The technique, which makes use of the distributed nature of the cell, an intrinsic property shared by all cells, allows one to detect potentially harmful cracks with a sensitivity greater than any other optical technique reported previously, and it permits one, for the first time, to locate regions of poor metallization. It has also been used to determine efficacy of cell design and to study cell degradation processes. The new scanning technique employs forward biasing of the cell during scanning. Biasing may be achieved through the use of a steady-state light source, or for cells made using conventional semiconductor materials, e.g., silicon and gallium arsenide, the use of an external current source. The scanning technique is nondamaging; it requires no electrical contacts to the cell other than those already present, and it can be used on encapsulated or unencapsulated cells in almost any laboratory or test environment. (Author)

A80-35372 **Upper limit for the conversion of solar energy.** W. Ruppel and P. Würfel (Karlsruhe, Universität, Karlsruhe, West Germany). *IEEE Transactions on Electron Devices,* vol. ED-27, Apr. 1980, p. 877-882. 8 refs.

A semiconductor in the solar radiation field acts as a thermal electronic engine. It converts absorbed radiation heat into chemical energy of the excited electron-hole gas. In flow equilibrium, a homogeneous semiconductor gives off this chemical energy by radiative recombination to the surroundings. If provision is made, as by a p-n junction, to divert the excited electrons and holes, before they recombine, from their point of generation, their chemical energy may be converted into electrical energy. The ratio of this chemical energy current, which constitutes an upper limit for the obtainable electrical energy current, to the absorbed heat current is computed as a function of the value of the bandgap of the semiconductor. Under the assumption that the absorptivity of the electron-hole system of the semiconductor is unity for photon energies larger than the bandgap and zero for smaller photon energies, the conversion efficiency for unfocussed sunlight has a maximum of 30 percent for a bandgap of 1.3 eV. (Author)

A80-35385 **Effect of titanium, copper and iron on silicon solar cells.** A. Rohatgi, J. R. Davis, R. H. Hopkins, P. Rai-Choudhury, P. G. McMullin (Westinghouse Research and Development Center, Pittsburgh, Pa.), and J. R. McCormick (Hemlock Semiconductor Corp., Hemlock, Mich.). *Solid-State Electronics,* vol. 23, May 1980, p. 415-419, 421, 422. 19 refs. Research sponsored by the U.S. Department of Energy.

The effect of Ti, Cu, and Fe on silicon solar cells has been investigated. Ti severely degrades cell performance above a concentration of 10 to the 11th per cu cm. A higher Ti level results in a 63% loss in cell performance and more than an order of magnitude

reduction in carrier lifetime; Ti produces two deep levels in Si at Ev + 0.30 eV and Ec - 0.27 eV. Copper, at concentrations below 10 to the 16th per cu cm, has negligible effect on cell performance and carrier lifetime. Fe begins to damage the cell performance above a concentration of 2 x 10 to the 14th per cu cm; at the concentration of 1.7 x 10 to the 15th per cu cm it causes a 46% loss in cell efficiency and about an order of magnitude reduction in lifetime.

A80-35467 **Improvement of polycrystalline silicon solar cells with grain-boundary hydrogenation techniques.** C. H. Seager, D. S. Ginley (Sandia Laboratories, Albuquerque, N. Mex.), and J. D. Zook (Honeywell Corporate Technology Center, Bloomington, Minn.). *Applied Physics Letters*, vol. 36, May 15, 1980, p. 831-833. 12 refs. Contract No. DE-AC04-76DP-00789.

Electron-beam-induced-current- and dark-current-voltage measurements have been made on p/n photovoltaic cells fabricated from polycrystalline silicon. These data have demonstrated that grain-boundary hydrogenation greatly reduces grain-boundary minority carrier recombination and improves diode current-voltage characteristics.
(Author)

A80-35474 **Properties of photoelectrochemical cells with a chemically sprayed photoanode.** C.-H. J. Liu and J. H. Wang (New York, State University, Buffalo, N.Y.). *Applied Physics Letters*, vol. 36, May 15, 1980, p. 852, 853. 7 refs. NSF Grant No. PCM-77-5502.

Chemically sprayed CdSe thin films were used as photoanodes in photoelectrochemical solar cells. The power characteristics of the cell ITO/CdSe/Na2S-S-NaOH/Pt was measured. The energy conversion efficiency of this cell was 7.8% at 640 nm and 5.2% under 50-mW/sq cm white light.
(Author)

A80-35480 **Photovoltaic Material and Device Measurements Workshop, Arlington, Va., June 11-13, 1979, Proceedings. Part 1.** Workshop sponsored by the U.S. Department of Energy and Solar Energy Research Institute. Edited by D. E. Sawyer (National Bureau of Standards, Electron Devices Div., Washington, D.C.). *Solar Cells*, vol. 1, Feb. 1980. 123 p.

A collection of papers on solar cells is presented regarding their science, technology, applications and economics. Attention is given to polycrystalline materials and the associated thin-film solar-cells. Topics of interest include perspective on photovoltaic material and device measurements, new techniques for the study and control of grain boundary effects, grain size and its influence on efficiency in polycrystalline GaAs solar cells, scanning light spot analysis of faulty solar cells, and effective diffusion length in polycrystalline semiconductor thin films.
S.D.

A80-35482 **Electron-beam-induced current characterization of polycrystalline silicon solar cells.** J. I. Hanoka (Mobil Tyco Solar Energy Corp., Waltham, Mass.). *(Photovoltaic Material and Device Measurements Workshop, Arlington, Va., June 11-13, 1979.) Solar Cells*, vol. 1, Feb. 1980, p. 123-139. 15 refs.

The use of the electron-beam-induced current mode of the scanning electron microscope for recombination studies in polycrystalline silicon solar cells is reviewed. The potential and some limits of the technique are discussed. Quantitative studies and representative results for edge-defined film-fed growth (EFG) ribbon solar cells and other kinds of silicon solar cells are presented and compared. Questions concerning recombination by impurities and defects such as dislocations, grain boundaries and SiC particles and the interactive effects of all these are discussed at some length.
(Author)

A80-35486 **The Zn/x/Cd/1-x/S/Cu2S heterojunction - Review and recent measurements.** L. C. Burton (Virginia Polytechnic Institute and State University, Blacksburg, Va.). *(Photovoltaic Material and Device Measurements Workshop, Arlington, Va., June 11-13, 1979.) Solar Cells*, vol. 1, Feb. 1980, p. 159-174. 36 refs.

Development of the Zn(x)Cd(1-x)S/Cu2S thin-film solar cell is reviewed. Several possible mechanisms that could account for differences between solar cells made from Zn(x)Cd(1-x)S and CdS are described. It is found that there is an accumulation of zinc under the Zn(x)Cd(1-x)S/Cu2S interface for junctions formed by ion exchange. It is proposed that this zinc-rich region is inhomogeneous when the Cu2S is formed in aqueous solution, resulting in current blocking behavior over a fraction of the cell area. The open-circuit voltage of these cells is controlled by the nonblocking regions of lower barrier height. Composition measurements of the Zn(x)Cd(1-x)S/Cu2S interfacial region are related to a modified model which can account for some of the properties of the junction that are not well understood.
S.D.

A80-35488 **Etching of CdS films.** F. A. Shirland (Westinghouse Research and Development Center, Pittsburgh, Pa.). *(Photovoltaic Material and Device Measurements Workshop, Arlington, Va., June 11-13, 1979.) Solar Cells*, vol. 1, Feb. 1980, p. 183-197. 13 refs. Research supported by the Westinghouse Electric Corp.; Contract No. EG-77-C-03-1577.

In the processing of front-wall CdS thin film solar cells the films are given a strong HCl etch prior to formation of the Cu2S layer. This results in substantially higher cell outputs. Preliminary data are reported of a study of how HCl attacks CdS films and how the attack is affected by changes in the etching parameters, particularly time, temperature and acid concentration. Etched CdS films and replicas of etched CdS film surfaces were examined by scanning electron microscopy (SEM) and selected SEM photographs are presented to illustrate the effects. It is shown that etching textures the front surface of the CdS films and forms deep pits into the films. Pitting is the factor which varies most widely on differently processed films and which seems to correlate with the output level achievable from cells made from such films. The underlying substrate seems to be the factor having most influence on the etch pits.

A80-35490 **Photoconductivity as a probe of polycrystalline films.** R. H. Bube (Stanford University, Stanford, Calif.). *Solar Cells*, vol. 1, Feb. 1980, p. 209-212. 9 refs. Abridged.

The paper shows how photoconductivity measurements can provide information about the properties of polycrystalline films through a variety of direct and indirect effects. The temperature dependence of the photoconductivity decay, or its associated phenomenon of thermally stimulated conductivity, may be used to obtain information and to evaluate parameters of imperfections. Measurements that allow separation of density and mobility effects are discussed. A model proposed by Petritz (1956) provides a useful framework within which to consider barrier modulation effects with photoexcitation. The discussion is illustrated by two specific examples involving polycrystalline films of CdS and PbS.

A80-35492 **The design and utilization of a microprocessor-controlled absolute spectral response system.** L. M. Kilgren, N. C. Wyeth, and W. E. Devaney (Delaware, University, Newark, Del.). *(Photovoltaic Material and Device Measurements Workshop, Arlington, Va., June 11-13, 1979.) Solar Cells*, vol. 1, Feb. 1980, p. 225-231. 5 refs.

A fully automated spectral response system for solar cells has been developed and utilized in the study of CdS/Cu2S and Zn3P2 solar cells. Four types of measurements were carried out: (1) spectral response under bias light conditions to study the effects of light intensity and spectral content on cell response; (2) spectral response on thick absorbing layers to determine their diffusion length and absorption coefficient; (3) spectral response beyond the intrinsic absorption region to determine the internal photoemission barrier height; (4) the response at a given wavelength as a function of the voltage bias and light bias on the cell to determine the voltage dependence of the light-generated current and its effect upon the fill factor of the cell.

A80-35500 * # **Preliminary study of a solar selective coating system using black cobalt oxide for high temperature solar collectors.** G. McDonald (NASA, Lewis Research Center, Cleveland, Ohio). *American Vacuum Society, International Conference on Metallurgical Coatings, San Diego, Calif., Apr. 21-25, 1980, Paper.* 14 p. 8 refs.

Black cobalt oxide coatings were deposited on thin layers of silver or gold which had been deposited on oxidized stainless steel substrates. The reflectance properties of these coatings were measured at various thicknesses of cobalt oxide for integrated values of the solar and infrared spectrum. The values of absorptance and emittance were calculated from the measured reflectance values before and after exposure in air at 650 C for 1000 hours. Also, these cobalt oxide/noble metal/oxide diffusion barrier coatings have absorptances greater than 0.90 and emittances of approximately 0.20 even after about 1000 hours at 650 C. (Author)

A80-35838 **Heat losses of a static low-concentration solar collector.** F. Grasso, G. Guerriera, F. Musumeci, and A. Triglia (Catania, Università; Centro Siciliano di Fisica Nucleare e Struttura della Materia, Catania, Italy). *Nuovo Cimento C, Serie 1,* vol. 2C, Sept.-Oct. 1979, p. 537-542. 11 refs.

A static low-concentration collector has been designed and manufactured. The collector geometry reduces the thermal convection, and the selective coating of the absorber reduces radiative losses. The total heat losses have been measured as a function of temperature difference between absorber and ambient up to 150 C. A typical loss figure is 160 W/sq m for a temperature difference of 80 C. B.J.

A80-36052 **An assessment of solar hot water heating in the Washington, D.C. area - Implications for local utilities.** M. W. Stuart (George Washington University, Washington, D.C.). *Energy* (UK), vol. 5, Apr. 1980, p. 331-342. 19 refs.

A survey of residential solar hot water heating in the Washington, D.C. area is presented with estimates of the total solar energy contribution per year. These estimates are examined in relation to a local utility's peak-load curves to determine the impact of a substantial increase in solar domestic hot water use over the next 20 yr in the area of utility management. The results indicate that a 10% market penetration of solar water heaters would have no detrimental effect on the utility's peak-load profile and could save several million dollars in new plant construction costs. A80-36121 **A circuit for measurement of the fill factor of solar cells.** G. Popkirov (B'lgarska Akademiia na Naukite, Tsentralna Laboratoriia po Sl'ncheva Energiia i Novi Energiini Iztochnitsi, Sofia, Bulgaria). *Journal of Physics E - Scientific Instruments,* vol. 13, May 1980, p. 496.

A simple, accurate electronic circuit for the direct measurement of the fill factor of solid-state solar cells is presented. The circuit provides for solar cell operation in the short circuit, open circuit and applied voltage modes, and fill factor is determined from the ratio of the product of the maximum applied current and voltage to the product of the short-circuit current and open-circuit voltage. Depending on component precision, accuracies of 1% or better can be obtained. A.L.W.

A80-36242 **Observation of an active photoinductive component in high intensity solar cells.** F. C. Jain (Connecticut, University, Storrs, Conn.). *Journal of Applied Physics,* vol. 51, May 1980, p. 2685-2692. 25 refs.

Observations of a photoinductive reactance in Si and GaAs p-n junction diodes under photon flux densities above a certain threshold value are discussed. Results of experimental measurements of the capacitance and inductance of a n(+)-p Si diode, a p(+)p-n Si diode, two n(+)n-pp(+) Si diodes and a p(+)-n GaAs diode as a function of photon flux density expressed in terms of diode short circuit current are presented for virtually dc open-circuited solar cell conditions, and a crossover to inductive behavior at threshold photon flux densities from 2.75 to 21 times as intense as solar radiation at air mass 2, depending on diode structure and wavelength of incident light, is demonstrated. Theoretical considerations are presented which show that an explicit inductive component originates in the conductivity-modulated section of the base region when the photogenerated minority carrier concentration becomes comparable to that of the majority carriers. Theoretical computations of reactance characteristics on the basis of this model are then shown to be in agreement with experimental results. A.L.W.

A80-36245 **An analytical model of a backwall MIS Schottky barrier solar cell.** B. L. Krauter and R. J. Soukup (Nebraska, University, Lincoln, Neb.). *Journal of Applied Physics,* vol. 51, May 1980, p. 2914-2919. 25 refs.

The paper analyzes various factors which determine the performance of a backwall MIS Schottky barrier solar cell, including the short-circuit current density, the MIS Schottky barrier junction behavior, and resistive losses. The study concentrates on the Al-Al2O3-GaAs-metal structure. It is shown that the maximum current occurs when the GaAs thickness is in the 500 A to 1.2 microns range, depending on the minority carrier diffusion and surface recombination velocity. An optimum open circuit voltage is achieved for an Al2O3 thickness of 15 A. Conversion efficiencies as high as 6% are predicted for this structure despite rather poor electrical properties of the GaAs films. V.L.

A80-36587 **Processes degrading the electrophysical characteristics of photoconverters in long-term operation.** G. S. Daletskii, I. V. Karpenko, M. M. Koltun, V. A. Karpukhin, Iu. N. Ksendzatskaia, V. M. Kuznetsov, S. V. Riabikov, and R. N. Tykvenko (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Istochnikov Toka, Moscow, USSR). *(Geliotekhnika,* vol. 15, no. 5, 1979, p. 7-12.) *Applied Solar Energy,* vol. 15, no. 5, 1979, p. 1-5. 8 refs. Translation.

Causes of the degradation of the photoelectric characteristics of silicon and thin-film photoconverters during long-term operation are considered. Laboratory tests in high-vacuum conditions under a simulator have shown that a transparent bonding compound based on low molecular weight silicone rubber has greater resistance to the ultraviolet radiation of the sun and to nuclear particle irradiation than epoxy cements, and maintains its elasticity at temperatures down to -180 C. The stability of cells in which polycrystalline films of n-type cadmium sulfide and telluride form the base region of the solar cells was investigated; the potential barrier is formed at Cu2Te-CdTe and Cu2S-CdS heterojunctions, where a p-type layer of copper chalcogenide is produced by a chemical substitution reaction (Cu2S) or by discrete deposition in vacuum (Cu2Te). It is concluded that silicon single-crystal solar cells using the system of optical coatings developed and thin-film solar cells based on A2B6 compounds may be used for space and ground applications. A.T.

A80-36588 **Investigation into the influence of high solar-excitation level on optimal parameters of P-Al/x/Ga/1-x/As-P-GaAs-n-GaAs heterophotocells.** S. A. Azimov, M. M. Mirzabaev, K. Rasulov, A. Iskanderov, and M. Tursunov (Akademiia Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR). *(Geliotekhnika,* vol. 15, no. 5, 1979, p. 13-16.) *Applied Solar Energy,* vol. 15, no. 5, 1979, p. 6-9. 6 refs. Translation.

The behavior of solar cells using n-GaAs-P-GaAs-P-Al(x)Ga(1-x)As systems with an intermediate diffused layer is studied for high solar-radiation conditions. It has been shown by Alferov (1977, 1978) and Agaev et al. (1978) that heterophotoconvertors (HPC) based on GaAs-AlGaAs with an intermediate radiation conversion and an intermediate conversion layer, and graded heterostructures with forbidden gap widths that expand toward the irradiated surface can operate at high illumination and temperature levels. This study made it possible to determine the method by which the basic HPC energy parameters depend on illumination, temperature and structural characteristics of the contacts. The operating efficiency of the HPC at elevated illumination levels depends on the spreading resistance of the upper layer; if this is reduced through selection of an optimal contact structure, the output power and efficiency of the cells will be increased. A.T.

A80-36591 Investigation into operating characteristics of solar batteries using Cu/2-x/S-CdS ceramic photoconverters. A. I. Marchenko, I. I. Stepko, G. A. Fedorus, and G. I. Sheremetova (Akademiia Nauk Ukrains'koi RSR, Institut Napivprovidnikiv, Kiev, Ukrainian SSR). *(Geliotekhnika,* vol. 15, no. 5, 1979, p. 34-37.) *Applied Solar Energy,* vol. 15, no. 5, 1979, p. 27-30. 7 refs. Translation.

The development of Cu(2-x)-CdS heterogeneous photoconverters with parameters which appear promising for solar batteries is presented. Typical specimens of ceramic solar cells (SC) using CdS for solar radiation power of 75 mW/sq cm and AMI conditions were used, with the solar batteries (SB) having 10, 20, 40, and 80 individual photoconverters, each with an area of 3 sq cm. The devices were installed on a flat micarta board with various types of leads, making it possible to change the interconnection of individual modules. Investigation of the operating characteristics of the SB under laboratory and natural conditions demonstrated the possibility of their utilization as independent power sources; it was also established that additional improvement is required in the construction of the SB and its protection against the environment, since the use of varnish as the protective coating is inadequate because it is affected by moisture. A.T.

A80-36592 Evaluating the performance of reflecting concentrating systems. R. A. Zakhidov (Akademiia Nauk Uzbekskoi SSR, Tsentral'noe Proektno-Konstruktorskoe i Tekhnologicheskoe Biuro Nauchnogo Priborostroeniia, Uzbek SSR). *(Geliotekhnika,* vol. 15, no. 5, 1979, p. 38-42.) *Applied Solar Energy,* vol. 15, no. 5, 1979, p. 31-36. Translation.

Methods for evaluating the performance of mirror elements of reflecting concentrators are described. A system for the inspection of reflecting surfaces combining several methods of determining the geometric-optic characteristics of the reflectors was developed; the system consists of devices for local and integral inspection of geometric accuracy and reflectance of the surfaces. The contact (profilometry) and contactless (optical) methods are local; the calorimeter, thermoelectric, and photoelectric methods are integral. The profilometer inspection-measurement setup includes a coordinate stand and a micrometer measurement head with an interchangeable dial-type indicator; the optical unit includes a coordinate illuminator with a laser; the unit for investigating the shape of reflecting-surface elements by moiré method uses the 'mechanical' interference of a reference grating and a grating pattern reflected from the mirror surface. Finally, the integral-inspection devices and installations, and the unit for determining the reflectance of concentrating surfaces are discussed, noting possibilities for future automation. A.T.

A80-36593 Obtaining film materials with solar furnaces. I. N. Frantsevich, V. S. Dverniakov, I. E. Kasich-Pilipenko, V. L. Tikush, G. V. Rusakov, L. A. Gaevskaia, L. R. Shaginian, and R. S. Biriukova (Akademiia Nauk Ukrainskoi SSR, Institut Problem Materialovedeniia, Kiev, Ukrainian SSR). *(Geliotekhnika,* vol. 15, no. 5, 1979, p. 43-47.) *Applied Solar Energy,* vol. 15, no. 5, 1979, p. 37-40. 8 refs. Translation.

It is shown that it is possible to produce films of various materials by means of solar energy. A single-crystal type KE silicon was used as a substrate, and coatings of silicon monoxide, silicon, and aluminum were applied. The electron diffraction studies showed that silicon monoxide applied to single-crystal silicon has an amorphous structure, aluminum films deposited on these substrates have a polycrystalline textured structure, and silicon layers on the same substrate are polycrystalline with inclusions of single crystal blocks. It is concluded that solar energy films in a wide range of thicknesses can be produced and used as dielectrics, semiconductors, and metals. A.T.

A80-36594 Electrolytic coatings of 'black chromium' type for solar collectors. G. Ia. Umarov, U. Kh. Gaziev, Sh. A. Faiziev, V. V. Li, and V. S. Trukhov (Akademiia Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR). *(Geliotekhnika,* vol. 15, no. 5, 1979, p. 50-55.) *Applied Solar Energy,* vol. 15, no. 5, 1979, p. 44-48. 11 refs. Translation.

Results are reported for investigations of a 'black chromium' type electrolytic coating. The 'black chromium' deposits obtained on copper and nickel substrates have good optical characteristics: a solar-radiation absorptance of 0.9-0.93 and an emissivity of 0.1. (Author)

A80-36596 Technical-economic validation for selection of solar resources as energy sources. R. B. Salieva (Tashkentskii Elektrotekhnicheskii Institut Sviazi, Tashkent, Uzbek SSR). *(Geliotekhnika,* vol. 15, no. 5, 1979, p. 74-77.) *Applied Solar Energy,* vol. 15, no. 5, 1979, p. 67-70. 5 refs. Translation.

The paper presents calculations for technical-economic validation of the choice of solar resources as energy sources using mathematical-economic models for calculation stages. The economic justification of the energy base for construction of solar-power and wind-power systems is especially important for areas with scarcity of water and energy; this applies to the deserts and arid steppes of Central Asia and Kazakhstan. The basic energy technical-economic considerations are the reduction of the variants compared to an identical energy effect, and the evaluation of the one-time and annual expenditures for the variants are compared. The solar and wind plants for which the total output over the period of utilization would make it possible to meet the total demand for the facilities serviced with the required insurance standards is considered; this is followed by the calculation for regulation of output of the solar and wind plants. A.T.

A80-36597 Development and investigation of solar thermoelectric generator using a tubular module. Ch. Agabaev, G. A. Gukhman, N. V. Kolomoets, M. A. Markman, N. G. Milevskaia, and N. Rozyev (Akademiia Nauk Turkmenskoi SSR, Fiziko-Tekhnicheskii Institut, Ashkhabad, Turkmen SSR). *(Geliotekhnika,* vol. 15, no. 5, 1979, p. 82, 83.) *Applied Solar Energy,* vol. 15, no. 5, 1979, p. 77-79. Translation.

A technical-economic comparison was made for the effectiveness of using solar desalination plants (SDP) and water lines in a pressure water-supply system. It is shown that in a desert-pasture water supply, solar desalination plants are more economical than water lines. Thus, utilization of SDP in the area of operation of the Erbent, Turkmenia water line produced a 55% reduction in capital investment for construction of a water-supply system. A.T.

A80-36598 Evaluating certain ways of storing solar energy. A. V. Sheklein. *(Geliotekhnika,* vol. 15, no. 5, 1979, p. 92-96.) *Applied Solar Energy,* vol. 15, no. 5, 1979, p. 87-91. 9 refs. Translation.

An evaluation of large-scale utilization solar energy storage methods is presented. The photosynthesis method can be embodied in growing of algae with subsequent production of gas, liquid, or solid fuel by pyrolysis or hydrogasification; the photoelectric method with generation of electric power is promising for large-scale energy systems; and the thermal method may be used in the production of electric power by means of thermodynamic cycles and power generation by thermoelements. The photochemical reaction methods, including fission, synthesis, or isomerization can be used for storage, although it has a drawback of the relatively low quantum yield of many reactions and low storage capacity. It is concluded that photochemical storage of radiant energy, especially when using photolysis of water and production of a nearly ideal fuel, hydrogen, is fully competitive with other types of energy accumulation. A.T.

A80-36821 **Energy balance of solar thermoelectric generator.** V. A. Baum, C. Agabaev, and N. Ovezsakhatov (Akademiia Nauk Turkmenskoi SSR, Fiziko-Tekhnicheskii Institut, Ashkhabad,

The paper develops a computational method for determining the maximum efficiency of a solar thermoelectric generator. It is shown that the efficiency of a solar thermoelectric system with natural cooling and without radiation concentration is less than 1%. B.J.

A80-36822 **Multielement silicon photoelectric converters for investigating the optical and energy characteristics of solar and radiant energy concentrators.** A. Ia. Gliberman, I. I. Kovalev, V. I. Krasilovskii, and L. M. Medvedeva (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Istochnikov Toka, Moscow, USSR). *(Geliotekhnika,* no. 3, 1979, p. 7-10.) *Applied Solar Energy,* vol. 15, no. 3, 1979, p. 5-8. 5 refs. Translation.

Translation.

A80-36825 **Calculation principles for heliostat fields of solar power plants.** R. A. Zakhidov (Akademiia Nauk Uzbekskoi SSR, Tsentral'noe Proektno-Konstruktorskoe i Tekhnologicheskoe Biuro Nauchnogo Priborostroeniia, Uzbek SSR). *(Geliotekhnika,* no. 3, 1979, p. 22-27.) *Applied Solar Energy,* vol. 15, no. 3, 1979, p. 20-25. 14 refs. Translation.

The paper attempts to develop a general computational model for solar-tower concentrating systems. The model takes into account a number of factors, including the solar radiation characteristics, the arrangement of heliostats, the shape of mirrors, collector configurations, etc. Formulas are obtained for calculating insolation for collectors and heliostats of arbitrary configuration. B.J.

A80-36826 **Heating characteristics of concentrator/receiver system employing a selective absorbing surface.** O. I. Kudrin and A. Abdurakhmanov. *(Geliotekhnika,* no. 3, 1979, p. 28-33.) *Applied Solar Energy,* vol. 15, no. 3, 1979, p. 26-31. 5 refs. Translation.

A80-36829 **Thermodynamic analysis of solar-energy thermal-power converters operating together with photoelectric converters.** B. A. Bazarov and B. D. Tairov (Akademiia Nauk Turkmenskoi SSR, Fiziko-Tekhnicheskii Institut, Ashkhabad, Turkmen SSR). *(Geliotekhnika,* no. 4, 1979, p. 10-13.) *Applied Solar Energy,* vol. 15, no. 4, 1979, p. 8-11. Translation.

The paper examines the operation of a solar energy system combining solar cells and a thermomechanical converter based on a Freon turbine with power output up to 10 kW. The basic thermodynamic and design parameters of such a system are investigated and compared to that of other Freon and water-vapor systems. B.J.

A80-36830 **High-voltage multijunction solar-energy photoelectric converter.** V. G. Doroshenko, M. B. Zaks, V. A. Kalash'ian, V. N. Lozovskii, Iu. V. Skokov, and O. I. Solodukha. *(Geliotekhnika,* no. 4, 1979, p. 14-18.) *Applied Solar Energy,* vol. 15, no. 4, 1979, p. 12-15. Translation.

The paper examines the photoelectric properties of single-crystal silicon high-voltage solar cells with bulk arrangement of p-n junctions, obtained through gradient zone recrystallization. The temperature dependence of the basic properties of such cells was studied in the 100-400-K range, and volt-ampere characteristics at high illumination intensities were examined. B.J.

A80-36832 **Evaluating the mass of current conductors and required voltage level for large orbiting solar batteries.** A. Kh. Cherkasskii (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Istochnikov Toka, Moscow, USSR). *(Geliotekhnika,* no. 4, 1979, p. 25-29.) *Applied Solar Energy,* vol. 15, no. 4, 1979, p. 21-25. Translation.

Estimates are obtained in a dimensionless form for the necessary mass of conductors for a large satellite solar array. In addition, necessary voltage levels at array output terminals are estimated as a function of area. B.J.

A80-36833 **Development and application of high-power lightpipes.** V. S. Dverniakov, V. V. Pasichnyi, I. E. Kasich-Pilipenko, T. V. Eremina, D. K. Sattarov, M. I. Murav'eva, and I. E. Galant (Akademiia Nauk Ukrainskoi SSR, Institut Problem Materialovedeniia, Kiev, Ukrainian SSR). *(Geliotekhnika,* no. 4, 1979, p. 36-39.) *Applied Solar Energy,* vol. 15, no. 4, 1979, p. 32-35. 6 refs. Translation.

The paper examines the possibility of using optical waveguides to transmit high-flux solar radiation in solar-furnace type systems. The waveguides will be used to deliver concentrated solar radiation for such manufacturing processes as zone melting, welding, and heat treatment. Design parameters and materials selection for such waveguides are considered. B.J.

A80-36834 **Selective radiation absorption as a means of improving efficiency of a high-temperature solar power plant.** O. I. Kudrin, A. Abdurakhmanov, and I. A. Aggeeva. *(Geliotekhnika,* no. 4, 1979, p. 40-48.) *Applied Solar Energy,* vol. 15, no. 4, 1979, p. 36-43. Translation.

The use of selectively absorbing surfaces to increase the efficiency of high-temperature solar energy systems is examined. Particular attention is given to the application of selective absorption to: (1) a high-temperature Stirling-engine system and (2) a solar thermal rocket engine. B.J.

A80-36898 **Screen printed thin film CdS/CdTe solar cell.** N. Nakayama, H. Matsumoto, A. Nakano, S. Ikegami (Matsushita Electric Industrial Co., Ltd., Wireless Research Laboratory, Osaka, Japan), H. Uda, and T. Yamashita (Matsushita Electric Industrial Co., Ltd., Materials Research Laboratory, Moriguchi, Osaka, Japan). *Japanese Journal of Applied Physics,* vol. 19, Apr. 1980, p. 703-712. 14 refs. Research supported by the Agency of Industrial Science and Technology.

A screen-printed thin-film solar cell with a CdS/CdTe junction is considered. Microstructures of the cell near the boundary of CdS and CdTe films are discussed along with the photovoltaic properties of the cell. In the most efficient cell, the peak of electron voltaic effect exists within 1 micron of the CdTe side from the CdS/CdTe metallurgical boundary. A 1-watt solar cell module consisting of 25 elements with a module efficiency of 2.9% is described. V.T.

A80-36933 * **Forward- and reverse-bias tunneling effects in n/+/p silicon solar cells.** G. F. J. Garlick (Southern California, University, Los Angeles, Calif.) and A. H. Kachare (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). *Applied Physics Letters,* vol. 36, June 1, 1980, p. 911-913. 16 refs. Research sponsored by the U.S. Department of Energy.

Excess currents due to field-assisted tunneling in both forward and reverse bias directions have been observed in n(+)-p silicon solar cells. These currents arise from the effect of conducting paths produced in the depletion layer by n(+) diffusion and cell processing. Forward-bias data indicate a small potential barrier with height of 0.04 eV at the n(+) end of conducting paths. Under reverse bias, excess tunneling currents involve a potential barrier at the p end of the conducting paths, the longer paths being associated with smaller barrier heights and dominating at the lower temperatures. Low-reverse-bias data give energy levels of 0.11 eV for lower temperatures (253-293 K) and 0.35 eV for higher temperatures (293-380 K). A model is suggested to explain the results. (Author)

A80-36937 **Charge collection and spectral response of amorphous-silicon solar cells.** R. O. Bell (Mobil Tyco Solar Energy Corp., Waltham, Mass.). *Applied Physics Letters,* vol. 36, June 1, 1980, p. 936-938. Contract No. DE-AC03-79ET-20460.

Current generation in hydrogenated amorphous silicon, a-Si(H), was found to be predominately from the space-charge region. The mobility-lifetime products were the order of 5 x 10 to the -10th sq cm/V for both holes and electrons. It was necessary to consider trapping and recombination of the optically generated carriers in the space charge region to interpret solar cell and spectral response data. (Author)

A80-37012 **Medium and high temperature solar processes.** J. F. Kreider (Jan F. Kreider and Associates, Boulder, Colo.). New York, Academic Press, Inc., 1979. 358 p. 148 refs. $38.

The subject matter of this book is concerned with those solar-thermal processes that operate above 100 C. A broad division between medium- and high-temperature processes is made at 300-400 C, corresponding to practical operating temperatures achieved by single- and compound-curvature solar concentrators. An attempt is made to present an analytical framework for comparing the many features of thermal, solar, and nonsolar systems in an unbiased manner so that technically and economically optimal systems for performing a given task may be designed. Seven problem areas are discussed: solar systems economics and environmental impacts of solar systems; principles of solar radiation and optics; selected topics

if the maximum temperature increase on discharge is to be kept below 5-10 C to avoid electrolyte loss via evaporation/condensation processes. Conversely, use of only one or two layers leads to an unacceptably high penalty in the energy density. (Author)

A80-37190 **Characterization of commercial black chrome coatings.** D. M. Fell, L. L. Tongson, S. V. Krishnaswamy, R. Messier, and I. S. T. Tsong (Pennsylvania State University, University Park, Pa.). *(American Vacuum Society, National Symposium, 26th, New York, N.Y., Oct. 1-5, 1979.) Journal of Vacuum Science and Technology*, vol. 17, Jan.-Feb. 1980, p. 358-361. 21 refs.

A comparative study of the optical properties and chemical composition of three commercially prepared black chrome solar absorber coatings has been made. In all these samples, the visible and IR spectra were nearly the same and showed no peaks corresponding to hydrated chromium oxides. The chemical composition was obtained by AES and sputter-induced photon spectrometry (SIPS). The hydrogen profiles by SIPS indicated the presence of H (or OH) at varying levels in these coatings. Although the AES and SIPS analyses showed significant compositional profile differences among samples, their optical properties were quite comparable. (Author)

A80-37191 **Preparation of thin films for solar energy utilization.** D. M. Mattox (Sandia Laboratories, Albuquerque, N. Mex.). *(American Vacuum Society, National Symposium, 26th, New York, N.Y., Oct. 1-5, 1979.) Journal of Vacuum Science and Technology*, vol. 17, Jan.-Feb. 1980, p. 370-373. 36 refs.

Thin film deposition techniques have made and are making a contribution to solar energy utilization. Commercial applications of thin films include photothermal selective absorbers formed by electroplating, chemical conversion, and vacuum processing; solar reflectors formed by vacuum processes; heat reflectors formed by vacuum processes and spray pyrolysis; and antireflection coating formed by vacuum processes and chemical leaching and the metallization of photovoltaic cells. CdS/Cu2S photovoltaics formed by vacuum processes and spray pyrolysis are also close to commercial utilization. Principal problems in thin films applications include economics of fabrication and environmental stability of the thin film materials. For many applications the best and most economical film deposition technology is not yet defined. One of the problems with thin film evaluation is the lack of acceptable testing procedures particularly as related to lifetime. Research is continuing in the application of sophisticated thin films to photovoltaic conversion and other applications. This paper reviews the status of thin film in solar energy utilization. (Author)

A80-37192 **Importance of the interface in noncrystalline /poly and amorphous/ conductor-insulator-semiconductor /CIS/ solar cells.** R. Singh (Waterloo, University, Waterloo, Ontario, Canada) and K. Rajkanan (New York, State University, Buffalo, N.Y.). *(American Vacuum Society, National Symposium, 26th, New York, N.Y., Oct. 1-5, 1979.) Journal of Vacuum Science and Technology*, vol. 17, Jan.-Feb. 1980, p. 376-379. 27 refs. Research supported by the Natural Sciences and Engineering Research Council of Canada.

Recently a new class of photovoltaic device, classified as a conductor-insulator-semiconductor (CIS) solar cell, has been developed. On the top layer of these devices there may be a transparent metal film, oxide-semiconductor, or a combination of these leading to a wide variety of metal-insulator-semiconductor (MIS) and semiconductor-insulator-semiconductor (SIS) solar cells. Due to improved understanding of the interface between the top layer and the single crystal base semiconductor, efficiencies above 17% have been realized. However, CIS-type solar cells made on nonrecrystallized poly and amorphous semiconductors usually have low efficiency. It is shown that the native grown oxide may not be capable of forming a good interface and deposited dielectrics are required for noncrystalline CIS solar cells. The criteria for selecting the insulating layer are presented. (Author)

A80-37195 **Evidence for grain boundary passivation by oxidation in polycrystalline GaAs solar cells.** L. L. Kazmerski and P. J. Ireland (Solar Energy Research Institute, Boulder, Colo.). *(American Vacuum Society, National Symposium, 26th, New York, N.Y., Oct. 1-5, 1979.) Journal of Vacuum Science and Technology*, vol. 17, Jan.-Feb. 1980, p. 525-528. 14 refs.

The chemistry and composition of grain boundaries in polycrystalline GaAs grown by liquid phase epitaxy (LPE) and molecular beam epitaxy (MBE) are examined using complementary Auger electron spectroscopy (AES), secondary ion mass spectroscopy (SIMS) and X-ray photoelectron spectroscopy (XPS). The effects of an unintentional residual-oxygen partial pressure during LPE growth are investigated in terms of grain boundary passivation. Depth-compositional data verify the grain boundary localization of oxides using an in situ, UHV fracturing technique. Indications of distributions of these oxides over the grain boundary are presented. The performances of Au Schottky barrier solar cells fabricated from the polycrystalline LPE and MBE GaAs are compared and differences are explained in terms of grain boundary activity. (Author)

A80-37297 **An array of directable mirrors as a photovoltaic solar concentrator.** W. B. Ittner, III (IBM Corp., Federal Systems Div., Gaithersburg, Md.). *Solar Energy*, vol. 24, no. 3, 1980, p. 221-234.

Calculations of the optics of heliostats for use in large thermal power towers have been carried out in considerable detail, chiefly by Vant-Hull et al. This paper describes a simplified method for calculating the images generated by a special type of concentrator, i.e. an array of independently steered mirrors on a single frame, intended to direct the solar image onto a flat photovoltaic solar cell target. The case of interest is one in which the field of illumination on the target is as uniform as possible, and the emphasis is thus on small 'rim angle' geometries (a configuration which also minimizes mirror interference effects). Calculations are presented for constructing the individual mirror target images in terms of three angles: (1) the angle between the photovoltaic target normal and the reflecting mirror (called here the mirror position angle), (2) the angle between the target center and the sun as measured from the center of the reflecting mirror, and (3) the angle at which the plane defined by the center of the sun, the mirror center and the target center intersects the plane of the target. The overall system efficiency for various mirror configurations, characterized by such parameters as the maximum mirror angle (i.e. 'rim angle'), target-mirror plane separation, and mirror aiming accuracy is discussed in terms of the specifications desirable in an optical concentrator designed specifically to illuminate uniformly a photovoltaic solar cell target. (Author)

A80-37299 **Selenium and tellurium selective absorber coatings produced by an oblique vacuum deposition technique.** M. J. Peterson and F. H. Cocks (Duke University, Durham, N.C.). *Solar Energy*, vol. 24, no. 3, 1980, p. 249-253. 20 refs. Research supported by the Selenium-Tellurium Development Association.

Selective absorber surfaces with a/e ratios greater than 33:1 have been produced by the angled vapor deposition of Te thin films onto specular metal substrates. Such Te films have a remarkable surface texture structure which results in highly absorptive behavior for incident sunlight. The emissivity of the surface is determined by the specular substrate when the Te film is thin, thus producing the extremely high a/e ratio observed. The present work appears to yield substantially higher a/e ratios than those previously studied. Se, which also shows a distinctly different surface texture effect, was not found to yield a/e ratios greater than 2:1. (Author)

A80-37300 **Design and cost analysis for an ammonia-based solar thermochemical cavity absorber.** O. M. Williams (Australian National University, Canberra, Australia). *Solar Energy,* vol. 24, no. 3, 1980, p. 255-263. 12 refs.

A design and cost analysis is introduced for a solar thermochemical cavity absorber operated at the focus of a tracking paraboloidal concentrator and based on the ammonia dissociation reaction. The absorber design consists of a catalyst-filled nickel alloy tube wound into a spiral forming the inner cavity wall and shaped to match the incident power density profile to the reactor heat requirements. The reactor tube is welded to a coaxial counterflow heat exchanger. The relationships among the power density profile, the reaction thermodynamics and kinetics, and the heat transfer characteristics are examined in detail and it is shown that an installed cost goal of typically 10 U.S. dollars per square meter of solar collector area can be achieved through use of high activity ammonia dissociation catalyst. The optimum absorber size for a given paraboloidal dish area is calculated for a system pressure of 20 MPa and it is shown that a cost effective absorber suitable for 100,000-hr operation would operate at 90% efficiency at 750 C wall temperature. (Author)

A80-37301 **Maximally concentrating collectors for solar energy applications.** E. J. Guay (Wisconsin, University, Madison, Wis.). *Solar Energy,* vol. 24, no. 3, 1980, p. 265-270.

The performance characteristics of a solar energy collector can be described by a function relating the concentration to the direction of incident radiation. A strict bound on the integral of this function is established. This is used to define a realistic class of collectors with maximal concentration which can serve as a basis for design and optimality studies. (Author)

A80-37302 **Use of solar energy to reduce carbon dioxide.** L. R. Martin (Aerospace Corp., Los Angeles, Calif.). *Solar Energy,* vol. 24, no. 3, 1980, p. 271-277. 27 refs. Contract No. E(04-3)-1101.

Several thermodynamically possible ways are outlined in which solar energy could be used to decompose carbon dioxide into carbon or carbon monoxide and oxygen, thereby providing a new source of carbon-based fuels which do not contribute to the environmental problems of mining operations, sulfur pollution, and carbon dioxide buildup in the atmosphere. It is shown that these methods are analogous to cyclic thermochemical processes for the decomposition of water into hydrogen. While these cycles have not yet been proven practical in the laboratory, it is suggested that the thermodynamics are sufficiently favorable that experimental study is recommended. Finally, since the approach has much in common with the hydrogen economy, some of the basic aspects of the hydrogen proposal are reviewed. M.E.P.

A80-37305 **Solar coal gasification.** D. W. Gregg, W. R. Aiman, H. H. Otsuki, and C. B. Thorsness (California, University, Livermore, Calif.). *Solar Energy,* vol. 24, no. 3, 1980, p. 313-321. 18 refs. Contract No. W-7405-eng-48.

A preliminary evaluation of the technical and economic feasibility of solar coal gasification has been performed. The analysis indicates that the medium-Btu product gas from a solar coal-gasification plant would not only be less expensive than that from a Lurgi coal-gasification plant but also would need considerably less coal to produce the same amount of gas. A number of possible designs for solar coal-gasification reactors are presented. These designs allow solar energy to be chemically stored while at the same time coal is converted to a clean-burning medium-Btu gas. (Author)

A80-37306 **Absorption enhancement in solar collectors by multiple reflections.** J. J. O'Gallagher, R. Winston (Chicago, University, Chicago, Ill.), A. Rabl (Chicago, University, Chicago, Ill.; Solar Energy Research Institute, Golden, Colo.), and W. McIntire (Argonne National Laboratory, Argonne, Ill.). *Solar Energy,* vol. 24, no. 3, 1980, p. 323-326. 5 refs. Contracts No. ER-78-5-02-4657; No. W-31-109-eng-38.

This technical note examines the problem of effective absorption enhancement from the standpoint of the second law of thermodynamics. A limit is derived for the enhancement factor, and it is shown that the limit can indeed be reached in cases of practical interest if the receiver is coupled to an involute reflector with concentration less than unity. A simple formula is obtained for the enhancement factor which agrees well with ray-trace results. An analysis is presented which can be visualized conceptually in terms of any of the typical trough configurations which have been proposed for evacuated glass tubular absorbers, such as the flat diffuse reflector, specular V-trough, specular cylinder and specular involute, as shown schematically. The results are readily generalized to the case where the incidence angles are restricted and the maximum concentration is greater than unity. S.D.

A80-37937 **Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volumes 1-4.** Symposium-Workshop sponsored by the National Science Foundation. Edited by T. N. Veziroglu (Miami, University, Coral Gables, Fla.). New York, Pergamon Press, Inc., 1980. Vol. 1, 619 p.; vol. 2, 556 p.; vol. 3, 570 p.; vol. 4, 604 p. Price of four volumes, $300.

The symposium concentrated on solar energy collection, storage, and applications. The major topics included: solar radiation, flat plate collectors, concentrating collectors, collector technology and research, thermal storage, heating and cooling systems, biological and chemical conversion, direct electrical conversion, and solar power plants. Other subjects were distillation and desalination using solar energy, agricultural and industrial applications of solar energy systems, combination of solar and wind energies, national and international solar energy programs, and solar energy economics and policies. V.L.

A80-37940 **Solar energy at ground surface.** N. H. Helwa (National Research Centre, Solar Energy Laboratory, Cairo, Egypt). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 41-55. 8 refs.

Information is presented on weather conditions and the rates of incident solar radiation on different oriented surfaces at various months of the year required for the planning of a solar project. The total solar radiation incident on a horizontal surface, the ambient air temperature, the relative humidity, the wind speed, and the direct solar radiation incident on a plane normal to the solar beam were recorded by meteorological stations in Egypt; some of these measurements were mapped, including the hourly variations of direct solar radiation, monthly average of solar radiation, and the calculated amount of the total solar radiation at Giza. The uses of solar energy including heating of water, sea water desalination, and drying of crops are also discussed. A.T.

A80-37943 **The flat plate solar collector - Its steady-state and transient state behaviour.** E. Hahne, N. Fisch, and A. Arafa (Stuttgart, Universität, Stuttgart, West Germany). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 159-186. 6 refs. Bundesministerium für Forschung und Technologie Contract No. ET-4045-A.

The efficiency and effectiveness of the flat plate collectors were calculated in their steady-state and transient state behavior. The studied parameters were grouped into collector, operation, and meteorological parameters. The effects of these parameters and their relation to other factors were obtained by their individual variation in computer programs; the numerical results were compared to experimental data. The agreement was satisfactory with deviations of less than 10% as an average for efficiency and less than 2 K for transient outlet temperatures of more than 30 C. A.T.

A80-37944 **Flat-plate solar collectors - Influence of design material and configuration on performance.** S.-E. Ransmark (Lund Institute of Technology, Lund, Sweden). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 187-214.

A study was made of the effect of various materials, designs, and mass flow rates on the efficiency of a flat-plate solar collector. It showed that a mass flow rate higher than 0.05 kg/s/sq m will give a minimal efficiency increase; that with a metal absorber the efficiency will be approximately the same for risers of 5, 10, and 20 mm in diameter as long as the number of risers per meter is the same; and that with 10 or more risers per meter the efficiency will be approximately the same for absorbers of copper, aluminum, and steel. In addition, it was found that an absorber of plastic has to be water cooled, and that parallel risers or tubes in serpentine provide the same efficiency if the total tube length is the same, and if the mass flow is 0.05 kg/s/sq m or larger. It was concluded that small dimensions will reduce the heat capacity, which will shorten the collector start-up time and increase efficiency, at least in areas with varying cloudiness. A.T.

A80-37945 **My new types of flat plate solar collectors.** R. Jankovic. In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 215-238. 6 refs.

The paper presents new types of flat plate solar collector, and the collection efficiency factors for flat plate solar collector with rectangular tubes between two plates. The absorber of a semielliptic flat plate collector is described along with the absorber of a trapezoidal collector; details are given of construction of a flat plate collector with and without a glass cover. Collection efficiency factors are calculated for flat plate collectors with rectangular tubes, and the main parameters are depicted for the flat plate collector with a rectangular channel. Finally, an equation is derived for the fin efficiency factor which may be used to estimate the efficiency factor of the flat plate solar collector with rectangular channels. A.T.

A80-37946 **Measurements on a flat thermal solar energy collector with a cellular structure after Francia.** A. Bahr, H. Piwecki, and L. Rigolini (EURATOM and Comitato Nazionale per l'Energia Nucleare, Centro Comune di Ricerche, Ispra, Italy). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 239-257.

A thermal flat plate solar energy collector with a cellular structure after Francia has been tested in outdoor conditions. The results have been compared with measurements done at the same collector but with the cellular structure removed. Besides this measurements have been performed to determine separately the influence of the cellular structure on the internal heat transfer in the collector by radiation and by natural convection. The method applied - comparison of cover glass temperature in the selected working conditions - furthermore allows the determination of the influence of the absorption of solar radiation by the cover glass and the cellular structure on the effective power. (Author)

A80-37947 **Flat plate boosters for elevating temperatures.** I. A. Sakr and A. I. Hegazi (National Research Centre, Solar Energy Laboratory, Cairo, Egypt). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 274-297. 5 refs.

A stationary concentrating solar flat-plate booster (SFPB) with a flat absorber suited for moderate temperature applications is presented. It has the features of a trapezoidal enclosure, with two reflecting sides, flat absorbing passage at the bottom and a glass cover at the top. Mathematical expressions are deduced for the geometrical parameter, 'L, W, H' of the SFPB with apex angles between 5.0 and pi/2. Concentration gain and effective transmission factors are deduced for different SFPBs concerning the effect of beam deviation, apex angles and surface reflectivity. The year-round performance of different SFPBs is computed for the Egyptian solar conditions. It is shown that concentration ratios up to 4 times that associated with temperatures up to 180 C and effective transmission factors higher than 70% can be obtained with this class of solar boosters, depending on its apex angle and surface quality. (Author)

A80-37948 **A black liquid flat plate collector for economical applications.** R. S. Daryan and P. K. C. Pillai (Indian Institute of Technology, New Delhi, India). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 298-307. 8 refs.

A black liquid flat plate solar energy collector for economical applications has been designed and tested. A rectangular pattern of thin transparent glass tubing is used as the collector fluid container, in which a highly absorbent 'black' liquid flows and directly absorbs the solar energy. The liquid is the hottest substance in the collector and does not require any metal in the design. The structure is enclosed in a thermally insulated box with a two-glass cover. The collector efficiency with different black liquids, in which black ingredient and working fluid are used in different proportion, was calculated and a comparison with other conventional type flat plate collectors was made. (Author)

A80-37949 **Passive solar wall collectors.** A. Faist and J. B. Gay (Lausanne, Ecole Polytechnique Fédérale, Lausanne, Switzerland). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 308-323.

A study of front covers to be used in passive solar wall systems for building insulation is presented. Nineteen covers were investigated, including glass, translucid plastics and metal plates. The measurements were made under natural conditions on small concrete elements of about 0.5 sq m front surface. A mathematical model was developed and adapted to each case; by fitting the different measured curves, all the physical characteristics of the different covers were obtained. The measurements for 19 covers were presented; the results of a mathematical simulation based on meteorological data near Lausanne of two periods during the 1976-1977 winter were presented for four covers. A.T.

A80-37950 * **A two-dimensional finite-difference solution for the transient thermal behavior of a tubular solar collector.** F. L. Lansing (California Institute of Technology, Jet Propulsion Laboratory, DSN Engineering Section, Pasadena, Calif.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 328-350. Contract No. NAS7-100.

A numerical procedure was established using the finite-difference technique in the determination of the time-varying temperature distribution of a tubular solar collector under changing solar radiancy and ambient temperature. Three types of spatial discretization processes were considered and compared for their accuracy of computations and for selection of the shortest computer time and cost. The stability criteria of this technique were analyzed in detail to give the critical time increment to ensure stable computations. The results of the numerical analysis were in good agreement with the analytical solution previously reported. The numerical method proved to be a powerful tool in the investigation of the collector sensitivity to two different flow patterns and several flow control mechanisms. (Author)

A80-37951 **Optical and thermal performances of a half-circular, cylindrical concentrator.** K. Bordoloi, T. Murray, F. Bynum, and E. Chaves (Louisville, University, Louisville, Ky.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 351-377. 10 refs.

An investigation of the optical and thermal performances of a non-tracking, half-circular cylindrical concentrator is presented. The study of the optical and thermal properties has resulted in the selection of a class of receivers for the non-tracking mode in which the concentrator can be used. The receiver is designed to have placement and size to take into account the changing orientation of the incident solar radiation as the declination changes throughout the year; the main type of receivers considered are circular and triangular. The study focused on: (1) the geometrical consideration of the concentrator and the receiver for the optimum absorption of sunlight, (2) the study of optical parameters such as the concentration ratio and the average number of reflections, and (3) the analysis of the collector in terms of the heat transfer coefficient, heat loss coefficient, useful energy gain, and the efficiency of the collector. The results suggest that the concentrator performs satisfactorily even under non-tracking mode when compared with a flat-plate collector; the cost effectiveness of such a concentrator is favorable, if used for space heating and cooling. A.T.

A80-37952 **Modeling a V-trough collector in terms of zero, single or multiple thermal capacitance nodes.** K. Bordoloi, C. Hoang, and F. Bynum (Louisville, University, Louisville, Ky.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 378-391. 15 refs.

Previously a mathematical model for the thermal performance was developed for a V-trough collector. Essentially, it was an application to this configuration of an H-B-W zero capacitance node model. In this present paper this analysis is extended to take into account the effects of thermal capacitance. The collector involved is formed of a linear array of V-troughs, is non-concentrating in nature and it heats a stream of air going through the channels above the blackened heat-absorbing plate and below a transparent cover. Direct comparison is made of the results of calculations between the zero capacitance node model and the present version which includes the capacitance effects. In each case identical sets of time-changing inputs are used. The method of study is by the digital simulation of the collector's overall performance. (Author)

A80-37953 * **High-efficiency solar concentrator.** F. L. Lansing and J. Dorman (California Institute of Technology, Jet Propulsion Laboratory, DSN Engineering Section, Pasadena, Calif.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 392-403. Contract No. NAS7-100.

A new type of solar concentrator is presented using liquid lenses and simple translational tracking mechanism. The concentrator achieves a 100:1 nominal concentration ratio and is compared in performance with a flat-plate collector having two sheets of glazing and non-selective coating. The results of the thermal analysis show that higher temperatures can be obtained with the concentrator than is possible with the non-concentrator flat-plate type. Furthermore, the thermal efficiency far exceeds that of the comparative flat-plate type for all operating conditions. (Author)

A80-37955 **Thermo-fluid analysis of a cylindrical solar heat absorber.** M. F. Khalil (Alexandria, University, Alexandria, Egypt). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 412-430. 7 refs.

In this paper, a theoretical analysis for the fluid flow through a cylindrical solar heat absorber is considered, taking into consideration the heat loss to the surroundings due to convection and radiation. The variation of fluid density and viscosity with temperature is also considered. The continuity, momentum and energy equations in cylindrical co-ordinates, are reduced in such a way to describe the flow and temperature fields along the absorber. These equations are solved numerically using the Runge-Kutta method. The effect of radiative and convective heat losses from the absorber is demonstrated. The effect of fluid thermal conductivity and absorber thermal capacity are considered on the fluid temperature rise, pressure drop for fluid flow along the absorber, and finally on the absorber efficiency. (Author)

A80-37956 **An experimental investigation of comparative performance of a header-type compound parabolic concentrator and a flat-plate collector.** K. K. Rao and S. B. Ahmed (Indian Institute of Technology, Madras, India). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 431-445.

The comparative performance of a header-type compound parabolic concentrator and a flat-plate collector has been experimentally investigated. Two configurations of the collectors, one in which the absorber tubes were all oriented in the east-west direction, and another in which the absorber tubes of the FPC were oriented north-south, three different flow rates and three angles of tilt were considered. The hourly efficiency and useful thermal energy gain have been obtained as a function of the hour of day, and efficiency vs Delta T/I curves have been drawn. The results show that in configuration I, the CPC was more efficient than the FPC for about two to three hours around noon when kept at an angle equal to latitude or declination. The mean daily efficiency was about the same for both collectors. When kept horizontal the CPC was quite inefficient. In configuration II, the CPC was more efficient than the FPC for about two hours around noon when kept at the declination angle; when kept at an angle equal to the latitude the FPC had the better overall performance. (Author)

A80-37957 **Interferometric investigations of convection in slat, flat plate and vee-corrugated solar collectors.** B. A. Meyer, K. R. Randall, M. M. El-Wakil, and J. W. Mitchell (Wisconsin, University, Madison, Wis.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 446-462. 14 refs. Contract No. E(11-1)-2941.

An interferometric study is presented which determined the local and average values of the Nusselt number in moderate and small aspect ratio flat-plate enclosures. The investigation was made of collector tilt angles from 45 to 90 deg, aspect ratios from .25 to 36 and slat angles from 45 to 90 deg. The results show that aspect ratios between .5 and 10 are undesirable because of a convective loss; collector geometries with slat angles less than 90 deg are effective in reducing convective losses. Heat transfer rates in an enclosure bounded by a heated vee-corrugated surface on the bottom and a cooled flat surface on the top were also examined for vee aspect ratios of .75, 1, and 2 and tilt angles of 0, 45, and 60 deg. It is concluded that the average heat transfer for this geometry is considerably higher than for the flat-plate collector operating under similar conditions. A.T.

A80-37958 **Study of a multi-pass radiation fluid-heater exposed to non-uniform radiation.** N. M. Rafat, M. M. Elkotb, and M. F. El-Refaie (Cairo, University, Giza, Egypt). In: Solar energy: International progress; Proceedings of the International Symposium-

Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 463-489. 5 refs.

The steady state performance of a multipass radiation fluid heater is investigated when the distribution of the incident thermal radiation is non-uniform in cross direction. This condition may occur in a multipass solar collector combined with a parabolic reflection trough; the analysis presented is valid for any general form of radiant energy distribution. Mathematical expressions are derived for the fluid and wall temperature distributions along the serpentine; these expressions are given in terms of a number of convenient dimensionless groups. The performance of the heater is evaluated, and a new effectiveness index is used, together with conventional efficiency, to describe the performance. When the heater passes are exposed to different radiation densities, the sequence of flow through the different passes will be of importance; the effect of the flow arrangement on the performance is studied and the optimum flow pattern is determined. A.T.

A80-37959 **Simulations of solar captation systems - Methodology and applications to distillation, gas and water heating.** F. Rocaries, G. Olalde, P. Granier, B. N'Doye, and M. Daguenet (Perpignan, Université, Perpignan, France). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 490-511. 5 refs.

The authors study heat transfer phenomena with numerical methods. Because of the experimental difficulties, it is useful of course to simulate the behavior of solar systems. Simulation is available for high temperatures systems (gas reheaters in focusing devices); for solar stills; flat plate collectors, etc. Simulation enables an accurate prevision of the behavior, and a systematical study of all the parameters effects. This last study points out the major parameters, to simplify the model. The present study regards: solar stills, various flat collectors, high temperatures gas re-heaters. The authors give appropriate organigrams and graphical results. (Author)

A80-37960 **Low cost spiral shaped solar collector.** P. K. C. Pillai and R. C. Agarwal (Indian Institute of Technology, New Delhi, India). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 512-521.

The details of the design and development of an inexpensive solar collector system are given in this paper. A spiral-shaped plastic tube coated with a black paint constitutes the solar absorber in the above collector. The above structure is enclosed in a wooden box with 4 in. thick glass wool insulation at the bottom and also provided with a glass cover at the top. Water is used as a working fluid. For high temperature applications with higher efficiencies, plastic tubing is replaced by a metallic tubing. Studies on the characteristics of this solar collector with and without selective absorptive coatings are also being made. (Author)

A80-37961 **Optimum inclination of linear reflectors.** B. A. Khalefa and A. S. Hegazy (Minufiya University, Shibin el Kom, Egypt). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 529-535.

This paper presents a computer model for determining the optimum angle of inclination of a linear reflector for a specified site and a certain time period. This optimum angle of inclination is selected on the basis of maximum solar radiation energy reflected from the concentrator and received by its target during the testing time period. This proposed model was applied to some sites in Egypt for certain time periods of the month and year. (Author)

A80-37962 **Phase change collector wall versus water collector wall.** L. Bourdeau and A. Jaffrin (CNRS, Laboratoire d'Ecothermique Solaire, Nice, France). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 549-564.

Two experimental cells have been constructed to study under true weather conditions the thermal behavior of collector - storage walls containing a phase changing material or plain water. Recorded temperatures show that the latent heat wall collects solar energy with a much larger efficiency (up to 100%) and stores twice more heat than the water wall of same volume, while acting as a very good temperature filter. (Author)

A80-37963 **On the evaluation of the feasibility of solar collectors for electrical power generation applications.** A. Gokhman and N. Ozboya (Miami, University, Coral Gables, Fla.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 1. New York, Pergamon Press, Inc., 1980, p. 565-576.

In this paper certain technical parameters have been proposed for economical evaluation of solar collectors for electric power generation applications. In the analysis only high temperature concentrating collectors have been considered. These parameters could be useful for government agencies and power companies in order to compare various solar collector subsystems quickly and correctly. (Author)

A80-37964 **Performance of a storage unit coupled to a flat plate solar collector.** S. B. Ahmed and V. Sriramulu (Indian Institute of Technology, Madras, India). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 593-603. 6 refs.

A storage unit is an indispensable component of a solar power generating unit. A thermal storage unit coupled to a system of flat plate collectors is described. In a thermal storage unit stabilization effects are always present; the processes occurring in such a system have been simulated on a digital computer to determine the performance characteristics of the unit for a given load pattern. The analysis considers a selectively coated surface employing water as the working medium. The temperature distribution in the storage unit undergoes a change when the water flow rate is altered. The storage volume does not affect the performance significantly in the range of volumes investigated. (Author)

A80-37969 **Solar heating systems with air collectors and rock bed storage.** W. L. Dutre, L. Cypers, J. Berghmans, and A. Debosscher (Leuven, Katholieke Universiteit, Heverlee, Belgium). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 697-730.

A domestic air heating system based on air collectors and rock bed storage is studied in this paper. For the system being considered a dynamic model has been developed, including the regulation criteria and the dynamic behaviour of the building. Making use of the climatological data for temperature and solar radiation as half-hour averages for the Belgian climatological reference year, the year round performance of the system has been calculated over a wide range of the most important design parameters, such as collector area, thermal capacity of the storage system, the total heat demand and its distribution. Results of these calculations are reported in this paper and the relative influence of system component size as well as the importance of each of the possible operation modes under the climatic conditions being considered are discussed. (Author)

A80-37970 **Influence of heat exchanger effectiveness on the performance of thermosyphon double loop water heating system.** A. F. Orlando, L. Goldstein, Jr., and D. Magnoli (Centro de Tecnologia Promon, Rio de Janeiro, Brazil). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. New York, Pergamon Press, Inc., 1980, p. 731-744. 5 refs.

The development and testing of a double loop thermosyphon solar heater is described. It is reported that the absorbers in the collector are non selective and of the roll-bond aluminum type. Further, it is shown that for the required consumption hot water temperature range (40-60 C), single glazing collectors are more efficient than double glazing collectors. In addition, the design of the heat exchanger is found to be critical to the technical and economic performance of the water heater. The influence of the heat exchanger is analyzed in terms of the coefficient of performance COP. It is concluded that the system is found to be more efficient for larger ratios between the heat exchanger surface and collector.

A80-37971 **Hot water production by means of a solar thermosyphon loop.** W. L. Dutré, L. Cypers, J. Berghmans, and A. Debosscher (Leuven, Katholieke Universiteit, Heverlee, Belgium). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 745-766. Research supported by the Belgian National Research and Development Programme on Solar Energy Applications.

The results of a study of hot water production using a solar thermosyphon loop are reported. A dynamic model has been developed describing the behaviour of the loop consisting of a number of solar collectors and a water tank placed above the collectors. The loop is segmented and for each segment the time-dependent mass conservation, momentum and energy equations are satisfied. The solution of these equations is obtained numerically and is compared to temperature distributions determined experimentally. It is found that good agreement can be obtained between theoretical predictions and experiment. Using the temperature and solar radiation data for a typical Belgian year, the dynamic model allows one to calculate the energy produced by the thermosyphon system as a function of system parameters: collector size, storage tank size, daily consumption rate, etc. Energy savings with respect to an all-electric heater are reported as a function of the system parameters.

A80-37972 **Effectiveness of packed-bed solar air heaters.** S. C. Gupta (Allahabad, University, Allahabad, India). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 767-777. 8 refs.

The fabrication and performance testing of a single glass cover solar air heater with a packed-bed absorber made of iron shavings as well as one of iron wires and scraps of aluminum are reported. A test procedure recommended by the National Bureau of Standards has been followed during experimentation. The comparative efficiencies of both heaters are evaluated with and without the use of a metallic tray of absorbers. In addition, the effect of mass flow rate, aspect ratio, length of absorber, air temperatures and solar insolation are also studied. Finally, it is found that the collection efficiencies of these absorbers are as high as 70 to 75% at outlet air temperatures of 50 to 53 C.

A80-37973 **Performance comparison of different types of solar water heaters under Egyptian conditions.** S. W. Youssef and I. A. Sakr (National Research Centre, Solar Energy Laboratory, Cairo, Egypt). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 778-792.

The design details of four different types of solar water collectors, suitable for providing enough hot water for domestic demand are reported. It is shown that the collectors are designed in a way that they can be easily manufactured with local materials and technology and can operate optimally under the climatic conditions of Egypt. Attention is given to performance tests of these different types under identical conditions. Further, a study is carried out to determine which available materials can be used most economically in the production of solar water heaters. Finally, the results obtained are analyzed to select the most suitable type for operating under the local conditions described.

A80-37974 **Solar water heaters.** D. Buxey (Dr. Beck and Co. /India/, Ltd., Bombay, India). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 793-801.

The salient features of world developments and new developments in the field of solar heaters are briefly summarized. Attention is given to the importance of adapting the heater to varying needs which vary not only due to locale but also habits. The first major industrial installation in a hotel in Matheran, near Bombay, is described noting the the absorption and storing in same and separate units, and the dual circulation system. Further, the various factors affecting design, such as heat removal, orientation and transmittance of glass covers, are examined, and trends in the improvement of design are discussed. Finally, auxiliary heating and the design of a solar switch are also considered.
M.E.P.

A80-37975 **Latent heat diode wall.** L. Bourdeau and A. Jaffrin (Nice, Observatoire, Nice, France). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 802-826.

A composite wall with separate collector side and storage volume operating as a thermal diode is proposed. The storage uses a latent heat material called chliarolithe. Laboratory experiments performed on the storage side show that it is possible to define satisfactory conditions both for the collector side and for the heat restitution: relatively low temperature in collector, little external losses, storage equivalent to 75 cm of concrete in the form of 5 cm of chliarolithe, excellent temperature control on the internal side.

A80-37976 **Comparison between two absorption cooling systems of the 'open' type under different climate conditions.** M. Bolzan and R. Lazzarin (Padova, Università, Padua, Italy). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 827-854. 12 refs.

Two open-type solar cooling systems are described and compared: (1) the dehumidification-humidification (DH) system and (2) Baum's system which consists only of evaporator and absorber, and with the generator in the open air. The DH systems are shown to be more efficient in the three climates in which tests were conducted (hot dry, hot humid, and Mediterranean). Some advantages of Baum's cycle are noted.

A80-37977 **Analysis of ammonia-water intermittent solar refrigerator operating with a flat plate collector.** A. Venkatesh and M. C. Gupta (Indian Institute of Technology, Madras, India). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 870-885.

The paper is concerned with the thermodynamic analysis of an ammonia-water intermittent solar refrigerator which uses a simple flat plate collector for generating ammonia vapors from the ammonia-water solution. A digital computer is used to simulate the processes which constitute the cycle. The following parameters are evaluated and discussed: heat absorbed during generation, amount of vapors generated and amount of ammonia condensed, minimum evaporator temperature, effective refrigeration, and coefficient of performance. The solar refrigerator has no moving parts and hence it is easy to maintain. In addition, it has no pumps, fans or any gadgets that require electricity.
S.D.

A80-37978 * **A thermodynamic analysis of a solar-powered jet refrigeration system.** F. L. Lansing and V. W. Chai (California

Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 886-897. 5 refs. Contract No. NAS7-100.

The article describes and analyzes a method of using solar energy to drive a jet refrigeration system. A new technique is presented in the form of a performance nomogram combining the energy and momentum equations to determine the performance characteristics. A numerical example, using water as the working fluid, is given to illustrate the nomogram procedure. The resulting coefficient of performance was found comparable with other refrigeration systems such as the solar-absorption system or the solar-Rankine turbocompressor system. (Author)

A80-37979 **Development of a solar desiccant dehumidifier.** Z. Lavan, D. Gidaspow, M. Onischak, S. Chaturvedi, B. Mathiprakasam, and S. Perkari (Illinois Institute of Technology, Chicago, Ill.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 898-931. 9 refs. Contract No. EG-77-C-03-1589.

A preliminary design of a cross-cooled two-ton silica gel dehumidifier is presented. The system consists of two identical fixed bed units; one dehumidifies while the other is being regenerated. The cross cooling is achieved with room or ambient air flowing through rectangular channels; the process stream flows in perpendicular channels which are lined with paper-like sheets consisting of micron-size silica gel particles held in a Teflon web. The silica gel was tested in an isothermal channel and found to perform satisfactorily. Detailed calculations have shown that the low regeneration temperatures of the silica gel result in sufficient dehumidification for air conditioning applications. The low regeneration temperature permits the use of flat plate solar collectors. B.J.

A80-37980 **Liquid desiccant solar heat pump for developing nations.** H. Robison (South Carolina, University, Conway, S.C.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 932-938. 11 refs.

A redesign of the U.S.C. liquid sorbent solar air collector to include a heating cycle, while being more economical to construct and operate, is described. It is reported that the triethylene glycol desiccant has been replaced by a calcium chloride solution. Concentration of the desiccant by direct solar radiation absorbed by the colored liquid is shown to allow collector operation at low temperature and high efficiency. Attention is given to the fact that the easily constructed open-channel trickle collector system is not used for transfer of sensible heat, but rather is used for mass transfer of water absorbate from the absorbent solution to the natural ambient air stream. It is stressed that the hardware necessary to build the system is readily available worldwide. Finally, a detailed description of the cooling and heating modes is given. M.E.P.

A80-37981 **A review of the historical developments of the use of passive solar systems.** C. L. Robbins (Florida Agricultural and Mechanical University, Tallahassee, Fla.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 939-959. 34 refs.

The historical development of passive solar systems from 3000 BC in Mesopotamia to the present is reviewed. Attention is given to the systems design, performance characteristics, and energy conservation criteria of convective self-flow thermal systems and passive (natural) lighting systems. B.J.

A80-37982 **Natural lighting in buildings - A passive solar system.** C. L. Robbins (Florida Agricultural and Mechanical University, Tallahassee, Fla.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 960-982. 35 refs.

This paper reviews the issue of using natural lighting in buildings. In general, there are four basic reasons why natural lighting systems are required by building codes in many parts of the world. These reasons are: (1) to facilitate the performance of visual tasks and ensure visual comfort; (2) to provide visual communication channels between people and their outdoor environment; (3) to provide psychological impact to lighting schemes; and (4) to conserve lighting energy, during daylight hours, and help reduce the total energy requirements in buildings. The realization that there is a need to conserve energy in the United States has brought about a reviewed interest in the use of natural lighting systems to provide light within buildings during daylight hours. This interest has caused the development of new techniques to study daylight as well as new natural lighting systems called Planned Supplemental Lighting Systems. (Author)

A80-37983 **Solar collector related research and development in the United States for heating and cooling of buildings.** R. K. Collier (California, University, Los Alamos, N. Mex.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 991-1028. 19 refs. Research sponsored by the U.S. Department of Energy.

This paper describes some of the research funded by the Research and Development Branch of the Heating and Cooling Division of Solar Energy of the United States Energy Reseach and Development Administration. Specifically, this paper deals with collector and collector materials research reported on during FY-1977. The R&D Branch has funded research in open and closed cycle liquid heating flat plate collectors, air heating flat plate collectors, heat pipe collectors, concentrating collectors, collector heat transfer studies, honeycomb glazings, evacuated tube collectors, ponds both salt gradient and viscosity stabilized, materials exposure testing, collector testing standards, absorber surface coatings, and corrosion studies. A short description of the nature of the research is provided as well as a presentation of the significant results. (Author)

A80-37985 * **A quinone-assisted photoformation of energy-rich chemical bonds.** S. W. Fox, T. Adachi, and W. Stillwell (Miami, University, Coral Gables, Fla.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 1056-1074. 18 refs. Grant No. NGR-10-007-008.

In a study of biochemical means of solar energy conversion, ADP and inorganic phosphates were converted to ATP by white light in the nonaqueous solvent dimethylformamide in the presence of tetrachloro-p-quinone or ubiquinone. Conversion of ADP to ATP has been accomplished in aqueous suspension by the use of cell-like structures aggregated from poly(aspartic acid, glutamic acid, tyrosone). This is believed to occur through the formation of dopaquinone in the peptide structure during illumination. The way in which the quantitative yield of ATP has been influenced by pH and by added substances, such as FeCl2, was studied. B.J.

A80-37990 **Physics and economics of photovoltaic solar energy conversion.** Y. Marfaing (CNRS, Laboratoire de Physique des Solides, Bellevue, Hauts-de-Seine France). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1132-1153. 13 refs.

This paper presents principles of the photovoltaic effect. From this description are derived the basic properties required for the semiconducting materials to be used in photovoltaic solar converters. Then, the structure and the performances of various photovoltaic devices produced by industry or studied in the laboratory are presented. Finally, some considerations are given about the cost of electric energy supplied by photovoltaic generators for the present time and to be expected in the future. (Author)

A80-37991 **Realization of p-n junction solar cells by an ion implantation doping procedure.** J. C. Muller, M. Hage-Ali, and P. Siffert (CNRS, Centre de Recherches Nucléaires de Strasbourg, Strasbourg, France). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1154-1166. 13 refs.

The possibility of using a low cost ion implantation procedure for the preparation of junction solar cells has been investigated. The method employs a dc glow discharge ion source and a short post acceleration structure, without any mass separation. Preparation of the cells in a continuous way is possible at competitive speeds since the ion beam current density reaches 1 mA/sq cm. The properties of silicon cells, obtained by discharge bombardment in BF3 or PF5 atmosphere followed by recrystallization of the damaged layer either by thermal annealing or fast surface laser pulses, have been investigated. Rutherford backscattering, SIMS, electrical measurements have been used. Finally, characteristics and performance of the devices are presented. (Author)

A80-37992 **Solar energy conversion by fluorescent materials for utilization in space communication systems.** A. K. Sen and J. S. Sehra (Calcutta, University, Calcutta, India). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1167-1183. 52 refs.

In space communication, solar energy is widely employed to obtain the electrical power required to operate various electrical systems in a spacecraft. However, the efficiency of conversion of solar energy to electrical energy is typically under 10%. A major part of the electrical power obtained is utilized for the operation of the onboard communication systems. Direct utilization of solar energy for communication may increase the overall efficiency of the energy conversion involved. There are two ways in which such direct utilization can be affected. Firstly, solar energy can be utilized directly as the carrier of intelligence and secondly, solar energy may be utilized directly as a pump source for an onboard laser. The use of fluorescent materials may further extend the possibilities of using lasers at longer wavelengths for which the pump is derived from the fluorescent emission. There is also a possibility of utilizing the fluorescent emission directly as a carrier of intelligence. All these possibilities have been studied in this paper with special reference to space communication systems. (Author)

A80-37993 **New possibilities of solar energy conversion by means of refractory thermoelements.** S. Abdalla, J. M. Dusseau, F. Roche, and J. M. Darolles (Montpellier II, Université, Montpellier, France). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1184-1191.

It is shown that high-efficiency thermoelectric conversion can be obtained by using refractory compounds with low thermal conductivity and high thermoelectric power. Boron silicon compounds with a high boron concentration such as B14Si are considered. Samples are obtained by chemical vapor deposition by pyrolysis of mixture of BBr3 and SiBr4 under reduced pressure. Experimental results show that the thermoelectric figure of merit is 3.75 x 10 to the -3rd/deg and zT(H) equals 7.5 at 1700 K; moreover, the total conversion efficiency would exceed 20 percent. This is particularly interesting for solar energy conversion. (Author)

A80-37994 **On direct conversion of sunlight to electricity.** M. A. Melehy (Connecticut, University, Storrs, Conn.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1192-1209. 10 refs.

A new physical theory for homojunction and heterojunction solar cells is presented. The theory relates the voltage-current characteristics of such cells to the device physical parameters and the spectral distribution of the incident radiation. The derived formula is shown to be accurately in agreement with experiment for Si solar cells. In the treatment, the photon-generated electron-hole pairs are considered and their transport through the device and its battery (or load) is determined. The analysis is based on this author's thermodynamic theory of generalized fields (TTGF). The TTGF is a theory particularly developed for interfacial phenomena and more generally for all systems which have gradients of any physical parameters, when the particle fluxes are vanishing in the system. (Author)

A80-37995 **Performance of the noval solar cell substitute for the future.** S. C. Rastogi (M.M.M. Engineering College, Gorakhpur, India). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1210-1215.

This paper deals with a future solar cell, in which solar radiations obtained from the sun have been utilized for the phase transformation of the electrolytic crystal by developing a potential difference between the electrodes placed in different phases (viz., solid, liquid). The paper also reviews the earlier investigations made by the author regarding the working principle, experimental observations and design considerations. Further investigation has been carried out on long-life performance of the cell in respect to power. An effort has also been made for improvement in the design of the proper electrode. The investigations show a great potential of such a cell in the future. (Author)

A80-37996 **MOS solar cells.** H. M. Kizilyalli (Middle East Technical University, Ankara, Turkey). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1216-1229. 36 refs.

The solid state physical principles of MOS structure and their electrical characteristics is reviewed for its application to solar cells. The various parameters like insulator thickness, resistivity of the substrate, insulator charge, surface-state density, minority carrier lifetime, and crystal orientation that affects the performance of MOS solar cells will be discussed. The paper is concluded with a summary of recent developments in the field. (Author)

A80-37998 **Optimization of graded doping CdTe solar cells.** A. S. Bouazzi (Laboratoire d'Energie Solaire, Tunis, Tunisia). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1242-1256. 5 refs.

From the CdTe band gap value (1.5 eV), a high efficiency is predicted for CdTe solar cells. The high surface recombination velocity and the small minority carrier lifetime make the present efficiency below 7%. The existence of an electric field in the frontal region of CdTe solar cells can counterbalance the recombination effects by accelerating the minority carriers towards the junction. A p-n CdTe junction with a traded frontal doping is studied; its efficiency is computed to fix the optimum depth of the junction and the optimum frontal electric field resulting from the graded doping. Two recombination parameters are taken into account: the surface recombination velocity and the minority carrier lifetime. The quantum responses of the optimized structure are simulated by the computer and the results are compared to those of the CdTe homojunction and to the graded-band-gap CdHgTe heterojunction. (Author)

A80-37999 **Solar thermal power plant - Thermodynamic analysis.** A. A. Samuel, U. S. P. Shet, and M. C. Gupta (Indian Institute of Technology, Madras, India). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1279-1292. Research supported by the Council of Scientific and Industrial Research.

There have been several proposals for solar thermal power plants using a Rankine cycle with a low boiling point fluid as the working medium. Organic Rankine-cycle engines are particularly suited for a number of reasons such as, high thermal efficiency and reliability, relatively uncomplicated mechanical components and adaptability for use over a wide power range. In this study three working fluids: butane, dichloro tetrafluoroethane and trichloro trifluoroethane are examined. These three fluids were chosen in view of their desirable properties such as high molecular weight, low boiling point and the slope of their vapor saturation curve. (Author)

A80-38000 **Solar power units with screw expanders.** J. M. Merigoux and P. Pocard (Alsthom-Atlantique, Bruyères-le-Châtel, Essonne, France). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1293-1317.

A low-power solar electric generator based on a screw expander which drives an ac motor is presented. The choices of flat plate or concentrating Rankine or Brayton cycle, and an oil-injected screw expander motor in the development of the unit are examined, and the effects of Mediterranean and subtropical locations on plant performance are discussed. Results of solar engine performance simulation testing are presented, and an application of the screw expander solar unit as a deep well pump is illustrated. It is concluded that the screw expander is well adapted to low-power solar energy applications due to (1) its small efficiency variation over a large range of expansion ratios and rotating speeds, (2) its compatibility with low-concentration solar collectors and (3) its ability to be used with conventional organic working fluids and inexpensive heat transfer fluids. A.L.W.

A80-38001 **New developments for future solar power plants.** J. Lorenz, J. Feustel, and M. Kraft (M.A.N.-Neue Technologie, Munich, West Germany). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1318-1328.

The development of a planned solar farm providing 15 to 500 kW of electrical and mechanical energy in regions with high insolation is discussed. In the proposed power plant, 200 to 300 C heat generated in tracking parabolic cylindrical collectors is used to produce high-pressure steam as a source of mechanical energy, electricity or low-temperature heat. The optimization of system operating temperature and collector area with respect to collector and machine efficiency is discussed, and the first plant prototype is presented. Advanced development of the modular collector units and the energy conversion circuit, which consists of the boiler, expansion machine, electrical generator, condenser, cooling tower and control, monitoring and auxiliary devices, is then considered. A.L.W.

A80-38002 **Power from the sun by thermodynamics French tower type projects.** M. J. Bignon (CETHEL, Paris, France). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1329-1337.

The main features of three solar-power tower-type projects designed in France are discussed. Consideration is given to THEMIS, INTI 800(R), and EEC developments. The THEMIS prototype 2 MWe unit utilizing a cavity receiver with molten salt transfer and storage is due for start-up in 1980. V.T.

A80-38003 **Steam and gas turbines for small outputs using solar energy.** K. Bammert (Hannover, Universität, Hanover, West Germany) and H. Pösentrup (M.A.N.-Neue Technologie, Munich, West Germany). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1338-1350.

The conversion of the solar energy into electrical or mechanical energy in turbine power plants requires new design criteria. The choice of the working fluid and the configuration of the cycle are of great importance. Not every variant is suitable for the solar farm and the solar tower concept in the same way. The design of the turbomachinery and the other components of the cycle do strongly influence each other. An important point of view in designing a small solar power station is the simplicity of the construction so that no special service is required in remote locations. The efficiency should be as high as possible. Some important criteria for the choice and design of small power turbine plants using solar energy are discussed. The advantages of open cycle air turbines are compared with steam turbines. Indications to the choice of suitable cycles and turbomachinery are given. (Author)

A80-38004 **Turbine selection for small capacity solar-power generation.** A. Mobarak, N. Rafat (Cairo, University, Cairo, Egypt), and M. Saad (UNESCO, Regional Office, Cairo, Egypt). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1351-1367. 10 refs.

In developing countries lying within the solar belt, there is an urgent need for power generation systems of sufficient capacity to supply power to small communities in remote areas. The turbine for small power units in the range from 1 to 100 kW is not of the conventional type and requires special design. To attain high cycle efficiency (Rankine cycle) for power systems of small capacity, the enthalpy drop should be as high as possible whereas the mass flow rate is small. This leads to problems such as partial admission, multistaging, high rotative speeds, etc. The present study indicates that the most suitable choice of turbine is a multistage radial Ljungstrom-type turbine. (Author)

A80-38005 **A helioelectric farm.** O. J. M. Smith and P. S. Smith. In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1368-1407. 17 refs.

A multi-modular solar thermal electric plant based on conventional materials and engineering techniques is presented. In the proposed 100-MW system, the electrical generator is driven by a conventional steam turbine utilizing heat derived from 600 concentrating collector modules covering a total of 5.5 sq km in a solar farm. A sophisticated computer design program is used for the optimization of mirror dimensions, and spacing, module dimensions, tower height and receptor dimensions for cost reduction, and the mirrors are computer controlled to track the sun. The 300,000 small mirrors and 600 short towers permit mass production techniques which significantly reduce production costs, which are estimated at $175,000,000 for a 100-MW plant. Half of the construction costs are direct labor wages, which would have a desirable impact on local economy, while environmental effects are minimal. A.L.W.

A80-38006 **A central receiver solar power system for remote locations.** R. J. Holl (McDonnell Douglas Astronautics Co., Huntington Beach, Calif.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1408-1425. 11 refs.

A solar power plant was designed to supply electrical and/or thermal power for remote locations isolated from a utility grid. Applications include domestic, agricultural, and light industrial use.

Means of achieving attractive economics are identified. Simplicity in system design and maximum use of commercial equipment are stressed. A small central receiver is used for solar energy collection, and steam is utilized as the working fluid. Modular thermal storage matches various applications without changing the system balance. S.D.

A80-38007 **Investigation of pool boiling heat transfer in the energy carrying liquids of solar energy power plants.** N. S. Abdelhafiez (Alexandria, University, Alexandria, Egypt) and M. A. Abdelsalam (Helwan University, Cairo, Egypt). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1426-1442. 37 refs.

The present paper suggests a generalized equation which gives the heat flux of the pool boiling of refrigerants from horizontal surfaces at the normal earth gravity. The suggested relationship was obtained by using the dimension analysis theory and regression analysis. A large volume of experimental data, up to 600 points collected from 12 different researches with P/Per in the range of 0.003-0.78 was used in the analysis with the aid of a digital computer. Verification of the obtained equation shows that the absolute average deviation of the Nusselt number calculated by it, from that obtained by experimentation, does not exceed 10%. (Author)

A80-38008 **The use of solar furnaces in materials research.** D. Suresh (Indian Institute of Science, Bangalore, India) and P. K. Rohatgi (Council of Scientific and Industrial Research, Trivandrum, India). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 3. New York, Pergamon Press, Inc., 1980, p. 1443-1473. 54 refs. Research supported by the Tata Energy Research Institute.

Solar furnaces are promising tools for studying ultrahigh temperature properties of materials. In this paper, the applications of solar furnaces in the field of materials research are reviewed in detail and some of their industrial applications are briefly projected. Research on crystal growth, high temperature phase diagrams of oxide systems, ignition of materials, purification and stabilization of refractories is being conducted, utilizing the very high temperatures attainable in solar furnaces, without any contamination. Specific future opportunities for research in these areas have been identified. Some of the future prospects of solar furnaces could be the study on freezing of superheated alloys, zone-refining of large quantities of materials, growing new single crystals for semiconductor and laser applications, vacuum welding and materials research in outer space. (Author)

A80-38009 **Street lighting by sunlight.** J. G. Sakas. In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 1723-1741.

The feasibility of street lighting by sunlight reflected or diffused satellites in orbit around the earth is examined. The following systems are considered: a large oriented mirror rotating with a constant velocity on a circular orbit around the earth, plane mirrors of random orientation, spheres and objects of similar shape, cubic mirrors, and light diffusing satellites. The construction of a large oriented mirror of sufficient illumination capacity is shown to be impossible. All other systems, while technically possible, are found to be uneconomical, unless the reflected sunlight also used for purposes other than street lighting, e.g. for ice melting or in agriculture. V.L.

A80-38010 **The first solar energy system in West-Germany for industrial utilization.** I. Hoffmann (Consulting Office for Solar Technology, Vechta, West Germany). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 1742-1747.

About 3000 to 4000 liters of water are consumed daily in the steam pressing facilities of the coat factory. This water is prewarmed up to 333 K by means of a solar energy system. For this purpose a thermal heat storage of 1300 l is used. In the summer a factory swimming pool is also heated; in this case a heat storage of 14,000 l is used. The solar energy system has a collector surface area of 85 square meters facing south and inclined at 45 deg. Switching for both applications is arranged so that they can be operated either simultaneously or separately. (Author)

A80-38011 **A simple water pump, powered by solar energy.** K. Speidel (Dornier System GmbH, Friedrichshafen, West Germany). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 1748-1761. Research sponsored by the Bundesministerium für Forschung und Technologie.

A project is being implemented whose objective is to design a simple solar water pump system which could meet the drinking water requirements in small village communities, far from other sources of energy. The basic specifications of the system are: pump energy output at about 1 kW, delivery head of 20-50 m, self-priming every day with sufficient solar radiation, and maintenance interval of one year; the system should be easy to construct and repair. Because of the requirement of a simple design, flat plate solar collectors will be used. Several drive system designs are considered, and it is shown that only expansion machines can meet the desired specifications. A double-acting cylinder machine has been designed and is being constructed. To improve the total efficiency, a new direct evaporator will be used. V.L.

A80-38013 **Comfortable heating and cooling by solar reflectors and wind.** S. A. Husain (Aligarh Muslim University, Aligarh, India). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 1850-1861. 7 refs.

A solar and wind energy system is proposed which would meet the home heating, cooling, lighting, hot water, and cooking requirements in tropical countries. Direct and diffused solar radiation together with radiation reflected from frame-mounted reflectors is collected by a flat-plate collector mounted on the room window. The collector carries water tubes for heating and three generators connected to the ammonia absorption unit for cooling the room. At night, room insulation helps to retain to a certain extent the heat or cold of the day. The reflectors can be used partly for heating and cooling, and partly for cooking food from 8 A.M. to 4 P.M. Wind energy is used for energizing ceiling fans and to power a generator which would supply heating, cooking, and lighting power needs. An immersion heater will be used for warming water. V.L.

A80-38014 **Combination of wind and solar energies at the Northern Coast of Egypt.** I. A. Sakr (National Research Centre, Solar Energy Laboratory, Cairo, Egypt), M. S. Abdel Hafiez (Alexandria, University, Alexandria, Egypt), and A. S. Hegazy (Minufiya University, Shibin el Kom, Egypt). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 1862-1890. 7 refs.

Various combinations of wind and solar units are analyzed in order to determine the effect of such combinations on the storage system capacity and performance. The analysis is made for the site of Mersa Matruh on the Northern Coast of Egypt. Wind and solar energy may be combined either in a direct arrangement, whereby all energy produced by wind and solar units is first accumulated in a storage unit, or in a bypassing arrangement, in which only the power produced in excess of the load demand is accumulated in the storage unit. It is shown that the storage losses are greater in the direct arrangement. A method is proposed to select the optimum solar fraction at which the storage capacity is minimum; this fraction is found to be 0.68 for a wind machine combined with a focusing collector, and 0.70 for a wind machine combined with a flat plate collector. V.L.

A80-38015 **Solar energy - UNIDO programme of action for developing countries.** S. Rao (United Nations, Industrial Development Organization, Vienna, Austria). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 1901-1910.

UNIDO activities with regard to the promotion, development, and utilization of solar energy in developing countries include: feasibility studies, strengthening of existing solar energy research and development institutions or establishment of new ones, establishment of prototype pilot manufacturing units and industrial liaison, manufacturing and investment promotion, training, and information dissemination. In this program UNIDO will rely on cooperation among the developing countries in the fields of training, research, and development, as well as on technology transfer from industrialized countries: information and expertise exchange, joint research and development programs, manufacturing promotion, and training programs. V.L.

A80-38019 **Economic considerations of solar energy.** J. D. Parker (Oklahoma State University, Stillwater, Okla.) and J. A. Tipton (U.S. Department of Energy, Bartlesville Energy Research Center, Bartlesville, Okla.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 2021-2043.

The performance and economics of several solar systems are discussed, including a solar home, an asphalt heater, and a water heater for a research building. Summary of economic data is also presented for the world's largest solar water heating system for an industrial laundry in California, and the world's largest solar installation on a secondary school in Arizona. In the latter system, 343 collectors give a receiver area of about 20,000 sq ft and heat 280 gallons of water per minute for space heating, cooking, and domestic hot water. It has a 50,000 gallon underground storage tank and can handle 80% of the school's peak load. The system cost $769,000 and is expected to save $1 million over the 20 year life of the system. V.L.

A80-38020 **The comparative economics of passive and active systems.** F. Roach, S. Noll, and S. Ben-David (California, University, Los Alamos, N. Mex.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 2044-2083. 13 refs. Research supported by the U.S. Department of Energy.

Design criteria, solar performance characteristics, and incremental solar cost are examined for one passive design, the thermal mass storage wall, and compared to those of one active design, the air collector/rock storage. It is shown that the potential use of passive solar system in residential space heating applications is enhanced by incentives against all fuel types. This enhancement is especially evident in the natural gas and heating oil comparisons. The passive design is economically competitive against the electric resistance alternative in all but a few states, and is feasible today on a life cycle cost basis. Employment of the low interest loan incentive option gives rise to higher solar fractions than under the proposed NEA income tax credit option. V.L.

A80-38021 **An economic analysis of solar energy alternatives.** D. A. Huettner, B. J. Taylor, C. A. Ingene, and J. F. Horrell (Oklahoma, University, Norman, Okla.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 2084-2105. 5 refs.

The economic feasibility of several central station solar electric systems is analyzed with comparison to four traditional power generating options (nuclear, oil, gas, and coal). Mass production, optimal scale of production, and compliance with environmental laws are used for costing each of the solar and non-solar options, with consideration of energy storage and electrical distribution costs. The analysis is made for a specific site - Hobbs, New Mexico. It is shown that the best solar option should become competitive with nuclear and imported oil options under a reasonable range of assumptions, but are not generally competitive with low sulfur coal, except under the scenario of escalating fuel costs. If non-quantifiable costs (cost of pollution, mortality) are considered, central station solar electric power may be preferred to low sulfur coal on an overall basis toward the end of the century even without major technological breakthroughs. V.L.

A80-38022 **Impact of solar heating and cooling of buildings on electric utilities.** A. S. Debs (Georgia Institute of Technology, Atlanta, Ga.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 2106-2125. 22 refs.

The effect of widespread utilization of solar heating and cooling of buildings on the planning cost and production of electric power systems is discussed with special reference to the techniques for reducing peaks of electrical demand by adequately designed solar systems. After considering utility production costs, their relation to electric load profiles, electric generation planning, and load management, several basic solar systems with electrical backup are analyzed and a two-level optimization problem is formulated involving the utility and its customers. It is shown that by means of modified designs and peak-sharing control systems, solar systems for heating and cooling can contribute positively to reductions in the cost of electric energy production. V.L.

A80-38023 * **Evaluation of solar thermal power plants using economic and performance simulations.** N. El-Gabawali (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 2138-2161. 5 refs. Contract No. NAS7-100.

An energy cost analysis is presented for central receiver power plants with thermal storage and point focusing power plants with electrical storage. The present approach is based on optimizing the size of the plant to give the minimum energy cost (in mills/kWe hr) of an annual plant energy production. The optimization is done by considering the trade-off between the collector field size and the storage capacity for a given engine size. The energy cost is determined by the plant cost and performance. The performance is estimated by simulating the behavior of the plant under typical weather conditions. Plant capital and operational costs are estimated based on the size and performance of different components. This methodology is translated into computer programs for automatic and consistent evaluation. V.L.

A80-38024 **The American experience with solar energy in centralized electricity generation - Technology and economics.** D. L. Hurwood (Energy Economics and Alternatives, New York, N.Y.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 2162-2188. 27 refs.

The technological and economical feasibility of solar power for central-station generation is examined within the framework of existing fuel power technologies. Consideration is given to the fuel trends expected through 1986, cost of conventional fuels, impediments to early utilization of solar energy, prospects for growing decentralization of electricity generation, utility response to growing public and industry interest in solar power, advances in solar electric technologies, and a balanced program for electricity generation in the

United States. It is shown that solar technologies may play a part in a balanced electric energy 'mix' based on nuclear power, renewable sources (hydro, solar, and wind), and the orderly exploitation of existing and still-to-be discovered fossil-fuel deposits. V.L.

A80-38025 **Solar energy - Will it conserve our nonrenewable resources.** S. Baron (Burns and Roe, Inc., Oradell, N.J.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 2210-2229. 22 refs.

Solar energy applications, including heating, thermal electric, and photovoltaic, are examined in terms of consumed energy-intensive materials in order to determine their economic expediency. These applications will be justified economically if the energy consumed for fabrication, construction, and operation of solar power plants is less than the energy recovered by the plants over their operating life. It is shown that solar thermal electric plants in the Southwest United States will pay back their energy requirements in less than five years, which is not the case in other U.S. areas. Photovoltaic plants are highly energy-intensive, and an assessment shows that in operating such a plant for 30 years, the energy payback would be close to 20 years. The solar energy development program must concentrate on designs and technological developments that utilize less energy consuming materials in order to be competitive with present energy alternatives. V.L.

A80-38026 **Accelerated commercialization of solar energy - A new priority for international action.** L. Rishell and N. D. Jorstad (Rishell International, Inc., Potomac, Md.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 2251-2269. 13 refs.

International activities in the field of solar energy commercialization, involving the United States, are reviewed. Synergistic and reinforcing effects of combining the purchasing power of cost-effective markets in several countries could be most favorable for the economics of solar energy systems. A plan is formulated in which international solar markets can be aggregated for mutual benefit by establishing an Organization of Solar Energy Countries (OSEC) which would concentrate on the current and proposed solar energy initiatives, both national and international. V.L.

A80-38274 **Three-dimensional numerical evaluation of heat loss through natural convection in a solar boiler.** P. Le Quere and T. Alziary de Roquefort (Poitiers, Université, Poitiers, France). In: Conference on Numerical Methods in Fluid Mechanics, 3rd, Cologne, West Germany, October 10-12, 1979, Proceedings. Braunschweig, Friedr. Vieweg und Sohn Verlagsgesellschaft mbH, 1980, p. 241-250. 6 refs.

An implicit finite difference method is presented for the integration of compressible Navier Stokes equations. The scheme involves a generalized linearization process and the Douglas-Gunn ADI technique. The variables are defined on a variable mesh staggered grid and the spatial differencing satisfies some integral conservation properties for mass, momentum and energy. Stability is demonstrated for time steps much larger than the CFL limit. The method is applied to the computation of free convection flows in two and three dimensions with high values of the Grashoff number. (Author)

A80-38282 **Detailed balance limit of the efficiency of tandem solar cells.** A. De Vos (Gent, Rijksuniversiteit, Ghent, Belgium). *Journal of Physics D - Applied Physics*, vol. 13, May 14, 1980, p. 839-846. 10 refs.

The fundamental (detailed balance) limit of the performance of a tandem structure is presented. The model takes into account the fact that a particular cell is not only illuminated by part of the solar irradiance but also by the electroluminescence of other cells of the set. Whereas under 1 sun irradiance a single solar cell only converts 30% of the solar energy, a tandem structure of two cells can convert 42%, a tandem structure of three cells can convert 49%, etc. Under the highest possible light concentration, these efficiencies are 40% (one cell), 55% (two cells), 63% (three cells), etc. The model also allows one to predict the ideal efficiency of a stack with an infinite number of solar cells. Such a tandem system can convert 68% of the unconcentrated sunlight, and 86% of the concentrated sunlight. (Author)

A80-38305 **Wangen EVS-solarhouse with a positive balance sheet (EVS-Sonnenhaus Wangen mit positiver Bilanz).** *Energiewirtschaftliche Tagesfragen*, vol. 30, May 1980, p. 347-349. In German.

The results achieved with a solar house after one year of operation are reviewed. It is stressed that conventional solar collectors are not sufficient for heating the test house. Further, improvements are also needed for the task of hot water heating. Other disadvantages of solar collectors and of heatpumps working only with ambient air are discussed. It is demonstrated that a heat pump system using solar absorbers and a heat storage tank of damp the weekly to annual average values with the RMSE decreasing from 5 down to 2, respectively. A sensitivity study of these four improvements indicated that the first three were the most significant. (Author)

A80-39055 **I-V and C-V characteristics of Au/TiO2 Schottky diodes.** N. Szydlo and R. Poirier (Thomson-CSF, Laboratoire Central de Recherches, Orsay, Essonne, France). *Journal of Applied Physics*, vol. 51, June 1980, p. 3310-3312. 14 refs. Délégation Générale à la Recherche Scientifique et Technique Contract No. 77-7-1203.

A80-39061 **Single-crystal solar cell heterojunctions involving N-cadmium sulfide.** M. Arienzo and J. J. Loferski (Brown University, Providence, R.I.). *Journal of Applied Physics*, vol. 51, June 1980, p. 3393-3403. 24 refs. NSF-sponsored research.

A chemical vapor deposition method capable of depositing high-quality epitaxial layers of CdS on single-crystal substrates was used for the fabrication of heterojunction photovoltaic devices of the type n-CdS/p-InP, n-CdS/p-CdTe, n-CdS/p-GaAs and n-CdS/p-Ge. An analysis of the photovoltaic responses shows that all the devices have good collection efficiency, i.e. that at zero bias, photogenerated carriers crossing the junction do not suffer appreciable recombination at interface states. The solar energy conversion efficiency is, however, strongly influenced by the interface states through the open circuit voltage and the fill factor; analysis of the dark current-voltage characteristics shows the existence of a low temperature low-bias voltage tunneling current in all of the devices. A.T.

A80-39288 **The sunship - The case for a solar powered airship.** G. A. Khoury (Imperial College of Science and Technology, London, England). In: Economics and technology of airships; International Symposium, Paris, France, March 28-30, 1979, Proceedings. Volume 1. Paris, Association d'Etude et de Recherche sur les Aéronefs Allégés, 1979, p. 147-156.

The solar-powered airship is examined with reference to overall design, solar cell arrays, solar power speed, the weight problem, costs, and areas of application. It is noted that a sunship has, in addition to the known merits of an ordinary airship, the advantage of constant weight and an evenly distributed fuel system. It does not require refueling facilities and is even safer than an ordinary airship in that it does not carry inflammable fuel. Its operations, however, will be limited to the sunny regions of the world, where it can only sustain an average of nine hours flight a day unless satisfactory electrical storage units are installed or an auxiliary fuel system is used to support extended daily flights. B.J.

A80-39785 # **Determination of the unsteady heat fluxes in the focal plane of a radiant energy concentrator (Opredelenie nestatsionarnykh teplovykh potokov v fokal'noi ploskosti kontsentratora energii izlucheniia).** P. G. Krukovskii and K. B. Isaev. *Promyshlennaia Teplotekhnika,* vol. 2, May-June 1980, p. 3-6. In Russian.

A two-dimensional nonlinear inverse heat conduction problem is examined, which consists of determining, on the basis of given temperature measurements, the law of heat flux variation at the face of a cylindrical titanium specimen during the process of radiative heat transfer in the focal plane of a solar radiant-energy concentrator. A numerical solution is obtained, using an explicit finite-difference scheme to approximate the differential equation of the heat-transfer model. The obtained expressions for calculating the temperature field and the thermal fluxes are discussed. V.P.

A80-39937 **Properties of low cost, high volume glasses.** M. A. Lind, J. S. Hartman, and C. Q. Buckwalter (Battelle Pacific Northwest Laboratories, Richland, Wash.). In: Physical properties of optical materials; Proceedings of the Seminar, San Diego, Calif., August 27, 28, 1979. Bellingham, Wash., Society of Photo-Optical Instrumentation Engineers, 1980, p. 111-117. Contract No. EY-76-C-06-1830.

The properties of new and weathered samples of low cost, high volume glasses have been studied to determine their usefulness for solar energy applications. Glasses of varying compositions produced by float, drawn, rolled, fusion, and twin ground techniques were examined. Spectral transmittance and reflectance were measured and solar weighted values calculated. Laser raytrace techniques were used to evaluate surface parallelism and bulk homogeneity. Compositional changes were examined with scanning electron microscopy, X-ray fluorescence, and Auger electron spectroscopy. These techniques were used in conjunction with ellipsometry to study the surface effects associated with weathering. (Author)

A80-40252 * **Ion-implanted laser annealed silicon solar cells.** J. S. Katzeff (Lockheed Missiles and Space Co., Inc., Sunnyvale, Calif.). In: Laser applications in materials processing; Proceedings of the Seminar, San Diego, Calif., August 27-28, 1979.

Bellingham, Wash., Society of Photo-Optical Instrumentation Engineers, 1980, p. 42-48. Research sponsored by the U.S. Department of Energy and NASA.

Development of low cost solar cells fabrication technology is being sponsored by NASA JPL as part of the Low Cost Solar Array Project (LSA). In conformance to Project requirements ion implantation and laser annealing were evaluated as junction formation techniques offering low cost-high throughput potential. Properties of cells fabricated utilizing this technology were analyzed by electrical, transmission electron microscopy, Rutherford backscattering and secondary ion mass spectrometry techniques. Tests indicated the laser annealed substrates to be damage free and electrically active. Similar analysis of ion implanted furnace annealed substrates revealed the presence of residual defects in the form of dislocation lines and loops with substantial impurity redistribution evident for some anneal temperature/time regimes. Fabricated laser annealed cells exhibited improved spectral response and conversion efficiency in comparison to furnace annealed cells. An economic projection for LSA indicates a potential for considerable savings from laser annealing technology. (Author)

A80-40334 **Application of reliability, maintainability, and availability engineering to solar heating and cooling systems.** P. S. Chopra and R. M. Wolosewicz (Argonne National Laboratory, Argonne, Ill.). In: Annual Reliability and Maintainability Symposium, San Francisco, Calif., January 22-24, 1980, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1980, p. 248-253. 12 refs. Research supported by the U.S. Department of Energy.

This paper compares the reliability of solar hot-water and heating systems with that of conventional systems using block diagrams, failure modes and effects analysis, and fault trees. Although stand-alone solar-energy systems are not as reliable as conventional systems, the RMA of the combined solar and conventional system can be made comparable to currently available heating and hot-water systems. An availability matrix is presented that can be used to develop maintenance schedules that do not decrease the system's availability. Field data presented on operating solar heating and cooling systems indicate that these systems experience four major generic problems: freezing, leakage, controls, and collectors. (Author)

A80-40473 **Class of axisymmetric mirrors with uniform flux concentration properties along their axes.** U. H. Kurzweg (Florida, University, Gainesville, Fla.). *Optical Society of America, Journal,* vol. 70, June 1980, p. 750-752. 5 refs.

The shape of axisymmetric mirrors capable of producing a constant concentrated flux density along a coaxial cylindrical surface is determined via both a series solution and a phase plane analysis of the governing second-order nonlinear differential equation. It is shown that there exists a class of such concentrators and that they all have a characteristic bell shape with two finite principal radii of curvature. Mirrors of this type may find application in processes requiring concentrated uniform illumination over extended areas such as in photovoltaic energy conversion. (Author)

A80-40474 **Required minimum value of barrier height in minority-carrier M.I.S. solar cells.** O. M. Nielsen (Danmarks Tekniske Hojskole, Lyngby, Denmark). *IEE Proceedings, Part I - Solid-State and Electron Devices,* vol. 127, pt. I, no. 3, June 1980, p. 105-108. 9 refs.

The saturation currents of minority-and majority-carrier MIS solar cells have been compared to find the value of the barrier height where the dominating saturation current changes from a majority-carrier current to a minority-carrier current. For an interfacial oxide layer of 20A the value of the barrier height has been calculated to be in the range 750-800 mV, whereas for an oxide layer of 10A, the barrier height is found to be about 900-950mV. (Author)

A80-40538 **The effect of a black chrome selective surface on the thermal performance of a solar collector.** J. A. Manrique and R. Suarez (Monterrey, Instituto Tecnológico y de Estudios Superiores, Monterrey, Mexico). *Letters in Heat and Mass Transfer,* vol. 7, Jan.-Feb. 1980, p. 25-31. 5 refs. Research supported by the United Nations Developing Program and UNESCO.

The radiation properties of a black chrome selective surface are presented in this work. Similarly, a comparison between the thermal performance of a flat plate solar collector with and without selective surface on the absorber is described. (Author)

A80-40709 **Attenuation of solar energy by high, thin clouds.** V. E. Derr (NOAA, Wave Propagation Laboratory, Boulder, Colo.). *Atmospheric Environment,* vol. 14, no. 6, 1980, p. 719-729. 22 refs.

The paper discusses the attenuation of solar energy by high, thin clouds. The estimates of the effect of clouds on solar energy rarely include high ice curriform clouds because of the difficulty of direct, human detection. Lidar studies and aircraft observations show that cirrus is frequently present; the attenuation of solar energy by curriform clouds is calculated, and the data used in combination with cirrus frequency results to estimate average effects of cirrus on solar energy devices. The marginal cost effectiveness of large solar installations requires that the effects of cirrus be considered in design. A.T.

A80-40712 **Review of amorphous and polycrystalline thin film silicon solar cell performance parameters.** H. K. Charles, Jr. and A. P. Ariotedjo (PRC Energy Analysis Co., McLean, Va.). *Solar*

Energy, vol. 24, no. 4, 1980, p. 329-339. 40 refs. Contract No. EG-77-C-01-4024.

The paper presents a state-of-the-art technology review for amorphous and polycrystalline thin film silicon solar cells. It details the performance parameters for the diversity of cell types and structures (e.g., p-n junctions, p-i-n and MIS structures, Schottky barriers, and heterojunctions) fabricated with amorphous and polycrystalline silicon film materials. Trends in performance improvement and fabrication techniques are outlined. V.T.

A80-40714 * **New technologies for solar energy silicon - Cost analysis of BCL process.** C. L. Yaws, K.-Y. Li (Lamar University, Beaumont, Tex.), C. S. Fang (Southwestern Louisiana, University, Lafayette, La.), R. Lutwack, G. Hsu, and H. Leven (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). *Solar Energy*, vol. 24, no. 4, 1980, p. 359-365. 46 refs. Research sponsored by the U.S. Department of Energy.

New technologies for producing polysilicon are being developed to provide lower cost material for solar cells which convert sunlight into electricity. This article presents results for the BCL Process, which produces the solar-cell silicon by reduction of silicon tetrachloride with zinc vapor. Cost, sensitivity, and profitability analysis results are presented based on a preliminary process design of a plant to produce 1000 metric tons/year of silicon by the BCL Process. Profitability analysis indicates a sales price of $12.1-19.4 per kg of silicon (1980 dollars) at a 0-25 per cent DCF rate of return on investment after taxes. These results indicate good potential for meeting the goal of providing lower cost material for silicon solar cells. (Author)

A80-40717 **Measurement of wind speed distributions across a solar collector.** M. V. Oliphant (South Australia, Flinders University, Bedford Park, Australia). *Solar Energy*, vol. 24, no. 4, 1980, p. 403-405.

A80-40718 **Thermal performance predictions and sensitivity analysis for high temperature flat-plate solar collectors.** J. G. Symons (Commonwealth Scientific and Industrial Research Organization, Div. of Mechanical Engineering, Highett, Victoria, Australia) and R. Gani (Monash University, Clayton, Victoria, Australia). *Solar Energy*, vol. 24, no. 4, 1980, p. 407-410. 10 refs.

The long-term thermal performances of high-temperature flat-plate solar collectors are compared for typical process heating loads in significantly different climates. Consideration is given to the collectors which are double and triple glazed and to those with a single cover and convention suppression device. V.T.

A80-40721 **Solar elevation angle probability distribution.** D. C. Larson and C. R. Acquista (Drexel University, Philadelphia, Pa.). *Solar Energy*, vol. 24, no. 4, 1980, p. 417-420. 5 refs. Research supported by the U.S. Department of Energy.

The probability distribution of solar elevation angles is determined, and the importance of this distribution on concentrator design is discussed. It is concluded that the time probability function for the solar elevation angle is important when considering alternative low-concentration systems for year-round or seasonal applications. V.T.

A80-40937 **Temperature distributions in the flat-plate collector under actual unsteady insolation.** M. F. El-Refaie and M. A. Hashish (Cairo University, Giza, Egypt). *Applied Mathematical Modelling*, vol. 4, June 1980, p. 181-186. 7 refs.

The dynamic behavior of the flat-plate solar energy collector is analyzed taking into account the continuous variation of the received radiant flux. Closed-form mathematical formulas are derived for the fluid and absorber-plate temperatures as functions of both the time and the position along the collector. Different mathematical forms are given for the diurnal heating and the nocturnal cooling periods. The temperature expressions are presented in dimensionless form in terms of a limited number of dimensionless groups. Samples of the results obtained by using the derived formulas are displayed graphically. (Author)

A80-41324 **Solar energy economics - Orbiting reflectors for world energy.** K. W. Billman, W. P. Gilbreath, and S. W. Bowen. In: How big and still beautiful. Macro-engineering revisited. Boulder, Colo., Westview Press, Inc. (AAAS Selected Symposia Series, No. 40), 1980, p. 293-342. 19 refs.

The paper outlines a recent study made on a space-terrestrial solar energy system (SOLARES) consisting of a set of orbiting mirrors that provide nearly continuous reflected sunlight to a world-distributed set of solar conversion sites. This solar concept is examined under the four criteria which any candidate energy system must satisfy: (1) technical feasibility, (2) significant and renewable energy impact, (3) economic feasibility, and (4) social/political acceptability. V.T.

A80-41470 # **Design of a heat pipe absorber for a concentrating solar water heater.** K. T. Feldman, Jr. (New Mexico, University; Energy Engineering, Inc., Albuquerque, N. Mex.) and D. L. Noreen (Solar Energy Research Institute, Golden, Colo.). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 15th, Snowmass, Colo., July 14-16, 1980, Paper 80-1506*. 9 p. 16 refs. Research supported by the New Mexico Department of Energy and Minerals.

The heat pipes used in the absorber of a solar water heater with a concentrating collector were analyzed. The absorber was made of one or more gravity-assisted heat pipes. The heat pipe analysis included the effects of counterflow liquid-vapor shear and nucleate boiling. It was found that 2.09 to 2.66 cm inside diameter (3/4 to 1 inch nominal pipe) heat pipes operated horizontally or at small tilt angles could provide the required axial heat transport rate over the reasonably long distances encountered in concentrating solar collectors. A heat pipe solar collector can be highly cost-effective. December performance of 46% thermal efficiency with 61 deg C (142 deg F) end-of-day water temperature in a 208 kg (55 gal) tank was predicted for a 4 m long non-tracking collector with a 4 sq m area. Experimental results agree closely with the analysis predictions. (Author)

A80-41471 # **Heat pipe receiver for a 20 MWe solar tower.** H. Kreeb and K. Schaber (Dornier System GmbH, Friedrichshafen, West Germany). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 15th, Snowmass, Colo., July 14-16, 1980, Paper 80-1507*. 7 p.

Since October 1978 a German industrial group is working on the plant design and the development of a 20 MWe gas cooled central receiver solar power plant. During the phase of preliminary design, which is now finished, various configurations for each of the main components of the power plant have been investigated and a conception for further work is defined. The objective point of this project will be the erection of a pilot plant in a partner country, to be designated, and the commencement of operation in 5 years. The design of the central heat pipe receiver, using air up to 800 C as coolant, is described in detail. (Author)

A80-41502 # **Optimization of liquid desiccant systems for solar/geothermal dehumidification and cooling.** C. S. P. Peng and J. R. Howell (Texas, University, Austin, Tex.). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 15th, Snowmass, Colo., July 14-16, 1980, Paper 80-1546*. 11 p. 23 refs.

A80-41948 **Plastic solar collectors for 'low energy' applications.** A. Addeo, G. Campanile, L. Nicolais, and G. Romeo (Montedison - DIRS, Naples Research Centre, Naples, Italy). *Applied Energy*, vol. 6, July 1980, p. 265-274. Research supported by the Consiglio Nazionale delle Ricerche.

The possibility of constructing, with plastic materials, solar collectors for 'low temperature' (less than 60 C) applications is investigated. Several prototypes are analyzed for their performance and efficiency. The results indicate a strong possibility of large-scale use of these solar collectors for many applications. (Author)

02 SOLAR ENERGY

A80-41950 **Concentration characteristics of composite parabolic concentrators.** R. N. Singh, S. S. Mathur, and T. C. Kandpal (Indian Institute of Technology, New Delhi, India). *Applied Energy*, vol. 6, July 1980, p. 315-321. 5 refs.

The effects of the widths of individual strip mirrors in a composite cylindrical parabolic solar concentrator on the concentration ratio are investigated. Calculations of the geometrical concentration ratios for a circular cylindrical receiver and a flat plate receiver are presented as a function of rim angle, and the effects of strip widths are illustrated for rim angles of 60 and 45 deg for the circular cylindrical and flat plate receivers, respectively. It is pointed out that the concentration decreases sharply at first with increasing strip width, attaining a more or less constant value at widths greater than approximately 10 cm. A.L.W.

A80-41951 **Thermal insulation of a low capital cost solar-energy collector.** B. Norton and S. D. Probert (Cranfield Institute of Technology, Cranfield, Beds., England). *Applied Energy*, vol. 6, July 1980, p. 323-327. 5 refs. Research supported by the Science Research Council.

To achieve least steady-state heat losses across the atmospheric pressure air in a concentric horizontal cavity between a heated inner cylinder and a naturally cooled surrounding cylinder, the radial supports along the length of the cavity should be at approximately 60 deg from the vertically downwards position. This design recommendation has been incorporated in a simple prototype solar energy collector. (Author)

A80-42101 **Current from the sun - A look at the economics of solar cells.** J. J. Loferski (Brown University, Providence, R.I.). *The Sciences*, vol. 20, July-Aug. 1980, p. 6-9, 29.

The use and cost efficiency of photovoltaic solar cells in space and terrestrially is surveyed. Attention is given to systems in which lenses or mirrors are used to concentrate sunlight, and to flat plate collector systems which do not employ concentration. Lowering costs of silicon cells is considered along with the substitution of polycrystalline or amorphous semiconductor thin films for the single crystal silicon wafers. Also discussed is the use of high efficiency cells such as in tandem solar cell systems. J.P.B.

A80-42135 **Effect of plasma reflection on open-circuit voltage of a solar cell at ultrahigh light intensities.** V. K. Tewary (Birla Institute of Technology and Science, Pilani, India), L. S. Kothari (Delhi, University, Delhi, India), and S. C. Jain (Solid State Physics Laboratory, Delhi, India). *Applied Physics Letters*, vol. 37, July 1, 1980, p. 58, 59.

A80-42140 **Efficient indium tin oxide/polycrystalline silicon semiconductor-insulator-semiconductor solar cells.** A. P. Genis, P. A. Smith, K. Emery, R. Singh, and J. B. DuBow (Colorado State University, Fort Collins, Colo.). *Applied Physics Letters*, vol. 37, July 1, 1980, p. 77-79. 8 refs. Research supported by the Solar Energy Research Institute.

The fabrication of high efficiency (10.94%,AMI) and large area (11.46 sq cm) indium tin oxide/polycrystalline silicon semiconductor-insulator-semiconductor solar cells using neutralized-ion-beam sputtering is discussed. It was shown that the proper surface preparation and the incorporation of hydrogen during milling and oxidation of the substrate are important fabrication steps. The photovoltaic conversion parameters were the open circuit voltage of 0.526 V, the short-circuit density of 27.39 mA/sq cm, and the FF of 0.759. A.T.

A80-42161 # **The prospects for solar-powered closed-cycle gas turbines.** S. C. Kuo, T. L. O. Horton, and H. T. Shu (United Technologies Research Center, East Hartford, Conn.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-26*. 9 p. 14 refs. Members, $1.50; nonmembers, $3.00.

This paper presents the results of a systems study to evaluate the technological and economic feasibility of utilizing closed-cycle gas turbines integrated with an advanced-design central receiver for solar power generation. Applicable turbomachinery technologies were reviewed to estimate their future advances expected. System design-point performance, component size, and cost characteristics of closed-cycle air turbines were estimated, and system operational and control characteristics, including off-design and part-load performance characteristics, are discussed. Critical system components were reviewed to estimate the appropriate testing and development time and cost schedules required. (Author)

A80-42167 # **Reciprocal efficiency improvement of high temperature fossil and low temperature solar heat sources for power generation.** Z. P. Tilliette and B. Pierre (Commissariat à l'Energie Atomique, Division d'Etude et de Développement des Réacteurs, Gif-sur-Yvette, Essonne, France). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-34*. 7 p. 8 refs. Members, $1.50; nonmembers, $3.00.

Gas turbine systems are investigated for solar energy conversion because they can offer satisfactory performances, particularly in case of combined cycles, and interesting solutions for plant operation. Hybrid concepts, associating solar heating with fossil firing, reduce the need for energy storage. Key problems are: matching of combined gas and steam cycles for performance enhancement, coupling of solar heating with fossil firing, use of as much solar energy as possible and priority use of solar energy at medium temperature (200/650 C), because, within this temperature range, technology is more readily available for the solar receiver system (central receiver, fixed mirror concentrators, parabolic dish collectors) and for the primary circuit (Gilotherm, Dowtherm, sodium, molten salts). (Author)

A80-42244 # **The design of a solar receiver for a 25-kWe gas turbine engine.** M. Greeven, M. Coombs, and J. Eastwood (AiResearch Manufacturing Company of California, Torrance, Calif.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-131*. 5 p. Members, $1.50; nonmembers, $3.00.

This paper describes a solar receiver designed to be used with a single-point-focus, parabolic concentrator. The receiver accepts the concentrated solar radiation and uses it to heat the working gas of a small, open-cycle gas turbine to about 1500 F (815 C). The receiver employs a high-efficiency, metallic plate-fin heat transfer surface to effect this energy transfer. The thermal and mechanical design features of the receiver are discussed. (Author)

A80-42435 **Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures.** Course supported by the University of Waterloo, U.S. Department of Energy, and International Centre for Theoretical Physics. Edited by A. E. Dixon and J. D. Leslie (Waterloo, University, Waterloo, Ontario, Canada). Toronto and New York, Pergamon Press, 1979. 1324 p. $60.

The course concentrated on solar radiation and collectors, selective surfaces, heating and cooling of buildings, architecture and planning, direct conversion, control and measurement, bioconversion, and biomass. Papers were presented on basics of solar energy, technology of flat plate collectors, concentrating collectors, spectrally selective surfaces, solar energy air systems, cooling of buildings, solar architecture, hybrid energy optimization, polycrystalline solar cells, MIS and SIS solar cells, sensors, microprocessors, bioconversion of solar energy, solar powered refrigeration, and wind power. A.T.

A80-42436 **Basics of solar energy.** A. A. M. Sayigh (Riyadh, University, Riyadh, Saudi Arabia). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 1-7.

Basic data related to solar energy are summarized, including mass, radius, average density, and average surface temperature of the sun, as well as definitions of the common terminology. Equations are given for the calculation of the solar declination and the length of the day. V.L.

A80-42437 Characteristics of solar radiation. A. A. M. Sayigh (Riyadh, University, Riyadh, Saudi Arabia). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 9-36. 14 refs.

The intensity and spectral and temporal characteristics of solar energy received at the earth's surface are discussed in relation to solar energy applications. Measurements of the solar constant and the extraterrestrial solar spectral energy distribution are presented, and the determination of total and spectral solar irradiance at ground level taking into account the variability of incident solar energy due to solar inclination, cloud cover and atmospheric attenuation is considered. The calculation of direct solar radiation incident on an inclined surface, diffuse and reflected solar radiation on inclined and horizontal surfaces and total or global radiation on an inclined surface is then examined, and the effects of turbidity and surface albedo on solar radiation intensity are indicated. Finally, various means for the estimation of total solar radiation are reviewed and a new formula is proposed. A.L.W.

A80-42438 Methods for the estimation of solar energy on vertical and inclined surfaces. J. K. Page (Sheffield, University, Sheffield, England). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 37-99. 23 refs. Science Research Council of England Grants No. B/RG/93199; No. GR/A/34788.

The paper presents two methods for the assessment of monthly mean solar radiation falling on vertical and inclined surfaces anywhere in the inhabited world. Both methods involve splitting the incident flux into three components: direct, sky diffuse, and ground reflected diffuse using mean monthly sunshine data as their starting point. The first method is simple and provides daily values of the irradiation on slopes; the second method involves more complex mathematical modelling and is dependent on the availability of digital computers, and it rapidly produces hourly values of the mean monthly irradiance on slopes which check with field observations. This model does not assume isotropic radiation from the sky. A.T.

A80-42439 The technology of flat plate collectors. A. A. M. Sayigh (Riyadh, University, Riyadh, Saudi Arabia). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 101-124. 23 refs.

The capabilities and limitations of flat plate collectors of solar energy for heating are discussed. The properties of commonly used insulation materials are presented, and it is shown how collector efficiency varies with the temperature gain of the collector per unit insolation for different kinds of covers. Attention is given to the optimum air gap between the absorber and the glass covers as well as to reducing losses due to convection by producing a vacuum in the collector spacing or by placing transparent honeycombs in the air gap. Also considered are the radiative interchange within the gap between the hot collector plate and the top transparent cover, and processes of heat transfer by convection. J.P.B.

A80-42440 Free convection in solar collectors. K. G. T. Hollands (Waterloo, University, Waterloo, Ontario, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 125-147. 7 refs.

Free convective heat transfer in solar collectors is discussed. The heat transfer coefficient in a stationary fluid is considered along with buoyancy and viscous forces, and both the horizontal and inclined air layers. Attention is also given to combined free convective and radiative coefficients across air layers. In addition, the practical problems of choosing the spacing between the individual covers and between the inner cover and the absorber plate in a flat plate solar collector are addressed. J.P.B.

A80-42441 Advanced non-concentrating solar collectors. K. G. T. Hollands (Waterloo, University, Waterloo, Ontario, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 149-166. 15 refs.

Three classifications of advanced flat plate collector designs are considered. In the reduced pressure solar collector, the pressure in the air layer between the absorbing surface and the transparent cover is reduced as well as the tendency for free convection, with virtually no effect on the thermal conductivity of the air until very low pressures are reached. In evacuated collectors reduction in the heat transfer across an air layer is achieved by obtaining such a high vacuum that the thermal conductivity of air is effected; difficulties with regard to the unbalanced pressure force acting on the glass cover and maintenance of the vacuum against leaks are addressed. In honeycomb collectors the inner set of covers are cut into lengths and placed perpendicular to the absorber plate with the result that reflections of solar radiation are not lost and absorption in the partitions can be avoided; attention is given to cell size and calculation of radiant exchange across a honeycomb. J.P.B.

A80-42442 Concentrating collectors. A. S. Roy. In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 185-252. 86 refs. Contract No. W-7405-eng-26.

A review of the state-of-art of solar concentrating collectors is presented. Moderately concentrating systems which are defined as those operating below the intensity ratios of three are discussed including evacuated tube absorbers, vee-troughs, and compound parabolic concentrators; strongly concentrating collectors are being developed which utilize reflecting, refracting, mirror, and Fresnel optical principles, and parabolic, spherical, and flat contours. Point-focusing parabolic dish collectors, a 2-G axis parabolic dish, fixed-mirror two-axis focusing concentrators, and fixed-reflector-rotating absorber types are described. Economic considerations are analyzed, presenting a simplified model which computes the cost of electricity and the system efficiency; finally, the optical losses are examined by the consideration of point focusing paraboloidal reflectors and absorber efficiency. A.T.

A80-42443 Spectrally selective surfaces in photothermal solar energy conversion. B. O. Seraphin (Arizona, University, Tucson, Ariz.). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 287-329. 14 refs. Contracts No. EY-76-S-04-3709; No. ER-78-S-02-4899.

The paper examines photothermal conversion which directly converts solar into thermal energy. The principle is illustrated by depicting the energy flow in a conversion unit, and showing that the ideal converter should have an absorption profile that resembles a Fermi function. The spectral selectivity requirement depends on the flux concentration and the converter surface operating temperature; selective surfaces must have a proper spectral profile, and the properties of the surface must resist elevated temperatures. Methods of obtaining spectral selectivity including the single material approach, based on the spectral positions of the plasma edge in As-doped germanium and Ag, and the spectral selectivity of Mo-MoO3 thin films are discussed; the temperature dependence of optical properties is described by thermal emittances vs temperature of metals. Absorber-reflector tandems used because of inability of obtaining an ideal selective surface with a single material are examined, concluding with a discussion of interference coatings, such as the Al2O3-Mo-Al2O3 type. A.T.

A80-42444 **Solar air systems.** G. O. G. Lof (Colorado State University, Fort Collins, Colo.). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 331-375. 14 refs.

The paper examines solar air systems and compares them with solar liquid systems. The solar air systems built since 1945 in houses including an overlapped glass plate heater are described, along with the design of a typical collector which includes a pebble bed heat storage unit, a thermostat, air handler, hot water preheat tank, an evaporative cooler, and an auxiliary furnace. Pebble bed heat storage performance is evaluated, noting that the heat at the highest temperature is available from the collector, and it can be stored and delivered later; also, during the winter months, one end of the chamber remains unheated so that the collector is nearly always at about 70 F. This increases the collector efficiency so that it can operate with poorer sunshine and for longer periods than if warmer fluid was circulated. It is concluded that the air system is superior for residential use due to high reliability and low maintenance, but liquid systems are more economical for commercial and industrial application because of larger air duct and pebble bed storage requirements. A.T.

A80-42445 **Solar energy for heating and cooling.** J. R. Williams (Georgia Institute of Technology, Atlanta, Ga.). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 377-391.

Active and passive approaches to solar heating, hot water and cooling systems are reviewed. Consideration is given to passive solar heating systems, including direct gain systems, thermal storage walls, thermal storage roofs, attached greenhouses and convective loops, to active solar heating and cooling systems based on flat plate solar collectors using various absorber plate and cover plate materials, and to active solar domestic hot water systems. Solar heating and cooling systems developed for applications in Kuwait, at an elementary school in Georgia and in a large new multipurpose community center are indicated, and the cost advantages of active and passive systems in different areas of the world are discussed. It is pointed out, however, that in addition to cost, factors such as performance, durability, reliability and appearance must also be considered in the selection of a solar system. A.L.W.

A80-42446 **Cooling of buildings.** R. K. Swartman (Western Ontario, University, London, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 393-416. 13 refs.

The cooling of buildings is discussed and possible systems utilizing solar energy for this end are considered. The science of psychrometrics, which deals with the thermal properties of moist air, is introduced, and the three major processes for conditioning the atmosphere of a space, sensible cooling, cooling and dehumidification and cooling and humidification, are examined. The effects of environmental conditions on human comfort are considered, and the components and determination of building cooling loads are discussed. The various types of solar cooling systems are then examined in detail, with attention given to solar sorption cooling by absorption and adsorption cycles, solar-mechanical systems and solar-related cooling using heat pumps, sky radiation, rock bed regenerators, passive systems and flat-plate solar collectors. It is pointed out that cooling seems to be the most attractive application for solar energy, due to the concurrence of supply and demand, and can make significant contributions to saving money and energy. A.L.W.

A80-42447 **A completely instrumented solar building - The Shenandoah Solar Recreational Center.** J. R. Williams (Georgia Institute of Technology, Atlanta, Ga.). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 417-433.

The hydronic solar energy system of the Shenandoah Solar Recreational Center, with double glazed black chrome selectively coated copper tube-in-strip flat plate solar collectors, contains 63 collectors that are each 8.61 by 20.7 ft. A sawtooth roof structure is employed and the entire system is pressurized. The design incorporates the use of constant circulating loops, aluminum reflectors instead of aluminized mylar and the avoidance of downdrain for freeze protection; basically, one or more loops are used to control energy transfer to or from a component and each of these subsystems operates somewhat independently of the others. Attention is given to building load calculations, operation when there is sufficient or excess insolation and problems encountered with the freeze protection system. J.P.B.

A80-42449 **Fundamentals of solar architecture.** A. Bowen (Miami, University, Coral Gables, Fla.). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 481-553. 18 refs.

The paper reviews fundamentals of solar architecture with emphasis on the thermal and luminous properties of building materials. The exterior factors such as solar, wind, and precipitation which affect the building site, and the interior specifications such as the number of occupants, volume, and floor area are discussed considering that the prime provision of buildings is shelter from climate. Insulation characteristics of materials are tabulated, noting that they are classified into 'resistance insulation' and 'capacity insulation'; thermal reflectivities and emissivities of material surfaces are summarized, noting that solar radiation is reradiated in the long wave infrared range. Thermal exchange in buildings as caused by thermal conduction through walls and solar heat gain through openings is expressed in a thermal balance equation. Luminous behavior of materials is analyzed, along with factors which determine channels of daylight in buildings. It is concluded that solar engineering equipment can be used to satisfy energy needs of passive vernacular solar buildings, dynamic energy responsive designs and hybrid solar mechanically equipped buildings. A.T.

A80-42452 **Systematic techniques of design for solar houses in high latitudes.** J. K. Page (Sheffield, University, Sheffield, England). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 629-713. 34 refs. Science Research Council Grants No. B/RG/93199; No. GR/A/34788.

The paper discusses techniques of design of high altitude solar houses. Computer design methods are particularly valuable in reducing analysis time; eventually, architectural rules of thumb should be formulated, but at this stage it is too early to predict when this will be accomplished. The dangers of copying solar houses from other locations out of environmental context without adequate performance analysis are great; every unsatisfactory solar building makes it more difficult for designers to build other solar houses. It is concluded that the design of solar houses at high altitudes will remain a difficult challenge since the amount of available solar energy in winter is low. A.T.

A80-42453 **The potential of renewable energies in planning the development of rural areas.** T. A. Lawand (McGill University, Sainte Anne de Bellevue, Quebec, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 757-771.

A80-42454 **Review of solid state physics.** A. E. Dixon (Waterloo, University, Waterloo, Ontario, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 773-784.

A solid state physics background necessary to understand solar cell physics is presented. Some physical insight into the band structure of solids is provided, and the band structure is used to explain the physical properties of semiconductors. These properties are then used to illustrate the workings of a simple pn junction. V.T.

A80-42455 **Silicon solar cells. I - Basics. II - Practical aspects.** R. E. Thomas (Carleton University, Ottawa, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 785-803, 805-830. 67 refs.

The paper reviews the principles and practical aspects of silicon solar cells. The photovoltaic effect which generates electrical energy by absorption of ionizing radiation is produced in semiconductors used in solar cells; the cell operation is depicted, noting that its limiting behavior can be predicted by determining the photocurrent and the diode (dark) current. Expressions are derived for the dark current density of the diode and the conversion efficiency of the solar cell. The conversion efficiency is discussed relative to voltage and fill factors as a function of energy gap and temperature; current efficiency can be determined as the ratio of collected current to the maximum photon current. The solar cell equivalent circuit is examined with respect to the effect of shunt and series resistances on I-V characteristics, and factors affecting cell efficiency such as surface reflection, junction depth, and cell thickness are analyzed. A.T.

A80-42456 **Polycrystalline solar cells.** D. E. Brodie (Waterloo, University, Waterloo, Ontario, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 831-841.

Polycrystalline solar cells are discussed as possible low-cost components for solar energy conversion systems. Consideration is given to the properties and problems of crystalline heterojunction solar cells, including optimum parameters for providing a high conversion efficiency. The application of polycrystalline films with crystallites large compared to film thickness in heterojunction solar cells is then discussed, and factors such as film thickness, grain boundaries and fabrication methods that should be controlled in order to produce a useful cell are indicated. A.L.W.

A80-42457 **Metal-insulator-semiconductor /MIS/ and semiconductor-insulator-semiconductor /SIS/ solar cells. I - Basic principles. II - Performance characteristics.** J. Shewchun (McMaster University, Hamilton, Ontario, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 843-867, 869-884. 16 refs.

The paper examines metal-insulator-semiconductor (MIS) and semiconductor-insulator-semiconductor (SIS) principles and performance characteristics. They are of interest in solar cells applications because of possible processing cost reductions; since the junctions are virtual or induced, it may be possible to use polycrystalline film semiconductors to avoid grain boundary effects. It may also be possible to reduce or eliminate grids and built-in AR coatings; however, it should be noted that these devices are controlled by very thin interfacial layers which are difficult to produce. At present, a 12% efficiency plateau has been reached with these systems, and their features include the control by diffusion current flow in the bulk of the base semiconductor, and the ability to measure the interfacial layer directly and predict its effect on efficiency. It is concluded that the loss mechanisms which limit the efficiency can be removed and the performance should be limited only by the bulk characteristics of the base semiconductor. A.T.

A80-42458 **Basic electrochemistry.** A. F. Janzen (Western Ontario, University, London, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 885-903. 8 refs.

The concept and definitions of electrochemistry are introduced. A cyclic photogalvanic silver halide cell is used as an example. Oxidation reduction reactions are discussed, electrochemical potentials are outlined, and losses in electrochemical cells are considered. Emphasis is placed on frictional losses, concentration polarization, and overvoltage. V.T.

A80-42460 **Short course in microprocessors for solar energy applications - Microprocessors, microcomputers and single chip computers.** B. E. Paton (Dalhousie University, Halifax, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 939-951. 12 refs.

A80-42461 **Short course in microprocessors for solar energy applications - Sensors.** B. E. Paton (Dalhousie University, Halifax, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 953-965. 7 refs.

In the first part of the paper, it is shown how a microprocessor could be used to produce a computer controlled light meter which is capable of measuring both instantaneous and integrated solar light power. The second part deals with a thermistor interfaced to a single chip computer. The computer is used to convert measured resistance into temperature. V.T.

A80-42462 **Short course in microprocessors for solar energy applications - Control.** B. E. Paton (Dalhousie University, Halifax, Nova Scotia, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 967-978. 5 refs.

The paper shows how microcomputers may be interfaced with simple (on-off) mechanical relays and proportional mechanical devices. Single channel operation where each output line is connected to only one output device is considered. In the other example, a link between the digital and mechanical parts of a system is provided with a stepping motor. These motors may be used to control flow rates by operating a valve or to track the sun. V.T.

A80-42463 **Short course in microprocessors for solar energy applications - Systems.** B. E. Paton (Dalhousie University, Halifax, Nova Scotia, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 979-992. 10 refs.

A 16-channel data logger with a RS 232C serial output port is described. The circuit requires four integrated circuits: a data acquisition chip, DAS voltage reference, Vref single-chip computer, and line driver. Consideration is given to a microprocessor module with emphasis placed on a computer program. V.T.

A80-42464 **Short course in microprocessors for solar energy applications - The microcomputer family.** B. E. Paton (Dalhousie University, Halifax, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 993-1004. 6 refs. Research supported by the National Research Council of Canada.

Microprocessors and their applications, particularly for solar energy systems, are described. Consideration is given to a single-chip, single-board, and multiboard computers. Arithmetic using microprocessors are outlined, and distributing processing is emphasized. V.T.

A80-42465 **Bioconversion of solar energy.** D. O. Hall (King's College, London, England). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 1005-1057. 143 refs.

The paper discusses the bioconversion of solar energy. Plant photosynthesis fixes about 2 x 10 to the 11th tons of carbon yearly with an energy content of 3 x 10 to the 21st J which is 10 times the world annual use and 200 times the food energy consumption. All the atmospheric CO2 is cycled through plants every 300 years, all the O2 every 2000 years, and the H2O every 2 million years. The magnitude and role of photosynthesis is unrecognized primarily because such a small fraction of the fixed carbon is utilized and the recycling phenomena are not understood; however, the plants are very adaptable and exist in great diversity, so they can indefinitely supply renewable quantities of food, fiber, fuel, and chemicals. It is suggested to evaluate what photosynthesis can provide by various methods such as H2 production and carbon fixation. (Author)

A80-42468 **Solar power.** J. R. Williams (Georgia Institute of Technology, Atlanta, Ga.). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 1129-1136.

Solar-thermal-electric technologies, whereby solar radiation is converted into heat from which electric power is generated, are considered. These technologies consist of central receiver systems which use a field of mirrors to concentrate sunlight onto the heat receiver to generate power, and dispersed systems. Attention is given to the thermodynamic efficiency of solar power plants and to concentrating solar collectors, both point- and line-focusing systems. The parabolic trough concentrator and linear single axis tracking concentrators are also considered, along with a total energy plant that uses four types of collectors as well as tanks of oil for thermal storage. J.P.B.

A80-42469 **Solar powered refrigeration.** E. Bilgen (Ecole Polytechnique, Montreal, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 1223-1243. 35 refs.

Utilization of solar powered refrigeration units in cooling and food preservation is reviewed. Refrigeration for air-conditioning is discussed, including absorption systems. Refrigeration machines suitable for food preservation, such as intermittent or continuous-type absorption systems are considered. It is noted that there has been no systematic development of solar powered refrigeration units for ice making. V.T.

A80-42471 **Solar energy at the P.E.I. Ark.** K. T. Mackay and D. Bergmark. In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 1267-1277. 7 refs.

The use of solar energy in the Prince Edward Island Ark, a 490-sq m alternative energy and agriculture demonstration facility containing a home, two greenhouses, an aquaculture facility and office/laboratory space, is discussed. The passive solar system, which makes use of south and west-facing glass doors for collection and rocks, concrete and water for heat storage, provides over 50% of the heating requirements, without overheating in the summer. Supplemental heating and hot water is supplied by an active solar system comprised of 36 flat plate collectors mounted vertically at the peak of the building, with an efficient air-tight wood stove as back up. The commercial greenhouse employs a hybrid solar system with both active and passive features and has produced crops year round. Greenhouse horticulture involves solar-driven biological processes in place of energy-intensive processes, and is associated with a solar-driven aquaculture system employing algae as a purification system for the hatching of trout. Many of the techniques tested at the Ark have been incorporated into other projects. A.L.W.

A80-43118 **Scanning light spot analysis of faulty solar cells.** K. Lehovec and A. Fedotowsky (Southern California, University, Los Angeles, Calif.). *Solid-State Electronics,* vol. 23, June 1980, p. 565-576. 35 refs. NBS-supported research.

Current output patterns of a solar cell panel exposed to a scanning light spot are computed for fault-free and for faulty cell containing either cracks with leakage conductances across the exposed junction at the crack, or point shorts in series with various spreading resistances. Low light level, uniform attenuation length, and an external panel termination of low impedance are assumed. It is shown that various boundary conditions can be satisfied by appropriate imaging techniques. A general equivalency theorem for the cell output of an illuminated point with that of an illuminated line through that point parallel to the finger electrode is derived and utilized. The preferred attenuation length of about half the finger electrode spacing can be achieved by modulating the light beam at an appropriate frequency which is typically in the low MHz range. Output patterns generated by a modulated light beam are compared with those obtained by unmodulated light. (Author)

A80-43122 **A low-high-junction solar-cell model developed for use in tandem cell analysis.** R. J. McPartland and A. G. Sabnis (Pittsburgh, University, Pittsburgh, Pa.). *Solid-State Electronics,* vol. 23, June 1980, p. 605-610. 16 refs.

A comprehensive low-high (L-H) junction solar cell model has been developed. It accounts for actual solar spectrum related photogeneration of carriers in all regions of the n-p-p(+) cell and allows for any value of rear surface-recombination-velocity (SRV). In typical GaAs L-H junction solar cells, photogeneration in the p(+) region, but not the p region, is found to be negligible. The L-H junction's space-charge-layer recombination current density is also negligible. Assigning a non-infinite value of rear surface SRV makes this model applicable to tandem multi-junction structures made from materials with different band gaps. (Author)

A80-43344 * # **Generalized shading analysis for paraboloidal collector fields.** D. B. Osborn (Ford Aerospace and Communications Corp., Newport Beach, Calif.). *American Society of Mechanical Engineers, Energy Technology Conference and Exhibition, New Orleans, La., Feb. 3-7, 1980, Paper 80-Pet-33*. 8 p. 8 refs. Members, $1.50; nonmembers, $3.00. Contract No. JPL-955115.

This paper presents the development and results of a generalized shading analysis for a field of point-focus parabolic dish concentrators. Shading of one concentrator by another with attendant loss of energy is a function of the position of the sun and the relative locations of the concentrators within the field. A method is presented for determining the annualized energy loss which includes a trade-off of system life-cycle energy as a function of concentrator spacing and field geometric layout. System energy output is computed on an annualized basis, employing 15 minute-increment environmental data tapes for the year 1976 at Barstow, California. For a land cost of $5000 per acre, lowest system energy cost occurs at about a 25 percent packing fraction (concentrator area/land area) for a typical 1-MWe dish-Stirling solar thermal power plant. Basic equations are given for computing the shading and concomitant energy loss as a function of concentrator center-to-center spacing, field layout site location. (Author)

A80-43367 **Quasi-optimum pseudo-Lambertian reflecting concentrators - An analysis.** A. Luque (Madrid, Universidad Politécnica, Madrid, Spain). *Applied Optics,* vol. 19, July 15, 1980, p. 2398-2402. 9 refs.

A two-stage concentrator is analyzed, in which the first stage is reflective and the second stage considers the first one as a Lambertian source in order to obtain the highest possible gain. The profile and the position of this first stage, which happens to be a parabola, is determined, and the value of the gain is calculated as a function of the acceptance angle and the focal length of the first stage. M.E.P.

A80-43368 **Information theory and solar energy collection.** R. P. Patera and H. S. Robertson (Miami, University, Coral Gables, Fla.). *Applied Optics,* vol. 19, July 15, 1980, p. 2403-2407. 7 refs.

Information theory is applied to the problem of solar radiation collection. It is found that the optimum solar concentrator corresponds to a perfect imaging system, i.e., one that images the entire sky on the absorber with no aberrations. For a nonisotropic distribution of radiation at the collector aperture, many thermally separated absorber segments are necessary at the absorber for optimum performance. The heat transfer fluid is first passed through the warm segments and then passed sequentially through the progressively hotter segments. (Author)

A80-43473 **Medium and high temperature solar processes.** J. F. Kreider (Jan F. Kreider and Associates, Boulder, Colo.). New York, Academic Press, Inc., 1979. 357 p. 150 refs. $38.

The subject matter of the book is concerned with those solar-thermal processes operating above 100 C. A broad division between medium- and high-temperature processes is made at 300-400 C, corresponding to practical operating temperatures achieved by single- and compound-curvative solar concentrators. Systems for power production, shaft power, industrial process heat, and total energy (shaft power plus thermal power) are treated. Engineering design data for high-temperature collectors and their use in solar furnaces, central solar power plants, distributed power plants, and solar thermionics are described. V.T.

A80-43477 **The estimation of global and sky radiation in Austria.** F. Neuwirth (Zentralanstalt für Meteorologie und Geo- unit area is noted. To evaluate this influence, comparative space-diversity measurements were made (1976 through 1978) with different instruments. It was found that for a procedure based on the application of surface gauge data to the correction of radar calculations, the best results could be obtained using the mean value of two-hour measurements made with three gauges spaced 100 to 200 m apart. V.P.

A80-43479 **Solar thermoelectric generation using bismuth telluride alloys.** H. J. Goldsmid, J. E. Giutronich, and M. M. Kaila (New South Wales, University, Kensington, Australia). *Solar Energy,* vol. 24, no. 5, 1980, p. 435-440. 7 refs.

The possibility of using thermocouples made from Bi2Te3 alloys in solar thermoelectric generators is investigated. Experiments have been carried out for two systems. The first employs a commercial thermoelectric module operating at the relatively low source temperatures that can be achieved with a flat plate collector. The second system uses an asymmetric stationary concentrator with thermocouples fabricated so as to withstand higher temperatures. Present overall efficiencies are less than one percent but this could rise to about three percent with improvements in the concentration system. (Author)

A80-43482 **Cusp mirror - Heat pipe evacuated tubular solar thermal collector.** U. Ortabasi and F. P. Fehlner (Corning Glass Research and Development Laboratories, Corning, N.Y.). *Solar Energy,* vol. 24, no. 5, 1980, p. 477-489. 22 refs. Contract No. EY-76-C-02-2608.

A solar thermal collector was constructed based on an internal 1.15 X cusp concentrator, thermal insulation involving a vacuum and selective absorber, and thermal transfer to a manifold via heat-pipe action. Performance of the collector was compared with that of an evacuated, selectively coated, flat-plate absorber equipped with flow-through heat transfer. It was shown that with single collector tubes, mirror losses lowered the optical efficiency of the cusp, heat-pipe collector below that of the flat plate, while the smaller absorber area of the heat pipe reduced thermal losses at absorber temperatures above ambient. Thus, a crossover in efficiency occurred such that the flat plate was more efficient at low Delta T/H while the cusp-heat pipe was more efficient at high Delta T/H. The testing of modules showed that manifold losses and gains could dominate these collector effects when the collector area approximately equaled the manifold area. (Author)

A80-43484 **The economics of solar heating - A note on the appropriate discount rate and the use of the pay back period.** J. M. Sulock (North Carolina, University, Asheville, N.C.). *Solar Energy,* vol. 24, no. 5, 1980, p. 505, 506. 5 refs.

A80-43485 **On a class of axisymmetric concentrators with uniform flux concentration for photovoltaic applications.** U. H. Kurzweg (Florida, University, Gainesville, Fla.). *Solar Energy,* vol. 24, no. 5, 1980, p. 507-509. 5 refs.

Substantial cost reduction in photovoltaic conversion of solar energy can be achieved by means of solar concentrators. However, the concentrators must be inexpensive as compared to the cost of an equivalent area of solar cells, have concentration ratios in the range of ten to several hundred suns, and must be capable of providing a uniform flux density over each of the individual solar cells of an array of optimal conversion efficiency. In the present paper, some new configurations which meet these requirements are proposed. V.P.

A80-43486 **Transmission of diffuse radiation through CPC and flat plate collector glazings.** M. J. Brandemuehl and W. A. Beckman (Wisconsin, University, Madison, Wis.). *Solar Energy,* vol. 24, no. 5, 1980, p. 511-513.

Solar-collector glazings reduce convective losses from the absorber to the environment and protect the absorber from dust and other contaminants. Expressions for the transmittance of a glazing system as a function of the angle of incidence are currently available. To obtain the transmittance of a glazing system for diffuse radiation, the expressions must be integrated numerically over the appropriate range of incidence angles. A compound parabolic collector (CPC) accepts diffuse radiation over a lune-shaped segment of the hemisphere, while a tilted flat plate collector receives one level of diffuse radiation from the sky and a different level from the ground. In the present paper, effective beam radiation incidence angles are calculated for these two collector types. V.P.

A80-43513 **Infrared spectra of the hydrogenated amorphous silicon layers on metallic substrates of solar absorbers.** D. E.

Soule (Argonne National Laboratory, Argonne, Ill.; Western Illinois University, Macomb, Ill.) and G. T. Reedy (Argonne National Laboratory, Argonne, Ill.). In: Metallurgical coatings 1979; Proceedings of the Sixth International Conference, San Diego, Calif., April 23-27, 1979. Volume 1. Lausanne, Elsevier Sequoia, S.A., 1979, p. 175-181. 10 refs. Research supported by the U.S. Department of Energy.

A80-43514 **Optical and topographical properties of selective black chrome.** P. K. Gogna and K. L. Chopra (Indian Institute of Technology, New Delhi, India). In: Metallurgical coatings 1979; Proceedings of the Sixth International Conference, San Diego, Calif., April 23-27, 1979. Volume 1. Lausanne, Elsevier Sequoia, S.A., 1979, p. 183-187. 5 refs.

The optical and surface topographical properties of black chrome deposited onto differently treated substrates were investigated to study the effect of substrate surface roughness. Coatings with a solar absorptance of 0.94 and a thermal emittance of 0.14 at 100 C were obtained on steel substrates with dull nickel overlayers and anodically etched nickel overlayers. A polarimetric technique was employed to study the angular dependence of the reflectance of the coatings. (Author)

A80-43516 **The design and fabrication of high efficiency thin film CdS/Cu2S solar cells.** R. B. Hall and J. D. Meakin (Delaware, University, Newark, Del.). In: Metallurgical coatings 1979; Proceedings of the Sixth International Conference, San Diego, Calif., April 23-27, 1979. Volume 1. Lausanne, Elsevier Sequoia, S.A., 1979, p. 203-211. 18 refs. Contract No. EG-77-C-03-1576-2.

Thin film photovoltaic cells of CdS/Cu2S which exhibit conversion efficiencies in excess of 9% have been designed and fabricated. Specific cell designs are prepared from an analysis of optical and electronic loss mechanisms operative in the cell. Material and engineering modifications to the fabrication process are then made to minimize specific energy conversion losses. The present cell design consists of five thin film layers which are sequentially prepared on a copper substrate 35 microns thick. In addition to the material control required for each component layer, the electrical, chemical, mechanical and topological compatibilities at the interfaces between each adjoining layer must be assured to achieve the desired cell performance. The present analysis shows that a fully optimized solar cell based on a CdS/Cu2S junction will have a practical conversion efficiency limit of about 11%. It is anticipated that practical conversion efficiencies of 14-15% can be achieved utilizing a (CdZn)S/Cu2S junction designed to produce the maximum open-circuit voltage possible using Cu2S as the absorbing layer. Present cell results which incorporate this design are presented. (Author)

A80-43528 **A field ion microscope study of microstructural features of solar collector coatings.** O. T. Inal and W. Yarbrough (New Mexico Institute of Mining and Technology, Socorro, N. Mex.). In: Metallurgical coatings 1979; Proceedings of the Sixth International Conference, San Diego, Calif., April 23-27, 1979. Volume 2. Lausanne, Elsevier Sequoia, S.A., 1979, p. 129-141. 12 refs. Contract No. ER-78-04-4226.

The nucleation and growth characteristics of the systems electroplated nickel on stainless steel and black chrome on nickel were investigated for thin coverages and for thick coverages utilizing the techniques of field ion microscopy (FIM) and scanning electron microscopy (SEM). The SEM study shows that increasing the plating voltage and/or decreasing the nickel concentration in the plating bath produces finer overgrowths in the nickel/stainless steel system, whereas this trend is reversed for black chrome electroplatings on nickel field emission end forms. FIM analysis of the plated growths shows an epitaxial attachment at thin coverages (less than 50 atomic layers), while at thicker deposits (greater than 50 atomic layers) the overgrowth goes through a zone of excessive defect structure to a polycrystalline layer of the plated material with its own lattice structure. These results are consistent with earlier studies of Cu/W systems utilizing the deposition of copper through cementation, electroplating and flash evaporation. (Author)

A80-43583 **An induced back surface field solar cell employing a negative barrier metal-insulator-semiconductor contact.** N. G. Tarr, D. L. Pulfrey (British Columbia, University, Vancouver, Canada), and P. A. Iles (Applied Solar Energy Corp., City of Industry, Calif.). *Journal of Applied Physics,* vol. 51, July 1980, p. 3926-3929. 12 refs. Research supported by the Natural Sciences and Engineering Research Council of Canada.

A80-43589 **A computer analysis of heteroface solar cells with ultrathin window layer.** A. Yoshikawa (Chiba University, Chiba, Japan). *Journal of Applied Physics,* vol. 51, July 1980, p. 3990-3992. 8 refs. Research supported by the Sakkokoi Foundation.

A computer analysis of heteroface solar cells with thin window layer has been performed regarding the effects of multiple reflections in the window layer, as well as in antireflection layers. It is shown that the thickness of the window layer greatly affects the reflection characteristic of the cell, and there is an optimum thickness for the window, so the window layer thickness must be defined so as to minimize the reflection loss, as well as the absorption loss by the window. (Author)

A80-43761 **Grain boundary defects in thin semicrystalline material.** Z. C. Putney and W. F. Regnault (Semix, Inc., Gaithersburg, Md.). *(Photovoltaic Material and Device Measurement Workshop, Arlington, Va., June 11-13, 1979.) Solar Cells,* vol. 1, May 1980, p. 285-292.

The effects of grain boundaries on the electrical performance of semicrystalline silicon solar cells were investigated. It was found that there are at least three distinct types of grain boundaries. Type 1 is present in high efficiency cells and has little or no effect on the cell's performance. Type 2 is characterized by an ohmic shunting of the cell, possibly due to diffusion which has proceeded along open grain boundaries. This type of grain is also characterized by an enhanced red-to-blue ratio. Type 3 grain boundaries also lead to a shunted cell but in this case the shunting mechanism is apparently due to generation-recombination centers in the depletion region. Several experimental techniques were employed to substantiate these conclusions. (Author)

A80-43762 **Grain boundary effects and conduction mechanism studies in chromium metal-insulator-silicon solar cells on polycrystalline silicon.** W. A. Anderson, K. Rajkanan (New York, State University, Buffalo, N.Y.), A. E. Delahoy, and S. L. Hyland (Rutgers University, Piscataway, N.J.). *(Photovoltaic Material and Device Measurement Workshop, Arlington, Va., June 11-13, 1979.) Solar Cells,* vol. 1, May 1980, p. 305-310. 7 refs. Contract No. ET-78-R-03-1876.

Chromium metal-insulator-silicon (MIS) solar cells fabricated on Wacker polycrystalline silicon and electron-beam-deposited thin film silicon were studied to determine current flow mechanisms. Wacker polycrystalline p-type silicon was shown to produce MIS solar cells which exhibit surface-state-controlled current for T greater than 150 K and tunneling-controlled current at lower temperatures. MIS cells on unpolished Wacker silicon are clearly space charge limited. Electron-beam-deposited polycrystalline silicon 20-30-microns thick has a conductivity which may be limited by the grain boundary trap density or the availability of free carriers. Surface state analysis, laser scan data and diffusion length studies also show the limitations which exist at grain boundaries of polycrystalline silicon. (Author)

A80-43763 **Noise spectral density as a device reliability estimator.** J. Dubow and C. Osterwald (Colorado State University, Fort Collins, Colo.). *(Photovoltaic Material and Device Measurement Workshop, Arlington, Va., June 11-13, 1979.) Solar Cells,* vol. 1, May 1980, p. 315-318. 10 refs.

The measurement of noise spectral density is proposed as an estimator of solar cell device reliability. The use of associated temperature and bias stresses is investigated as a nondestructive rapid test method. A novel technique which employs the cooling rather than the heating of the device was utilized. In certain cases the predominant failure mechanisms may be derived. Data are presented on indium-tin oxide/silicon as well as p-n junction devices. (Author)

A80-43764 **Measurement techniques in thin film polycrystalline materials and devices /solar cells/.** H. K. Charles, Jr., R. J. King, and A. P. Ariotedjo (PRC Energy Analysis Co., McLean, Va.). *(Photovoltaic Material and Device Measurement Workshop, Arlington, Va., June 11-13, 1979.) Solar Cells,* vol. 1, May 1980, p. 327-346. 53 refs. Contract No. EG-77-C-01-4024.

Measurement techniques used in the analysis of polycrystalline thin film materials and devices are surveyed to determine the most widely applied thin film resistivity and Hall effect measurement methods. Measurement techniques for other relevant parameters (e.g. minority carrier lifetime, diffusion length, etc.) are also identified, and an estimate of their efficiency in yielding results (i.e. parameter values) for thin films consistent with overall device performance is made. A80-43836 * **Implications for the UK of solar-power satellites /s.p.s/ as an energy source.** R. M. Shelton (British Aerospace, Dynamics Group, Filton, Glos., England). *IEE Proceedings, Part A - Physical Science, Measurement and Instrumentation, Management and Education, Reviews,* vol. 127, pt. A, no. 5, June 1980, p. 336-343. 13 refs. Research supported by the U.S. Department of Energy and NASA.

The solar power satellite concept which would make the sun's radiation available on earth as a source of energy, is discussed. Attention is given to the concept currently under evaluation in the USA, and also in Europe, though to a lesser extent. The advantages and problems associated with its adoption by the UK as a major source of electrical energy are discussed. The discussion covers topics such as sizing, reference system, and construction, costs, and problem areas. M.E.P.

SOLAR HEATING AND COOLING DEMONSTRATION PROJECT AT THE FLORIDA SOLAR ENERGY CENTER Final Report
Feb. 1980 175 p refs Sponsored in part by NASA
(Contract EG-77-A-01-4074)
(NASA-CR-161413) Avail: NTIS HC A08/MF A01 CSCL 10A

The retrofitted solar heating and cooling system installed at the Florida Solar Energy Center is described. The system was designed to supply approximately 70 percent of the annual cooling and 100 percent of the heating load. The project provides unique high temperature, nonimaging, nontracking, evacuated tube collectors. The design of the system was kept simple and employs five hydronic loops. They are energy collection, chilled water production, space cooling, space heating and energy rejection. Information is provided on the system's acceptance test results operation, controls, hardware and installation, including detailed drawings. R.E.S.

SOLAR PROCESS WATER HEAT FOR THE IRIS IMAGES CUSTOM COLOR PHOTO LAB Final Report
Mar. 1980 126 p Sponsored by NASA. Marshall Space Flight Center.
(Contract EX-76-C-01-2381)
(NASA-CR-161414) Avail: NTIS HC A07/MF A01 CSCL 10B

The solar facility located at a custom photo laboratory in Mill Valley, California is described. It was designed to provide 59 percent of the hot water requirements for developing photographic film and domestic hot water use. The design load is to provide 6 gallons of hot water per minute for 8 hours per working day at 100 F. It has 640 square feet of flat plate collectors and 360 gallons of hot water storage. The auxillary back up system is a conventional gas-fired water heater. Site and building description, subsystem description, as-built drawings, cost breakdown and analysis, performance analysis, lessons learned, and the operation and maintenance manual are presented. SOLAR APPLICATIONS ANALYSIS FOR ENERGY STORAGE
T. Blanchard *In* NASA. Lewis Res. Center Thermal Energy Storage Mar. 1980 p 43-46

Avail: NTIS HC A99/MF A01 CSCL 10B

The role of energy storage as it relates to solar energy systems is considered. Storage technologies to support solar energy applications, the status of storage technologies, requirements and specifications for storage technologies, and the adequacy of the current storage research and development program to meet these requirements are among the factors discussed. Emphasis is placed on identification of where the greatest potential exists for energy storage in support of those solar energy systems which could have a significant impact on the U.S. energy mix. Avail: NTIS HC A99/MF A01 CSCL 10A

In support of the DOE thermal and chemical energy storage program, the solar energy storage program (SERI) provides research on advanced technologies, systems analyses, and assessments of thermal energy storage for solar applications in support of the Thermal and Chemical Energy Storage Program of the DOE Division of Energy Storage Systems. Currently, research is in progress on direct contact latent heat storage and thermochemical energy storage and transport. Systems analyses are being performed of thermal energy storage for solar thermal applications, and surveys and assessments are being prepared of thermal energy storage in solar applications. A ranking methodology for comparing thermal storage systems (performance and cost) is presented. Research in latent heat storage and thermochemical storage and transport is reported. A.R.H.

SOLAR-HEATED GAS-TURBINE PROCESS USING SULFUR OXIDES FOR POWER PRODUCTION AND ENERGY STORAGE M.S. Thesis
George Kohler Tyson, Scott Lynn, and Alan Foss Sep. 1979 108 p refs
(Contract W-7405-eng-48)
(LBL-9472) Avail: NTIS HC A06/MF A01

If any system of solar power generation is to provide a significant fraction of the power requirements of a community, some means of economical energy storage must be used. A process configuration using the heat of reaction of 2 SO3 reversible 2 SO2 + O2 for energy storage was developed and evaluated. The process uses the sulfur oxides directly in a gas turbine in a hybrid Brayton-Rankine cycle to produce electricity. Heat for the system is supplied during sunlit hours by a field of heliostats focused on a central solar receiver. When sunlight is not available, the storage system provides the heat to drive the gas turbine. An efficient process configuration for this power cycle is proposed. Detailed material and energy balances are presented for a base case that represents a middle range of expected operating conditions. The average cost of the electricity produced is estimated to be 7.7 cents/kW/sub e/hr. DOE

METHODS FOR REDUCING HEAT LOSSES FROM FLAT PLATE SOLAR COOLECTORS, PHASE 3 Final Report, 1 May 1977 - 31 Jan. 1979
K. G. T. Hollands, G. D. Raithby, F. B. Russell, and R. G. Wilkinson Mar. 1979 88 p refs
(Grant EY-76-G-02-2597)
(COO-2597-5) Avail: NTIS HC A05/MF A01

The present study extends earlier studies by examining the effect of the emissivities of both the absorber plate and the glass cover on the honeycomb's ability to suppress free convection, and on the radiative and conductive heat transfer which takes place across the honeycomb in the absence of free conversion. By means of heat transfer measurements on ten Mylar honeycomb, it is shown that the effect of the above emissivities on the suppression of convection by the honeycomb is slight and can probably be ignored. On the other hand, the measurements also showed that the effect of these emissivities on the nonconvective heat transfer is substantial, but not nearly so large as would have been predicted by existing theories. To explain this latter result theories were developed which take into account the important coupling (ignored by previous theories) between the conductive and radiative modes of heat transfer. These new theories predict the measured heat transfer rates to with about +-15%, depending on the emissivities. The results have direct application to evaluating solar collectors which combine a selective surface with a honeycomb. DOE

SOLAR ENERGY SYSTEM PERFORMANCE EVALUATION: SEASONAL REPORT FOR FERN, TUNKHANNOCK, PENNSYLVANIA Contractor Report, May 1978 - Apr. 1979
Jan. 1980 81 p refs Sponsored in part by DOE
(Contract NAS8-32036)
(NASA-CR-161392) Avail: NTIS HC A05/MF A01 CSCL 10A

The operational and thermal performance of a variety of solar systems installed in operational test sites are described. The analysis is based on instrumented system data monitored and collected for at least one full season of operation. The long-term field performance of the installed system is reported, and technical contributions to the definition of techniques and requirements for solar energy system design are made. The solar energy system was designed to supply space heating and domestic hot water for single-family residences. The system consists of air flat plate collectors, storage tank, pumps, heat exchangers, associated plumbing, and controls. F.O.S

A modular solar space heating system for residential use at central European latitudes was examined experimentally. Technical as well as economic factors were included. The system selected for the experimental test consisted of flat plate solar collectors and cubic water tanks for energy storage. Two test houses in Germany were equipped with this system, both of then single-family houses. One of these houses is a special, newly constructed prefabricated home, the other was retrofitted with the system. Results are presented. Author (ESA)

OPTOELECTRONIC AND PHOTOVOLTAIC PROPERTIES OF METAL-SiO2-SILICON TUNNELING STRUCTURES Ph.D. Thesis

Kwok Ng 1979 117 p
Avail: Univ. Microfilms Order No. 8009362

The short wave length (lambda) response of near-ideal silicon Schottky barrier photodetectors was studied. It is shown that the major cause of reduced quantum efficiency in this range of lambda is the collection by the metal of majority carriers photogenerated within the image force maximum. The potential barriers of ultrathin SiO2 layers to electrons and holes tunneling between the semiconductor and the metal were measured independently on the same MOS samples. The results show that the tunnelling barriers for holes are consisently much larger than those for electrons. Metal-SiO2-silicon (MIS) solar cells were investigated as a function of SiO2 thickness d. Both majority carrier and minority carrier structures were studied and their performance compared for SiO2 layers prepared under identical oxidation conditions and with identical silicon surface treatments. The short circuit current densities and the optimum conversion efficiencies for the majority carrier cells and for the minority carrier cells are given. Dissert. Abstr.

RADIATION DAMAGE IN HIGH VOLTAGE SILICON SOLAR CELLS

Irving Weinberg, Henry Brandhorst, Jr., Clifford K. Swartz, and Victor G. Weizer 1980 11 p refs Presented at 2nd European Symp. on Photovoltaic Generators in Space, Heidelberg, 15-17 Apr. 1980
(NASA-TM-81478; E-412) Avail: NTIS HC A02/MF A01 CSCL 20L

Three high open-circuit voltage cell designs based on 0.1 ohm-cm p-type silicon were irradiated with 1 MeV electrons and their performance determined to fluences as high as 10 to the 15th power/sq cm. Of the three cell designs, radiation induced degradation was greatest in the high-low emitter (HLE cell). The diffused and ion implanted cells degraded approximately equally but less than the HLE cell. Degradation was greatest in an HLE cell exposed to X-rays before electron irradiation. The cell regions controlling both short-circuit current and open-circuit voltage degradation were defined in all three cell types. An increase in front surface recombination velocity accompanied time dependent degradation of an HLE cell after X-irradiation. It was speculated that this was indirectly due to a decrease in positive charge at the silicon-oxide interface. Modifications aimed at reducing radiation induced degradation are proposed for all three cell types. Author

SOLAR CELL HETEROJUNCTIONS INVOLVING N-CADMIUM SULFIDE AND CERTAIN P-TYPE SEMICONDUCTOR SINGLE CRYSTALS Ph.D. Thesis

Arienzo Maurizio 1979 214 p
Avail: Univ. Microfilms Order No. 8006969

The fabrication and testing of heterojunction photovoltaic solar cells of the type n-CdS/p-Ge, n-CdS/p-InP, n-CdS/p-GaAs and n-CdS/p-CdTe is described. The CdS layer was found to be single crystalline when it was grown on substrates whose lattice mismatch with CdS was less than 4%, i.e., in the case of growth on InP, GaAs and Ge. Analysis of the dark current characteristics revealed that in all of these heterojunction devices, there exists a low temperature, low bias voltage tunneling current. Analysis of the photovoltaic responses showed that they generally had respectable collection efficiencies; i.e., that the interface states did not act as recombination sites of photogenerated carries crossing the junction. The solar energy conversion efficiency is, however, strongly influenced by interface states through the open circuit voltage and the fill factor. A maximum conversion efficency without antireflection coating of 6.5% for n-CdS/p-InP under natural sunlight having an intensity of 74 mW/cm was observed. Dissert. Abstr.

N80-23767 Stanford Univ., Calif.

PROPERTIES OF SPUTTERED ITO/CdTe SOLAR CELLS Ph.D. Thesis

Francis Georges Courreges 1980 135 p
Avail: Univ. Microfilms Order No. 8011619

The properties of indium tin oxide/cadmium telluride (ITO/CdTe) solar cells prepared by RF sputtering of ITO on phosphorus-doped CdTe single crystals is investigated through measurements of dark and light current-voltage characteristics of ITO/CdTe heterojunctions and In/CdTe junctions and of surface photovoltage and photoluminescence of CdTe surfaces. An observed reduction in solar efficiency of ITO/CdTe solar cells with time and/or heat treatment is describable in terms of the change from a n(+)-ITO/n-CdTe/p-CdTe homojunction structure to a n(+)-ITO/p-CdTe heterojunction, characterized by high collection efficiency and poor rectifying properties. Dissert. Abstr.

DEVELOPMENT OF PULSED PROCESSES FOR THE MANUFACTURE OF SOLAR CELLS Final Report, Apr. 1979
J. A. Minnucci Apr. 1979 238 p refs Sponsored in part by DOE
(Contract JPL-954786)
(NASA-CR-153188; DOE/JPL-954786-79/02; JPL-9950-324; FR-79-10052) Avail: NTIS HC A11/MF A01 CSCL 10A

Low-energy ion implantation processes for the automated production of silicon solar cells were investigated. Phosphorus ions at an energy of 10 keV and dose of 2 x 10 to the 15th power/sq cm were implanted in silicon solar cells to produce junctions, while boron ions at 25 keV and 5 x 10 to the 15th power were implanted in the cells to produce effective back surface fields. An ion implantation facility with a beam current up to 4 mA and a production throughput of 300 wafers per hour was designed and installed. A design was prepared for a 100 mA, automated implanter with a production capacity of 100 MW sub e/sq cm per year. Two process sequences were developed which employ ion implantation and furnace or pulse annealing. A computer program was used to determine costs for junction formation by ion implantation and various furnace annealing cycles to demonstrate cost effectiveness of these methods. R.E.S.

ANALYSIS OF THE EFFECTS OF IMPURITIES IN SILICON Final Report, 19 Jan. 1979 - 31 Jan. 1980
J. H. Wohlgemuth and M. N. Giuliano 1980 95 p refs Sponsored in part by DOE
(Contract JPL-955307)
(NASA-CR-163133; DOE/JPL-955307; JPL-9950-325) Avail: NTIS HC A05/MF A01 CSCL 10A

A solar cell fabrication and analysis program was conducted to determine the effects on the resultant solar cell efficiency of impurities intentionally incorporated into silicon. It was found that certain impurities such as titanium, tantalum, and vanadium were bad, even in very small concentrations. Cell performance appeared relatively tolerable to impurities such as copper, carbon, calcium, chromium, iron and nickel (in the concentration levels which were considered). R.E.S.

SOLAR HOT WATER SYSTEM INSTALLED AT QUALITY INN, KEY WEST, FLORIDA Final Report
Apr. 1980 25 p Sponsored in part by NASA
(Grant EG-77-G-01-1633)
(NASA-CR-161434) Avail: NTIS HC A02/MF A01 CSCL 10A

The solar energy hot water system installed in the Quality Inn, Key West, Florida, which consists of four buildings is described. Three buildings are low-rise, two-story buildings containing 100 rooms. The fourth is a four-story building with 48 rooms. The solar system was designed to provide approximately 50 percent of the energy required for the domestic hot water system. The solar system consists of approximately 1400 square feet of flat plate collector, two 500 gallon storage tanks, a circulating pump, and a controller. Operation of the system was begun in April 1978, and has continued to date with only three minor interruptions for pump repair. In the first year of operation, it was determined that the use of the solar facility resulted in forty percent fuel savings. R.E.S.

SOLAR HEATING SYSTEM INSTALLED AT BLAKEDALE PROFESSIONAL CENTER, GREENWOOD, SOUTH CAROLINA Final Report
Mar. 1980 33 p Sponsored in part by NASA
(Contract EX-76-C-01-2389)
(NASA-CR-161435) Avail: NTIS HC A03/MF A01 CSCL 10B

Information on the solar heating system installed at the Blakedale Professional Center, in Greenwood, South Carolina is presented. The information consists of site and building description, solar system description, performance evaluation, system problems and installation drawings. The solar system was designed to provide approximately 85 percent of the building's heating requirements. The system was installed concurrently with building construction and heats 4,440 square feet of the building. There are 954 square feet of liquid flat plate collectors that are proof-mounted and have a drain-down system to protect the collectors from freezing. A 5,000 gallon steel, polyurethane insulated tank buried underground provides storage. The system was fully instrumented for performance evaluation and integrated into the National Solar Data Network. R.E.S.

SOLAR APPLICATIONS OF THERMAL ENERGY STORAGE Final Report
C. Lee, L. Taylor, A. J. DeVries, and S. Heibein Jan. 1979 158 p refs
(Contract EM-78-C-01-4275)
(TID-29430) Avail: NTIS HC A08/MF A01

The preparation technology assessment on solar energy systems which use thermal energy storage was studied. The characterization of the current state-of-the-art of thermal energy storage, an assessment of the energy storage needs of solar energy systems, and the synthesis of this information into preliminary design criteria which would from the basis for detailed designs of thermal energy storage are included. Since the goal of the solar thermal energy storage program is to provide optimum storage units for solar thermal energy systems, the focus was on storage concepts that are either commercially available or will be commercially available by 1979. NOAA'S ROLE IN THE SOLAR ENERGY PROGRAM Annual Report, 1978
Aug. 1979 244 p refs
(DOE/ET-0110) Avail: NTIS HC A11/MF A01

The efforts of the National Oceanic and Atmospheric Administration toward monitoring and documenting the USA solar radiation and related weather data are reported. A format to be used for transfer and processing of related solar data sets is presented. Solar radiation maps of the U.S. for total and direct radiation on a monthly and annual basis are presented and discussed. A section on solar and climatic data applied to subdivisions of the U.S. that are quasi-homogeneous in solar radiation heating demand and topography is included. A listing of the periods of record of all available wind observations in the National Climatic Center's meteorological archives is given. The computational of extra-terrestrial solar radiation, solar evaluation angle, and true solar time of sunrise and sunset is described. Also, research on the effects of aerosols and clouds on solar radiation is described. DOE

DEVELOPMENT OF A SOLAR THERMAL RECEIVER FOR HIGH TEMPERATURE APPLICATIONS
M. Bohn and G. Bessler Nov. 1979 7 p refs Presented at the Semiann. Conf. for Adv. Solar Thermal Tech., Phoenix, Ariz., 11 Dec. 1979
(Contract EG-77-C-02-4042)
(SERI/TP-333-485; CONF-791221-1) Avail: NTIS HC A02/MF A01

A thermal receiver for point focus collectors is described. The receiver uses as a buffer between the cavity surface and the heat transfer fluid a thermal mass, which with a very small temperature drop penalty smooths the flux distribution to eliminate hot spots. The design of the receiver enables significant spillage flux at the receiver to be used. Thus, lower quality optics can be employed in applications not requiring very high temperatures. Design and construction features of the receiver are presented and the testing program is described. DOE

N80-23806# Sandia Labs., Livermore, Calif.
HELIOSTAT DESIGN COST/PERFORMANCE TRADEOFFS
Miriam J. Fish and T. A. Dellin Nov. 1979 50 p refs
(Contracts EY-76-C-04-0789; DE-AC04-76DP-00789)
(SAND-79-8248) Avail: NTIS HC A03/MF A01

The heliostat field comprises the most expensive subsystem of a solar central receiver power plant. Cost reductions might be achieved by either total heliostat redesign or component substitution in existing design. The value of changing any of several design specifications, in the current baseline glass/metal heliostat is discussed. Results are quantified in terms of the breakeven cost; i.e., the cost of a new design which will yield the same total system energy cost as the baseline system. Changes in mirror reflectivity, pointing accuracy, surface quality, canting and focusing strategy, heliostat size, and stow requirements were evaluated. DOE

METAL FOILS FOR DIRECT APPLICATION OF ABSORBER COATINGS ON SOLAR COLLECTORS
Carl M. Lampert Aug. 1979 19 p refs Presented at the 2nd Am. Electroplaters Soc. Symp. on Coatings for Solar Collectors, St. Louis, 16-17 Oct. 1979
(Contract W-7405-eng-48)
(LBL-9324-Rev; CONF-791021-1-Rev) Avail: NTIS HC A02/MF A01

The basic materials and processing associated with the production of coated metal foils for solar collector absorber surfaces are discussed. Also covered are details of heavier metal strips for direct fabrication of solar collectors. Techniques including bonding methods and the use of adhesive are surveyed. Commercial solar foil manufacturers are covered along with the research efforts in this area. In conclusion, advantages and disadvantages are outlined, with specific recommendations. DOE

N80-23811# Monsanto Research Corp., Dayton, Ohio.
LOW-COST MIRROR CONCENTRATOR BASED ON DOUBLE-WALLED METALLIZED, TUBULAR FILMS Semiannual Technical Progress Report, 20 Aug. 1978 - 19 Feb. 1979
J. W. Leffingwell, G. L. Ball, III, J. L. Schuendeman, and T. A. Orofino 30 Mar. 1979 44 p refs
(Contract EM-78-C-04-4227)
(ALO-4227-12; SAPR-2) Avail: NTIS HC A03/MF A01

The development of a potentially, low cost, air inflatable tubular plastic, nontracking 3X solar collector is described. The design employs joined truncated cylindrical sections which reduce both cover and mirror material requirements by 40% compared with a conventional cylindrical design. Aluminum foil-plastic laminates were selected as an alternative to aluminized polyester films because of their low cost, ease of fabrication, good durability, high strength, and acceptable reflectivity. Specially UV-stabilized and polyester scrim reinforced flexible polyvinyl chloride film was selected for use as the outer transparent cover material because of its mechanical and optical durability, acceptable transmission characteristics and its potential low cost. STUDY AND ANALYSIS OF A LOW COST CEMENT BONDED FLAT PLATE SOLAR COLLECTOR Final Report
Jan. 1979 136 p refs

(Contract EG-77-04-4122)
(ALO-4122-T1) Avail: NTIS HC A07/MF A01

A flat plate collector was designed and tested using low cost materials. This collector absorber plate included copper circulating tubes bonded to a flat sheet of conductive material using high service temperature, low outgassing, high conductivity adhesives. A series of candidate adhesive were evaluated. Structural and thermal tests were performed using galvanized sheet steel collector plates and aluminum collector plates with copper tubes to determine the conductivity of bond joints. The structural integrity of bond joints was evaluated under relative thermal expansion forces at various temperatures (ranging from 35 C to 300 C). Thermal cycling tests were conducted to evaluate fatigue of bond joints and to evaluate the degradation of thermal conductivity of these bond joints. A cost/performance summary was made (using F-chart) to determine the potential cost sevings realized compared with conventional systems. DOE

N80-23817# Monsanto Research Corp., Dayton, Ohio.
NON-CONCENTRATING COLLECTORS FOR SOLAR HEATING APPLICATIONS (MEDIUM TEMPERATURE AIR HEATERS BASED ON DURABLE TRANSPARENT FILMS) Final Report, 30 Sep. 1977 - 31 Oct. 1978
J. W. Leffingwell, J. L. Schwendeman, G. L. Ball, and T. A. Orofino Mar. 1979 143 p refs
(Contract EG-77-C-04-4147)
(ALO-4147-T1; MRC-DA-867) Avail: NTIS HC A07/MF A01

A special UV-stablized and scrim-reinforced flexible photovoltaic conversion film was developed, characterized, and tested on an air solar heater. Solar energy transmission of early precontract 20/mil thick film was determined to be about 83% after two months outdoor Florida exposure, dropping to 78% after two years. Outdoor exposure and artificial UV aging tests indicate that a 10 year lifetime could be possible. The fabricated solar heater had a lower efficiency than predicted from computer modeling (43% for 129 F output with 62 F temperature rise at an ambient temperature of 60 F) suggesting design problems which could most easily be overcome by changing from a double-glazed non-selective absorber collector to a single-glazed-selective absorber heater. DOE

OFF-PEAK ELECTRIC AUXILIARY HEAT FOR SOLAR AIR-HEATING SYSTEMS Final Report, 1 Jun. 1977 - 31 Dec. 1978
Thomas B. Jones and Paul J. Wilbur Jan. 1979 51 p refs
(Contract EG-77-S-02-4516)
(COO-4516-1) Avail: NTIS HC A04/MF A01

The performance of various solar auxiliary heating system options was examined by means of computer simulation. A storage reservoir which is separate from the solar reservoir was found to be preferable. Performance was generally not found to be sensitive to the time at which off-peak energy is available. Control schemes that predict energy requirements for a forthcoming on-peak period and account for energy in solar storage are preferable and a reservoir heater that can be staged so heating can be accomplished over the full duration of the on-peak period to supply different levels of energy is desirable. The system installed in a solar house for testing is described. DOE

DESIGN OF LOW-COST STRUCTURES FOR PHOTOVOLTAIC ARRAYS. VOLUME 2: TECHNICAL STUDIES AND APPENDICES Final Report
Nov. 1979 238 p refs
(Contract EY-76-C-04-0789)
(SAND-79-7002-Vol-2) Avail: NTIS HC A11/MF A01

A study of low cost support structures for flat photovoltaic panels set at a fixed angle to the ground was conducted. The work began with a survey of solar system manufacturers. The results showed a diverse approach to the design of support structures and a lack of systematic design criteria. Therefore, a series of conceptual designs of support structures and their foundations were developed based on the use of concrete, steel or aluminum, and timber. A 6 MWe peak baseline photovoltaic power plant was conceptualized in order to bring a practical perspective to cost estimating for the designs. Detailed civil-structural design criteria were developed. These criteria identified loadings for normal operating conditions and extreme environmental conditions. The study results include detailed designs for eight array support structures and foundations for flat plate arrays using 8 foot wide panels with foundations spaced 20 feet apart along the rows in the east-west direction. Cost estimates for supports and foundations were shown to vary between $2 to $3 per square foot of supported panels (deflated to 1975 dollars). DOE

PERFORMANCE IMPROVEMENT OF A SOLAR HEATING SYSTEM UTILIZING OFF-PEAK ELECTRIC AUXILIARY Semiannual Progress Report, 18 Jun. - 31 Dec. 1979
A. H. Eltimsahy Dec. 1979 10 p
(Contract DE-FG02-79R5-10140)
(DOE/R5/10140-1) Avail: NTIS HC A02/MF A01

A solar-assisted heat pump system, which was designed, installed, and operated in an experimental solar house, is described. The heat pump system is capable of operating in a wide range of temperatures which is needed in a solar house utilizing off-peak storage from the electric utility. The complete system consists of 584.1 square feet of flat plate solar collectors, a 5 horsepower compressor, an evaporator, a condensor, thermal storage units, and associated equipment. During the installation and initial operation of the system, numerous aspects of the feasibility of the system design were evaluated. Many of these aspects point to the potentially improved operating performance of a solar heating system utilizing off-peak storage from the electric utility. DOE

SOLPOND: A SIMULATION PROGRAM FOR SALINITY GRADIENT SOLAR PONDS
Jon Henderson and Cecile M. Leboeuf Jan. 1980 7 p refs Presented at the 2nd Ann. Systems Simulation and Econ. Analysis Conf., San Diego, Calif., 23-25 Jan. 1980
(Contract EG-77-C-01-4042)
(SERI/TP-351-559; CONF-800101-4) Avail: NTIS HC A02/MF A01

A computer simulation design tool was developed to simulate dynamic thermal performance for salinity gradient solar ponds. Dynamic programming techniques allow the user significant flexibility in analyzing pond performance under realistic load and weather conditions. Finite element techniques describe conduction heat transfer through the pond, earth, and edges. Results illustrate typical thermal performance of salinity gradient ponds. Sensitivity studies of salty pond thermal performance with respect to geometry, load, and optical transmission are included. Experimental validation of the program with an operating pond is also presented. DOE

SOLAR ENERGY SYSTEMS: STANDARDS FOR RUBBER HOSE
Robert D. Stiehler and John L. Michalak Nov. 1979 38 p Sponsored in part by DOE
(PB80-129828; NBSIR-79-1917) Avail: NTIS HC A03/MF A01 CSCL 10A

A study of commercial rubber hose was made to develop standards for hoses used in solar energy systems. Twelve hoses were evaluated by cycling between temperatures of about 100 C and temperatures as low as -40 C during a period of about seven months. Laboratory tests for bursting strength, compatibility with metals, compression set, ozone resistance, and water vapor transmission were also made. The results of the tests are presented. Based on these findings a standard for rubber hose used in solar energy systems is proposed. GRA

N80-23869# National Bureau of Standards, Washington, D.C.
SOLAR COLLECTOR FLUID PARAMETER STUDY Final Report, Nov. 1978 - Jun. 1979
Wallace W. Youngblood, William Schultz, and Ralph Barber Oct. 1979 130 p
(Contract EG-77-C-01-4050)
(PB80-125891; NBS-GCR-79-184) Avail: NTIS HC A07/MF A01 CSCL 10A

A series of instantaneous thermal performance tests were performed on four differently constructed, commercially available flat plate solar collectors with each of four commonly used heat transfer fluids. The tests were designed to illustrate the magnitude of fluid parameter effects on the thermal performance of flat plate solar collectors. The configurations were selected to provide a broad variety of flow conditions. The heat transfer fluids used were as follows: (1) water; (2) an ethylene glycol (Prestone 11) water solution (50 percent by weight); (3) a silicone based heat transfer fluid (SLYTHERM 444); and (4) a synthetic hydrocarbon (Therminol 44). (SERI/SP-69-071) Avail: NTIS HC A04/MF A01

A plan for a technical information dissemination (TID) program is presented, the purpose of which is to build the most effective information transfer mechanisms possible to support the earliest appropriate commercialization of solar research and development (R&D) results in five technologies: photovoltaics, solar thermal power, biomass, ocean thermal energy conversion, and wind energy conversion. Coordination, evaluation, and maximum use of ongoing information support services, information activities where the leverage effect appears reasonably high in meeting the goals of the TID program, and involvement of in house and contractor personnel in planning, evaluating, and implementing these technical information dissemination activities are described. Users of solar R&D results are to be involved in external evaluation of technical information activities in each of the five solar technologies. DOE

STUDY OF MULTI-kW SOLAR ARRAYS FOR EARTH ORBIT APPLICATION

30 Apr. 1980 334 p
(Contract NAS8-32981)
(NASA-CR-161453; LMSC-D715841) Avail: NTIS HC A14/MF A01 CSCL 22B

Low cost low Earth orbit (LOW) and geosynchronous Earth orbit (GEO) Solar Array concepts in the 300 to 1000 kW range which could be reduced to hardware in the mid 1980's, are identified. Size scaling factors and longer life demands are recognized as the prime drivers for the designs if low life cycle costs for energy are to be achieved. Technology is identified which requires further development in order to assure component readiness and availability. Use of the low concentration ratio (CR) concentrator, which uses gallium arsenide solar cells for both LEO and GEO applications, is recommended. E.D.K.

STUDY OF MULTI-kW SOLAR ARRAYS FOR EARTH ORBIT APPLICATION Progress Report, 15 Mar. 1979 - 1 Mar. 1980

21 Mar. 1980 202 p
(Contract NAS8-32981)
(NASA-CR-161452; LMSC-D715827) Avail: NTIS HC A10/MF A01 CSCL 22B

Planar and concentrator solar array configurations based on silicon and gallium arsenide solar cells were conceptualized and on-orbit maintainability was addressed. Four basic categories emerged: (1) planar (non concentrated) with silicon cells, (2) low-CR (concentration ratio = 3.4) with silicon cells, (3) low-CR with GaAs, and (4) high-CR (concentration ratio = 62.5) with GaAs. A very high-CR (concentration ratio = 200) was investigated but rejected on thermal grounds. Nonrecurring and recurring cost elements for each of the four concepts selected were compared over a 15 year life cycle. Under conditions where the gallium arsenide cells can be produced for less than $25 per 2 x 2 cm, the low CR concentrator emerges as the most cost effective configuration. However, the producibility risk remains higher on the gallium arsenide cell. R.E.S.

OVERALL EFFICIENCIES FOR CONVERSION OF SOLAR ENERGY TO A CHEMICAL FUEL

J. D. Fish 1979 22 p refs Presented at the 2nd Miami Intern. Conf. on Alternative Energy Sources, Miami Beach, Fla., 10 Dec. 1979
(Contracts EY-76-C-04-0789; DE-AC04-76DP-00789)
(SAND-79-8636; CONF-791204-9) Avail: NTIS HC A02/MF A01

A complete and consistent schema for determining the overall efficiency of a generalized process for the conversion of solar energy into a chemical fuel was developed and applied to seven conversion processes. The overall efficiency of each of these processes is determined by ten common factors: maximum theoretical efficiency; inherent absorption losses; inherent internal losses; rate limiting effects; reflection losses; transmission losses; coverage losses; system construction requirements; parasitic losses; and harvesting and conversion losses. An economical way to reduce the deleterious effects of titanium, one of the impurities present in metallurgical grade silicon material, is disclosed. By adding copper to approximately the same concentration level of the titanium during the melting process, the conversion efficiency will be restored to about 99.3% of what it would have been if the single crystal silicon had been grown free of titanium impurities.

SOLAR ARRAY SUBSYSTEMS STUDY Final Report, Mar. 1979 - May 1980

P. W. Richardson, F. Q. Miller, and M. B. Badgley 6 Jun. 1980 284 p
(Contract NAS3-21926)
(NASA-CR-159857) Avail: NTIS HC A13/MF A01 CSCL 10A

The effects on life cycle costs of a number of technology areas are examined for a LEO, 500 kW solar array. A baseline system conceptual design is developed and the life cycle costs estimated in detail. The baseline system requirements and design technologies are then varied and their relationships to life cycle costs quantified. For example, the thermal characteristics of the baseline design are determined by the array materials and masses. The thermal characteristics in turn determine configuration, performance and hence life cycle cost. Author

SOLAR HEATING AND HOT WATER SYSTEM INSTALLED AT SAINT LOUIS, MISSOURI Final Report

Apr. 1980 68 p refs Sponsored by NASA
(Grant EG-77-G-01-4085)
(NASA-CR-161420) Avail: NTIS HC A04/MF A01 CSCL 10A

The solar heating and hot water system installed at the William Tao & Associates, Inc., office building in St. Louis, Missouri is described, including maintenance and construction problems, final drawings, system requirements, and manufacturer's component data. The solar system was designed to provide 50 percent of the hot water requirements and 45 percent of the space heating needs for a 900 sq ft office space and drafting room. The solar facility has 252 sq ft of glass tube concentrator collectors and a 1000 gallon steel storage tank buried below a concrete slab floor. Freeze protection is provided by a propylene glycol/water mixture in the collector loop. The collectors are roof mounted on a variable tilt array which is adjusted seasonally and is connected to the solar thermal storage tank by a tube-in-shell heat exchanger. Incoming city water is preheated through the solar energy thermal storage tank. R.E.S.

SOLAR-HEATED FLUIDIZED BED GASIFICATION SYSTEM Patent Application
Shaik A. Qader, inventor (to NASA) (JPL) Filed 15 May 1980 13 p
(Contract NAS7-100)
(NASA-Case-NPO-15071-1; US-Patent-Appl-SN-150115) Avail: NTIS HC A02/MF A01 CSCL 10A

A solar-powered fluidized bed gasification system for gasifying carbonaceous material is disclosed. The system includes a solar gasifier which is heated by fluidizing gas and steam. Energy to heat the gas and steam is supplied by a high heat capacity refractory honeycomb which surrounds the fluid bed reactor zone. The high heat capacity refractory honeycomb is heated by solar energy focused on the honeycomb by solar concentrator through solar window. The fluid bed reaction zone is also heated directly by thermal contact to the high heat capacity ceramic honeycomb with the walls of the fluidized bed reactor. Provisions are also made for recovering and recycling catalysts used in the gasification process. A back-up furnace is provided for start-up procedures and for supplying heat to the fluid bed reaction zone when adequate supplies of solar energy are not available. NASA

SOLAR THERMAL POWER SYSTEMS POINT-FOCUSING THERMAL AND ELECTRIC APPLICATIONS PROJECTS. VOLUME 1: EXECUTIVE SUMMARY Annual Technical Report, fiscal year 1979
A. Marriott 15 Jan. 1980 36 p 2 Vol.
(Contracts NAS7-100, DE-AI01-79ET-20307; JPL Proj. 5103-93)
(NASA-CR-163147; DOE/JPL-1060-31-Vol-1; JPL-Pub-79-118-Vol-1) Avail: NTIS HC A03/MF A01 CSCL 10A

The activities of the Point-Focusing Thermal and Electric Applications (PETEA) project for the fiscal year 1979 are summarized. The main thrust of the PFTEA Project, the small community solar thermal power experiment, was completed. Concept definition studies included a small central receiver approach, a point-focusing distributed receiver system with central power generation, and a point-focusing distributed receiver concept with distributed power generation. The first experiment in the Isolated Application Series was initiated. Planning for the third engineering experiment series, which addresses the industrial market sector, was also initiated. In addition to the experiment-related activities, several contracts to industry were let and studies were conducted to explore the market potential for point-focusing distributed receiver (PFDR) systems. System analysis studies were completed that looked at PFDR technology relative to other small power system technology candidates for the utility market sector. R.E.S.

SOLAR THERMAL POWER SYSTEMS POINT-FOCUSING DISTRIBUTED RECEIVER TECHNOLOGY PROJECT. VOLUME 2: DETAILED REPORT Annual Technical Report, fiscal year 1979
1 Apr. 1980 134 p refs Prepared in part by NASA. Lewis Res. Center, Cleveland, Ohio 2 Vol.
(Contracts NAS7-100; DE-AI01-79ET-20307; JPL Proj. 5104-61)
(NASA-CR-159715; DOE/JPL-1060-30-Vol-2; JPL-Pub-79-112-Vol-2) Avail: NTIS HC A07/MF A01 CSCL 10A

The accomplishments of the Point-Focusing Distributed Receiver Technology Project during fiscal year 1979 are detailed. Present studies involve designs of modular units that collect and concentrate solar energy via highly reflective, parabolic-shaped dishes. The concentrated energy is then converted to heat in a working fluid, such as hot gas. In modules designed to produce heat for industrial applications, a flexible line conveys the heated fluid from the module to a heat transfer network. In modules designed to produce electricity the fluid carries the heat directly to an engine in a power conversion unit located at the focus of the concentrator. The engine is mechanically linked to an electric generator. A Brayton-cycle engine is currently being developed as the most promising electrical energy converter to meet near-future needs. R.E.S.

PROPOSED METHOD FOR DETERMINING THE THICKNESS OF GLASS IN SOLAR COLLECTOR PANELS
Donald M. Moore 1 Mar. 1980 74 p refs
(Contracts NAS7-100; EX-76-A-29-1012)
(NASA-CR-163151; DOE/JPL-1012-41; JPL-Pub-80-34) Avail: NTIS HC A04/MF A01 CSCL 10A

An analytical method was developed for determining the minimum thickness for simply supported, rectangular glass plates subjected to uniform normal pressure environmental loads such as wind, earthquake, snow, and deadweight. The method consists of comparing an analytical prediction of the stress in the glass panel to a glass breakage stress determined from fracture mechanics considerations. Based on extensive analysis using the nonlinear finite element structural analysis program ARGUS, design curves for the structural analysis of simply supported rectangular plates were developed. These curves yield the center deflection, center stress and corner stress as a function of a dimensionless parameter describing the load intensity. A method of estimating the glass breakage stress as a function of a specified failure rate, degree of glass temper, design life, load duration time, and panel size is also presented. R.E.S.

HEAT AND ELECTRICITY FROM THE SUN USING PARABOLIC DISH COLLECTOR SYSTEMS
Vincent C. Truscello and A. Nash Williams *In its* Proc. of the First Semiann. Distributed Receiver Program Rev. 15 May 1980 p 19-26 refs
Avail: NTIS HC A11/MF A01 CSCL 10A

Point focus distributed receiver solar thermal technology for the production of electric power and of industrial process heat is addressed. The thermal power systems project which emphasizes the development of cost effective systems which will accelerate the commercialization and industrialization of plants up to 10 MWe, using parabolic dish collectors is described. The projected size of the isolated load market in the 1990-2000 time period is 300 to 1000 MW/year. Although this market is small in comparison to the grid connected utility market, it is indicated that by assuming only a 20 percent market penetration, up to 10,000 power modules per year would be required to meet this need. At a production rate of 25,000 units/year and assuming no energy storage, levelized bus bar energy costs of 75 mills/kWeh are projected. These numbers are based on what is believed to be a conservative estimate regarding engine-generator conversion efficiency (40 percent) for the 1990 time period. With a more optimistic estimate of efficiency (i.e., 45 percent), the bus bar cost decreases to about 67 mills/kWeh. At very large production rates (400,000 modules/years), the costs decrease to 58 mills/kWeh. Finally, the present status of the technology development effort is discussed. J.M.S.

LINE-FOCUS CONCENTRATING COLLECTOR PROGRAM
Virgil L. Dugan *In* JPL Proc. of the First Semiann. Distributed Receiver Program Rev. 15 May 1980 p 27-33

Avail: NTIS HC A11/MF A01 CSCL 10A

The Line-Focus Concentrating Collector Program has emphasized the development and dissemination of concentrating solar technology in which the reflected sunlight is focused onto a linear or line receiver. Although a number of different types of line-focus concentrators were developed, the parabolic trough has gained the widest acceptance and utilization within the industrial and applications sectors. The trough is best applied for application scenarios which require temperatures between 140 and 600 F. Another concept, the bowl, is investigated for applications which may require temperatures in the range between 600 and 1200 F. Current technology emphases are upon the reduction of system installation cost and the implementation of production oriented engineering. J.M.S.

TEST BED CONCENTRATOR MIRRORS
M. J. Argoud *In its* Proc. of the First Semiann. Distributed Receiver Program Rev. 15 May 1980 p 41-46

Avail: NTIS HC A11/MF A01 CSCL 10A

The test bed concentrator (TBC) was des point focusing distributed receiver (PFDR) systems. The reflective surface of the concentrator was fabricated using mirror facet designs and techniques. The facets are made by bonding mirrored glass to spherically-conducted substrates. Several aspects of earlier work were reevaluated for application to the TBC: optimum glass block size, material selection, environmental test, optical characteristics, and reliability. A detailed explanation of tooling, substrate preparation, testing techniques, and mirror assembly is presented. J.M.S.

N80-24765*# Jet Propulsion Lab., California Inst. of Tech., Pasadena.
INITIAL TEST BED CONCENTRATOR CHARACTERIZATION
D. J. Starkey *In its* Proc. of the First Semiann. Distributed Receiver Program Rev. 15 May 1980 p 47-51

Avail: NTIS HC A11/MF A01 CSCL 10A

The operational characteristics and the mirror alignment technique of the test bed concentrator control system are highlighted. The final design of the TBC control system provided one axis of fast slew capability so that either the Sun acquisition or emergency off-Sun mode could be obtained in a minimum time. The procedure for getting on and off Sun is to run the elevation axis up to the approximate elevation of the Sun for the particular time of acquisition and then slew the concentrator on Sun in azimuth. The automatic Sun-acquisition system is controlled by two Sun sensors, one for each axis; each has a 2 deg acquisition cone angle within which the concentrators are programmed to point. The mirror alignment technique chosen utilized a semi-distant incandescent light source which produced a reflected image on the focal point target. The concentrator was boresighted to the light by moving the concentrator while sighting along the cross hairs and through the apertures in the disks to the light source resulting in a maximum point error of 0.11 deg. Test plans to install a solar flux mapper to characterize the solar spot and to measure the size, shape, and intensity of the Sun's image are outlined. J.M.S.

THE DEVELOPMENT OF AN AIR BRAYTON AND A STEAM RANKINE SOLAR RECEIVER
Max V. Greeven *In* JPL Proc. of the First Semiann. Distributed Receiver Program Rev. 15 May 1980 p 75-85 refs

Avail: NTIS HC A11/MF A01 CSCL 10B

An air Brayton and a steam Rankine solar receiver now under development are described. These cavity receivers accept concentrated insolation from a single point focus, parabolic concentrator, and use this energy to heat the working fluid. Both receivers were designed for a solar input of 85 kw. The air Brayton receiver heats the air to 816 C. A metallic plate-fin heat transfer surface is used in this unit to effect the energy transfer. The steam Rankine receiver was designed as a once-through boiler with reheat. The receiver heats the water to 704 C to produce steam at 17.22 MPa in the boiler section. The reheat section operates at 1.2 MPA, reheating the steam to 704 C. R.E.S.

COSTING THE OMNIUM-G SYSTEM 7500
H. R. Fortgang *In its* Proc. of the First Semiann. Distributed Receiver Program Rev. 15 May 1980 p 139-144

Avail: NTIS HC A11/MF A01 CSCL 05C

A complete OMNIUM-G System 7500 was cost analyzed for annual production quantities ranging from 25 to 10,000 units per year. Parts and components were subjected to in-depth scrutiny to determine optimum manufacturing processes, coupled with make or buy decisions on materials and small parts. When production quantities increase both labor and material costs reduce substantially. A redesign of the system that was analyzed could result in lower costs when annual production runs approach 100,000 units/year. Material and labor costs for producing 25, 100, 25,000 and 100,00 units are given for 17 subassembly units. A.R.H.

SITING SOLAR THERMAL POWER EXPERIMENTS

Herbert J. Holbeck *In its* Proc. of the First Semiann. Distributed Receiver Program Rev. 15 May 1980 p 169-173

Avail: NTIS HC A11/MF A01 CSCL 10A

The Small Community Solar Thermal Power Experiment will test a point-focusing, distributed receiver system in a small community, electric utility application. Site planning is becoming increasingly important for solar experiments as well as all kinds of development due to increased competition for desirable sites and increased complexity of regulatory requirements. Siting issues can be categorized as: (1) resources and physical environmental at this site; (2) acquisition, permits and regulations; and (3) development requirements and costs. These issues are addressed with respect to the unique requirements of solar thermal power experiments. A.R.H.

INDUSTRIAL APPLICATION EXPERIMENT SERIES

Steven A. Bluhm *In its* Proc. of the First Semiann. Distributed Receiver Program Rev. 15 May 1980 p 181-184

Avail: NTIS HC A11/MF A01 CSCL 10A

The deployment of parabolic dish systems into the industrial sector for the purpose of providing users, suppliers, sponsors, and developers with a realistic assessment of system feasibility in selected near-term industrial applications will be accomplished initially through the industrial module experiment and later through additional experiments involving thermal, electric, and combined thermal and electrical systems. The approach is to progress through steps, from single module to multi-module systems, from thermal-only applications to more complex combined thermal and electric applications. The experience of other solar thermal experiments, particularly those involving parabolic dish hardware, will be utilized to the fullest extent possible in experiment planning and implementation. A.R.H.

SPS MARKET ANALYSIS

Hugh C. Goff *In* JPL Proc. of the First Semiann. Distributed Receiver Program Rev. 15 May 1980 p 185-189

Avail: NTIS HC A11/MF A01 CSCL 05C

A market analysis task included personal interviews by GE personnel and supplemental mail surveys to acquire statistical data and to identify and measure attitudes, reactions and intentions of prospective small solar thermal power systems (SPS) users. Over 500 firms were contacted, including three ownership classes of electric utilities, industrial firms in the top SIC codes for energy consumption, and design engineering firms. A market demand model was developed which utilizes the data base developed by personal interviews and surveys, and projected energy price and consumption data to perform sensitivity analyses and estimate potential markets for SPS. MILITARY MARKETS FOR SOLAR THERMAL ELECTRIC POWER SYSTEMS

James S. Hauger *In* JPL Proc. of the First Semiann. Distributed Receiver Program Rev. 15 May 1980 p 191-195

Avail: NTIS HC A11/MF A01 CSCL 10B

The Departmant of Defense maintains an inventory of over 1,800 MW of engine-generators 15 KW and larger, with an estimated procurement rate of over 140 MW/year. Nearly the entire requirement could be met by advanced heat engines of the types being developed as point-focussing, distributed receiver power plants. A conceptual system consisting of a heat engine which efficiently burns liquid fossil or synthetic fuels, with a 'solarization kit' for conversion to hybrid solar operation could meet existing DOD requirements for new systems which are quieter, lighter, and multi-fueled. An estimated 24 percent (33 MW/year) or more could operationally benefit from the solar option. Baseline cost projections indicate levelized energy cost goals of 210 to 120 mills/KWh (15 to 1000 KW systems). Fuel cost escalation is the major factor affecting the value of the solar option. A baseline calculation for fuel at $0.59/gal in spring, 1979, escalating at 8 percent above general inflation indicates a value of $2700/KWe for a solarization kit. A.R.H.

SOLAR THERMAL PLANT IMPACT ANALYSIS AND REQUIREMENTS DEFINITION

Yudi P. Gupta *In* JPL Proc. of the First Semiann. Distributed Receiver Program Rev. 15 May 1980 p 197-209

(Contract JPL-955238)

Avail: NTIS HC A11/MF A01 CSCL 10B

Progress on a continuing study comprising of ten tasks directed at defining impact and requirements for solar thermal power systems (SPS), 1 to 10 MWe each in capacity, installed during 1985 through year 2000 in a utility or a nonutility load in the United States is summarized. The point focus distributed receiver (PFDR) solar power systems are emphasized. Tasks 1 through 4, completed to date, include the development of a comprehensive data base on SPS configurations, their performance, cost, availability, and potential applications: user loads, regional characteristics, and an analytic methodology that incorporates the generally accepted utility financial planning methods and several unique modifications to treat the significant and specific characteristics of solar power systems deployed in either central or distributed power generation modes, are discussed. A STUDY OF MASS PRODUCTION AND INSTALLATION OF SMALL SOLAR THERMAL ELECTRIC POWER SYSTEMS
John F. Butterfield *In* JPL Proc. of the First Semiann. Distributed Receiver Program Rev. 15 May 1980 p 211-215

Avail: NTIS HC A11/MF A01 CSCL 10B

Technological constraints, materials availability, production capacity, and manufacturing and installations plans and costs at different production levels are included in a study of concentrating collector industrialization. As cobalt for the engine and receiver is supply limited, alternative lower temperature alloys and higher temperature materials such as ceramics are discussed. Economics and production efficiency favor co-location of cellular and thin glass production for reflectors. Assembly and installation are expensive for small sites and few alternatives exist to apply mass production techniques to lower these costs for the selected design. Stepping motors in the size and quantities required are not commercially available today but could be in the future. E.D.K.

IEA/SPS 500 kW DISTRIBUTED COLLECTOR SYSTEM
Temple W. Neumann and Creighton D. Hartman *In* JPL Proc. of the First Semiann. Distributed Receiver Program Rev. 15 May 1980 p 221-227
Avail: NTIS HC A11/MF A01 CSCL 10A

Engineering studies for an International Energy Agency project for the design and construction of a 500 kW solar thermal electric power generation system of the distributed collector system (DCS) type are reviewed. The DCS system design consists of a mixed field of parabolic trough type solar collectors which are used to heat a thermal heat transfer oil. Heated oil is delivered to a thermocline storage tank from which heat is extracted and delivered to a boiler by a second heat transfer loop using the same heat transfer oil. Steam is generated in the boiler, expanded through a steam turbine, and recirculated through a condenser system cooled by a wet cooling tower. E.D.K.

PRELIMINARY OPERATIONAL RESULTS FROM THE WILLARD SOLAR POWER SYSTEM
Donald L. Fenton, G. H. Abernathy, G. Krivokapich, D. E. Ellibee, and V. Chilton *In* JPL Proc. of the First Semiann. Distributed Receiver Program Rev. 15 May 1980 p 241-246 refs

Avail: NTIS HC A11/MF A01 CSCL 10B

The solar powered system located near Willard, New Mexico, generates mechanical or electrical power at a capacity of 19 kW (25 HP). The solar collection system incorporates east/west tracking parabolic trough collectors with a total aperture area of 1275 sq m (13,720 sq ft). The hot oil type thermal energy storage is sufficient for approximately 20 hours of power system operation. The system utilizes a reaction type turbine in conjunction with an organic Rankine cycle engine. Total collector field efficiency reaches a maximum of 20 percent near the winter solstice and about 50 percent during the summer. During the month of July, 1979, the system pumped 60 percent of the 35,300 cu m (28.6 acre-feet) of water delivered. Operating efficiencies for the turbine component, organic Rankine cycle engine and the complete power system are respectively 65 to 75 percent, 12 to 15 percent and 5 to 6 percent. Significant maintenance time was expended on both the collector and power systems throughout the operational period. Author

SOLAR TOTAL ENERGY-LARGE SCALE EXPERIMENT, SHENANDOAH, GEORGIA
Walter R. Hensley *In* JPL Proc. of the First Semiann. Distributed Receiver Program Rev. 15 May 1980 p 247-249

Avail: NTIS HC A11/MF A01 CSCL 10A

The design and development of a 7 meter diameter parabolic dish solar collector are discussed. Each of the four main subsystems of the collector: (1) reflector, (2) mount and drives, (3) receiver and (4) the controls, is discussed briefly with the major emphasis on the receiver design. To minimize development risks and production costs, a dish design based on use of stamped aluminum petals (sectors) was chosen. This design is similar to the design of a communication antenna already commercially produced. The reflective surface of the petals has a total reflectance of .86 and a specularity (dispersion) of 8 mrd. This performance is obtained by mechanical polishing and chemical brightening of the petal surface, followed by application of a clear RTV silicone protective coating. Selection of the material and weather proofing coated are discussed. Results from performance tests on an engineering development dish collector are presented and compared with pretest predictions. SENSIBLE HEAT STORAGE FOR A SOLAR THERMAL POWER PLANT M.S. Thesis
Thomas F. Baldwin, Scott Lynn, and Alan S. Foss Jul. 1979 195 p refs
(Contract W-7405-eng-48)
(LBL-9321) Avail: NTIS HC A09/MF A01

One possible configuration for a solar power plant with a sensible-heat storage unit was investigated. The proposed flowsheet allows thermal energy storage between the heat collection unit and the power generation unit without a reduction in the thermodynamic availability of the energy supplied to the power turbines. Energy is stored by heating a checkerwork of magnesia bricks. A gas that is circulated from the solar collector through the storage unit and the power plant boiler serves as the heat-transfer medium. Nitrogen was found to be preferable to helium for this purpose. A computer model was used to predict the behavior of the sensible-heat storage unit and to aid in sizing the storage unit. Procedures were developed to estimate the cost of electricity generated by the solar power plant. The effects on the storage unit and on the total plant design of changing several processes and design parameters were then evaluated. Two alternative process configurations for solar power plants with sensible-heat storage were developed. DOE

SOLAR THERMAL SMALL POWER SYSTEMS STUDY. INVENTORY OF US INDUSTRIAL SMALL ELECTRIC POWER GENERATING SYSTEMS
1 Jun. 1979 59 p ref
(Contract ET-78-C-03-2226)
(ATR-79(7780)-1) Avail: NTIS HC A04/MF A01

This inventory of small industrial electric generating systems was assembled to provide a data base for analyses being conducted to estimate the potential for displacement of these fossil fueled systems by solar thermal electric systems no larger than 10 MW in rated capacity. The approximately 2100 megawatts generating capacity of systems in this category constitutes a potential market for small solar thermal and other solar electric power systems. The sources of data for this inventory were the (former) Federal Power Commission (FPC) Form 4 Industrial Ledger and Form 12-C Ledger for 1976. Alphabetical lists are presented of generating systems located at industrial plants and at Federal government installations in each of the 50 states. These systems are differentiated by type of power plant: steam turbine, diesel generator, or gas turbine. Each listing is designed as a power system rather than a power unit because the GPC Ledgers do not provide a means of determining whether more than one unit is associated with each industrial installation. The user should consider each listing to be a system capacity rating wherein the system may consist of one or more generating units with less than 10 MW/sub e/ combined rating. DOE

COMPOSITION PROFILING OF SOLAR COATING MATERIALS Final Report, 16 Apr. 1976 - 15 Apr. 1979
G. K. Wehner Sep. 1979 39 p refs
(Contract EY-76-S-02-2953)
(COO-2953-4) Avail: NTIS HC A03/MF A01

Auger electron composition vs. depth and optical analysis revealed that a very inexpensive-to-produce (15 min. 900 C heat treatment in air) Cr2O3 layer on stainless steels provides an excellent diffusion barrier for preventing stainless steel constitutents from entering into an IR reflective Mo coating. It was shown that with sputter deposition of Mo at high rate in a clean noble gas plasma, one can obtain Mo coatings of excellent IR reflectance. The optical properties of various other absorber surfaces such as stacked razor blades, cone or whisker-covered metal surfaces, plasma-sprayed chromic oxide coatings etc. were measured and explored. DOE

SOLAR COLLECTORS Technical Progress Report, 5 Sep. 1978 - 5 Mar. 1979
B. Baum and Michael Gage 27 Apr. 1979 54 p
(Contract EM-78-C-04-5359)
(ALO-5359-T1; TPR-1) Avail: NTIS HC A04/MF A01

A broad information search was carried out in four areas: glazings, housing materials, acrylic coatings, etching processes and AR coatings. An extensive list of all (known) US transparent polymers was developed as well as tables of plastic, ceramic and metallic materials that could conceivably function as a housing. In addition, a compilation was made of commercially available solvent and water base acrylic coatings for use as a uv protective coating for the glazing. Eighteen transparent polymers were chosen as possible glazings and twelve materials (plastic and wood) as possible housings and exposed in the Weather-Ometer as tensile bars and for the glazings as disks for optical transmission. These same materials were also exposed on our roof to monitor soiling. A variety of solvent and water base acrylics were selected as protective coatings and ordered. Two commercial films, Tedlar 20 and Halar 500, with strong absorption in the uv and two commercial films containing uv absorbers, Tedlar UT and Korad 201R, were laminated by several different processes to four promising glazing materials: polyvinyl fluoride (Tedlar), polymethyl methacrylate (Plexiglass), crosslinked ethylene/vinyl acetate and thermoplastic polyester (Llumar). A variety of etching processes were briefly explored and AR coating studies started on the above four glazing films. DOE

HETEROSTRUCTURE SINGLE CRYSTAL SILICON PHOTOVOLTAIC SOLAR CELLS Final Report, 27 Sep. 1976 - 31 Jul. 1979
J. R. Szedon, T. A. Temofonte, T. W. OKeeffe, H. C. Dickey, S. J. Fonash, and T. E. Sullivan 31 Jul. 1979 209 p refs Prepared in cooperation with Pennsylvania State Univ., Univ. Park
(Contract EY-76-C-03-1282)
(DOE/ET/20408-1) Avail: NTIS HC A10/MF A01

Technical and commercial practicability (specifically, conversion efficiency of 10 percent or greater at a module selling price below $0.50/peak watt in 1975 dollars) for power generation of metal-heterojunction silicon solar cell of the metal-insulator semiconductor (MIS) variety is assessed. Empirical and theoretical studies were made of cells using both single crystal (n- and p-type) and polycrystalline (p-type) silicon with a variety of metals (Al, Au, Ag, Pd) and silicon dioxide lasers of various thicknesses. Performance limitations were identified. Means to improve cell performance were evaluated, including material modifications, layer thickness control and changes in device structure. It is concluded that the program goals can be met. Encouraging results in analysis of cells made with polycrystalline material provide a good basis for proceeding with future work to assess the prospects of even lower cost cells. DOE

FEASIBILITY EVALUATION FOR SOLAR INDUSTRIAL PROCESS HEAT APPLICATIONS
S. A. Stadjuhar Jan. 1980 7 p refs Presented at the Systems Simulation and Econ. Analysis Conf., San Diego, Calif., 23 Jan. 1980
(Contract EG-77-C-01-4042)
(SERI/TP-333-538; CONF-800101-3) Avail: NTIS HC A02/MF A01

An analytical method for assessing the feasibility of Solar Industrial Process Heat applications was developed and implemented in a flexible, fast-calculating computer code, PROSYS/ECONMAT. The performance model PROSYS predicts long-term annual energy output for several collector types, including flat-plate, nontracking concentrator, one-axis tracking concentrator, and two-axis tracking concentrator. Solar equipment cost estimates, annual energy capacity cost, and optional net present worth analysis are provided by ECONMAT. User input consists of detailed industrial process information and optional economic parameters. Internal program data includes meteorological information for 248 US sites, characteristics of more than 20 commercially available collectors representing several generic collector types, and defaults the economic parameters. Because a fullscale conventional back-up fuel system is assumed, storage is not essential and is not included in the model. DOE

DEVELOPMENT OF A SECOND-GENERATION CONCENTRATING TRACKING SOLAR COLLECTOR Technical Progress Report, 20 Jun. - 27 Dec. 1978
Roy W. Miller 16 Jan. 1979 58 p refs
(Contract EM-78-C-04-4375)
(ASE-4371) Avail: NTIS HC A04/MF A01

The objective is to develop a second generation parabolic mirror concentrator with a variation of the cylindrical blackbody receiver to provide a minimum concentration ratio of ten. Performance characteristics are to be determined by tests using a prototype unit. Probable mass production costs for the collector will be generated. Work performed during the first six months of the effort is described. The design of the prototype collector was completed. The collector design is described in detail. The performance analysis for the second generation collector was also completed during the first six months of the contract. The work consists of collector tradeoff studies together with optical and thermal analysis of detailed configurations. The analysis is described in detail with computer programs included and results given for conditions of interest. The performance analysis was conducted in concert with the collector design effort. Thus, the collector design features were driven by performance considerations and design details are optimum with respect to performance. The result is a collector design capable of producing outlet field of high enough temperature to drive air conditioning equipment. Concentration ratio is 12 and predicted efficiency is 60% at fluid outlet temperature of 200 F. DOE

NEW APPLICATIONS OF HIGH-TEMPERATURE SOLAR ENERGY FOR THE PRODUCTION OF TRANSPORTABLE FUELS AND CHEMICALS AND FOR ENERGY STORAGE
19 Jan. 1979 178 p refs
(Contract EY-76-C-03-1101)
(ATR-78(7691-04)-1) Avail: NTIS HC A09/MF A01

The solar fuels and chemicals study was limited to the examination of processes requiring temperatures in excess of 1000 K since lower temperature processes had already been examined in studies concerned with the application of waste heat from nuclear power plants to industrial processes. In developing the carbon cycle processes, the primary activity included an extensive literature search and the thermodynamic evaluation of a number of candidate chemical cycles. Although both hydrogen and carbon closed- and open-loop chemical cycles were studied, it was concluded that the carbon cycles offered sufficient additional potential to warrant concentrating on them in subsequent work. The section on new ideas for transportable fuels presents the elements of a new concept for a carbon cycle recovery technique to produce transportable fuels. The elements discussed are sources of carbon dioxide, solar energy reduction of CO2, potential carbon cycles, and use of carbon monoxide as fuel and feedstocks. Another section presents some new concepts for the use of high temperature solar energy in the production of essential materials and for closed-loop chemical storage, as well as for the production of hydrogen as a fuel and open-loop applications. Potential problem areas pertinent to solar derived fuels and chemicals have been identified. These problems are primarily associated with the limited high temperature experience in industry and include materials compatibility, separation of reaction products, development of solid electrolytes and high temperature electrodes, selective emission of receiver coatings at high temperature, and a lack of chemical kinetics data, and high temperature thermodynamic data. DOE

SOLAR THERMAL REPOWERING: UTILITY/INDUSTRY MARKET POTENTIAL IN THE SOUTHWEST
N. Lord, P. Curto, and S. True Dec. 1978 177 p refs
(Contract ET-78-C-01-2854)
(MTR-7919) Avail: NTIS HC A09/MF A01

An analysis of the utility and industrial solar thermal repowering market potential in the Southwest is presented. Repowering involves adding the solar thermal central receiver (power tower) system as a retrofit power source for existing utilities and industries. It would provide steam to drive utility turbogenerator or supply process heat for industry. The potential for repowering oil and gas using steam turbine utility sites with a capacity greater than 25 MWe and sufficient land adjacent to the plant for a minimum 25 MWe addition is analyzed. Industry projections based on an analysis of the energy requirements for the chemicals and petroleum industries in Texas and estimates of land availability are included. It is estimated that the potential solar thermal repowering market for utilities and industries in the Southwest is approximately one quad. DOE

AMORPHOUS Si SOLAR CELLS Quarterly Report, 1 Apr. - 30 Jun. 1979
V. L. Dalal Aug. 1979 56 p refs
(Contract DE-AC03-79ET-23034)
(DOE/ET/23034-T1; QR-2) Avail: NTIS HC A04/MF A01

An analysis of a-Si devices was completed. The analysis shows that even with limited diffusion length and high defect density, a-Si devices can achieve J/sub sc/ approximately = to 15 mA/sq cm, V/sub oc/ approximately = to IV and FF approximately = to 0.72. Novel a-Si devices were also designed and analyzed. The analysis shows that the flexibility in material properties offered by a-Si can be used advantageously to design high quality devices. DOE

APPLICATION OF CIRCUMSOLAR MEASUREMENTS TO CONCENTRATING COLLECTORS
D. F. Grether, D. Evans, A. Hunt, and M. Wahlig Jun. 1979 6 p refs Presented at the Intern. Solar Energy Soc. Meeting, Atlanta, 28 May 1979
(Contract W-7405-eng-48)
(LBL-9412; CONF-790541-58) Avail: NTIS HC A02/MF A01

A systematic measurement program is being carried out to assess the effects of circumsolar radiation (the solar aureole) on the performance of solar conversion systems using concentrating collectors. Four instrument systems were constructed and are providing detailed intensity vs. angle profiles of the solar and circumsolar (out to 3 deg from the center of the Sun) as well as other solar measurements. The instruments are briefly described. Results are presented of the average effect of the circumsolar radiation on the solar energy available to an idealized point focusing system. Results are also presented for an analysis of two specfic central receiver designs. DOE

EXTRINSIC LOSSES IN SOLAR CELLS FOR LINEAR FOCUS SYSTEMS 4
C. Michael Garner Dec. 1979 42 p refs
(Contract EY-76-C-04-0789)
(SAND-79-1781) Avail: NTIS HC A03/MF A01

Solar cell efficiency is dependent on the intrinsic one dimensional diode efficiency and on the extrinsic losses (i.e., contact shadowing, series resistance and losses arising from nonuniform illumination). These extrinsic losses can depend on

cell size and should be considered in the design of concentrator systems. The carrier transport and junction phenomena are arbitarily called intrinsic effects, and the efficiency resulting from the one dimensional transport equations will be called the intrinsic efficiency. The under consideration will be called extrinsic effects. The I sq R and shadowing losses have been calculated as a function of cell size, contact thickness and number of buses. In addition, losses resulting from nonuniform illumination and temperature have been calculated. These results should give clear guidelines for the design of receivers for linear focus systems.

CADMIUM SULFIDE/COPPER SULFIDE HETEROJUNCTION CELL RESEARCH Final Report, 30 Sep. 1977 - 31 Jul. 1979

J. R. Szedon, F. A. Shirland, W. J. Biter, T. W. OKeeffe, J. A. Stoll, and S. J. Fonash (Pennsylvania State Univ., University Park) 31 Jul. 1979 186 p refs
(Contract EG-77-C-03-1577)
(DOE/ET/20429-1) Avail: NTIS HC A09/MF A01

The objective of this program is to conduct research on solar cells of the copper sulfide/cadmium sulfide (and cadmium sulfide-zinc sulfide alloy) type with the goal of producing thin film cells capable of 10% AM1 conversion efficiency with less than 5% degradation in performance over a period of 20 years. New evaluation methods reveal cell microstructure details (grain size, Cu2S penetration into grain boundaries, etch pit depth and density) whose modification and control should allow reproducible achievement of at least 9% conversion efficiency. Cell degradation primarily involves changes in heterojunction collection efficiency, not minority carrier transport in the thin CU2S, light absorbing layer. Analysis of current technology predicts a selling price of $0.53/peak watt(1975 dollars) for glass encapsulated, 8% efficient modules. More conservative material use, especially gold grid electrode, should allow a selling price of $0.38/peak watt. DOE

LINE FOCUS SOLAR THERMAL CENTRAL RECEIVER RESEARCH STUDY Final Report, 30 Apr. 1977 - 31 Mar. 1979

D. G. DiCanio, William J. Treytl, Frank A. Jur, and C. Don Watson Apr. 1979 314 p refs
(Contract EY-76-C-03-1246)
(DOE/ET/20426-1) Avail: NTIS HC A14/MF A01

The results of a study to examine the line focus central receiver alternative for solar thermal generation of electric power on a commercial scale are presented. The baseline concept consists of the following elements: (1) A solar collector (heliostat) whose geometry is the equivalent of a focused parabolic cylinder. The heliostat reflecting surface is composed of an array of flexible rectangular mirror panels supported along their long edges by a framework which rotates about an axis parallel to the ground plane. (2) A linear cavity receiver, composed of 61 meter (200-foot) sections supported by towers at an elevation of 61 meters (200 feet). Each section receives feedwater and produces turbine-rated steam. (3) Heliostat control, consisting of a local controller at each heliostat module which communicates with a master control computer to perform elevation tracking and focal length adjustment. The control logic is open-loop, with sun position computer by the master computer with an algorithm.

SOLAR THERMAL SMALL POWER SYSTEMS STUDY. PHASE 2: STUDY RESULTS

D. E. Lapedes, P. K. Munjal, and L. R. Sitney 12 Jul. 1979 239 p refs
(Contract ET-78-C-03-2226)
(DOE/ET/20516-2) Avail: NTIS HC A11/MF A01

This study of small solar power systems (SSPS) was structured to determine conditions under which SSPS can be cost-effective sources of electric power in the US in the period 1985 to 2015. An extensive data base, which provides a discrete identification of all utility and industrial electric generating units up to ans including 10 MW/sub e/ in rated capacity, was prepared. This data base defines the market for which comparative evaluations are made of SSPS and alternative fossil-fueled power plants. The market penetration of SSPS is determined and the effect of economic incentives on accelerating the penetration is evaluated. The solar electric power system is evaluated as either a complete replacement for existing conventional electric power systems or as a repowering installation for boilers supplying steam to turbine-driven generators. The cost data used in the market penetration analysis are for a central receiver-type of small solar thermal power system. While the market penetration discussed is for this type of SSPS, the sensitivity data in the report can be used to determine the market penetration of other types of solar thermal power systems (e.g., point focus distributed receiver) with different system costs. STANDARD ASSUMPTIONS AND METHODS FOR SOLAR HEATING AND COOLING SYSTEMS ANALYSIS

Cecile M. Leboeuf Jan. 1980 7 p refs Presented at the 2nd Ann. Systems Simulation and Econ. Anal. Conf., San Diego, Calif., 23-25 Jan. 1980
(Contract EG-77-C-01-4042)
(SERI/TP-351-548; CONF-800101-9) Avail: NTIS HC A02/MF A01

A set of inputs, assumptions, analytical methods, and a reporting format is presented to help compare the results of residential and commercial solar system analyses being performed by different investigators. For residential heating and cooling systems, three locations were selected. The weather data chosen to characterize these cities are the Typical Meteorological Year (TMY). A house for each location was defined that is typical of new construction in that locale. Hourly loads for each location were calculated using a computerized load model that interacts with the system specified inputs characterizing each house. Four locations for commercial cooling analyses were selected from among the existing sites for which TMYs were available. A light commercial (nominal 25 ton cooling load) office building was defined and is used in all four locations. Hourly cooling and heating loads were computed for each city. DOE

PREPARATION OF HIGHLY EFFICIENT SOLAR CELLS AND CORROSION STUDIES ON SOLAR CELL MATERIALS Final Report, 1 Jul. 1978 - 30 Jun. 1979
Su-Moon Park Jul. 1979 69 p refs Sponsored by New Mexico Energy and Minerals Dept.
(PB80-141294; NMEI-46) Avail: NTIS HC A04/MF A01 CSCL 10B

The Pourbaix diagram was applied to the prediction and understanding of corrosion properties of semiconductor materials. With the aid of flat band potential information, the thermodynamic stability of semiconductor materials under various operating conditions, types of electrodes (n- or p-), conversion efficiencies, types of redox couples, and the proper operating pH-region can be determined. Electrolyte and pH dependencies of flat band potentials were studied to be able to design more efficient semiconductor-liquid junction solar cells. Various effects of electrolytes on flat band potentials were also studied. GRA

DESIGN PARAMETERS FOR SOLAR POWERED ABSORPTION COOLING SYSTEMS WITH CHILLED WATER STORAGE Ph.D Thesis
Ping-Shian Shih 1979 120 p
Avail: Univ. Microfilms Order No. 8013046

A simulation model of a solar cooling system with chilled water storage was formulated. Simulations were performed using typical meteorological year data of seven SOLMET stations to study the relationship between the performance of the system and design parameters. The chilled water storage was found to be an effective scheme for improving the performance of the solar cooling system. The effectiveness of this scheme depends largely on the proper sizing of the chilled water storage, and collector area. The predictions of the semi-empirical equation were found to be within six percent accuracy of the simulation results. This equation was also found to be valid for locations with considerable differences in their weather patterns. The annual cost analysis showed that proper sizing of the chilled water storage, hot water storage, and collector area can improve significantly the economics of the solar cooling system. Although the solar cooling system is not economically feasible at the present time due to the high cost of the solar energy collector and the low cost of the conventional fuel, a properly designed solar cooling system can become economically attractive when the fuel cost becomes more expensive. Dissert. Abstr.

ANALYSIS AND EVALUATION IN THE PRODUCTION PROCESS AND EQUIPMENT AREA OF THE LOW-COST SOLAR ARRAY PROJECT Annual Report, Oct. 1978 - Oct. 1979
H. Goldman and M. Wolf Oct. 1979 203 p refs
(Contract JPL-954796)
(NASA-CR-163208; JPL-9950-342; DOE/JPL-954796-79/7) Avail: NTIS HC A10/MF A01 CSCL 10A

Analyses of slicing processes and junction formation processes are presented. A simple method for evaluation of the relative economic merits of competing process options with respect to the cost of energy produced by the system is described. An energy consumption analysis was developed and applied to determine the energy consumption in the solar module fabrication process sequence, from the mining of the SiO2 to shipping. The analysis shows that, in current technology practice, inordinate energy use in the purification step, and large wastage of the invested energy through losses, particularly poor conversion in slicing, as well as inadequate yields throughout. The cell process energy expenditures already show a downward trend based on increased throughput rates. The large improvement, however, depends on the introduction of a more efficient purification process and of acceptable ribbon growing techniques. R.E.S.

SOLAR ENERGY SYSTEM PERFORMANCE EVALUATION:

SEASONAL REPORT FOR DECADE 80 HOUSE, TUCSON, ARIZONA Progress Report, Nov. 1973 - Sep. 1979
May 1980 103 p refs Prepared for DOE
(Contract NAS8-32036)
(NASA-CR-161450) Avail: NTIS HC A06/MF A01 CSCL 10A

The operational and thermal performance of the Decade 80 solar energy system is described. The system was designed by Cooper Development Association, Inc. with space heating and space cooling to a one-story, single family residence located in Tucson, Arizona. The Decade 80 House was designed and built in the mid-70's to be a showplace/workshop for solar energy utilization. Superior construction techniques, the use of quality materials and a full time maintenance staff have served to make the entire system an outstanding example of the application of solar energy for residential purposes. The luxury of a full time, on-site maintenance person is perhaps the single most important aspect of this program. While most installations cannot support this level of maintenance, it was very useful in keeping all subsystems operating in top form and allowing for a full season data collection to be obtained. Several conclusions were drawn from the long term monitoring effort, among which are: (1) flat plate collectors will support cooling; (2) definite energy savings can be realized; and (3) more frequent periodic maintenance may be required on solar energy systems that are not custom built. R.E.S.

N80-25788*# Gilliland-Bell Associates, Inc., Greenwood, S.C.
SOLAR HEATING AND HOT WATER SYSTEM INSTALLED AT MUNICIPAL BUILDING COMPLEX, ABBEVILLE, SOUTH CAROLINA Final Report
Nov. 1979 54 p Sponsored in part by NASA
(Contract EM-78-F-01-5202)
(NASA-CR-161443) Avail: NTIS HC A04/MF A01 CSCL 10A

Information on the solar energy system installed at the new municipal building for the City of Abbeville, SC is presented, including a description of solar energy system and buildings, lessons learned, and recommendations. The solar space heating system is a direct air heating system. The flat roof collector panel was sized to provide 75% of the heating requirement based on an average day in January. The collectors used are job-built with two layers of filon corrugated fiberglass FRP panels cross lapped make up the cover. The storage consists of a pit filled with washed 3/4 in - 1 1/2 in diameter crushed granite stone. The air handler includes the air handling mechanism, motorized dampers, air circulating blower, sensors, control relays and mode control unit. Solar heating of water is provided only those times when the hot air in the collector is exhausted to the outside. R.E.S.

SOLAR ENERGY SYSTEM PERFORMANCE EVALUATION: SEASONAL REPORT FOR IBM SYSTEM 1A, HUNTSVILLE, ALABAMA Contractor Report, Sep. 1978 - Aug. 1979
May 1980 85 p refs Sponsored in part by DOE
(Contract NAS8-32036)
(NASA-CR-161464) Avail: NTIS HC A05/MF A01 CSCL 10A

The operational and thermal performance of the solar energy system, Sims Prototype System 1A, is described. The system was designed by IBM to provide 50 to 60 percent of the space heating and domestic hot water preheating load to a 2,000 square foot floor space single family residence in the Huntsville area. The load design temperature inside the building was to be maintained at 70 degrees fahrenheit with auxiliary energy for heating supplied by an electric heat pump assisted by an electric resistance strip heater. In general the disappointing operation of this system is attributed to the manner in which it was used. The system was designed for residential application and used to satisfy the demands of an office environment. The differences were: (1) inside temperature was not maintained at 70 F as expected; and (2) hot water usage was much lower than expected. The conclusion is that the solar energy system must be designed for the type of application in which it is used. Misapplication usually will have an adverse affect on system performance. R.E.S.

SOLAR ENERGY SYSTEM PERFORMANCE EVALUATON: SEASONAL REPORT FOR SOLARON-AKRON, AKRON, OHIO Contractor Report, Nov. 1978 - Oct. 1979
May 1980 87 p refs Sponsored in part by DOE
(Contract NAS8-32036)
(NASA-CR-161465) Avail: NTIS HC A05/MF A01 CSCL 10A

The operational and thermal performance of the solar energy system by Solaron Corporation is described. The system was designed to provide an 1940 square foot floor area with space heating and domestic hot water for a dual-level single family residence in Akron, Ohio. The solar energy system uses air as the heat transport medium, has a 546 square foot flat plate collector array subsystem, a 270 cubic foot rock thermal storage bin subsystem, a domestic hot water preheat tank, pumps, controls and transport lines. In general, the performance of the Solaron Akron solar energy system was somewhat difficult to assess for the November 1978 through October 1979 time period. The problems relating to the control systems, various solar energy leakages, air flow correction factors and instrumentation cause a subjectivity to be involved in the performance assessment for this solar energy system. Had these problems not been present, it is felt that this system would have exhibited a resonably high level of measured performance. R.E.S.

An analytical treatment related to the generation of space specific weighting factors is presented using a recursion relationship which employs a heat balance of both the outside and inside surface. The multizone problem is then discussed. The use of frequency domain methods is detailed such that the amplitude ratio and phase shift characteristics for a sinusoidal excitation are derived for the thermal load resulting from radiation heat gain/loss and space air temperature fluctuations. The results of a parametric study related to variable floor properties, radiation distributions and space sizes are presented. The weighting factors generated for each perturbation were used to define the expected differences in space response characteristics. DOE

The intermediate range of concentration ratios (1.5X-10X) which can be achieved with CPC's without diurnal tracking provides both economic and thermal advantages for solar collector design even when used with nonevacuated absorbers. The present paper summarizes more than 3 years of research on nonevacuated CPC's and reviews measured performance data and critical design considerations. Concentrations in the upper portions of the practical range (e.g., 6X) can provide good efficiency (40 percent to 50 percent) in the 100 C to 160 C temperature range with relatively frequent tilt adjustments (12 to 20 times per year). At lower concentrations (e.g., 3X) performance will still be substantially better than for a double glazed flat plate collector above about 70 C and competitive below, while requiring only semiannual adjustments for year round operation. In both cases the cost savings associated with inexpensive reflectors, and the optimal coupling to smaller, simple inexpensive absorbers (e.g., tubes, fins, etc.) can be as important an advantage as the improved thermal performance. DOE

DEVELOPMENT OF MATERIALS FOR A LUMINESCENT SOLAR COLLECTOR Annual Progress Report, 1 Sep. 1978 - 31 Aug. 1979
A. Lempicki, L. Andrews, and B. C. McCollum 1979 42 p refs
(Contract ER-78-C-02-4996)
(COO-4996-1) Avail: NTIS HC A03/MF A01

The objectives of the research involved preparation of a number of Cr(3+) doped glasses beginning with common commercial types, and expansion of the number and variety of glasses as time allowed. The Cr(3+) doped glasses were evaluated by spectroscopic measurements which included absorption and emission as well as quantum yield determinations. In addition, the influence of concentration quenching was measured by studying the luminescence decay kinetics at various concentrations in a variety of glasses. As the program developed, and the problem of rather low quantum yields became apparent in all the glasses, a rather detailed investigation was undertaken to better understand the radiationless decay of Cr(3+) in order to best evaluate the future direction of the program. The results are summarized. DOE

SOLAIR HEATER PROGRAM: SOLAIR APPLICATIONS STUDY Final Report
Dec. 1977 96 p
(Contract EY-76-C-02-2705)
(COO-2705-3) Avail: NTIS HC A05/MF A01

The evaluation identified attractive applications, evaluated corresponding control procedures, estimated system performance, compared economically insolation and insulation, and evaluated the repackaging of off-the-shelf equipment for improved cost effectiveness. A detailed commercialization study of a residential domestic water heating system using the Solair concept which has been selected as the most attractive application was done. Other attractive applications are space/domestic water heating and a heat pump assisted solar system/domestic water heating where the heat pump and the solar system function in parallel. A prime advantage of heated air solar systems over liquid systems is cost and longer life which results in higher Btu's/dollar. Other air system advantages are no liquid leakage problems, no toxicity of freezing problems, and less complicated equipment. A hybrid solar system has been identified that can improve the market penetration of solar energy. Details of this system are provided. DOE

DESIGN OF A SYSTEM USING CPC COLLECTORS TO COLLECT SOLAR ENERGY AND TO PRODUCE INDUSTRIAL PROCESS STEAM
C. K. Hsieh (Florida Univ., Gainesville) Aug. 1979 105 p refs
(Contract W-31-109-eng-38)
(ANL-79-102) Avail: NTIS HC A06/MF A01

A system was designed to use CPC collectors to collect solar energy and to generate steam for industrial process heat purposes. The system is divided into two loops with the collectors in the collector loop to operate a preheater and the collectors in the boiler loop to heat water to elevated pressures and temperatures. A flash boiler is used to throttle the heated water to steam. Two types of CPC collectors are chosen. In the collector loop the CPC collectors are fitted with concentric tube receivers. In the boiler loop the collectors employ heat pipes to transmit heat. This design is able to alleviate the scaling and plumbing problems. A fragile receiver tube can also be employed without rupture difficulties. The thermal processes in the collectors were analyzed using a computer modeling. The results were also used to develop a thermodynamic analysis of the total system. Calculations show that the design is technically feasible. The CPC collector is shown to have an efficiency that is very weakly dependent on its operating temperatures, which makes the collector particularly attractive in high temperature applications. DOE

SOLAR ENERGY SYSTEM PERFORMANCE EVALUATION. ALBUQUERQUE WESTERN NO. 1, ALBUQUERQUE, NEW MEXICO Progress Report, Oct. 1978 - Mar. 1979
C. M. Fu 1979 65 p refs
(Contract EG-77-C-01-4049)
(SOLAR/1011-79/14) Avail: NTIS HC A04/MF A01

The Albuquerque Western site is a four story, 110 unit apartment building in Albuquerque, New Mexico. The solar energy system consists of two independently controlled systems: one system serves domestic hot water (DHW) preheating needs, the other serves to preheat hot water used in space heating. Only the DHW system is described. The solar energy system has an array of tracking collectors with a gross area of 1782 square feet. The array faces south at an angle of 35 degrees to the the horizontal. Water is the transfer medium that delivers solar energy from the collector array to storage. Solar energy is stored in a 2000 gallon wooden tank that contains a plastic liner. The DHW is continuously circulated throughout the building. When solar energy is insufficient to satisfy the hot water energy requirements, auxiliary heating is provided by an inline gas-fired boiler. An operational summary of the performance of the system for the period October 1978 through March 1979 is presented. DOE

HIGH TEMPERATURE HYDROGEN CYCLES FOR SOLAR HEAT SOURCES
M. G. Bowman 1979 16 p refs Presented at Solar Fuels Workshop, Albuquerque, N. Mex., 28-29 Nov. 1979; sponsored by Solar Thermal Test Facilities Users Assoc. Submitted for publication

(Contract W-7405-eng-36)
(LA-UR-80-184; CONF-791143-3) Avail: NTIS HC A02/MF A01

Some of the criteria required for high temperature thermochemistry hydrogen cycles to couple efficiently with solar heat sources are defined. Some of the experimentally validated cycles that have been developed over the years in terms of these criteria are examined and potential cycles that are being considered for the higher temperatures potentially available from solar concentrators are discussed. Cycles discussed include oxide sulfate cycles, halide hydrolysis cycles, direct decomposition of H2O and CO2, oxide cycles, and sulfuric acid-metal cycles. DOE

SOLAR PROJECT DESCRIPTION FOR A-FRAME INDUSTRIES' SINGLE FAMILY RESIDENCE: KANEOHE, HAWAII
27 Jul. 1979 44 p
(Contracts EX-76-A-29-1020; HUD-H-2372)
(SOLAR/1010-79/50) Avail: NTIS HC A03/MF A01

A solar energy system designed to provide domestic hot water heating is described. The system uses city water as the common heat transfer medium, and contains no energy storage tank or DHW tank heat exchanger loop. Therefore, the total operating energy is in the energy collection and storage subsystem (ECSS). The house has been fully instrumented for performance evaluation of the solar system since February 1978 and the compiled data are discussed. Original cost estimates for provisioning and installation of the solar system are given. DOE

SOLAR PROJECT DESCRIPTION. ALBUQUERQUE WESTERN-2 MULTI-DWELLING BUILDING ALBUQUERQUE, NEW MEXICO
D. Moore 23 Nov. 1979 43 p refs
(Contracts EX-76-A-29-1020; HUD-H-2372)
(SOLAR/1090-79/50) Avail: NTIS HC A03/MF A01

The Albuquerque Western-2 site is a four-story, 110 unit apartment building in Albuquerque, New Mexico. The solar energy system consists of a controlled system to preheat hot water used in space heating. The solar energy system is designed to provide approximately 54 percent of the conditioned space heating load. The system has an array of tracking collectors with a gross area of 6429 square feet. The array faces south at an angle of 35 degrees to the horizontal. Water is used as the medium for delivering energy from the collector array to storage. Solar energy is stored underground in a 57,000 gallon concrete storage tank. During the space heating season, the heated water from storage is continuously circulated through the building to satisfy the space heating needs for each apartment. Auxiliary heating is provided by three inline gas-fired boilers. The system has three modes of operation. Original cost estimates for provisioning and installation of the solar system are given. DOE

SOLAR PROJECT DESCRIPTION FOR PERL-MACK ENTERPRISES' SINGLE FAMILY RESIDENCES, DENVER, COLORADO
21 Aug. 1979 50 p
(Contracts EG-77-C-01-4049; HUD-H-2372)
(SOLAR/1015-79/50) Avail: NTIS HC A03/MF A01

The Perl-Mack Enterprises Co. solar energy systems, which are installed in a total of 25 single family dwellings located in Denver, Colorado, are described. The 25 dwellings are of three different configurations. Two of the twenty-five dwellings have been fully instrumented for performance monitoring and evaluation since September 1977. All the solar systems are designed to provide approximately 69 percent of the space heating and energy requirements for each dwelling. Solar energy is collected by an array of flat plate collectors having a gross area of 470 square feet. A water-glycol mixture is used as the medium for delivering solar heat from the collection to the storage tank. The storage tank has a total capacity of 945 gallons. A liquid-to-liquid heat exchanger, within the storage tank, transfers the stored heat from the transfer medium to the domestic hot water tank of the house. DOE

WEST CHESTER WORK CENTER: SOLAR SPACE HEATING DEMONSTRATION PROJECT
May 1979 47 p ref
(Contract EY-76-C-02-4048)
(DOE/CS-4048/2; COO-4048-2) Avail: NTIS HC A03/MF A01

The construction stage of an integrated system providing solar energy space heating for 9982 sq ft, newly built, one-story building is described. The building is located at 966 Matlack Street, West Goshen Township, Chester County, Pennslyvania. Functionally, the building consists of two sections: an office and a storeroom. The office section is heated by solar-assisted water-to-air heat pump units. The storeroom section is heated by an air-handing unit, containing a water-to-air coil. Solar energy is expected to provide 62% of the heating load, with the balance provided by a back-up electric boiler. The system includes 1900 active (2112 gross) square feet of flat-plate solar collectors, and a 6000 gallon above ground indoor storage tank. Freeze protection is provided by a gravity drain-down scheme combined with nitrogen pressurization in a closed circuit. DOE

SOLAR TOTAL ENERGY PROJECT SHENANDOAH Final Design Report
10 Jan. 1980 340 p
(Contract EG-77-C-04-3985; DE-AC04-77ET-20260)
(ALO-3985-1-Rev-1) Avail: NTIS HC A15/MF A01

A description of the final design for the Solar Total Energy System to be installed at the Shenandoah, Georgia, site of utilization by the Bleyle knitwear plant, is presented. The system is a fully cascaded total energy system design featuring high temperature paraboloidal dish solar collectors with a 235 concentration ratio, a steam Rankine cycle power conversion system capable of supplying 100 to 400 kW(e) output with an intermediate process steam take-off point, and a back pressure condenser for heating and cooling. The design also includes an integrated control system employing the supervisory control concept to allow maximum experimental flexibility. The system design criteria and requirements are presented including the performance criteria and operating requirements, environmental conditions of operation; interface requirements with the Bleyle plant and the Georgia Power Company lines; maintenance, reliability, and testing requirements; health and safety requirements; and other applicable ordinances and codes. DOE

NOVEL SOLAR CELL CONCENTRATOR PHOTOVOLTAIC CONVERTER SYSTEM Final Report
L. W. James and A. VanderPlas Dec. 1979 91 p refs Prepared for Sandia Labs., Albuquerque, New Mex.
(Contract EY-76-C-04-0789)
(SAND-79-7048) Avail: NTIS HC A05/MF A01

Attainment of photovoltaic conversion efficiencies greater than 25% to 30% thought necessary to make concentrator photovoltaics economical, seems possible if the soalr spectrum is more efficiently used by splitting the spectrum and using solar cells of different bandgaps,. For initial work on multi-bandgap concentrator solar cells, the spectrum was split by an optical filter which transmits light above 1.6 eV and below 1.1 eV and reflects light between 1.1 and 1.6 eV. Theoretical modeling of possible conversion efficiencies led to the choice of the filter bandpass energies and practical solar cell fabrication considerations have led to the choice of silicon and the Al(x) Ga(1-x)As system for initial development work. Special silicon concentrator solar cells with a p(+):n(-):n(+) structure designed for this application and have attained apparent cell conversion efficiencies of 16.2% at a current ratio of 455 suns. DOE

SOLAR COLLECTOR STUDIES FOR SOLAR HEATING AND COOLING APPLICATIONS Technical Progress Report, 18 Sep. 1978 - 18 Mar. 1979
S. O. Jensen, J. E. Kovacic, and J. H. Anderson (Scientific Sunsource Systems) 10 Mar. 1979 56 p refs
(Contract EM-78-C-04-5355)
(ALO-5355-T1) Avail: NTIS HC A04/MF A01

A summary of the literature, especially patent teachings pertaining to black fluid solar collectors, is given. Laboratory tests to determine the suspension stability of various carbon types in water/ethylene glycol are reported. The suspensions were aged at 160 F for 2000 hours and at -15 F for 500 hours. Tests to date demonstrate that colloidal carbon with Zanflow gum as the suspending agent gave excellent, stable suspensions even after evaporation and resuspension with water/ethylene glycol 50:50 solution. It is suggested that the suspending agent interacts with electrical charges on the carbon particles to prevent agglomeration. DOE

SOLAR ENERGY CONVERSION THROUGH BIOPHOTOLYSIS Annual Report, 1 Apr. 1978 - 31 Mar. 1979
J. R. Benemann, M. A. Murry, P. C. Hallenbeck, K. Miyamoto, A. G. Olafsen, D. J. Esteva, and L. V. Kochian 1 May 1979 236 p refs
(Contract EY-76-S-03-0034)
(SAN-0034-239-T1; AR-3) Avail: NTIS HC A11/MF A01

The state-of-the-art of biophotolysis was reviewed and a bioengineering analysis carried out. The conclusions were that practical biophotolysis systems are feasible; however, they will require, in most cases, relatively long-term R and D. The biophotolysis system developed, utilizing heterocystous blue-green algae, was demonstrated both indoors and outdoors with a model converter system using the heterocystous blue-green alga Anabaena cylindrica. Maximal light energy conversion efficiencies were 2.5 percent indoors and about 0.2 percent outdoors, averaged for periods of about two weeks. Achievement of such rates required optimization of N2 supply and culture density. DOE

DEVELOPMENT OF POLYIMIDE MATERIALS FOR USE IN SOLAR ENERGY SYSTEMS Semiannual Progress Report, 1 Aug. 1978 - 31 Jan. 1979
A. L. Wilcoxson, U. A. Sorathia, and J. Gagliani 1979 39 p refs
(Contracts EM-78-C-04-5305)
(DOE/CS-35305/T1; SR-79-R-4650-09) Avail: NTIS HC A03/MF A01

Two separate and distinct products were studied, a lightweight flexible insulating foam and a high density rigid, load bearing insulating foam. These products are derived from a polyimide resin. A critical characterization criteria was established in the form of environment exposure resistance. The foams were evaluated on the basis of this direct exposure test. Studies initiated to improve the resistance included additive studies, using reinforcements and uv absorbers, and postcure studies. The various formulations were also screened on the basis of humidity resistance. On the basis of testing conducted, four different resin formulations at a foam density of approximately 16 kg/cu m are meeting minimum requirements. The rigid foam was optimized through a glass reinforcement study and a process parameter study. The result was an optimized glass strand/microballoon reinforced foam which meets the tested property goals at a density of approximately 240 kg/cu m. DOE

SOLARIZATION OF HELIOSTAT GLASSES
J. Vitko, Jr. and J. E. Shelby Dec. 1979 26 p refs Presented at the Solar Reflective Mater. Workshop, San Francisco, 12-14 Feb. 1980
(Contracts EY-76-C-04-0789; DE-AC04-79DP-00789)
(SAND-79-8754) Avail: NTIS HC A03/MF A01

A solar induced decrease in FE(2+) absorption in heliostat glasses from the solar furnace at Odeillo, France, has been observed. This decrease occurs throughout the sampled (not just at the exposed surface) and is of sufficient magnitude to result in an increase of 2.5% in solar transmittance in a period of nine years. Optical and ESR studies did not detect a corresponding increase in FE(3+) concentration. The implication of these results on a microscopic model for the observed solarization is discussed. Solar simulation studies produced effects of magnitude and sign similar to those observed in the field exposed samples, and appear to offer an attractive means for screening samples for solarization tendencies. DOE

CLEANING AGENTS AND TECHNIQUES FOR CONCENTRATING SOLAR COLLECTORS
V. L. Morris 1980 65 p refs Presented at 2nd Solar Reflective Mater. Workshop, San Franciso, 12 Feb. 1980
(Contract EY-76-C-04-0789)
(SAND-80-7005C; CONF-800220-2) Avail: NTIS HC A04/MF A01

Tests were conducted to determine the nature of the soil which is irreversibly deposited on solar collectors during environmental exposure. Mehods of removing this soil were investigated. The mechanism of attachment of the soil to the surface was determined as a potential aid to cleaning agent formulation. Reflector specimens were environmentally exposed at several industrial sites. Three types of reflector surfaces were studied: second surface silvered glass, aluminized FEK-244 film on aluminum substrate, and RTV 670 on aluminum. Cleaning procedures were evaluated by microscopic examination of the solid surfaces before and after cleaning by measurement of specular reflectance. The effect of local environmental degradation specific to an industrial process on solar collector surfaces was investigated. DOE

COMPARATIVE PERFORMANCE OF TWO TYPES OF EVACUATED TUBULAR SOLAR COLLECTORS IN A RESIDENTIAL HEATING AND COOLING SYSTEM Final Report, 1 Oct. 1977 - 30 Sep. 1978
G. O. G. Loef and W. F. Duff Sep. 1979 16 p
(Contract EY-76-S-02-2577)
(COO-2577-19) Avail: NTIS HC A02/MF A01

Two types of evacuated tubular solar collectors were operated in space heating, cooling, and domestic hot water heating systems in Colorado State University Solar House 1. A flat absorber plate inside a single walled glass tube is used in the Corning design, whereas heat is conducted through a single glass wall to an external heat exchanger plate in the Philips collector. The respective aperture areas are 50.0 sq m and 44.7 sq m. Since system designs and conditions of operation were not identical, efficiencies and energy deliveries of the two evacuated tubular collectors should not be compared without recognition of these factors. But in comparison with conventional flat plate collectors, both types show substantially reduced heat losses and improved efficiency. DOE

TWO-TANK SEASONAL STORAGE CONCEPT FOR SOLAR SPACE HEATING OF BUILDINGS
B. K. Cha, D. W. Connor, and R. O. Mueller 1979 15 p refs
Presented at the APS Electron and Atomic Phys. Meeting, Houston, Tex., 10-12 Dec. 1979
(Contract W-31-109-eng-38)
(CONF-791226-2) Avail: NTIS HC A02/MF A01

An analysis of a novel two tank water storage system is presented, consisting of a large primary water tank for seasonal storage of solar energy plus a much smaller secondary water tank for storage of solar energy collected during the heating season. The system offers the advantage of high collection efficiency during the early stages of the heating season, a period when the temperature of the primary tank is generally high. The resulting improvement in annual system efficiency through the addition of a small secondary tank is found to be substantial - for the site considered (Madison, Wisconsin), the relative percentage gain in annual performance is in the range of 10 to 20%. A simple computer model permits accurate hour-by-hour transient simulation of thermal performance over a yearly cycle. Results are presented of detailed simulations of collector and storage sizing and design tradeoffs for solar energy systems supplying 90 to 100% of annual heating load requirements. DOE

EVALUATION OF RELIABILITY OF OPERATIONAL SOLAR-ENERGY SYSTEMS
J. A. Mavec, E. Waite, and R. Wolosewicz 1979 8 p refs
Presented at Ann. Solar Heating and Cooling Systems Operational Results, Colorado Springs, Colo., 27 Nov. 1979
(Contract W-31-109-eng-38)
(CONF-791105-2) Avail: NTIS HC A02/MF A01

A reliability study of two solar heating systems using air as the heat transfer medium is presented. Failure modes and effects analysis were used to examine the controls of the systems for three operating modes. Principal components were identified for each mode, and a fault tree and reliability block diagram was constructed to structure the fault or failed sequence. Established failure rates were assigned to each component, and an exponential failure distribution was assumed. For components operating on demand at a given average frequency, the adjusted demand and normal operating failure rates were combined to reflect the total contribution. Representative operational times and component frequencies were found for each operating mode. A fault tree computer code was used to determine minimal outsets to the top event, remove redundant events, and perform necessary calculations. DOE

CONCEPTUAL DESIGN OF ADVANCED CENTRAL RECEIVER POWER SYSTEMS SODIUM-COOLED RECEIVER CONCEPT. VOLUME 2, BOOK 1: COMMERCIAL PLANT CONCEPTUAL DESIGN Final Report
Mar. 1979 400 p refs
(Contract EG-77-C-03-1483)
(SAN-1483-1/2; ESG-79-2-Vol-2-BK-1) Avail: NTIS HC A17/MF A01

The conceptual design of the 100 MW solar tower focus commercial power plants is described in detail. Sodium is pumped up to the top of the tall tower where the receiver is located. The sodium is heated in the receiver and then flows down the tower, through a pressure reducing device, and into a large, hot storage tank made to meet a specific thermal energy storage capacity requirement. The sodium is pumped by a separate pump, through a system of sodium to water steam generators. The sodium flowing from the evaporator unit is piped to a cold storage tank. From the cold storage tank, sodium is then pumped up to the tip of the tower to complete the cycle. The steam generated in the steam generators is fed to a conventional off-the-shelf, high-efficiency turbine. The steam loop operates in a conventional rankine cycle with the steam generators serving the same purpose as a conventional boiler and water being fed to the evaporator with conventional feedwater pumps. PHOTOCHEMICAL DETERMINANTS OF THE EFFICIENCY OF PHOTOGALVANIC CONVERSION OF SOLAR ENERGY
Morton Z. Hoffman and Norman N. Lichtin 1979 35 p refs
(Contract EY-76-S-02-2889)
(COO-2889-5) Avail: NTIS HC A03/MF A01

A photogalvanic cell is a battery in which the cell solution absorbs light directly to generate species which, upon back reaction through an external circuit with the aid of suitable electrodes, produces electric power; photoactivation of the electrodes is not involved. The charge-carrying species have storage capacity if they are long-lived and can be prevented from engaging in degradative back reactions in bulk solution. The efficiency of a photogalvanic cell for the conversion of photon energy into electrical energy is determined by photochemical and electrochemical factors. Among the latter are the choice of electrode materials and the kinetics of electron transfer at the heterogeneous surfaces. The photochemical determinants of the efficiency of photogalvanic cell operations are examined: the absorption spectral characteristics of the cell solution, the efficiency of formation of separated charge carriers, and the lifetimes of the carriers toward back electron transfer. Modulation of bulk solution dynamics can be achieved by variation of the solution medium. The photochemical determinants are discussed with particular reference to the use of thionine or RU(bpy)2/3(+) as the light absorbing species. DOE

A 150 cu m home, clear performance and economic advantages are shown for a solar assisted heat pump, providing domestic hot water and space heating and cooling. The pump uses a year round solar heated swimming pool as a large thermal energy reservoir. The pool cycles seasonably between 18 and 31 C, allowing year round swimming, and provides an excellent water source for the heat pump and low cost, low temperature plastic solar panels operating at their near optimum efficiency. The system was optimized by examining the performance and cost characteristics of different glazed and unglazed solar panel collector (areas from 28 to 150 cu m and orientation from horizontal to 60 deg tilt) for sites in San Francisco Bay Area and in San Joaquin Valley. SAGE, SOLAR ASSISTED GAS ENERGY Summary Report
S. J. Cunningham and J. Rice Sep. 1979 34 p
(Grant NSF PTP-75-03457)
(PB80-144363; NSF/RA-790330) Avail: NTIS HC A03/MF A01 CSCL 13A

A multidiciplinary effort to examine the problems of introducing solar energy into the United States building industry was conducted. The following were emphasized: (1) field installations and tests to evaluate new vs. retrofit installations; (2) market assessment of the potential for a SAGE water heating system in apartment buildings; and (3) policy analysis of strategies that would contribute to widespread utilization of SAGE water heating. Technical results of field installations and tests are described for two installations using the system configuration chosen from pilot plant analysis. GRA

SAGE, SOLAR ASSISTED GAS ENERGY Final Report
S. J. Cunningham Sep. 1979 225 p refs
(Grant NSF PTP-75-03457)
(PB80-153836; NSF/RA-790331) Avail: NTIS HC A10/MF A01 CSCL 13A

A technical and economic baseline for assessing the practical potential of solar water heating for apartments was developed. Several steps were involved in the development: (1) installing and testing two solar assisted gas energy (SAGE) water heating systems; (2) assessing the market potential for a SAGE water heating system and possible business arrangements; and (3) analyzing strategies that would contribute to wide-spread utilization of SAGE water heating. Project findings are reported with respect to technical results, cost analysis, system performance and maintenance results, market assessment and policy analysis. GRA
